ALFRED GRANT GOODMAN

Istesso tempo, l' (It.: 'the same pace'). A direction to maintain the tempo in spite of apparent disturbances, particularly changes of time signature or note value. Thus in a change from 2/4 to 6/8 time the beat would remain constant: the crotchet of the former would equal the dotted crotchet of the latter. *Medesimo tempo* was also used. By the later 19th century these directions were increasingly replaced by equivalence equations.

DAVID FALLOWS

Istituto di Studi Verdiani. Institute established in 1963 in PARMA.

Istomin, Eugene (George) (*b* New York, 26 Nov 1925). American pianist. He first studied with Kiriena Siloti, and then at the Mannes College. When he was 12 he entered the Curtis Institute, where he studied with Rudolf Serkin and Mieczyslaw Horszowski. In 1943 he won the youth competition sponsored by the Philadelphia Orchestra, with which he made his orchestral début playing Chopin's F minor Concerto the same year. That year he also won the Leventritt Award, which led to an appearance with the New York PO, playing Brahms's Second Concerto (1943). Around this time he also played with the Busch Chamber Players; his first recording, which brought him considerable attention, was of Bach's D minor Concerto with that ensemble. He then appeared regularly as a soloist with leading American orchestras, embarking on major tours abroad from 1956; he has been associated primarily with 19th-century works. In 1961 he formed a trio with Isaac Stern and Leonard Rose; his performances of chamber music represent the delicate end of the expressive spectrum. In 1975 he married Marta Casals, the widow of Pablo Casals; she became artistic director of the Kennedy Center in 1980.

MICHAEL STEINBERG/DENNIS K. McINTIRE

Istrate, Mircea (*b* Cluj, 27 Sept 1929). Romanian composer. He began his studies at the Cluj Academy with Elisa Ciolan (piano, 1945–9) and Toduţa (composition, 1950–53), but was expelled on political grounds; he was able to transfer to the Bucharest Academy, where he studied composition with Andricu and the piano with Florica Musicescu (1954–7). He taught the piano in Music School no.3 in Bucharest from 1959 until his retirement. A non-conformist composer, Istrate respects tradition while remaining open to techniques ranging from modalism to serialism. The limited number of his works reveal a meticulous and rigorous approach to composition. *Pe o plajă japoneză* ('On a Japanese Beach', 1961) employs variation and phasing techniques within its integrated serial structure; *Evenimente* ('Incidents', 1966) displays his subtle use of timbre and sonic textures.

OCTAVIAN COSMA

Ištvan, Miloslav (*b* Olomouc, 2 Sept 1928; *d* Brno, 26 Jan 1990). Czech composer. He studied composition with Kvapil at the Brno Academy of Music (1948–52) and remained there as a postgraduate student (1953–6), assistant lecturer (1956–66) and lecturer (from 1966). He was also active in the Brno branch of the Czech Composers' Union (1951–60), a member of the Tvůrčí Skupina A (Composer's Group A) from 1963, and an associate of the Brno electronic music studio from 1966.

The years of Ištvan's studies and first works were marked by an ideological prohibition of much important 20th-century music in Czechoslovakia. However, he quickly found his own direction, gaining stimulus from Moravian folksong and from the music and theory of Janáček. Robust, dramatic and unsentimental qualities, together with a persistent search for new forms of expression, are typical of his early years. The Piano Trio (1958) is the finest work of this period, which culminated in the three symphonic frescoes *Balada o Jihu* ('Ballad of the South', 1960), a protest against racialism and national injustice. Three other works of these years, the Second Piano Sonata, the Violin Concertino and the Rhapsody for cello and piano, show him taking up a Bartókian modal technique; in all of them the themes are elaborated very strictly and consistently. The String Quartet (1962–3) again shows Bartók's influence in the palindromic relation of its five movements, but Ištvan also continued to write works with a topical message: the piano piece *Odyssea lidického dítěte* ('Odyssey of a Child of Lidice', 1963) describes the fate of a child, dragged from his home by the Nazis and returning after years of hardship.

Ištvan's subsequent adoption of serialism is documented in *Dodekameron* (1964), a composition for 12 instruments in 12 movements, some modal, some 12-note. Derived from his incidental music for Büchner's *Woyzeck*, the score catches the main phases of the dramatic action in its brief sections. Ištvan then began to show an increased interest in rhythm, notably in *Ritmi ed antiritmi* for two pianos and percussion (1966), where African patterns in the percussion are confronted by vague, aleatory material in the pianos. The final development of his collage technique came in the first vocal works, *Zaklínaní času* ('The Exorcism of Time', 1967) and *Já, Jákob* ('I, Jacob', 1968). The first is a meditation on the meaning of human existence scored for two speakers and orchestra, the montage of three texts being allied with a musical juxtaposition of archaic and contemporary materials. All this is achieved with Baroque tightness, but *Já Jákob* is much more free-ranging and colourful in its multiplicity of levels. Ištvan had now established his pluralist technique, and his creative potency increased greatly despite the fact that his works were receiving few performances as he was no longer a member of the Composers' Union. The compositions that followed include the electronic *Ostrov hraček* ('Island of Toys', 1967–8), based on the sounds of toys, *Ommagio a J.S. Bach* for wind quintet (1971), in which Bach motifs are transformed in a pseudo-electronic manner and through serial progressions, and *Psalmus niger* for percussion ensemble (1972), an extreme product of his preoccupation with elemental rhythm.

During the second half of the 1970s Ištvan approached the peak of his compositional designs. Not hiding his disagreement with the social and political developments in Czechoslovakia, he withdrew from public life and concentrated exclusively on composition and on teaching

at the Academy. In *Shakespearovské variace* ('Shakespeare Variations', 1975) for wind and percussion and in the orchestral *Hry* ('Games', 1977) he was inspired by medieval and Renaissance approaches, the forms of the madrigal and the partita determined the shape of his choruses *Horlivá toužení* ('Ardent Longings', 1974), *Cor mio* (1979) and Partita (1980) for 16 strings. At the same time, however, he rethought his use of the jazz, pop and minimal music, which he realized in an original way in the diptych *Mikrosvěty* ('Microworlds', 1977), in the chamber cantata *Hard Blues* (1980) and in the Concertino for Baroque Jazz Quintet (1982). His discontent and anger at social events are encrypted in his string quartet *Zatemněná krajina* ('The Darkened Landscape', 1975) and in the single-movement symphonic piece *Tempus irae* (1983), the provocative titles of which had to compensate for the missing textual hints (a dedication to the victims of war in the first piece, a reference to John Steinbeck's novel in the second) so that the works could be publicly performed. With its simplified expression and large-scale conception the extensive *Vokální symfonie* ('Vocal Symphony', 1986) bore witness to the composer's love of heterophony.

The last two years of Ištvan's life were marked by the death of his wife Věra (1988). An elegiac tone is heard in the *Variace na renesanční téma* ('Variations on a Renaissance Theme', 1988), in the chamber trio *Rotace a návraty* ('Rotations and Returns', 1988) and especially in *Solitudo* (1989) for 11 string instruments, which he completed in the disturbed atmosphere of November 1989. The resulting political changes brought him to the fore in the revival of activities by Brno artists; involvement cut short by his sudden death soon after completing *Makrosvěty* ('Macroworlds', 1990).

ALENA NĚMCOVÁ

Istvánffy, Benedek (*b* Szentmárton [now Pannonhalma], 1733; *d* Győr, 25 Oct 1778). Hungarian composer. Born into a noble family, he probably received his first musical instruction from his father, an organist, and came into contact with G.J. Werner, Kapellmeister at the Esterházy court. He was employed by various members of the Széchényi family from 1757 onwards. In 1766 he became succentor at the cathedral in Győr, and from 1773 to 1775 he was also responsible for leading the choir of the Jesuit church there.

Istvánffy's works, of which only ten survive, cannot have been known outside his immediate surroundings in his own time. Nevertheless, he may be considered the most talented Hungarian composer of the second half of the 18th century in Hungary: his works are almost faultless in technique and up to date in style, and each one shows some individuality in structure.

Italian overture. A type of OVERTURE to an opera, oratorio or other vocal work, common from the late 17th century to the late 18th. It is usually in three movements, fast–slow–fast. The texture is generally homophonic, and the outer movements are normally in major keys, most often D major. Initially, the first movements tended to be in duple metre; the slow movements were often quite short; and the finales were dance-like, often resembling fast minuets or gigues. As the form developed, the first movements tended to incorporate fanfare elements and came increasingly to follow the pattern of sonata form without a development section; the slow movements became longer and more lyrical.

The Italian overture became established in the works of Alessandro Scarlatti in the 1690s (his earliest use of the form is in the 1687 revision of his opera *Tutto il mal non vien per nuocere*) and spread throughout Europe until it became the standard operatic overture in the middle decades of the 18th century. Alternatives to the three-movement pattern among multi-sectional italianate overtures include the 'reprise' overture and a two-movement design, fast–slow, in which the first number after the curtain serves as the finale of the overture (Mozart, *La finta giardiniera*, 1775). After 1760 these types gradually gave way to other patterns, particularly the familiar one-movement design, which represents the first movement of the earlier Italian overture.

Italian overtures detached from operas were often used as independent concert pieces and were important in the early history of the symphony (*see* SINFONIA, §2, and SYMPHONY).

1. Plainchant. 2. Early secular music. 3. Renaissance. 4. 17th century. 5. 18th century: (i) General observations (ii) Musicians' lives (iii) Opera (iv) Sacred music (v) Instrumental. 6. 19th century: (i) Opera (ii) Church music (iii) Instrumental music (iv) Musicology (v) Cultural systems and aesthetics. 7. 20th century.

1. PLAINCHANT. The length and mountainous nature of the Italian peninsula, and its historical vicissitudes, have given its regional segments significantly different ethnic and linguistic profiles. Similar differences existed in the local 'dialects' of Western plainchant that developed during the early Middle Ages and continued in use until the imposition of Gregorian chant throughout most of Italy by the 11th century. In some areas of the peninsula, the Greek liturgies were followed, notably in the south where the Byzantine rite was celebrated in the old Basilian monasteries; Eastern practices are also known to have existed during the early medieval period in the Greek monasteries in Rome and in cities, such as Ravenna, that were once governed by Byzantium.

Traditionally, the origins of Roman chant were ascribed to Pope Gregory the Great (590–604), who, according to legends dating from the Carolingian era, composed the basic melodic repertory and established the Schola Cantorum as the model for the correct performance of liturgical music in the Western Church. However, there is no contemporary evidence to suggest that Gregory was particularly concerned with chant and it is now thought that the Schola Cantorum was founded in Rome during the second half of the 7th century. The repertory that bears his name – Gregorian chant – probably derives from the late 8th century, when the Carolingian kings attempted to introduce Roman chant into the Frankish lands. Whether Gregorian chant was actually sung in Rome at this time, however, is unclear and it has been suggested that it represents a 'reworking' of the genuine Roman repertory by Frankish cantors (*see* PLAINCHANT, §2(ii)). The earliest extant notated manuscripts from Rome, dating from between the 11th and 13th centuries, present a body of melodies that is clearly related to Gregorian chant but which consistently differs in certain details. The performance of this repertory, known as OLD ROMAN CHANT, was brought to an end in Rome when Pope Nicholas III (1277–80) officially suppressed it in favour of Gregorian chant.

During the Carolingian era many of the local Italian repertories were replaced by Gregorian chant as part of an attempt to establish liturgical uniformity; by the 11th century only Rome and Milan maintained their indigenous musical traditions. The Aquileian Church, which had formerly followed its own rite, adopted the Gregorian use during the reign of Charlemagne (*d* 814); almost nothing of its melodic repertory survives. Beneventan chant, however, which developed in southern Italy during the 7th and 8th centuries, was not fully suppressed until 1052 and a significant amount of its music survives in notated sources. The only tradition that successfully resisted the imposition of Gregorian chant was that of Milan. Its survival was undoubtedly helped by the prestige of St Ambrose, Bishop of Milan (374–97), who was traditionally credited with the creation of the chant repertory. Ambrose is known to have introduced the singing of psalms and hymns to strengthen the resolve of his flock when they were beseiged in the Basilica Porziana by Aryan persecutors, and at least four of the many hymn texts attributed to him are genuine. However, there is no evidence to associate him with the composition of 'Ambrosian' melodies. The melodies of the Milanese rite

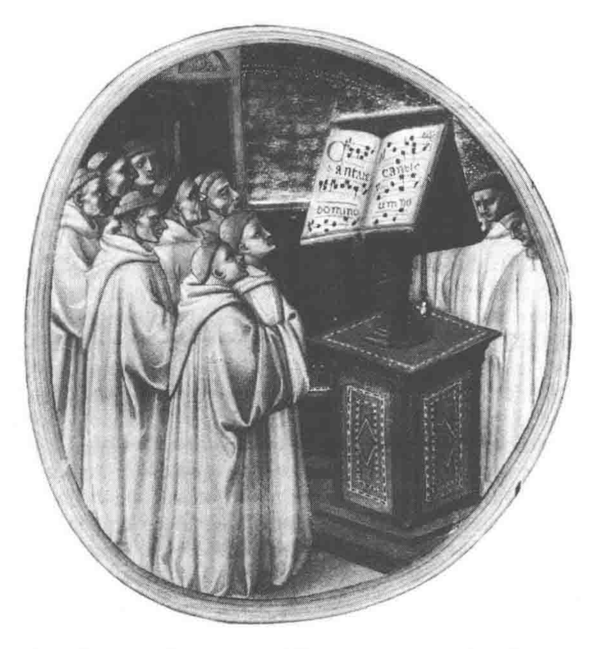
were first written down in the 12th century in pitch-specific notation and are still performed today in Milan and in some churches in the diocese of Lugano (*see* AMBROSIAN CHANT and AMBROSE).

From the 10th century, several different kinds of neumatic notation were used in Italy, and the diversity began to decrease only when the various scriptoria adjusted their neumes to the staff perfected by Guido of Arezzo (*d* after 1033) and adopted shapes which became those of square notation (*see* NOTATION, §III, 1). Guido is also credited with the invention of solmization, a teaching method for reading neumes and producing the corresponding pitches. Less easily assessed are other Italian contributions to the further development of liturgical and paraliturgical singing. Although sequences, either belonging to an international repertory or of local origin, were sung at an early date, only a few, which survived the rigours of the Council of Trent, are well known: *Dies irae*, *Lauda Sion* and *Stabat mater*, the melodies of which are respectively attributed to Thomas of Celano (*d c*1250), St Thomas Aquinas (*d* 1274) and Jacopone da Todi (*d c*1306); the only other surviving sequences are *Victimae paschalis laudae* and *Veni sancte spiritus*. The production of tropes seems to have been modest, but liturgical dramas were performed in various places, and the music of four at Cividale and six at Padua survives. The latter group (dating from the late 13th century, with 15th-century additions) includes pieces for two equal voices, a type of polyphony (*cantus planus binatim*) of which other examples have recently been found, suggesting a widespread practice of polyphonic elaboration of plainchant. Two-part organum had already been described in Guido's *Micrologus* as a current practice; and many melodies were prescribed to be sung *cum organo* (i.e. in polyphony) in 13th-century *ordines* of the churches of Siena and Lucca. Simple, essentially *punctus contra punctum* polyphony appears to have lasted until the Renaissance and even later, with more cultivated types. Some of these two-part compositions were internationally known, others used only locally. In any case, performances of this type of polyphony in the 18th, 19th and early 20th centuries are attested by several recently discovered sources.

2. EARLY SECULAR MUSIC. Information concerning secular music is scant until the 12th century, and even then it consists of descriptions of performances and texts of songs, but no music; the few exceptions (some historical complaints, a vigil song of Modenese sentries and the well-known pilgrim song *O Roma nobilis*, to the simple tune of which the more profane *O admirabile Veneris ydolum* was also sung) all belong to the 9th century and to ecclesiastical circles, to which they owe their survival. Among the earliest documents of poetry in the vulgar tongue, some jongleur songs addressed to bishops show that the traditional condemnation of jongleurs and mimes had subsided by the 12th century. Dance-songs in a popular vein and in ballata form (often entitled *danze*) survive in notarial acts of the 13th century and early 14th century; the way in which they were sung in alternation between a leader and the chorus of dancers is described in a Latin epistle by the grammarian Giovanni del Virgilio. Ballata form was also used for solo songs unconnected with dancing.

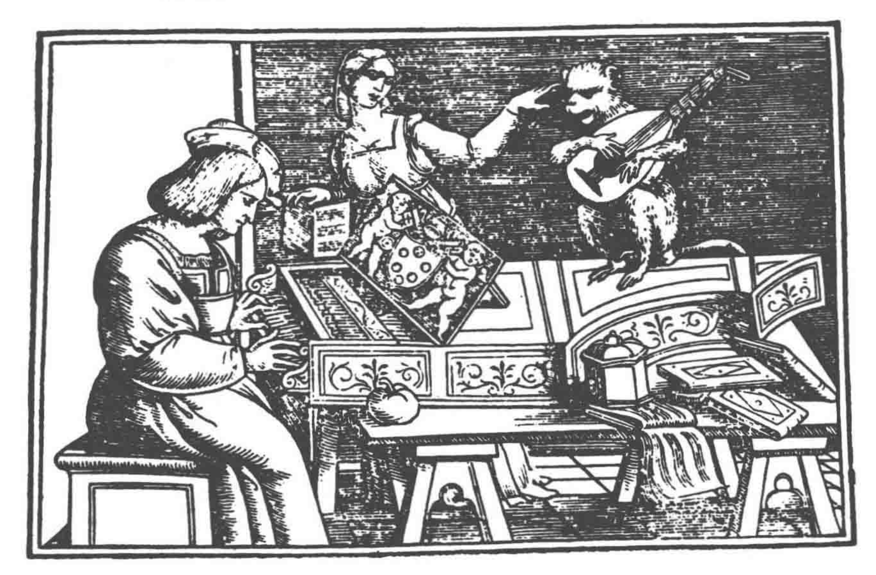
Troubadour lyrics were performed and composed during the 13th century at the courts of feudal lords in northern Italy, in bourgeois circles in Bologna and Tuscany and at the court of the Emperor Frederic II (1197–1250; King of Sicily, often engaged in wars throughout the peninsula) both by visiting troubadours and by local poets also using the Provençal language; among the latter were Sordello da Goito (*c*1200–*c*1270) and the Genoese Lanfranco Cigala (*d c*1274) and Bonifacio Calvo (*d* after 1274). In this regard it is worth noting that most extant sources of troubadour poetry are of Italian origin; they seldom contain any music, however, and it is hard to say whether this is due to the compilers' exclusive interest in the texts or to the fact that the melodies were usually transmitted orally. The same applies to the vernacular poetry of the so-called Sicilian and Tuscan schools, the former centred on Frederic II and his sons, the latter with Guittone of Arezzo (*c*1225–*c*1294) as its main representative. For the later *dolce stil nuovo* it can only be surmised that the increasing length and the philosophical bent of its poems conflicted with a increasing floridity of the settings. Dante (1265–1325) had some of his canzoni and ballatas set by musician friends (e.g. Casella); yet he asserted (*De vulgari eloquentia*, ii, 8) the self-contained verbal musicality of the canzone and argued that music would better suit the 'mediocre' style of the ballata. After him there was a split: because of the feeling that profound poetic thoughts had little to gain from the ornament of music, canzoni and the most sophisticated ballatas were no longer set to music, while shorter ballatas, madrigals and cacce began to be written specifically as *poesia per musica*.

Frequent references to the singing of ballatas persist during the 14th century, indicating a widespread use of this most versatile form as a dance-song, aristocratic or popular, and as a vehicle for lyrical expression. Music



1. Singers, accompanying themselves on psaltery (centre) and gittern, entertain a queen and the ladies of her court: miniature from the French romance 'Meliadus', illustrated in Italy for a manuscript compiled for Louis I, Duke of Anjou and titular king of Naples, 1352–62 (GB-Lbl Add.12228, f.222v)

survives, however, only for the religious counterpart of the ballata, the *lauda*; and even then, only two lavishly decorated *laudari* contain music, while many simpler ones are without it, suggesting that notation (which did not, anyway, show the rhythm of the songs) was more an ornament than the answer to a real need. The penitential singing of *laude* spread from Franciscan Umbria around 1260 and became a devotional custom practised by lay fraternities all over Italy, a practice which survived well into the 18th century, often through the adaptation of secular melodies and folktunes to texts of devotional character, thus continuing the medieval practice of *contrafactum*. The alternation of soloist and chorus, involving all those present in the singing of the choral refrain, had been borrowed from the dance-song. An early 14th-century manuscript of Umbrian origin (*I-CT* 91) contains simple melodies of touching directness, while a slightly later Florentine repertory (*I-Fn* Magl.I.I.122) already shows a pronounced tendency towards florid vocalization.



Notation is a natural need of a polyphonic art and explains the impressive array of manuscripts containing music of the Italian Ars Nova, which, however, was the expression of only a small minority and had a much more limited diffusion than monophonic music. It is thus deceptive to see it as representative of Trecento music. Polyphonic singing, probably taken over from the private entertainment of ecclesiastics, began to be fashionable at the courts of the Scaligeri and Visconti, in Padua, Verona and Milan during the early 14th century; later it also gained favour in literary circles in Florence. Accordingly, its composers, most of them ecclesiastics or lawyers, divide into a northern group, whose main figures are Jacopo da Bologna and, later, Bartolino da Padova (both significantly from places with famous universities), and a larger Florentine group, including Francesco Landini (*d* 1397). The role of lesser places, such as Perugia, Rimini, Caserta, Teramo and Lucca, is unclear. Over 600 extant works, datable from about 1335 to about 1420, include madrigals, ballatas, a small number of cacce and a scattering of motets. The madrigal and caccia were the oldest forms, apparently created by polyphonists from both the musical and the literary point of view. The madrigal's short, descriptive, epigrammatic or celebratory texts (some of them by Petrarch, Boccaccio and Franco Sacchetti) were set for two, seldom three, texted parts, with effusive figuration in the upper one, often to mark the beginning or end of a poetic line or verse. Madrigals set in canon were called 'cacce', but that musical term (a musical synonym of the later *fuga*) soon suggested longer, metrically irregular descriptions of open-air scenes (hunting, fishing, marketing etc.), whose onomatopoeic animation, rendered by the voices in canon, often required the support of a third, non-canonic instrumental part. Ballatas were at first set monophonically even by polyphonists (two manuscripts contain a small number of such settings), but began to be set for two or three parts after 1360; as the lyricism of their upper voice-parts (often supported by lower, instrumental parts) appealed to somewhat larger audiences, they gradually supplanted madrigals and cacce. This explains the particular renown enjoyed by Landini, whose works are mainly ballatas.

With its special forms and special system of notation, codified in the 1320s by Marchetto da Padova (himself a composer), Italian secular polyphony was related to, yet independent from, the contemporary French Ars Nova. Its learned supporters, however, began gradually to indulge in *subtilitas*, mostly identifying it with the imitation of French contemporary models; in time, and particularly during the great schism following the return of the popes from Avignon to Rome, various artists were induced to embrace a French style. As a counterpart, some foreign composers who were active in Italy, among them Johannes Ciconia (*d* 1412) and later Du Fay, set Italian texts and showed their appreciation of the original flavour of the Italian polyphonic style. A distinguishing feature of 14th-century Italian polyphony was the motet celebrating a state or religious occasion, whose text (always in Latin) mentions not only the event itself but also the personalities involved and, in some cases, the composer.

3. Renaissance. Historians have been puzzled by the sharp contrast between the apparent brilliance of 14th-century polyphony and the emptiness of that of the 15th century. Actually, the Ars Nova is magnified by its splendid manuscript tradition; when its thin support was all too easily washed away by a wave of humanistic distrust for all that smacked of scholasticism, secular society simply reverted entirely to kinds of music that were mainly committed to oral tradition. Such a humanistic attitude is epitomized by Leonardo Giustiniani (*d* 1446), a Venetian nobleman, who set out to recapture the spell of ancient music by singing dialect songs in a popular style. A whole class of songs came to be called *giustiniane* after him; his music is completely lost, however, as is that of many singers *a liuto* or *alla viola*, some professional, like Pietrobono of Ferrara (*c*1417–1497) and Serafino Aquilano (1466–1500), others amateur, like Lorenzo de' Medici and many members of his retinue. Their techniques may also have included some kind of simple polyphonic accompaniment to the voice. Virtuoso playing on the lute or keyboard was also increasingly admired.

2. Monks singing from a lectern: illuminated initial 'C' from the Camaldolese Gradual, early 15th century (I-Fl Corale 3, f.41v)

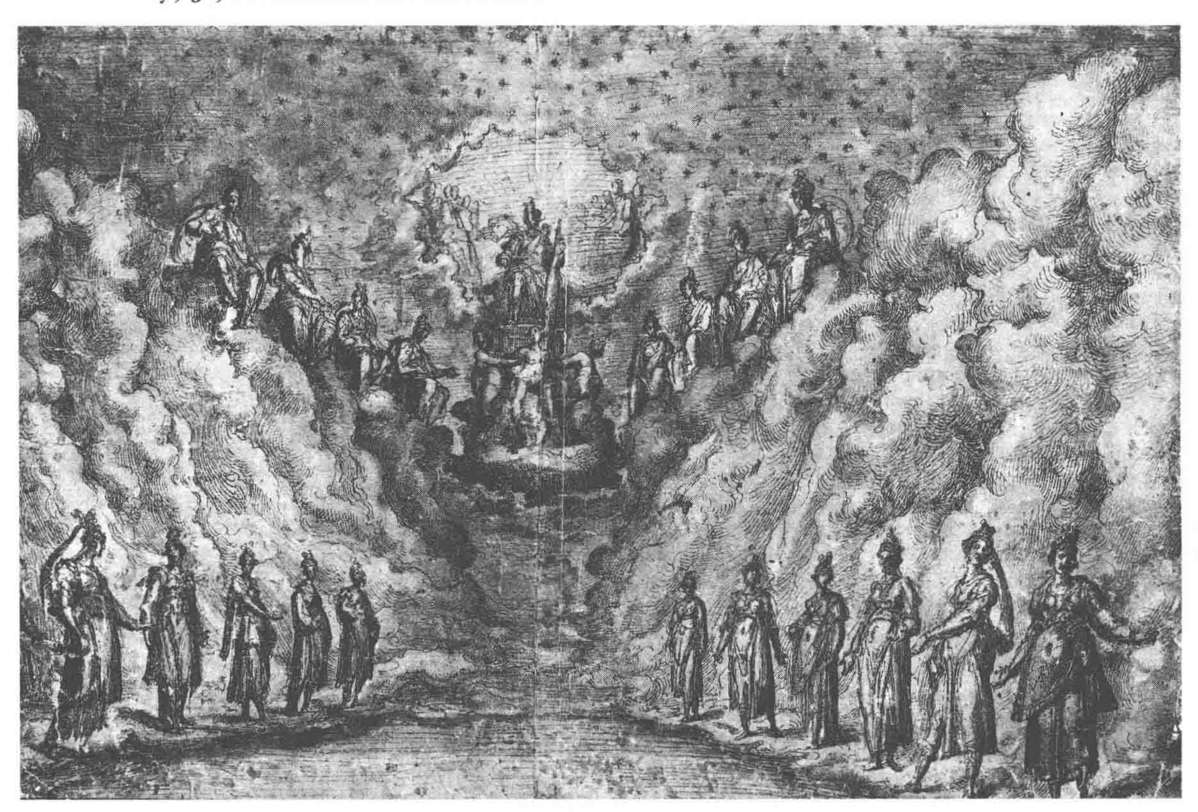
3. Frontispiece of Andrea Antico's 'Frottole intabulate da sonare organi' (Rome: Antico, 1517): woodcut attributed to Antico or Giovanbattista Columba

Many churches had organs and organists, but only a few had singers, most often foreigners, who sang and taught polyphonic music; S Pietro in Rome seldom had more than four. Sacred polyphony fared better in the *cappella papale* (papal chapel), particularly under Martin V (1417–31) and in the first years of the reign of his successor, Eugene IV; it then declined, mainly because of the latter's drive for ecclesiastical reforms and austerity, which, however, may have inspired Du Fay to compose his remarkable cycle of hymns. Du Fay, who had previously been connected with the Malatesta family, was a papal singer, with some interruptions, from 1428 to 1437; in 1436, while in Florence with the *cappella* he composed the motet *Nuper rosarum flores* for the dedication of Florence Cathedral during the visit of the Pope. But after Du Fay no composer of stature entered the *cappella* until late in the century, when a renewal of interest (which was to culminate under Leo X) brought Weerbeke (1479), Orto (1484) and Josquin (1489). The *cappella* established in Naples in 1442–3 by King Alfonso I of Aragon, the most famous member of which was Johannes Tinctoris, a Netherlander, served as a model for a few other courtly *cappelle*; the most important among them were those of Ferrara and Milan, the former created by Leonello d'Este (*d* 1450), who employed English musicians, and later strengthened by Ercole I (1471–1505), and the latter founded in 1473 by Galeazzo Maria Sforza (Josquin was associated with Cardinal Ascanio Sforza and the ducal court in 1484–9). In nominally republican Florence, the Medici did not have a *cappella* but encouraged and exploited for their private use the presence of polyphonists in various Florentine churches, including Heinrich Isaac.

Numerous manuscript collections of the late 15th century indicate a more widely spread and intensified interest in polyphony, the extent of which is even more eloquently stressed by the appearance in 1501 of music printing, started by Ottaviano Petrucci in Venice and soon imitated elsewhere in Italy and abroad. Petrucci's output, evidently addressed to a rapidly growing public of lesser nobility and upper bourgeoisie, mainly consists of secular music. His *Odhecaton* and two other collections of Franco-Flemish pieces, which were seemingly intended for instrumental performance, were soon followed by a series of 11 books of typically Italian pieces, whose markedly chordal (and possibly instrumental) accompaniment to a main vocal line apparently continued and developed previously unrecorded practices (two more of his prints contain similar pieces in arrangements for voice and lute). In addition to frottolas and *strambotti*, a more literary class of text – sonnets, *ode*, *capitoli*, Petrarchan canzoni and madrigals, as well as Latin poems – were also set in this style. These compositions, printed by Petrucci – and others preserved in contemporary manuscripts – clearly reflect and, in some cases, actually preserve in written form the oral practice of music-making from previous centuries in Italy. Bartolomeo Tromboncino and Marchetto Cara are the best known among the composers, many of whom served the courts of Ferrara, Mantua, Urbino and Rome. Also included in the prints are settings of mascheratas, certainly intended for courtly entertainment and requiring choral rather than solo singing; their Florentine equivalents, *canti carnascialeschi*, survive in manuscript form.

Early in this outburst of a new vitality two trends began to appear, both of which arose from a humanistic concern for the text but led to different conclusions. On one hand, the demand for higher literary standards and the revival of Petrarchism typical of the first decades of the century led to settings that concentrated on the effective delivery of the text by the upper voice, unobstructed by the subdued, basically chordal support of the other parts, often one or more instruments. On the other hand, the general interest in all artistic activities, also spurred by humanistic ideals, suggested that the literary refinement of the texts be matched by the musicians, summoning up all the resources of contrapuntal polyphony. The latter attitude gradually prevailed, leading to the madrigal (an old name for a new coalescence of poetic forms) becoming the main vehicle through which the composers set out to interpret musically the poetic content of their chosen or given texts; hence the recourse to so-called madrigalisms, a repertory of partly spontaneous, partly contrived associations of poetic and musical images, which, however, had its roots in the international motet style of the turn of the century. Madrigals were often intended to be

performed in connection with the meetings of the academies, as musical interludes or to conclude learned speeches or discussions.



Early madrigals by Verdelot, Costanzo Festa and Arcadelt generally achieve a balance between recitative-like clarity and contrapuntal activity. Later a sharper alternation of contrapuntal writing and chordal passages developed, while a keen spirit of experimentation led to the faster rhythms of the madrigals *a note nere*, or (fostered by Vicentino's speculations on the genres of ancient music) to Rore's exploitation of dissonance and chromaticism for the expression of deep poetic feelings. The whole gamut of expressive resource, ranging from dramatic moods to sunny enthusiasm or to pastoral levity, was displayed at its best towards the end of the century by Marenzio, while extreme emotional tensions dictated Gesualdo's sudden shifts from exaggerated chromaticism to melodious diatonicism. None of this ever completely erased the predominance of the upper part, as is also shown by performing practices; for although polyphony was now issued in partbooks – all provided with text – contemporary sources indicate that all-vocal performance could often be replaced by combinations of voice and instruments (even title-pages speak of 'madrigali da cantare e da suonare'). Furthermore, frottolas and *strambotti*, dropped by the printers about 1530 (although they continued to be sung), were soon replaced by new popular genres, such as the villotta, the three-voice *villanesca alla napoletana* and later the canzonetta. Midway between the madrigal and the lighter genres are Striggio's witty madrigalian narratives (e.g. *Il cicalamento delle donne al bucato*), to which Vecchi's and Banchieri's so-called madrigal comedies and other musical entertainments are related.

4. Domestic music-making: detail from a fresco by Giovanni Antonio Fasolo, c1568–70, in the main salon of the Villa Caldogno, near Vicenza

Less venturesome, and yet the main field of activity for many famous composers of madrigals, sacred music continued to be international in style and repertory. So too were many of the performers, including Verdelot, Arcadelt, Jacquet of Mantua, Jacquet of Ferrara, Nasco and Werrecore, whose church positions made them specially apt to influence new generations of musicians; in the 1530s, when the devastations of war were over, newly formed *cappelle* based on the model of the Cappella Giulia at S Pietro, designed in 1513 by Julius II, began to teach boys. Often, however, foreign musicians were so much involved in the Italian way of life as to become deeply italianate. The most relevant example is Willaert, who, after sojourns in Rome, Ferrara and Milan, succeeded Petrus de Fossis, also a Fleming, as *maestro di cappella* of S Marco, Venice, in 1527; during his 35-year tenure Parabosco, Vicentino, Rore, Zarlino, Andrea Gabrieli and Costanzo Porta were among his colleagues and pupils. With the pupils succeeding their masters, it became exceptional for foreign musicians (such as Rore, Wert or Victoria) to occupy leading positions in the second half of the century. From the combination of Willaert's powerful personality and the standards of magnificence set by the Venetian government for its official church, the main features for which the Venetian school became one of the principal models of Italian (and foreign) church music were established: richness of sound, polychoral writing, colourful use of the organ (S Marco constantly used at least two) and later of other instruments and finally a relative lack of concern for all debates on the future of church music. Following a century-old tradition, motets were composed to celebrate important state festivities, as in the works of the great Venetian composers such as the Gabrielis. Contrasting with the open attitude in Venice, the leading Roman institution, the *cappella papale*, was slowly evolving a guarded attitude, partly protecting old privileges under the shield of tradition, partly reacting to mounting criticism of church polyphony from both outside and inside the Catholic church. Without being a conservative, Palestrina continued and brought to consummate refinement stylistic trends that he had come to know from his French teachers in the *cappella* of S Maria Maggiore. It is significant, too, that he usually based 'parody' masses either on his own motets and madrigals or on French models of the 1530s. Mounting concern that the Council of Trent might banish the use of polyphony from the liturgy led Palestrina and his Roman colleagues to write masses paraphrasing plainchant (or even treating it in chorale-like fashion); above all, however, they were careful to avoid polyphonic complexity that might obscure the liturgical text. Finally, while the organ accompanied the singing in most Roman churches, the model of the *cappella papale*, where purely vocal performance was traditional, suggested moderation in the use of instruments. Thus, while the Venetian school followed a course that was to lead to the concertato style of the next century, the stage was set in Rome for the concept of *stile antico*. However, the church music of Palestrina's successors at S Pietro also reveals clarity of declamation and the use of vertical sonorities found in the works of their Venetian colleagues.

Music printing, of which Venice was the main centre, soon reflected a demand for instrumental music. In 1507 a series of prints containing vocal pieces (mostly secular, but also sacred), dances and ricercares in lute tablature was started by Petrucci. A privilege granted to him to

publish keyboard music was assumed instead by Antico for his *Frottole intabulate da sonare organi* (Rome, 1517; see fig.3; printers always referred to all keyboard instruments as *organi*). The most famous performers and composers of lute music were Francesco da Milano and, later, Vincenzo Galilei; lute transcriptions of polyphonic works were performed by university students during the Renaissance. Organists were much more numerous, because of their church employment. Their music was sometimes printed in score to make performance by a group of instruments possible, but instrumental music was practised to an even greater extent simply by use of the vocal repertory; favoured instruments were recorders and viols (for which tutors were published) and the whole family of cornetts. A great variety of instruments, combining or alternating with voices, was also displayed in the spectacular *intermedi* performed between the acts of comedies or pastoral plays, the most famous of which were those given at the Florentine court in 1589 to celebrate a ducal wedding (fig.5). A remarkable 16th-century collection of instruments is still housed in the Accademia Filarmonica in Verona.

An intense theoretical activity often led to debate. The most heated controversy was between supporters of a tuning similar to just (or harmonic) intonation, which was first taught at Bologna by the Spaniard Ramos de Pareia (*b c*1440), and defenders (including Gaffurius) of the traditional Pythagorean system, better suited to the needs of monophony. The former were later joined by Zarlino (1517–90), whose works cover a much wider range of philosophical, historical, aesthetic and compositional problems. Ancient theory was often summoned in support of tradition and as a justification for daring harmonic experiments in the direction of the ancient genera; further, it also helped critics of the current polyphonic style to foster the ideal of a new, essentially melodic, expressive immediacy. Vincenzo Galilei (*d* 1591) was the most outspoken critic, and yet it is an over-simplification to see his theoretical and musical works, as well as the discussions held from about 1575 in the Camerata of Count Bardi in Florence, as prime factors of a stylistic change to which many other elements contributed. Many of Galilei's arguments – that polyphony obscured the perception of the text and that its imagery singled out individual words but lost sight of the real poetic message, so that its artistry reached no deeper than the ear – had been anticipated in the discussion on the fate of church music; his suggestion that music should emulate the intensity of reciting actors had precedents in such madrigals (often called *ariosi*) as aimed to recapture the pathos of popular singers of epic verse. In any event, emotional intensity was not the only issue. More difficult to explain was the ideal of a melodic spontaneity, which was not (as in successful *villanesche* and canzonettas) attained simply by playing on instruments all parts but one of a polyphonic piece, for the resulting vocal line did not have the poise and balance of a real melody. The latter depended, paradoxically, on deep-seated harmonic feelings and on the fulfilment of expectations aroused by its harmonic implications.

4. 17TH CENTURY. The new style 'invented' about the turn of the century by Giulio Caccini consisted of vocal melodies unconditioned by any contrapuntal interplay

and supported by a bass line that was subservient to them – the continuo – to be sparingly realized as full chords by the accompanying instrumentalist (possibly the singer himself). This combined the advantages of harmonic function and flexible adjustment to the expressive needs (*sprezzatura*) of the singer's rendition. Caccini correctly claimed that what is called accompanied monody was the same as the *stile rappresentativo* or *recitativo* used by Peri, his colleague and rival at the Florentine court, in the first operas (*pastorali tutte in musica*), *Dafne* (1598) and *Euridice* (1600; fig.6). In both cases the composer set out to 'represent' the emotions of characters reacting to dramatic situations, although those of Caccini's madrigals and arias were merely hinted at by the texts. In fact this kind of dramatic projection through a chamber recital, which had had many precedents in the polyphonic madrigal, now became typical and often adopted the striking, emotional harmonies of Peri's and Monteverdi's operas. In time this extremely popular genre, fostered by many composers, evolved into an even larger production of cantatas.

Operas, on the other hand (of which the recitative aspects are now given too much emphasis over the melodious singing, choruses and instrumental colour), were connected with infrequent court events. In Florence, where they began, there was often a reversion to spoken plays with *intermedi*, or to spectacles, 'tutti in musica', of a choreographic rather than dramatic nature, after the model set in the 1590s by Cavalieri. After the Mantuan performances that included Monteverdi's *Orfeo* and *Arianna* (1607–8), both court events, the lead was taken by Rome, especially with the custom instituted by the Barberini family, relatives of Pope Urban VIII (1623–44), of holding operatic performances in their palaces during Carnival. The opening of the first public opera house in Venice in 1637 was a turning-point; within a few years operas were offered from December to Lent, and again in the spring, by four or five theatres in Venice, while the custom quickly spread to Bologna, Milan, Genoa, Lucca and Naples, and even in Rome opera was given in semi-private theatres (against the will of various popes). Although the tradition of performance at court was never completely broken, opera in the 17th century was practised either as an entertainment in the academies (thus continuing the Renaissance tradition of music at such events) or in smaller centres, performed by touring companies in connection with local celebrations. Already in the Barberini operas the plots, drawn from Tasso's epic poetry or from saints' lives, had begun to expand and sharpen the distinction between recitative sections (in the modern sense) and self-contained arias and choruses. Later librettos, starting with Busenello's *L'incoronazione di Poppea* (1643) for Monteverdi, drew freely from the whole range of history, juxtaposing in a cavalier fashion highly dramatic moments, arbitrarily inventing amorous effusions and scenes of ludicrous comedy. The music, however, often succeeded in making all incongruities plausible with a flexible, far from formalized, handling of recitative and aria, the former attaining on occasion highly dramatic effects, the latter avoiding stagnation in the compelling drive of the plot. The most effective and widely performed operas were those of Cavalli (1602–76). Towards the end of the century a new ornamental style of singing led to the appearance of virtuosos who practised what became known as *bel canto*. At the same time the comic element disappeared from operatic plots, leading to the appearance of the intermezzo, performed by actors who were also singers, at the beginning of the 18th century.

6. Title-page of Caccini's 'Euridice' (Florence: Giorgio Marescotti, 1600)

Lesser genres, such as extended cantatas or serenatas, expressed their dramatic content through purely auditory means, as also did opera's sacred counterpart (usually given in Lent), the oratorio, born from the spiritual exercises of Philippine oratories, from which the genre acquired its name. Cavalieri's allegorical *Rappresentatione di Anima, et di Corpo*, fully staged in Rome at the Oratorio del Crocifisso in 1600, was an exception; more typical were G.F. Anerio's *dialoghi*, published in his *Teatro armonico spirituale* (1619), in which a choral narrative introduced the words of the main characters sung by soloists. This type, using vernacular texts, had a wide diffusion through the Philippine congregation, showing, however, a tendency to assimilate dramatic techniques from opera, with more emphasis on solo recitatives and arias and developing more complex plots. Giacomo Carissimi (1605–74), who wrote his works (*historiae*) on Latin texts with a greater display of choruses and instruments, represents a somewhat different trend established by the Jesuits. As a teacher at the Jesuit

Collegio Germanico in Rome, Carissimi had considerable influence on German composers.

In the oratorio, to a greater extent than in the opera, accompanied monody was often incorporated in the new *stile concertato* which had developed from earlier polyphony, giving much greater differentiation to the various elements and a pointed expressive and sonic distinction to each, be it a voice, an instrument or a choral or instrumental group. The *stile concertato* had had its first important representative in Venice with Giovanni Gabrieli (*c*1554–7–1612), followed by Monteverdi, who used it at first in sacred pieces (beginning with the Vespers of 1610) and later in a number of madrigalian works. Instruments tended to be more sparingly used in the Roman school, where the *stile concertato* often took the shape of large-scale polychoral pieces supported by organs, the most representative being those by Orazio Benevoli (1605–72). These stylistic trends also characterize much of the sacred music composed at this period.

The free play of harmonic feeling to which both accompanied monody and concertato music instinctively tended did not open the way to an immediate assertion of the so-called tonal system. In the first place, the new vogue for harmonic surprise based on chromaticism, used (and abused) for emotional purposes, had to take its full course. Composers still relied on elementary harmonic functions, or on such traditional basses as the romanesca and passamezzo, or on new ones, such as the descending Dorian tetrachord and its many variants. Whole compositions, sometimes the most dramatic arias, could be based on a ground bass of some sort. Only gradually did the precise feeling of how each chord related to the tonal centre of its key begin to take shape. It had become clearly outlined in the operas and oratorios of Alessandro Stradella (1639–82) and even more so in those of Alessandro Scarlatti (1660–1725) and in the instrumental works of Arcangelo Corelli (1653–1713), although theoretical treatises still continued to expound the system of the church modes.

Instrumental practice, increasingly flourishing and autonomous, may have played a greater part than vocal music in the development of modern harmony with a language richer in figurations outlining full chords. Furthermore, at least part of it had inherited the elementary but powerful tonal drive of dance music. The warm, brilliant sound of the new violins built by famous makers in Brescia and Cremona lent itself to accompanied monody in the form of solo sonatas with continuo, such as those of Biagio Marini (*c*1587–1663). Most instrumental music, however, belonged to the concertato type. Here, too, the variety of instrumental colours in Giovanni Gabrieli's canzonas in eight to 15 parts (published in 1597 and 1615) gradually gave way to an almost absolute prevalence of strings. A most successful combination proved to be that of two violins with continuo (the latter doubled by a violone or cello), the *sonata a tre* of which Corelli's opp.1–4 were to become the best-known and most influential examples. Corelli was the first significant composer to devote himself entirely to instrumental music. His works became the model for string compositions in the first half of the 18th century. In larger ensembles recourse was first made during the second half of the century to an interplay of a group of soloists and a larger tutti; from it developed the concerto grosso, best represented, once more, by Corelli, in his op.6, most of which had been composed for performance during Roman festivities at least 25 years before its publication in 1714. The *canzona per sonar* was a composition of some length, alternating contrapuntal sections and chordal or melodic ones, generally played during Mass; in time (by about 1650) such pieces were called sonatas and were more sharply divided into various movements, so called from their changing time signatures and tempos. Canzonas and sonatas were also used for secular entertainment, and many were given titles referring to the noble dedicatees for whom they had been played. Only late in the century was a distinction made (though seldom stated) between sonatas *da chiesa* and *da camera*, which was probably meant to indicate the inclusion in the latter of dance

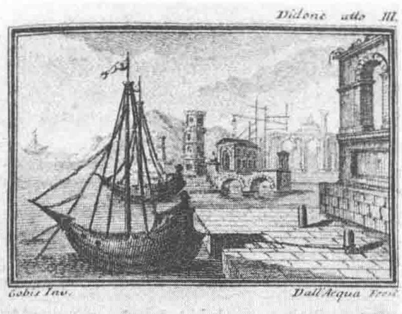
movements rather than works specifically destined for either church or chamber.

The distinction is hardly clearer in keyboard music, although the transfer of organ pieces to the harpsichord was much more likely than the performance on a church organ of partitas (variations) or dance suites intended for harpsichord. Composers of organ music reacted to the general trends of the time in peculiar ways. Expressive goals, analogous to those that had led to accompanied monody, were achieved in pieces of the toccata type, with their abrupt changes of texture, unexpected harmonic turns and, above all, the agogic flexibility of performance as emphatically recommended by Frescobaldi in his prefaces, especially that to his second book of toccatas. The organ had only limited potential as a concertato instrument; but contrapuntal pieces like the ricercare, elaborating on themes of more pointed individuality and secular flavour than those of the preceding period, slowly evolved towards the tonal fugue.

Theoretical writing was on the whole less intensive and polemical during the 17th century than in the Renaissance. It was essentially concerned with the practical consideration of problems of composition or performing practice; the works of Banchieri (1568–1634) and Cazzati (1616–78) are particularly valuable as a source of information about the views and criteria adopted by musicians in a time of rapid change.

5. 18TH CENTURY.



(i) General observations. 18th-century Italian music appears to have well-defined chronological limits: at one extremity stand Corelli and Zeno's operatic reforms, at the other the late works of Boccherini. This historical construct contains a measure of truth but is also misleading. The idea that the revolutions at the end of the 18th century released a spirit of artistic renewal was ideologically motivated: during the period of the Risorgimento critics condemned 18th-century music because of its hedonistic functions and as the expression of an élite class, and De Sanctis and Carducci judged Metastasian opera in the same light. Nevertheless, as early as the 19th century the music of Sammartini and 18th-century Venetian composers caught the attention of such theorists as Carpani, Gervasoni, Lichtenthal, Picchianti and Ruta. Asioli (1832) identified the counterpoint of Corelli and Marcello as instructive models of a style that was scholarly but not dry, but in doing so undervalued its purely aesthetic value. This view, a symptom of inadequate historic awareness, was repeated by Verdi's pupil, Emanuele Muzio, when he described Corelli's music as 'tough food to digest', but as a useful subject for study because it was 'full of science'.

The re-evaluation of 18th-century instrumental music was the work of the 20th-century musicologists Torchi, Chilesotti, Vatielli and Torrefranca, followed by the composers Casella and Malipiero. In contrast, the genres of oratorio and cantata, more concerned with a specific function, aroused no interest in an intellectual environment so heavily influenced by Benedetto Croce. In recent decades, however, research into 18th-century Italian opera has afforded greater insight into its codes of communication and its system of production. The definition of 18th-century Italian music as an abstract, stylized art, a hedonistic diversion for a society which the Treaty of Aix-la-Chapelle (1748) consigned to the margins of history, has thus declined.

Three broad categories of places where music was performed in 18th-century Italy can be identified: the public, private and ecclesiastical, which correspond in general terms to the three genres of opera, instrumental and chamber music (including cantatas) and liturgical music. There was an uninterrupted growth in the number of opera houses, which took on the character of civic institutions and became points of reference in the layout of a city. The old system of court theatres was progressively replaced by one of theatres run by impresarios for profit. Instrumental concerts ('academies') were mostly given in private homes; since it did not involve the commercial mechanisms of the theatre, instrumental music was the exclusive province of the upper classes. Cathedrals and their chapels were affected by the opera house: performers often worked both in church and the theatre, and the idiom of liturgical music grew increasingly similar to that of opera.

The three genres have in common a diffused habit of inattentive listening: it was only with considerable effort that the idea of listening to music as a work of art became established in Italy, and for this reason many musical compositions go no higher than the level of ornamental, extemporary and occasional work. The ephemeral nature

of musical expression entailed a high degree of improvisation in all three genres: from the opera house (where the singer improvised in the da capo sections of arias, and, as Giardini and Galeazzi document, orchestral players sometimes did likewise) to the church, where the organist had *carte blanche* to improvise, and private entertainments (in 1787 Hadrava describes an improvisation on 'composed' music, such as that by Mozart).

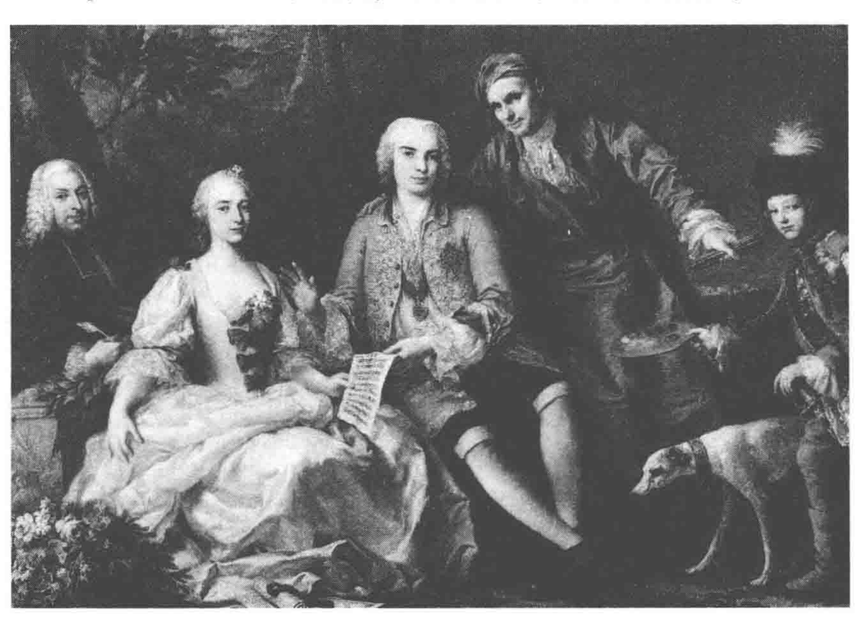
As the century progressed, music, without distinctions between genres, became the prevailing artistic expression in the daily life of the upper middle class: 'the Italians may, perhaps, be accused of cultivating music to excess' (Burney). The high rate of consumption led to greater conventionalism and periodic changes in taste: 'musical taste in Italy changes at least every ten years' (De Brosses, 256). With the spread of 'profit-making' opera houses, and the increased tendency to celebrate public occasions with music, the social range of consumers widened. This broadening of the social base of the 'leaders of taste' guided the choice of musical genres: the only really classless genre was opera, particularly comic opera after 1750. Although Stendhal, writing in 1817, still saw Italy as the land of music *par excellence*, this supremacy had diminished in the last decades of the 18th century, as can be seen in the exodus of players abroad and opera composers' search for success in the great capitals outside Italy.

In the middle of the century music started to be reconsidered aesthetically, no longer viewed as something ephemeral and occasional, but an art form with its own expressive worth. Algarotti, Tartini and Muratori, and later Baretti, Galeazzi and Carpani document the passage from a scientific concept of musical composition to an aesthetic one; from music as one of the liberal arts to music as one of the fine arts; no longer a craft (as Saverio Mattei was still maintaining in 1785), but an expression of character and *affetti*, a direct imitation of nature (Tartini/Algarotti).

(ii) Musicians' lives. Musicians were educated within the family circle, in the case of the professional musical families, or in the few institutional schools in Italy: these were the conservatories in Naples and Palermo (the famous *ospedali* for girls in Venice did not, with a few exceptions, prepare their pupils for a profession), the chapels of the great cathedrals like S Petronio in Bologna or, for 16th-century counterpoint, the Roman chapels and the Santuario della Santa Casa in Loreto. Lastly there was private teaching, the greatest example of which is provided by Tartini, 'teacher to all the nations', as well as the instances of Hasse with Scarlatti and Galuppi with Lotti. According to De Brosses (p.598), 'the best seminaries of *maestri di cappella* are in Naples. . . . For voices, the best school is in Bologna; Lombardy excels in instrumental music', and this is confirmed by Josse de Villeneuve (1756).

Naples, where the majority of Italian composers were educated, had four music conservatories: the Poveri di Gesù Cristo (closed in 1743), S Maria di Loreto and S Onofrio (which merged in 1797), and S Maria della Pietà dei Turchini. It is estimated that each conservatory had an average of about 100 pupils in a city of about 250,000 inhabitants. The subjects taught were counterpoint and figured bass (*partimenti*), while operatic and instrumental composition were learned orally and by imitation, a distinction between the educational and the professional (theory and practice) that remained unchanged until Verdi's day.

After completing his education, the young composer could make his début with short comic operas, liturgical pieces, or by writing arias for insertion into operas by others. After he made himself known, he could aspire to *opera seria* and the great theatres: the determining factors at this stage were the family ties and contacts of his own teacher. However, it was difficult to guarantee an income and regular work in writing for the theatre. Instrumental composition offered the composer two lucrative possibilities: a dedication to a member of the nobility, rewarded with a one-off gift, or in private sales of an independently printed work. Another possible employment was as *maestro al cembalo* (harpsichordist) in a theatre, as was probably the case with the young Galuppi at the Teatro S Angelo in Venice. As well as these personal sources of income a composer usually also held a permanent post in service to the nobility, in the church, or as a teacher. In these cases, too, the remuneration was modest. A composer in the mid-18th century being thus active in all genres meant that there was a continual stylistic cross-fertilization between them, a situation criticized by Tartini.



There are various examples of singers being born into professional musical families, such as the Mingotti, Ristorini, Baglioni and Laschi families. The greatest number of singing teachers is recorded in Bologna, although no institutional school of singing with a local stylistic identity was ever established there. In Rome the Collegio Germanico and the Seminario Romano, both Jesuit foundations, exported their pupils all over Europe. Because of the papal ban on women performing either in church or in the opera house, many castratos, often from humble backgrounds, began their careers in Rome.

Singers who did not succeed in entering the extensive operatic scene, which had its centre in Bologna, contented themselves with posts in the cathedrals. The first performers to reap the benefits of the nascent star system were singers, on whom every category of musical performance depended; they were thus the first element operatic administrators had to consider, and they were the highest paid, commanding up to ten times the fee of the composer. Later on, the composer also entered the open market: for example, Piccinni in 1770 could choose where to work according to the pay on offer. This was the point at which the composer became a cornerstone in the mechanism of opera production, and began his social ascent.

(iii) Opera. Opera was the most widespread artistic form; no other cultural expression had the same capacity to reflect social life, the same cultural prestige or comparable turnover. Opera as a whole had a double social and cultural function: its social function was as an instrument of moral and civil education (Zeno), the vehicle of the dominant ideology (Metastasio), and as social critique (comic opera); its cultural function was to disseminate 'high' culture and language and to convey classical subjects or, later on, otherwise unknown ones from fiction. Hence Strohm's assertion (1991, p.19) that 'Italian opera, good and bad, was a school for the nation, precisely as cinema and television are today'. At the beginning of the century opera divided into two genres: *opera seria* (*dramma per musica*) and comic opera (intermezzo, *commedia per musica*, *dramma giocoso per musica*, *opera buffa*). This division made it possible for opera to be widely disseminated and carry out multiple functions. The two genres constituted two alternative systems with mechanisms of production, performance and reception that rarely intersected, but which influenced each other to a great extent in dramaturgy, versification, musical language and structure.

Max Fehr and Hermann Abert were the first to recognize that the men of letters rather than the composers played the leading role in the 'reform' of 17th-century Venetian opera into the rational *dramma per musica*. The first reformers, besides Zeno, were Silvio Stampiglia, Girolamo Frigimelica Roberti, Antonio Salvi and Pietro Pariati, who all shared the same Arcadian ideals. Another member of the Accademia dell'Arcadia was the poet Metastasio, the most pervasive figure in the history of 18th-century opera.

The first Arcadian operas were created in Venice: *La forza della virtù* by Domenico David to a libretto by Zeno (1693), and *Gli inganni felici* (1695) and *Lucio Vero* (1700) by C.F. Pollarolo, also to librettos by Zeno. At

10. 'Self-portrait with Friends': portrait by Jacopo Amigoni, 1750–52 (National Gallery of Victoria, Melbourne); (from left to right) the librettist Pietro Metastasio, the soprano Teresa Castellini, the castrato Farinelli (holding his canzonet 'La Partenza'), the artist, and Farinelli's dog and page

first literary reform had little influence on the music: Alessandro Scarlatti, Giovanni and Antonio Bononcini and Gasparini continued the 17th-century legacy of contrapuntal writing, concertante instrumental parts, and arias accompanied only by basso continuo. The spread of Arcadian and rationalist opera coincided with Metastasio's first libretto (*Didone abbandonata*, 1724, Naples) and the first operas by the composers of his generation: the Neapolitans Porpora, Feo, Pergolesi, Leo, Hasse and Vinci (the first 'classical' composer, according to De Brosses, Algarotti, Burney and Grétry), and the Venetians Albinoni, Orlandini, Caldara and Vivaldi. The anti-Baroque reforms of Zeno and Metastasio covered a number of elements: the revival of the Aristotelian unities, the elimination of comic elements, marginal episodes and spectacular stage effects, and a reduction of the number of scenes from 60 or 70 to between 20 and 30. The composition followed the dramatic form, divided into repeated sequences of recitative (or multiple recitatives) and da capo aria. The recitatives, generally dialogues for up to five characters, set up the motivation for the subsequent aria, in which the character stepped outside the real time of the action for a personal, reflective reaction. At the end of the aria, the character left the stage. This recitative and aria structure remained dominant until 1770 and suited the 'tyranny of the text' over the music. Such a word-centred concept was in line with the classical idea of tragedy in which events did not take place on stage but were referred to by characters who brought their personal reactions on stage instead. The 19th century's charges against Metastasian opera derived in large part from an inability to understand these assumptions, which have their roots in the Enlightenment.

During the Metastasian period (by extension, from 1700 to 1770) only the drama was a work of art, the music having a simple auxiliary value. The 'author' was thus the dramatist, while it was the responsibility of the singer to create the performance; the composer had a subordinate role, vaguely comparable to that of the modern-day director. This is the reason why in 18th-century Italy it was the libretto, not the score, that was printed, and on the title-page, as on the theatre poster, the name of the composer was not given (in 1842 the title-page of the libretto of *Nabucco* still gave only Solera's name, not Verdi's). This also explains the practice of continual resetting of the same Metastasio librettos: *Didone abbandonata* was set to music about 60 times; *Olimpiade* about 50, *Achille in Sciro* about 30. *Opera seria*, at least until the last quarter of the century, was an established genre and the tendency was for each musical and dramatic realization to be a one-off, a costly undertaking incompatible with the emerging commercial nature of opera.

During the 1750s even faithful supporters of Metastasio such as Hasse and Jommelli reacted against the 'tyranny of the text'. At this time the text had a conservative function and a high prestige stemming from tradition, while the music had a contrasting evolutive function: arias broke free from the da capo form, the overture acquired greater interest (as in Piccinni's *Catone in Utica*), and accompanied recitative became predominant (Traetta, *Ifigenia in Tauride*). Sacchini, Traetta (*Antigona*) and Salieri (*L'Europa riconosciuta*) show in different ways the influence of French *tragédie lyrique* in the increasingly spectacular nature of opera and the greater use of chorus and orchestra. Another evolutionary impulse came from *opera buffa*, especially in the use of ensembles: in *Artaserse* (1749) Galuppi brings together in a final quartet what the Metastasio original had as a sequence of five separate arias. Dance became a source of new subjects: with Noverre and Angiolini in Milan from the 1770s onwards, the 'ballo pantomimo' proved more popular than opera, prompting lamentations from Metastasio. Of all the 18th-century trends in opera, only the reform of Gluck and Calzabigi had no great effect in Italy, except in those states with Habsburg connections.

In the last third of the century many new librettists (no longer autonomous playwrights like Metastasio) came to the fore, including Calzabigi, Da Ponte, Coltellini, De Gamerra, Sografi and Verazi. During this phase it was the composers who made operatic history: Anfossi, Sacchini, Paisiello, Cimarosa, Tritto, Zingarelli (the 'late Neapolitans'), Sarti, Salieri, Paer and Mayr. Metastasian opera was based on a range of conventions which were utterly clear to his contemporaries: the post-Metastasian phase (1770–1800) was multiform, sometimes experimental, but the tendency was towards an acceleration of the dramatic rhythm. New subjects and a new vocabulary implied new metres, with frequent breaks and a preference for lines with an even number of syllables. New types of scene were introduced (dungeons, oracles, executions, cemeteries, eerie forests, ghosts and skeletons), and there was greater dependence on spectacular effects and the use of the chorus even during arias (Traetta's *Ifigenia in Tauride*, Paisiello's *Elfrida* and Cimarosa's *Gli Orazi ed i Curiazi*). The orchestra acquired greater importance: in his *Nitteti* (1756) Metastasio had already imagined the 'din of tumultuous symphonies' in the battle scene. The number of arias was reduced and the scenes were extended: sequences of solo scenes were transformed into ensembles (like the final sextet of Cimarosa's *L'olimpiade*): this brought about a reduction of exit arias, and Paisiello, for example, wrote only four exit arias in *Elfrida* and none at all in *Elvira*. The same composer reached a new level in *Pirro* in 1787; contemporary periodicals (*Gazzetta Universale* and *Gazzetta Toscana*) and direct documentation (G.G. Ferrari, Hadrava) reveal how much the dramatization of the solo scenes and the elaborate ensemble finales were admired. Singers were asked to interpret with greater realism and fidelity, as Burney documented when he praised the Florentine Guarducci for his expressivity and because he 'adds but few notes' to the melody.

Comedy, which had been banished from opera by Zeno's reform, began a history of its own. The first comic operatic forms were the *commedia per musica* and the intermezzo, neither of them popular art forms – indeed, in some cases, they were quite erudite – and they shared in the same anti-Baroque reaction as Zeno's reforms. The intermezzo, which grew out of the comic scenes in 17th-century opera, sprang from collaborations between the librettist Pariati and Gasparini and Albinoni and the *buffo* bass G.B. Cavana in Venice (the first printed librettos date from 1707). Cavana is responsible for the intermezzo being exported from Venice to Naples, where it was taken up by Scarlatti, Leo, Sarro, Vinci, Hasse and Pergolesi. The most frequently performed intermezzo of the century was *Bacocco e Serpilla* by G.M. Orlandini (1715, Verona). But posterity remembers the intermezzo (suppressed in Naples by royal decree in 1736) only by Pergolesi's *La*

serva padrona (1733, Naples), which sparked the QUERELLE DES BOUFFONS when it was performed at the Académie Royale de Musique in Paris in 1752. There were some forward-looking elements in the style of a typical intermezzo: music which stays close to the text, short, unadorned vocal phrases, a simple plot with two or three characters, a recognition scene set as a duet, and middle-class, popular subject matter.

The *commedia per musica* had a more complex genesis: in Naples, after the private experiment of *La Cilla* (1706), the Teatro dei Fiorentini organized the first public season of *commedeje pe' museca*, all in Neapolitan dialect, in 1709. There were companies active in Rome performing Neapolitan *commedie*, and in 1717 Florence saw a scholarly attempt to revive the 17th-century 'civili e rusticali' operas of Moniglia and Villifranchi, while the librettist, impresario and composer G.M. Buini had a company working in Bologna and Venice. Only Neapolitan comedy, translated into Italian, went on to long-lasting success; the *buffo* bass Francesco Baglioni was responsible for the genre's decisive step forward in popularity, in Rome. Here in 1729 there were performances of *La costanza* (from Vinci's *Li zite 'ngalera*) and *La somiglianza* (from Leo's *Lo simmele*) at the Teatro Capranica; in 1738 *La finta cameriera* (Latilla) and *La commedia in commedia* (Rinaldo di Capua) were given at the Teatro Valle. *La finta cameriera* had been performed more than 20 times in northern Italy by 1750. Neapolitan *opera buffa* continued on its way in Florence, where it was performed by the singers Pertici, Laschi, Brogi and Querzoli. Goldoni was living in Florence until 1748; when he returned to Venice his collaboration with Galuppi produced the two examples of *dramma giocoso per musica*, *L'Arcadia in Brenta* (1749; fig.11) and *Il filosofo di campagna* (1754), the first pan-Italian comic operas.

The golden age of *opera buffa* lasted from 1770 until about 1820, significantly, from Piccinni to Rossini. Although more ambitious in scope, the genre has similarities with the intermezzo: the various characters are stylized in music that has a new, imitative quality; each text was set only once, and operas were frequently revived, but the text was not printed, as yet; ensembles are used and secco recitative retained in response to the need to present the action as succinctly as possible; multiple musical forms and linguistic registers are employed, from dialect to Latinate Italian for parody purposes, and a range of vocal writing from parlando to the decorative melismas of *opera seria*; many more voice types are used, and the leading role is always taken by a *buffo* bass (the famous performers were G.B. Cavana, Gioacchino Corrado, Filippo Laschi, Pietro Pertici, Francesco Baglioni and Antonio Lottini) while the higher voices are expected to be more actors than virtuoso singers. In 1760 *La buona figliuola* by Piccinni, to a libretto by Goldoni, marked the change to a pathetic, sentimental genre; the success of this work can be measured both in the influence it had on *opera seria* and in the dissemination of some of its techniques, such as the rondo finale.

Venice was the centre of the operatic market both for its high rate of consumption and because it provided the link to posts in northern Europe; Bologna was where the agencies that looked after the engagements of singers, composers and designers were concentrated, and Naples was the centre for the training of operatic composers. This division, already clear to De Brosses (1799) and Archenholz (1787), reflects the system of Italian opera production, based not on permanent service, as in the courts of northern Europe, but on itinerant singers, composers, designers and choreographers. The mobile work force was coordinated by the impresarios, who belonged to the urban middle class, and who directed the theatres with public and private money. The great cities had many theatres: usually the political authority controlled and financed the leading theatre, devoted to *opera seria* for celebrations and during the Carnival seasons (averaging two new operas a year), and occasionally a minor theatre, giving *commedie* or *opera buffa*; these two organizations had the characteristics of civic institutions. For example, in Naples the leading theatre of S Bartolomeo (S Carlo from 1737) was linked to the Fondo; in Milan the Ducale (La Scala from 1778) was associated with the Cannobiana; in Turin the connected theatres were the Regio and the Carignano, and other financed theatres were found in Rome, Genoa, Bologna, Florence, Parma

11. Scene from Carlo Goldoni's 'L'Arcadia in Brenta', set by Galuppi in 1749; engraving from 'Opere teatrale' (Venice: Zatta, 1788–95)

and Reggio nell'Emilia. Many smaller theatres were not subsidized and were in competition with one another: the Fiorentini and Nuovo theatres in Naples, for example, and many others in Venice, Rome, Bologna and Florence; smaller cities, finally, were connected to the dominant centres by the impresario network (in 1785 about 80 cities had a theatre). The private minor theatres favoured comic opera, which meant that impresarios could economize on the production and choose operas with a wider audience appeal. In these cases it was more economical to revive tried and tested scores. The smaller business corresponded to more moderate payment to the singers; *opera buffa* was performed by more or less stable companies when the market in *opera seria* was already operating on an individual basis (this could be a practical reason why there are more ensembles in comic opera). The business of the leading *opera seria* theatres involved greater outlay, but survival was guaranteed by government support: the business of the minor theatres was subject to the risks of the free market: this contrast reveals another aspect of the bourgeois nature of *opera buffa*.

In *opera seria* the long survival of castratos (Guadagni, Farinelli, Senesino, Caffariello and Gizziello) and the stardom of the great virtuosos (Bordoni, Gabrielli, Cuzzoni, Raaf and Carlani) meant that the profession never became one transmitted from generation to generation (in fact, singing was considered extremely specialized); in comic opera, in contrast, skills were passed down through entire family trees (descendants of the Laschi and Baglioni families appeared in the first performances of Mozart's *Le nozze di Figaro* and *Don Giovanni*). The abstract, idealized tone of *opera seria* allowed unnatural voice types to survive for quite some time; the realistic, middle-class tone of *opera buffa* required only natural voices and the entire range of voice types to differentiate between the characters.

When it first appeared, comic opera was musically and dramatically progressive, but the financial basis on which the opera house was organized meant that within 30 years the situation was reversed. Being less exposed to market forces, *opera seria* had greater freedom to experiment and develop, while *opera buffa*, subject to public approval, maintained its original features up to the 19th century; for this reason, the eclecticism of *opera seria* from the 1780s onwards (in the work of Paisiello, Sarti, Paer and Mayr) enabled it to develop continually, while the growing success of *opera buffa* meant that it became a conservative genre.

(iv) Sacred music. Foreign travellers such as De Brosses, Burney, Coyer, Lalande and Hadrava were struck by the amount of music performed in Italian churches. Burney, in particular, paints a picture of much sacred music, often of poor quality, being composed and performed for a non-class-specific audience. The principal causes for its weakness were the quasi-operatic character of the music, and the demands of composing quickly to order. Besides this 'consumer' output, the visitors also noted a rigorous 'Palestrina' style of strict counterpoint with or without instrumental accompaniment, unconnected with consumption or changing taste. Burney in 1770 indicates its use not only in Rome in the famous Cappella Sistina and Cappella Giulia and at the Chiesa Nuova, but also in Florence and Venice.

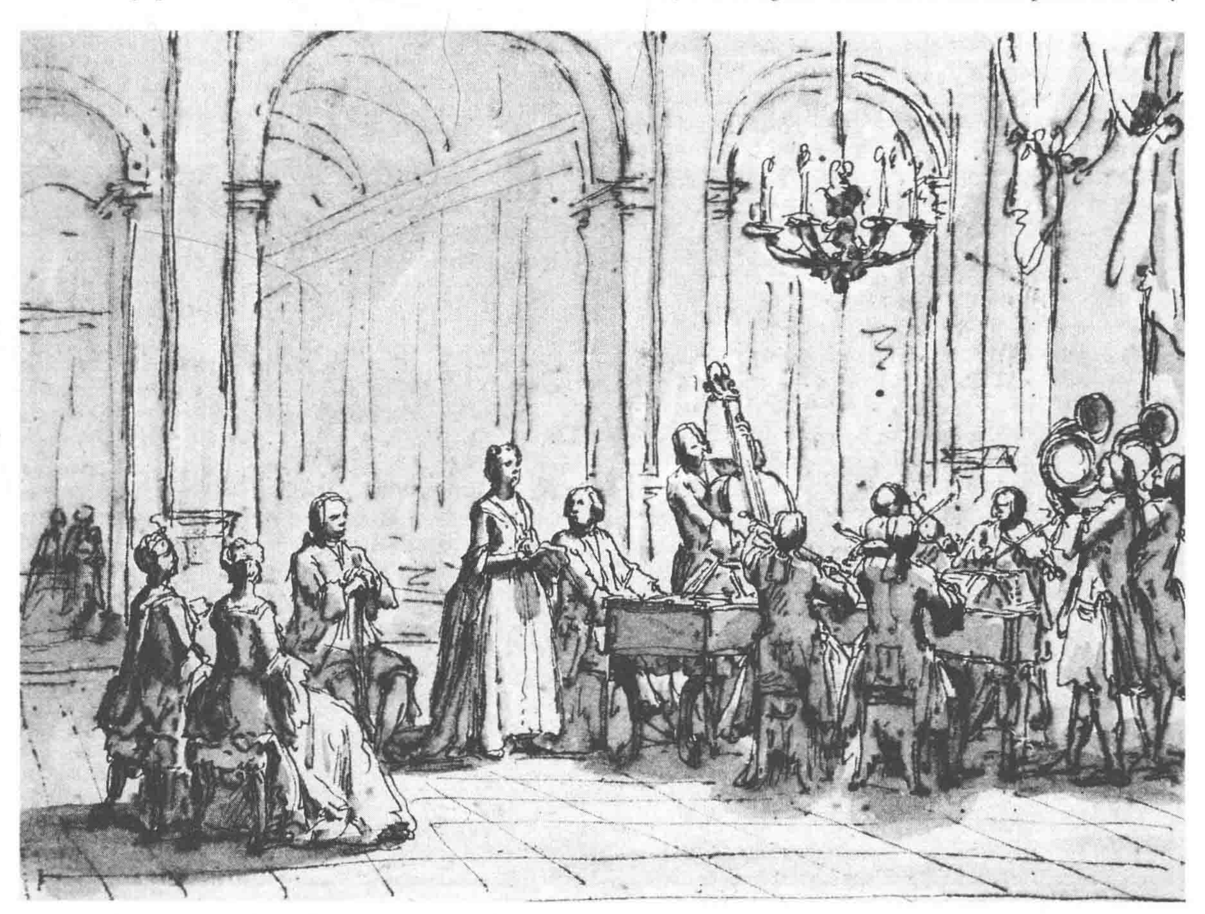
The stylistic colonization of sacred music, in particular of oratorio, by opera reflects the latter's economic dominance. The connection between the two is suggested by the title of Arcangelo Spagna's essay *Oratorii overo melodrammi sacri* (1706), in which he proposes that the lessons of contemporary opera should be taken on board to alleviate the monotony of oratorios. The oratorio of the early 18th century was divided into two sections with a total of 400 lines, split into recitatives and da capo arias. The most active librettists in Italian oratorio, apart from those who were also patrons, Benedetto Pamphili and Pietro Ottoboni, were Stampiglia, Zeno (from 1718) and Metastasio (from 1730).

Rome was the centre of oratorio: the Oratorio del Crocifisso, where Alessandro Scarlatti worked and Corelli was leader of the violins, was the home of oratorio in Latin until 1710; other locations were S Girolamo della Carità, S Maria in Vallicella, Chiesa Nuova, Seminario Romano Gesuita, Collegio Clementino, the Confraternita della Morte and the Confraternita della Pietà dei Fiorentini, as well as the many noble homes which hosted performances of oratorios and cantatas in Italian by Alessandro Scarlatti, Handel and Caldara. From 1720 Durante, Leo, Porpora, Jommelli, Piccinni, Cimarosa, Paisiello, Anfossi and Zingarelli worked at the Oratorio dei Girolamini, Naples; here a debate on sacred music saw the supporters of Durante ('durantisti'), who wanted to distinguish between modern composition and the style of Palestrina, line up against Leo's supporters ('leisti') who looked instead for a fusion between the two. In Venice oratorio continued to be in Latin, cultivated first by Lotti, Gasparini and Vivaldi, then by Bertoni, Sacchini and Galuppi. In Bologna, the second papal city, Vitali, the Predieri family, Perti and his pupil Giovanni Battista Martini provided works for the cathedral of S Petronio and the academies: degli Unanimi, degli Anziani and delle Belle Lettere. Sammartini and Marchi worked for Milan Cathedral, where in 1724 there was a performance of the composite oratorio *La calunnia delusa* by ten local composers, in the manner of the operatic pasticcio. There is documentation of the fashion for such composite oratorios in Florence as well.

In the mid-century the papacy also made concessions to the prevailing operatic style: Pope Benedict XIV's encyclical *Occasione imminenti Anni Sacri* (1749) hopes for a middle way 'inter cantum ecclesiasticum et scaenicas modulationes'. Teachers like Durante and scholars like Padre Martini safeguarded the strict Palestrina style. In his polemic with Eximeno, Martini takes Pergolesi's *Stabat mater* to task for paying little attention to sacred style, and in so doing Martini demonstrates an abstract idea of strict counterpoint that is at a remove from the actual music, and thus anachronistic.

(v) Instrumental music. For a long time instrumental music was also held to be a functional adornment which could be altered according to the occasion. The composer did not yet consider his own work to be an absolute 'text'. The evidence for this lies in the details of for whom, and for what occasions, sonatas or concertos were composed: Corelli for private celebrations of Roman patrons, Vivaldi to provide music for teaching, Tartini for the solemn functions at the basilica of S Antonio in Padua, Sammartini 'for the entertainment of those citizens who for amusement come to the ramparts [of the Castello Sforzesco in Milan] on summer evenings' (Carpani). In the middle of the century there was a reaction against the predominantly lightweight nature of instrumental music in the period:

Algarotti heard 'motives' and 'subjects' derived from Petrarch in Tartini's works; Tartini himself attributed to instrumental musical expression the natural imitation of 'characters' and 'affects', often clarified in short Metastasian verses placed at the head of the piece of music. Despite their differences, the two attitudes indicate the movement from a scientific concept of music (applied science) to the aesthetic idea (expressive fine art).



At the beginning of the century Rome and Venice were the leading centres: Burney saw in the Venetian school around Vivaldi (Albinoni, Alberti and Tessarini) 'a light and irregular troop'; on the other hand, the Roman school formed by Corelli (Locatelli, Geminiani and Valentini) provided 'the greatest performers and composers for the violin which Italy could boast during the first 50 years of the present century'. Historical distance, however, shows a proximity between the two, encouraged by the Borghese and Ottoboni families. In 1905 Schering established Corelli's thematic influence on Vivaldi; he saw Vivaldi's op.3, *L'estro armonico*, as an eclectic collection embracing both conventional Venetian elements and contemporary Roman elements taken from Corelli's pupil Valentini. There were two responses to Corelli's position as the archetype: for some his work was a model from which to develop according to the composer's own sensibilities: these include Vivaldi, Veracini and Tartini. Others took a more conservative approach and followed the Corellian forms of sonata and concerto to the letter; examples of this are his pupil Geminiani, Locatelli and Handel.

The basic compositional element for Corelli is variety, the juxtaposition of contrasting elements. The op.6 collection of concerti grossi brings together paratactic elements written at different times and on different occasions, assembled as constructional building-blocks according to the basic criterion of contrast (counterpoint–harmony, tutti–concertino, cantabile–virtuosity, slow–fast, *sonata da chiesa–sonata da camera*).

While the form of the Corelli sonata with a prelude and two or three movements spread quickly to the Venetian school (Caldara, op.2, 1699; Albinoni, op.3, 1701), there are some differences between the two schools when it comes to concerto writing: the make up of the ensembles is different and Vivaldi tended to establish a uniform style of writing in five parts (principal violin, first and second violin, viola and cello/basso continuo). The concerto for one or more soloists was developed much more in Venice, and the Venetians reduced the formal variety of the Roman concerto to the form Allegro–Adagio–Allegro.

The Corelli model was disseminated not only through his influence in Venice but also by his pupils: Locatelli and Geminiani brought the Italian concerto grosso to the Netherlands and England, Somis (in Rome from 1703) began the Turin school of violin playing which led to Giardini, Pugnani and Viotti, and lastly, for Tartini the starting-point was a Roman source in a Venetian manner.

It was Tartini, with his work after 1735, who exceeded the bounds of the Corelli tradition. In his concertos for violin and strings the three movements are planned tonally

12. Musical gathering in a palazzo: drawing by Giuseppe Zocchi, pen and ink with wash, mid-18th century (Galleria degli Uffizi, Florence)

and have four tutti sections alternating with three solo interventions. Tartini's sonatas, on the other hand, follow a scheme of increasingly fast tempos (Lento, Allegro, Vivace), and are in a two-part form: tonic-dominant and retransition. The slow movements demonstrate the 'instrumental cantabile which constitutes the real achievement of Tartini's art' (Petrobelli).

De Brosses (1799), while recognizing Tartini's eminence, had a high opinion of the Lombard instrumental school, which benefited from the region's political links with Vienna. There were many composers active in Milan, with G.B. Sammartini at their head, who wrote 'sinfonie' (works for four-part strings, also known as 'ouverture' or 'sonate'): Brioschi, Scaccia, Giulini and Lampugnani (who also composed operas). Sammartini's sinfonie, from the 1740s, constitute a model which J.C. Bach, Boccherini, Haydn and Mozart must have looked to. The key to Sammartini's mature symphonic style is rhythmic organization and his ability to maintain an intense musical flow giving rise to continuity of structure: this gives his style an eminently logical and dynamic structure which is also to be found in Tartini, distinct from the static-architectural conception of the late-Baroque concerto. In his *Dictionnaire de musique* (1768) Rousseau signals Tartini as an exemplary composer of Adagios, Sammartini of Andantes and Locatelli of Allegros.

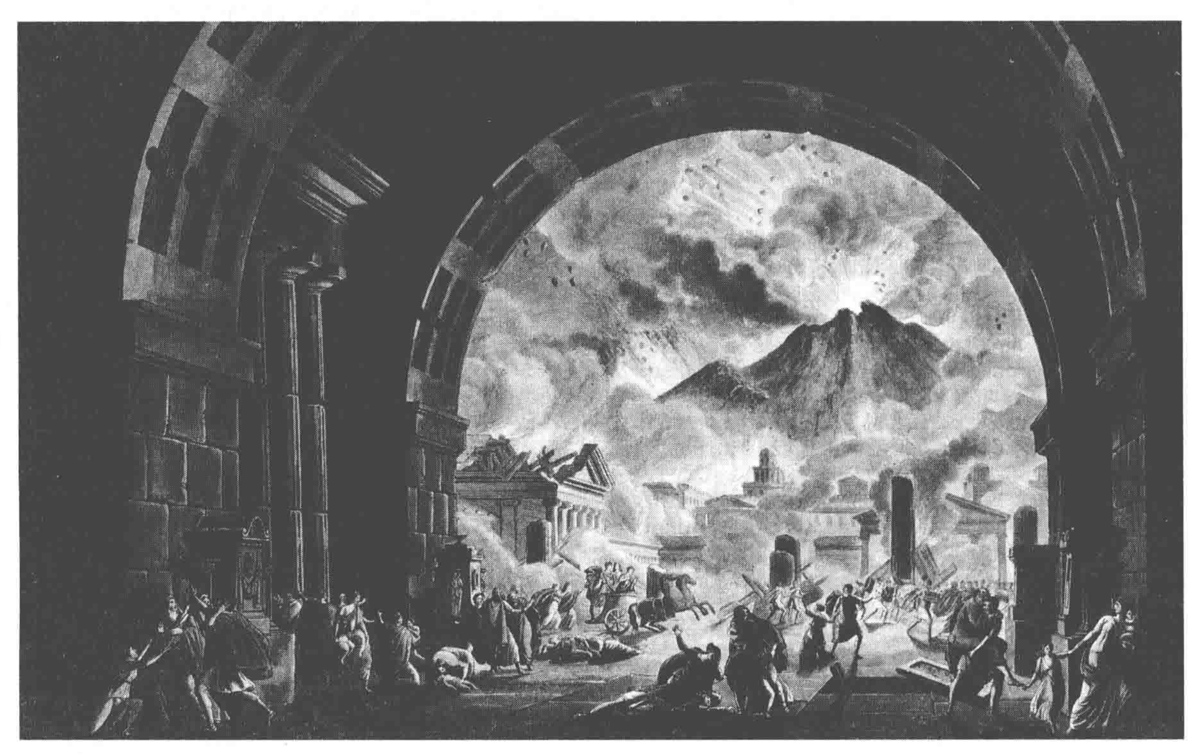
With Boccherini the diaspora of Italian instrumentalists became evident. Boccherini sums up the history of Italian instrumental music: from the neo-classical composure of Corelli assimilated during his student year in Rome (1757), to the Tartini style which he came to know through his teacher G.B. Costanzi and his collaborators Nardini and Manfredi, all pupils of Tartini, and the symphonic style of Sammartini, with whom he collaborated in person in 1765. Boccherini unites this Italian legacy with an eclectic international experience that ranges from Gluck to Gossec to the Mannheim school. But his assimilation of such elements was consciously directed towards a 'stylistic originality' (Degrada) that would support his authoritative role and individual creativity ('I would not be Boccherini if I had written as you advised').

Keyboard composition shows less vitality. The harpsichord was used principally to realize basso continuo, as can be read in the treatise *L'armonico pratico al cimbalo* by Gasparini (1708) and in Burney's documentation (1771). While Zipoli, organist of the church of the Gesù in Rome in 1716, and Durante introduced a distinction of timbre and idiom between organ and harpsichord, this came to fruition only in Domenico Scarlatti's sonatas, a personal development which has few connections with the Italian experience.

In 1711 in the *Giornale de' Letterati d'Italia* Scipione Maffei announced the construction of the first pianoforte by Bartolomeo Cristofori, harpsichord builder to the grand ducal court of Tuscany; but the new instrument was slow to become established. Sonata composers in the Venice area, Pescetti, Platti, Alberti, Galuppi, Paganelli, remained tied to harpsichord thinking. Some melodic ideas, however, and a broad use of functional dynamic accompaniments to suit the new melodic manner (the 'Alberti bass') show some evidence of interest in the new instrument. Here we can see a model for that 'singing Allegro' which became widespread in Europe for several decades. The Neapolitan school shows individual features in keyboard music too: Rutini, Paradies and Vento became famous abroad in particular (in England especially) more as harpsichordists than as opera composers. One of the flood of Italian composers who travelled to London was Clementi, and it was due to him that the piano became completely independent from earlier instruments. His sonatas op.2 (1773) display a modern, independent thematic style while introducing a whole range of pianistic techniques which remained in use up until the time of Schubert.

6. 19TH CENTURY.

(i) Opera. The multifarious activities of the previous century slackened at the beginning of the 19th and concentrated on musical theatre, where a code of communication between the composer and the Italian audience was firmly established. Whereas in the rest of Europe Romantic aspirations were expressed through instrumental music, in Italy this spirit was entirely manifested in opera; in fact the *melodramma* mirrored the behaviour of Italian society, in the manner of the novel in France, England and Russia. The middle classes began to rule the country even at the level of musical life, and publishers (such as Ricordi in Milan) and impresarios (such as Barbaia, Jacovacci, Lanari and Merelli) were the arbiters of operatic life. There was no place in the new century for a learned scholar like Padre Martini; his heirs, Padre Mattei at Bologna, Bonifazio Asioli at Milan and G.B. Baini at Rome, were restricted to a narrower sphere of activity. Men of culture were less important, while the clever impresario (often of humble origins) and the efficient publishers grew in power as they began to employ the medium of newspapers or new industrial techniques. Revolutionary opera, with its contemporary social implications, had little following in Italy. In his preface to the libretto of *La congiura pisoniana* (1797, Milan), F.S. Salfi presented an opera that aimed at 'instruction', at 'the heart' as well as 'the ear'; but such purposes would have required a freer form like the *opéra comique* or the Singspiel, foreign to taste in Italy where opera sung from beginning to end was a deep-rooted tradition. The revolutionary storm shipwrecked many composers of the old school. Cimarosa and Paisiello led turbulent lives under revolutionary and Bourbon governments, and the peaceful life of the second half of the 18th century ended in a period of great confusion. Significantly, after starting conventional careers in Italy, the two greatest Italian composers of the age, Cherubini and Spontini, worked abroad and wrote operas in foreign languages. At the same time, at least in northern Italy, the scene was dominated by a foreigner, Simon Mayr, who introduced a type of serious, carefully orchestrated opera influenced by Gluck.



The Restoration period was brightly illuminated by Rossini, whose star rose in 1813 just as that of Napoleon was about to set. Rossini's comic operas perfectly mirror the 'average Italian', with his disillusioned view of existence and his refusal to accept extreme solutions; similarly, the distinction between the Neapolitan and Venetian schools, between south and north, ended after 1815, when Barbaia summoned Rossini to Naples for *Elisabetta, regina d'Inghilterra.* As his operas were produced throughout Italy, many composers such as Mayr, Pietro Generali and Nicola Vaccai, who a few decades earlier would have scored a deserved success in their respective centres, were eclipsed by Rossini; those

who, like Pacini and Mercadante, competed with Rossini, Bellini and Donizetti on the one hand, and Verdi on the other, suffered even more from the comparison.

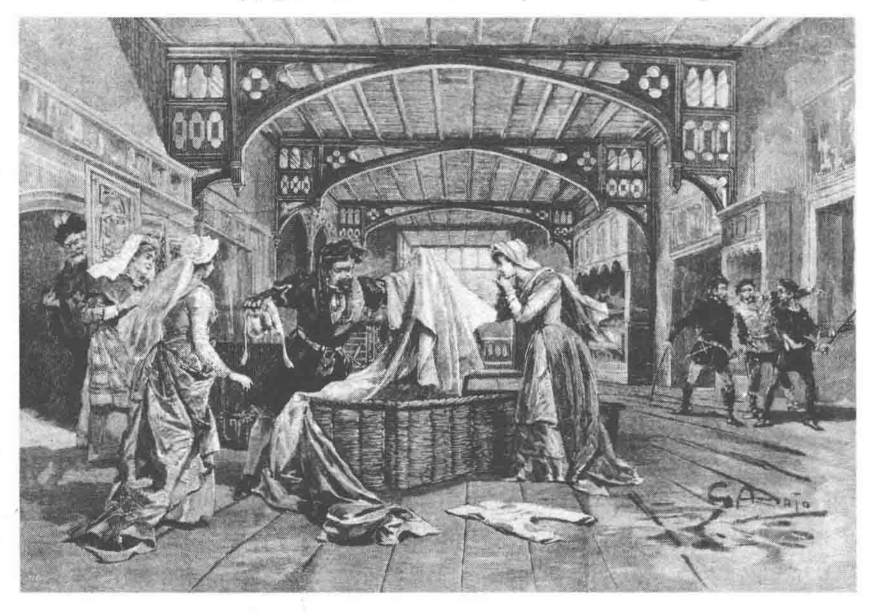
The musical unification of the country achieved by Rossini soon bore fruit; Bellini, a Sicilian, triumphed in Milan, while Donizetti, a Lombard, conquered Naples and Rome. Italy seemed smaller and more united, its boundaries increasingly connected by modern means of transport, its roads travelled by political exiles from one end of the country to the other. The number of major theatres was smaller than in the 18th century, but their prestige grew in inverse proportion, and La Fenice at Venice, La Scala at Milan, the Pergola at Florence, the Apollo and Argentina at Rome and the S Carlo at Naples were renowned throughout Italy. The exportation of Italian music, checked by the flourishing Romantic movement at the beginning of the century, was revived by Rossini; connections with Paris were renewed, and Bellini, Donizetti and Verdi followed in Rossini's footsteps, while for nearly the whole of the century France acted as the channel through which English and German literature reached Italy.

Italian opera, though still based on the supremacy of the voice, was no longer a self-sufficient and united world. It had to adapt itself to Romantic ideals. One of the first results was the waning popularity of comic opera after the peak reached by Rossini. Works in the style continued to be written (for instance by Valentino and Vincenzo Fioravanti at Rome and Naples), but after Donizetti's *L'elisir d'amore* (1832) the next comic masterpiece in Italy was Verdi's *Falstaff* (1893). Meanwhile new sources were discovered in European fiction and literature and particularly in English history (after the downfall of Napoleon such subjects became very popular); they were treated with a modified form of Romanticism, as for instance in the librettos of Felice Romani, who remained faithful to classical rules of plot construction. However, a new feeling for specific environment and a new interest in the development of the emotions produced new forces in opera, directed essentially towards the creation of dramatic tensions by musical means. Principally in pursuance of this aim, the plots drawn from novels were reduced to stock situations, allowing the music to come into its own. Significantly, no major composer set Manzoni's *I promessi sposi*, the greatest Italian novel, whose complexity of events and non-tragic dénouement found no echo in operatic forms.

Though intrinsically less perfect than his comic works, Rossini's serious operas contained greater potential for development. A fine thread connects Piccinni's Cecchina and Paisiello's Nina to the Desdemona of Rossini's *Otello* and through her to the heroines of Bellini and Donizetti, in whose operas love – a love thwarted by outside circumstances – forms the nucleus of the plot. Rossini also pointed the way to action through music, by the regular transference of the ensemble from comic into tragic opera. All these composers aimed, in different ways, at dramatic consistency. Bellini's dramatic sense, particularly strong in *Norma*, was not allowed to prejudice the supremacy of bel canto but permeated and combined with the great voices of the epoch, Pasta, Malibran and above all Rubini, for whom Bellini wrote the first typical Romantic tenor roles (e.g. Gualtiero in *Il pirata*, 1827). Donizetti and Mercadante, from 1835 onwards, reflected their concern for action and consistency in trenchant and pithy thematic material and in a melodic line immediately responsive to expressive demands; they, rather than Bellini, were the direct precursors of early Verdi.

13. Final scene of Pacini's 'L'ultimo giorno di Pompei', La Scala, Milan, 1827: engraving by Carlo Sanquirico after design by Alessandro Sanquirico

The literary polemics between classical and romantic conceptions were also applied to music, dissolving into a series of artificial antitheses long current in Italian musical circles: melody (exclusively the heritage of Italy) and harmony (an *oltremontana*, i.e. German, quality), voice and orchestra, bel canto and *canto declamato*, idealized history and everyday reality. The debate between the traditionalists (who included men of letters such as Carlo Botta, Giuseppe Carpani and Felice Romani) and the innovators was still going on in 1836, when Giuseppe Mazzini published his *Filosofia della musica*, which proclaimed the 'emancipation from Rossini', the birth of a music-drama based on stronger moral principles, with greater chorus participation, and the decline of the typical situation drama with its soprano and tenor lovers separated by the baritone. The debate was echoed in 1847 by the poet Giuseppe Giusti, who advised Verdi, after the production of *Macbeth* at Florence (where the first Italian performances of *Robert le diable* and *Der Freischütz* had been given in 1840 and 1843 respectively) to leave such fantastic plots to northern artists.



The renewal of musical theatre advocated by Mazzini was achieved in the art of Verdi, who perfectly expressed the ideals of the second half of the century. Verdi triumphed in Milan at a time when La Scala was dominated by Bartolomeo Merelli and the power of Ricordi was increasing through the absorption of smaller firms and the foundation (in 1842, the year of *Nabucco*) of the *Gazzetta musicale di Milano*. Verdi learnt from Rossini, in particular from the choral grandeur of *Mosè*, which in hastier style and with more pressing rhythms he transferred to the Risorgimento operas *Nabucco*, *I lombardi alla prima crociata* and *La battaglia di Legnano* (the last named was performed in 1849 at Rome, which had been abandoned by the pope and was governed by the republicans Mazzini, Armellini and Saffi).

The years 1848–9 were a watershed in 19th-century Italian music, and not only because of the death of Donizetti. The war against Austria produced a crisis in theatrical life; fewer people attended, the number of performances decreased, and celebrated singers like Erminia Frezzolini and Eugenia Tadolini either worked abroad or lost confidence in the managements. The failure of the national revolution led to a neglect of heroic themes in favour of individual dramas in which conflict raged in the soul and not on the battlefield. This tendency achieved perfection in Verdi's operas *Rigoletto*, *Il trovatore* and *La traviata*, produced at Venice and Rome between 1851 and 1853. The primacy of the individual seemed to herald a revival of the stories about individual characters such as had been treated by Bellini and Donizetti, but the ordering of events was no longer in the hands of a librettist such as Romani. The learned Salvadore Cammarano, librettist of *Lucia di Lammermoor*, could not understand the characterization of Azucena conceived by Verdi in *Il trovatore*; a librettist like F.M. Piave, willing to follow the composer's wishes in supplanting the aria with the scena, was more useful. This broadened conception is realized in all three operas, but the subject of *La traviata*, with its contemporary setting, best illustrates the spirit of the 1850s, although it was considered a bad influence by the leaders of the Risorgimento, who preferred high-minded subjects and saw a dangerously complacent sentimentality in the choice of a fashionably consumptive courtesan as heroine.

Verdi's ascendancy over Italy throughout the second half of the century is significantly based entirely on public acclaim; intellectual and cultural circles were not won over until much later (through the influence of Toscanini around 1920). The 'classicists' considered Verdi's early operas 'noisy' because of their abuse of the chorus and of martial rhythms. In the middle years of his career, the writers Giuseppe Rovani and Carlo Dossi, from the Milanese milieu that formed the cradle of Verdi's art, continued to prefer the operas of Rossini. The critic Basevi, who found Rigoletto's physical deformity unacceptable, showed that strong classicist prejudice remained even in 1859. After about 1860 Verdi aroused opposition less in the traditionalists than in the younger generation, interested in the novelties of European music and attracted to the cultural and technical ambitions of Meyerbeer, the elegant precision of Gounod and the dramatic ideals of Wagner (whose music was still little known in Italy, apart from the overtures to *Der fliegende Holländer* and *Tannhäuser*).

During its early years (1861–70), the newly formed kingdom of Italy had naturally to stand comparison with other European countries and to discover by how much it lagged behind in the cultural and artistic fields. In spite of Verdi, there was much talk of decadence in opera and of the reforms needed in the management of theatres and schools. Musical education became a national responsibility, developing from seeds planted in northern Italy by the short-lived Napoleonic governments at the beginning of the century. The Milan Conservatory, which maintained high standards, was instituted in 1807 and set the pattern for conservatories founded in mid-century in Florence, Turin, Rome, Palermo, Venice and Bologna. It was a difficult time financially; in 1867 theatrical subventions were curtailed and taxes imposed on contracts and profits; the following year Broglio, the minister for education, drew up a scheme for an association to administer and direct the conservatories, with Rossini, then in the last year of his life, in Paris, as president. A similar commission, with Verdi as president, was set up in 1871 to reform the musical institutions. Even so, many young people felt that Italy could not satisfy their thirst for knowledge, and in 1861 Arrigo Boito and Franco Faccio went abroad with scholarships – a significant reversal of the trend that since the Renaissance had led students and scholars towards Italy.

As the music schools multiplied, there was a growing interest in chamber and symphonic music, mostly German; Germany, the country of technical excellence, was much admired by Italy in the 1870s, while political events caused a growing coldness towards France. In 1870 the critic Filippo Filippi published six reports in *La perseveranza* on the Wagner operas he had seen at Weimar; the following year at Bologna Angelo Mariani conducted *Lohengrin*, the first Wagner opera heard in Italy, which immediately aroused enthusiastic and polemical reactions throughout the country. A long-standing rivalry between Verdi and Wagner ensued. Essentially it was an extension of the traditional rivalry between opera and music drama, between voice and orchestra, between Italian and German music; unlike the otherwise similar dispute between Piccinni and Gluck, it was not carried on with 18th-century chivalry but, especially in the case of the rivalry between the two publishing houses Ricordi (Verdi's publisher) and Lucca, with the insensitive hostility

14. Closing scene of Act 2 (a room in Ford's house) from Verdi's 'Falstaff', La Scala, Milan, 1893, with sets and costumes by Adolf Hohenstein: lithograph by Gennaro Amato from 'L'illustrazione italiana' (19 February 1893)

of modern business methods. The firm of Francesco Lucca, established in 1825, benefited greatly from the energies of Giovannina Strazza, wife of the founder. In opposition to Ricordi she too started (in 1847) a newspaper, *L'Italia musicale*; in an attempt to find an alternative to Verdi, she supported Mercadante, Pacini and other minor figures, including Salvi, Ricci and Petrella, and also zealously introduced into Italy the works of foreign composers, from Gounod, Halévy and Meyerbeer to Wagner.

Meanwhile, the more progressive of the generation of composers that followed Verdi and considered him outdated (though without specifically saying so), began to appear. The manifesto of this new movement, outlined by Boito in two articles that appeared in *La perseveranza* (1863–4), was succinctly summarized in four points: 'the complete elimination of formula; the creation of form; the realization of the largest possible tonal and rhythmic development; the total embodiment of drama'. The practical realization of these aims was more tame, as was exemplified by Faccio's *Amleto* (1865) and Boito's *Mefistofele* (1868). Boito was a man of wide culture, the first Italian composer who was also an intellectual, and an adherent of the 'Scapigliatura', a forward-looking literary movement active in Milan. But in musical matters the 'Scapigliati' were Rossinians, while Boito's modernism was largely intellectual; his covert antagonism to Verdi, therefore, changed quite naturally to sympathy and from 1881 to collaboration. Verdi, faced after 1860 with a transformation in Italian musical life, adopted two different attitudes – one a public resistance to innovation, the other a secret absorption of new ideas into his own operas, written at increasingly long intervals. After *La traviata* his choice of subjects, no longer confined to love, became much wider. *Don Carlos*, composed for Paris in 1867, is a more progressive work than either *Amleto* or *Mefistofele*, and its protagonist reflects more clearly than either of theirs the hectic excitement of the 'Scapigliati'. Later the *Messa da Requiem* won over the Wagnerians, through Bülow. In his final operas, *Otello* and *Falstaff*, both on texts by Boito, Verdi banished all traces of closed form; in them he again confronted the basic myth of Romanticism, Shakespeare.

Verdi had no pupils and no real imitators. The opera composers who attempted, during the first years of Italian unity, to establish themselves in the small area left free by Verdi, all achieved one dazzling success that had no sequel. Filippo Marchetti's *Ruy Blas* (1869) was produced at 60 theatres within two years; *Il Guarany* (1870), by the Brazilian composer Carlos Gomes, was admired by Verdi himself; after *I goti* (1873), Stefano Gobatti was for a short time hailed as 'the new Verdi'; and Ponchielli's *La Gioconda* (1876) was received, more justifiably, with exceptional enthusiasm that lasted longer. But none of these inaugurated a successful career for its composer, and all of them, despite a superficial similarity of dramatic content, differed from Verdi's works in their ostentatious, neo-Romantic style or in their insistently picturesque detail. Even further from Verdi's realism were those operas based on a different kind of plot: Antonio Bazzini's *Turanda* (1867), coloured by the fairy-tale surrealism of Carlo Gozzi; Luigi Mancinelli's *Isora di Provenza* (1884), produced at Bologna, the Wagnerian stronghold; and *Loreley* (1890) and *La Wally* (1892) by Alfredo Catalani, Bazzini's pupil at Milan. In all these, and particularly Catalani's, the spirit of northern fantasy crossed the Alps, and under the auspices of Wagnerian harmony it at last established a precarious foothold in Italian opera.

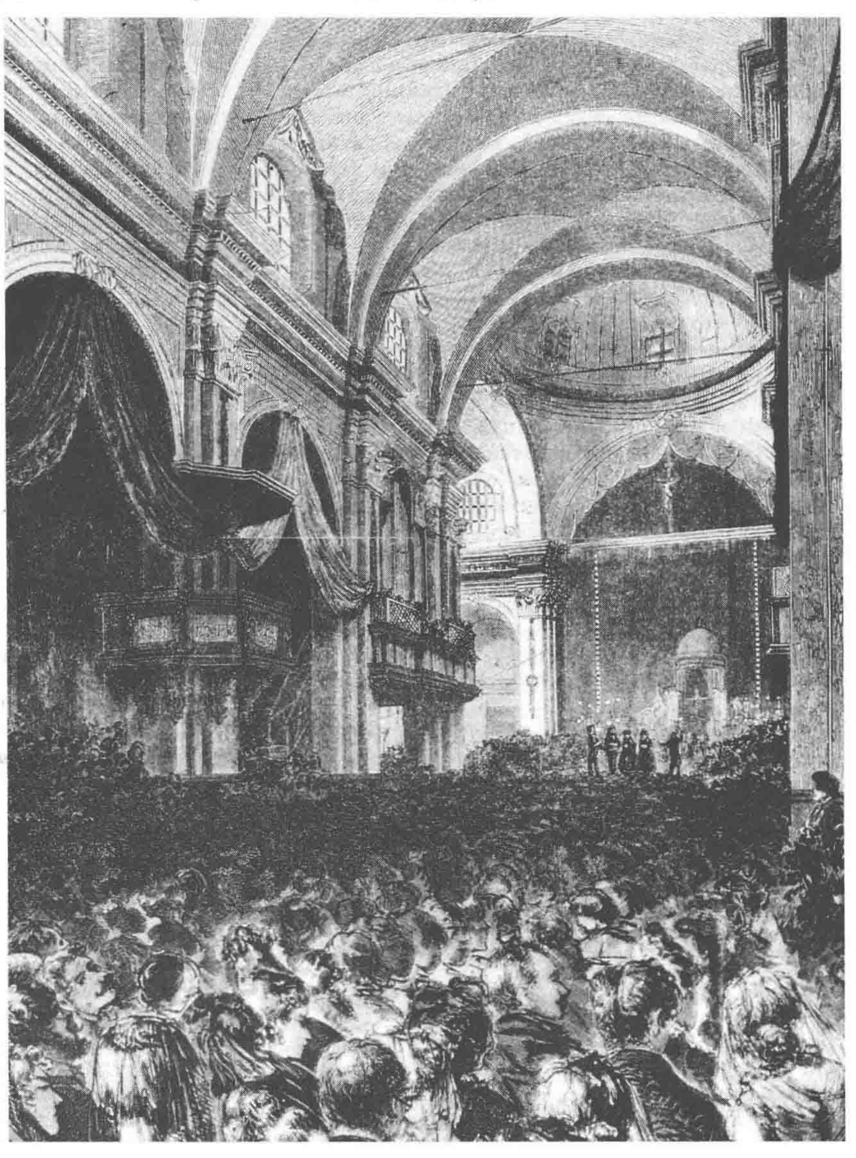
Wagner himself came to be better known; in 1883 the touring company managed by Angelo Neumann brought the *Ring* to Venice, Florence, Rome, Turin, Milan and Trieste. In 1888 the publishing house of Ricordi took over that of Lucca, and little by little the taste for novelty diminished. During the 1876–7 season Italian theatres still put on about 40 new operas, but public interest increasingly centred on successful works of the recent past, which were now the basis of the repertory. Innovation was regarded with scepticism, a sign of the decline of opera, at least in the sense of a common language uniting the musician and society, such as had prevailed at the beginning of the century. In the years immediately before the appearance of Puccini, the true face of the Italy of the time can be seen not in large-scale

operas on historical subjects (which continued to appear, however) but in the salon song, a genre cultivated by refined singing teachers like Gaetano Palloni and Filippo Marchetti at Rome, Gaetano Braga at Milan, and the greatest of them all, Paolo Tosti, the darling of Roman aristocratic society until he settled in London in 1880. In his songs Tosti caught the flexible intimacy, the sentimental sheen characteristic of the age of King Umberto I behind its façade of pomp and grandeur (which inspired, for instance, the building of the Teatro Costanzi at Rome in 1880).

(ii) Church music. Church music was the least popular genre for the 19th-century Italian composer. Certainly a large quantity was written, not only by minor composers, for use in worship, but also, less prolifically, by most of the major figures; but its prestige in Italian society reached a low level during the century, and began to rise again only with Perosi. The explanation lies partly in the 'religiosity' of Romanticism, hostile to codified systems and more sympathetic to secular forms such as opera, where monasteries, convents and religious choruses are frequent elements; and partly in the particular circumstances of Italy, where political and cultural progress, inspired by the laity, found an obstacle in the Church of Rome, no longer the symbol of a universal religion but a state within a state. This accentuated the growth of two different styles, both already apparent in the previous century: the academic and the theatrical. The stronghold of the academic style was still the Cappella Sistina, where first Baini and then Alfieri maintained the tradition. It continued in current practice for even longer, although increasingly as a means of learning composition, or as a student's exercise useful for winning a scholarship (as Catalani and Puccini did) to Milan, the capital of opera. Above this didactic level, the adoption of operatic language and vocal style was customary. The most prolific writers of church music were often opera composers who had withdrawn from the theatrical battlefield, like Generali, Vaccai or Carlo Coccia, who produced mainly masses with orchestral or organ accompaniment; while the sacred masterpieces of the century, including Cherubini's masses (in particular the two Requiem masses written in Paris), Rossini's *Stabat mater* and *Petite messe solennelle* and Verdi's Requiem, were all written by the leading opera composers.

It is symptomatic that in 1838 Pope Gregory XVI invited Spontini, rather than Baini or any other member of the Cappella Sistina, to compile a report on the decline of sacred music in Italy. The pervasive influence of the operatic style even penetrated the field most firmly closed to outside interference, namely that of organ music, as the works of Giacomo Davide of Bergamo and V.A. Petrali demonstrate. No consciousness of a need for reform or for the preservation of early church music was apparent until the last decades of the 19th century, when in 1877 G. Amelli, inspired by the CECILIAN MOVEMENT, founded the periodical *Musica sacra* and the Associazione Italiana di S Cecilia.

(iii) Instrumental music. Instrumental music, although to a lesser degree, also served primarily as a training ground for those composers aspiring to operatic success, while the instrument typifying 19th-century Romanticism, the piano, was the chief medium through which opera reached a large section of the public, in transcriptions, fantasias, variations and arrangements of the most popular numbers. The influence of operatic style was paramount here as well.



Until 1850 aspects of the 18th-century situation persisted to some extent, with the greatest composers working outside Italy. Milan was still a centre for instrumental music, but the only figure of international repute based in Italy was Paganini, who was self-taught and was a native of the north, where the traditions of violin-playing were strongest. While Paganini's activity led him all over Europe between 1828 and 1834, other violinists returned to work in Italy after the Napoleonic era; they were second-rate composers, who had benefited from an exposure to European culture during long periods abroad, and it was due also to F.A. Radicati (in Bologna), Ferdinando Giorgetti (in Florence) and G.B. Polledro (in Turin) that the taste for chamber music did not die out altogether.

The decade from 1850 was the emptiest as regards instrumental music, the revival of which from about 1860 thus seemed to start from nothing. The various Italian court *cappelle*, whose activity was already much reduced, were swept away soon after the proclamation of the Kingdom of Italy (1861). They were succeeded by the philharmonic societies and other private associations founded by members of the aristocracy or the middle class, which became the centres of an instrumental culture.

As if aware that a great deal of lost territory needed recovering, this culture began with the works of Beethoven, which did not become generally known throughout the country until the 1860s, a delay of 50 years that had far-reaching consequences. To meet the new demand, Ricordi published several major collections, including *La biblioteca del pianista* and *L'arte antica e moderna*. Meanwhile a network of quartet societies rapidly spread over Italy, reaching Florence in 1861 (after the Beethoven concerts promoted by Basevi), Milan and Turin in the 1860s, Palermo in 1871 and Bologna in 1879.

The growing interest in symphonic music (at Florence the publisher Guidi printed early pocket scores) led to the foundation of the Società Filarmonica at Naples in 1867, the Concerti Popolari at Turin in 1872 and the Società Orchestrale Romana in 1874. It was a natural, although over-simplified, consequence to ally this ferment of activity to the Wagnerian and progressive schools and to see it as an alternative to the Italian operatic tradition; so another rigid barrier, supported by the authoritative voice of Verdi, for whom Italian music was naturally 'vocal', was erected between operatic music, favoured by the vast majority, and instrumental (or 'classical') music, preferred only by a minority but associated with the qualities of culture and progress.

Celebrated soloists, including the violinist Camillo Sivori, the cellist Alfredo Piatti and the double bass player Giovanni Bottesini wrote chamber music or concertos for their own instruments in the intervals between concert tours abroad. Bazzini, after many years in Leipzig and Paris, settled in Milan; although he too chiefly composed music for the violin, or chamber music, he also attempted the symphonic style in the overtures *Saul* and *Re Lear*. Stefano Golinelli (at Bologna, from 1840), whose *Studi* op.15 were praised by Schumann, and the brothers Disma and Adolfo Fumagalli (at Milan), composers of many small pieces, as well as studies and operatic fantasies, all

15. First performance of Verdi's 'Messa da requiem', S Marco, Milan, 1874; engraving by Centenari after Pessina, from 'L'illustrazione universale' (14 June 1874)

concentrated on the piano; the two leading instrumental composers of the period, Giovanni Sgambati (in Rome) and Giuseppe Martucci (at Bologna and Naples), were also trained as pianists. Probably the first 19th-century Italians to eschew opera without exhibiting an inferiority complex, they attempted all forms of chamber and symphonic music, as well as songs; their works for solo piano in particular include, especially in the case of Martucci, pieces that surpass the dimensions of 'album leaves' and attempt extended forms. In spite of frequent references to the early Romantics (more than to Wagner and Brahms, whom they knew personally and intended to imitate), Sgambati and Martucci undoubtedly mark an important stage in the renascence of Italian instrumental music.

(iv) Musicology. The attempts to re-establish ties with European musical culture were also fruitful in historical studies. Basevi's critical activities at Florence; Angelo Catelani's research into Renaissance and Baroque music in the archives at Modena; the historical compilations by Francesco Florimo on the Neapolitan and by Francesco Caffi on the Venetian schools; the foundation, in 1894, of the *Rivista musicale italiana*; Oscar Chilesotti's editions of lute and guitar tablatures; Amintore Galli's *Estetica della musica*, an ambitious attempt to realize an Italian history of music through analyses of works; and the output of Gaetano Cesari, whose research on the origin of the madrigal was the first of a series of basic studies on Italian music and who was the leading figure behind Ricordi's publication of Istituzioni e Monumenti dell'Arte Musicale Italiana: all are signs that Italian culture had begun to observe its musical past in a new, historically conscious perspective.

(v) Cultural systems and aesthetics. In the age of Rossini the dominant musical aesthetic was neo-classicism, informing the writings of Gervasoni, Majer, Carpani, Asioli and Leopardi, and encapsulated by Rossini himself in 1868. At the root of this lay the concept of the *bello ideale*, the 'beautiful ideal', which embraced a number of ideas: the predominance of melody ('cantilena'); aesthetic

pleasure, with the composer's goal being to 'please in music' (Carpani); music as a 'moral atmosphere' in which the characters represented the action (Rossini) or as a generic expression of emotions, but not as a concrete expression of the drama; and 'symmetries' of forms (Asioli): the melodic line did not have the power to adapt to 'characteristics', 'moods', 'action' or 'concepts', but had an architectural value, serving as the principle that justified formal conventions.

The Romanticism of the Risorgimento and the era of Mazzini shattered this aesthetic edifice: from the 1830s onwards Victor Hugo's *Cromwell*, *Hernani* and *Le roi s'amuse* were interpreted as spurs to political redemption. In his *La filosofia della musica* (1836) Mazzini put forward a series of statements which summed up the historical moment: the 'committed' composer cannot restrict himself to writing 'notes and chords', but must 'understand the vast influence which [opera] could exercise on society ... not renounce the idea in favour of the form'; 'progressive' operatic music must abandon the rigid rules of the classicists, to take on characteristic *tinte* and 'historical reality'; the idea of opera as entertainment must change to one of opera as a mission; the chorus, which portrays the people, must be used more. Mazzini's *Filosofia* reflected the state of Italian opera in the 1830s: new subjects taken from Schiller, Hugo, Shakespeare, Byron and Dumas *père*; the expansion of formal conventions, replacing 'ideal singing' with 'declaimed singing'; and the contrast between the individual and the chorus.

According to Mazzini, Donizetti's *Maria Stuarda*, *Marin Faliero* and *Lucrezia Borgia* were the greatest examples of 'social opera'. In his preface to *Lucrezia Borgia*, the librettist Felice Romani provided a snapshot of the cultural conditions of the years before the appearance of Verdi: extremes ('physical [and] moral deformity ... dark subject matter'), violation of the Artistotelian unities, mixed genres, characteristic verbal (but not yet musical) language ('the Poet must conceal himself and let the characters speak their own language'), distortions of form and of versification in accordance with the musico-dramatic 'metre and outline'.

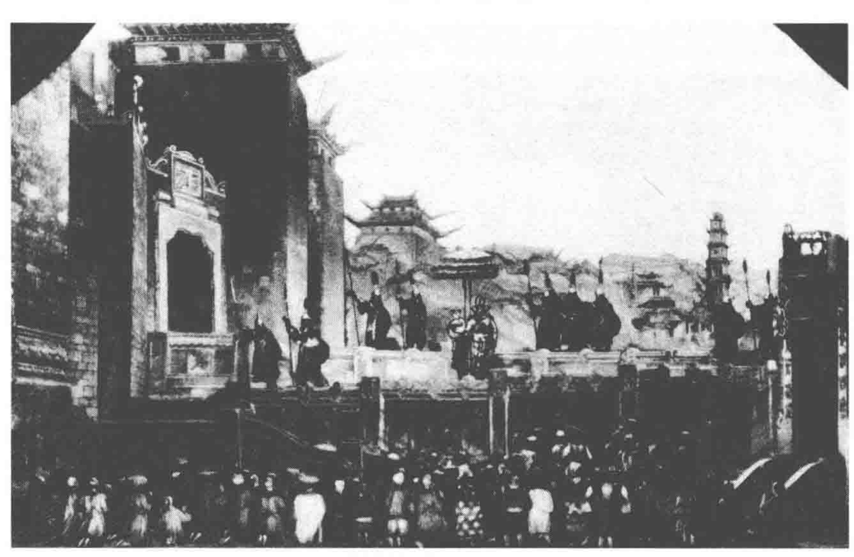
In the revised edition of his *Filosofia* (1861) Mazzini substituted Meyerbeer for Donizetti as the representative of 'social opera'. During the same period Basevi recognized in Meyerbeer 'the living expression of the new requirements'. In his *Studio sulle opere di Giuseppe Verdi* (1859) Basevi defined the new trend in Italian musical aesthetics as 'eclecticism': the fusion of foreign influences and national tradition, of which Verdi was the greatest exponent, despite his proclamations of self-sufficiency. In the years around 1860 musical criticism received a boost, with the trenchant writings of Boito, Basevi, Filippi, Biaggi, Mazzucato, D'Arcais and Depanis actively influencing composers in their search for a 'new ideal'.

After the 1860s this eclecticism was linked to the desire for a greater knowledge of musical history and of music from abroad: the effect was a multiplication of styles and techniques in opera, from the comic to the tragic, great public scenes to the intimate display of private passions, from Meyerbeer's technique of recurring themes to Berlioz's *réunion des thèmes* and techniques derived from Wagner and Massenet. Linked to this diversity of styles were plots with an all-embracing, epic sweep: the greatest example is *La forza del destino*, but the same tendencies can be seen in *Mefistofele*, *La Gioconda* and Carlos Gomes's *Il Guarany*. The inclusion of scenes incidental to the main plot has suggested a parallel with the discursiveness characteristic of the 19th-century novel.

A contemporary of Italian grand opera in the 1860s and 70s was the Scapigliatura movement in Milan, to which Boito, Faccio, Ghislanzoni and Giulio Ricordi were all linked. To Boito goes the credit for having established an openness to European culture and a new historical awareness, but one can also see in him the reaction of a cultivated man to the popularizing trends typical of the new Italy. In this phase new artistic and intellectual currents did not always run in parallel with the tastes of the broader public, dedicated to the consumption of repertory opera. Cultural exclusivity, the distance from an audience to which the artist no longer feels instinctively bound, gave rise to the idea of the 'avant garde'; this is the source of Boito's denial of traditional 'formulas'.

In the last three decades of the century musical taste seems to have been led by the increasingly affluent middle class. But those who really set new trends belonged to a small professional élite, in particular the 'Milanese monopoly' of the publisher Ricordi who in 1888 took over his rival publisher Lucca. Newspapers of the day contrasted the 'mass success' of Meyerbeer against the 'élite success' of Wagner; Verdi's operas from *Ernani* to *Aida* were popular successes, while *Otello* did not escape the charge of intellectualism (which in part reflects Verdi's own desire). Works of value were not directly subject to public judgment, as Verdi, with false ingenuousness, wished, but were now selected by a new professional class made up of intellectuals (Boita, Filippi and others) and businessmen (Ricordi, Sonzogno).

Popularization and specialization: this aesthetic duality was seen, on the one hand, in the growth of bands, of amateur choirs, the advent of operetta (after 1870) and grandiose stage productions; and, on the other, in the increase in concert-giving and the aestheticism of cultural fashions. The difficulty of bridging this dichotomy has condemned many works created in the last 30 years of the century to oblivion: it is not surprising that between *Aida* and *Otello* the only two operas to have remained in the repertory are *Mefistofele* and *La Gioconda*, representing the outer limits of the symbiosis between the two; the first tending towards intellectualism, the second towards popular appeal. The Giovane Scuola and so-called *verismo* opera were a success because of this aesthetic eclecticism and not as a popular reaction against it: while its components can still be identified as symbols of an Italian musical nature, their success rests on an intensive assimilation of foreign influences. The 'international' Puccini is the interpreter of the profound weakness of the Italian educated classes, who unconsciously found themselves dependent on foreign cultures. The reconstruction of an Italian cultural and musical identity, never before really questioned, was the principal goal of the earliest musicologists (Torchi, Chilesotti, Torrefranca) and the composers of the Generazione dell'Ottanta – the generation of the 1880s.



7. 20TH CENTURY. The development of Italian opera around the turn of the 20th century was affected by continued rivalries between influential publishers. After the absorption of Lucca in 1888, Sonzogno quickly became the new rival of Ricordi, especially after Mascagni's spectacular success with *Cavalleria rusticana* (1890). Other young Italian composers taken up by Sonzogno

included Leoncavallo, Giordano and Cilea, and the firm also brought important new foreign operas to Italy, starting with the Italian première of *Carmen* (1879). Ricordi responded not only by competing for the works of Sonzogno's 'discoveries' (publishing, for example, Mascagni's *Iris*) but above all by launching and supporting Puccini. All these composers were influenced by their publishers' rivalries, and there were others less fortunate who, by failing to win adequate support from either firm, were deprived of the opportunity for operatic success in Italy: victims of such ostracism included Smareglia (a gifted Wagnerian) and Wolf-Ferrari, whose vivacious comic operas became far better known in Germany.

The opera composers supported at this time by Ricordi and Sonzogno are often referred to as the *veristi*. But relatively few of their works in fact followed the fashion for *verismo* subjects set by *Cavalleria rusticana*: even Mascagni's own subsequent output, in its search for variety of subject matter at all costs, typifies, instead, that 'poetica del diverso' reflected also in the strong contrasts between successive Puccini operas. In Luigi Baldacci's words, 'for Donizetti and the young Verdi the idea of opera corresponded to a precise and direct demand from society. In Mascagni's time, however, the demand no longer came directly from society but from the publicity business, which had to astound the public with a continuous series of theatrical 'sensations' – thus combating audiences' tendency to rest content with successful operas from the recent past. Puccini, alone among the Italian opera composers who became prominent in the 1890s, had enough imagination and personality to turn the situation to his advantage: the others did not adequately follow up their early successes, but he continued to develop creatively and receptively until his death.

There were no unifying features in Italian opera in the decade before World War I. While naturalism and *verismo* were in decline, there emerged a spirit of pluralism that embraced the later works of Puccini (*La fanciulla del West*, 1910; *Il trittico*, 1918), Giordarno's *Mese Mariano* (1910) and *Madame Sans-Gêne* (1915), the restless eclecticism of Mascagni (*Le maschere*, 1901; *Lodoletta*, 1917) and the Goldoni-based regionalism of Wolf-Ferrari (*Le donne curiose*, 1903; *I quatro rusteghi*, 1906). Through the pervasive influence of Gabriele D'Annunzio, elements of French decadence (sensualism, aestheticism, exoticism and archaism) gained broad currency in Italian opera of the period. The D'Annunzian taste for archaism influenced the revival of pre-19th-century Italian instrumental music and stimulated the growth of Italian musicology. The first Italian chair in the history of music was created at Rome University in 1913. The nationalist ideology underpinning the view of Italy's musical past was also revealed in Torrefranca's anti-Puccini pamphlet *Giacomo Puccini e l'opera internazionale* (1912) and in the series Classica della musica italiana (1917), established with the participation of G.F. Malipiero and D'Annunzio.

Meanwhile Italian instrumental music was still gaining in importance after being marginalized in the 19th century, and was relatively free from the commercialization that affected opera, since it addressed mainly the select audiences of the orchestral and chamber music societies. By 1900 the composing careers of Sgambati and Martucci were almost over, culminating in Martucci's Second Symphony (1904), which G.F. Malipiero called 'the starting point of the renascence of non-operatic Italian music'. Before the composers of the 'generazione dell'ottanta' (the generation born around 1880) became established, various other instrumental composers were active. Marco Enrico Bossi drew on both the contrapuntal traditions of his native Bologna and the 19th-century German symphonic tradition, while Leone Sinigaglia wrote the earliest significant Italian works systematically based on folk music. Notable, too, are the orchestral and chamber works of Giacomo Orefice, Amilcare Zanella, Francesco Paolo Neglia and Alessandro Longo. The most widely successful non-operatic compositions during these years were, however, Perosi's naive and eclectic oratorios. More progressive trends usually met with apathy or open hostility in Italy, and few Italian musicians born before 1875 shared Puccini's receptivity to new ideas. Symptomatic of the situation was the predicament of Busoni, by far the most adventurous Italian composer of the time: in 1913, after many years abroad, he became director of the Bologna Liceo Musicale, hoping to lead a revolution in Italian music; but he found himself surrounded by indifference and obstructive bureaucracy and soon gave up the struggle, resigning himself to permanent exile.

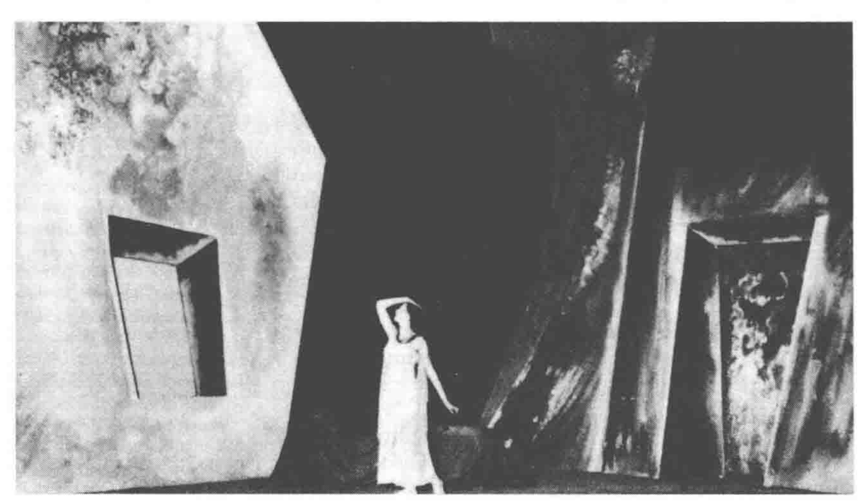
17. A Futurist night in Milan: caricature by Umberto Boccioni from 'Uno due e ... tre' (17 June 1911)

By then, however, a new generation of Italian artists was already groping towards new ideals, some of which were foreshadowed in the many-sided activities and interests of D'Annunzio. The most aggressive and notorious of these newcomers were the futurists, who achieved more in literature and (especially) the visual arts than in music, though Luigi Russolo's 'noise machines' have a notable place in the prehistory of *musique concrète*. The innovatory trends centring on the Florentine cultural periodical *La voce* (1908–16), with which Pizzetti and Giannotto Bastianelli were associated, were less barren where music is concerned. But the main sparking-point for new musical developments came in 1915, with the return to Italy from France of Alfredo Casella, who then for over two decades remained the leading figure (though not the most important composer) in the modernization of Italian music. Casella's Società Italiana di Musica Moderna (1917–19) provided a platform for young composers of widely varying aims, including most of the main members of the 'generazione dell'ottanta': Pizzetti, Respighi, G.F. Malipiero, Castelnuovo-Tedesco, Gui and even the seemingly traditional Zandonai (regarded by Ricordi as Puccini's heir-apparent), were all members of the society, although they never in the full sense formed a 'school'. Later, indeed, they tended to drift apart until, on 17 December 1932, Pizzetti, Respighi and Zandonai joined with various lesser composers in signing the notorious 'Manifesto dei dieci' attacking the progressive trends of the time. Meanwhile, undeterred by the break-up of his first circle of collaborators, Casella (together with Malipiero and Labroca, with enthusiastic encouragement from D'Annunzio) founded the Corporazione delle Nuove Musiche (1923–8), which aimed to bring to Italy 'the latest expressions and the most recent researches of contemporary musical art' – promoting performances of, for example, *Pierrot lunaire* (conducted by Schoenberg) and Stravinsky's *The Wedding* in many Italian cities. It was appropriate that the organization soon became closely bound up with the ISCM.

The creative results of this ferment of new developments range from the archaic nobility of Pizzetti's choral pieces and the picturesque orchestration of Respighi's tone poems to Casella's aggressively dissonant 'second manner' and Malipiero's hauntingly idiosyncratic theatrical experiments. It becomes increasingly clear, with historical perspective, that Malipiero was the most original of these composers, for all his unevenness (Dallapiccola even called him 'the most important personality that Italy has had since the death of Verdi'). Moreover, his close involvement with early Italian music, which bore musicological fruit in his complete edition of Monteverdi (1926–42) as well as influencing his style, is the most conspicuous example of that preoccupation with the remoter past which also affected other composers of the time. This growing awareness, thanks to the recent research of musicologists, that Italian music had once been far more versatile, and less dominated by a frankly popular opera tradition, than it had become by the 19th century, was an important stimulus to the 'generazione dell'ottanta' in reacting against their immediate predecessors.



Under fascism the modernization of Italian music was to some extent held back by political pressures. But there was never a systematic censorship of the arts on Nazi lines (apart from the banning of works by Jews when Mussolini adopted Hitler's race policies in 1938); and the press was as likely to attack music for being insufficiently Italian as for being radical in idiom. More new organizations were created to promote new works and to revive early music; notable among these were the Teatro di Torino (1925–31; established by G.M. Gatti), the Venice Festival Internazionale di Musica Contemporanea (1930), the Maggio Musicale Fiorentino (1933) and the Teatro delle Novità in Bergamo (1937). Italy's relative cultural freedom, even in the very year of the Pact of Steel, is well illustrated by the fact that Casella, though a naively convinced fascist himself, could prominently feature Schoenberg's music at the 1937 Venice Festival. Moreover, an exceptionally open-minded and informative periodical, founded in 1920 by Gatti as *Il pianoforte* and renamed *La rassegna musicale* in 1928, provided a crucially important antidote to narrow-minded provincialism. Nevertheless, a recognizably *mussoliniano* spirit of assertive, rather bombastic optimism, which represents

a retrograde step after the promising developments of a few years earlier, undeniably found expression in certain works of the time, including Casella's *Concerto romano* (1926) and Malipiero's *Inni* (1932). In the 1920s a strain of *petit-bourgeois* sentimentality contributed to the popularity of operettas by such composers as Mario Costa, Giuseppe Petri and Virgilio Ranzato.

Public responses to this rapidly changing scene were variable: as in most countries, the mass of the musical population turned its back on modern developments and continued to support established favourites. In the 1930s opera declined in popularity as audiences turned to the cinema for entertainment. The progressive musical idiom and dramaturgy of works such as Malipiero's *Torneo notturno* (1929) and Casella's *La donna serpente* (1932) had no lasting influence, and the majority of operas, including Respighi's *La fiamma* (1934) and works by Franco Alfano, Giuseppe Mulé, Adriano Lualdi, Luigi Ferrari Trecate, Felice Lattuada, Licinio Refice and Ludovico Rocca, adhered to traditional styles and techniques. But a new, more cultivated and receptive audience was growing up, and the extreme hostility which had surrounded the activities of the Società Italiana di Musica Moderna gradually subsided, though the audience for modern music, and for serious music of any kind other than opera, remains smaller in Italy than in some other countries. (Here a persistent reluctance, by the devisers of school and even university curricula, to give music an adequate place in a normal education outside the conservatories has much to answer for.) Among music publishers, Ricordi has retained a dominating position in Italian musical life; but the firm's former overwhelming preoccupation with popular operatic success had by the 1930s given place to a more open-minded policy. Meanwhile relatively new publishing houses like Carisch and (especially) Suvini Zerboni became increasingly associated with contemporary music; and the growing importance of the radio as an outlet for music of all kinds helped to put Italian composers into a situation very different from that of their predecessors at the turn of the century. However, a great disadvantage, impeding their progress on the international scene, has been the limited resources and extreme caution of Italian record companies: the exceptional paucity of Italian commercial recordings of modern music, and a seemingly incurable dilatoriness in their distribution (even at home, let alone abroad), has been one of the most important reasons why so many recent Italian composers have failed to win world reputations commensurate with their stature.

The generation of composers who appeared in the 1930s reaped many benefits from the achievements (both creative and practical) of the 'generazione dell'ottanta'. Composers who made their mark at this period included Vittorio Rieti, Antonio Veretti, Virgilio Mortari, Mario Pilati and Sandro Fuga. Much the most important of these newcomers were Dallapiccola and Petrassi, though Salviucci might have risen to comparable eminence but for his early death, and the rather older Ghedini reached a belated, highly individual maturity in his best music of the 1940s. Dallapiccola has won greater international renown than Petrassi, thanks partly to the powerful human appeal of 'protest' works like the *Canti di prigionia* (1941) and *Il prigioniero* (1948) and partly to his outstandingly sensitive adaptation of 12-note technique in terms of Italian sensibility. Petrassi, however, has in the long run proved the more adventurous composer: after 1955 drastic stylistic developments brought him unexpectedly close to the post-war avant garde.

As the 1940s progressed, several slightly younger composers, including Riccardo Nielsen, Riccardo Malipiero, Roman Vlad, Gino Contilli and the former disciple of Zandonai, Mario Peragallo, turned with varying strictness to 12-note technique, as did other, still younger men (Togni, Nono, Maderna) who were to become prominent post-war radicals. In turning to dodecaphony, these composers were inspired partly by Dallapiccola's example and partly by a need to reject the more parochial aspects of the music of the fascist period. An important milestone in Italy's reception of 12-note technique was the first Congresso Internazionale per la Musica Dodecafonica, held in Milan in 1949. From this time thoroughgoing post-Webern and other avant-garde trends attracted growing followings among Italian musicians. Encouraged by an exhilarating sense of release, after the constrictions of the fascist and war years, many young composers visited, or drew inspiration from, such centres of new musical enterprise as Cologne and Darmstadt, and before long comparable ventures were launched in Italy. In 1955 Berio and Maderna founded the Studio di Fonologia Musicale attached to the Milan branch of RAI, and Maderna in particular played a major part (as teacher and conductor as well as composer) in making new

18. Scene from the first production of Malipiero's 'Pantea' for solo dancer, offstage voices and orchestra, Teatro Goldoni, Venice, September 1932

methods and creative attitudes known south of the Alps. The development of electronic music in Italy began with the work of the RAI Studio di Fonologia Musicale in Milan. In 1960 the composer Pietro Grossi founded the S2FN sound studio in Florence; and computer music centres, generally within universities, subsequently appeared in Pisa (CNUCE, 1969), Milan (IJM, 1975), Padua (Centro di Sonologia Computazionale, 1979), where the composer Alvise Vidolin, among others, has worked, and Naples (ACEL, 1979), where the physicist Giuseppe di Giugno, who has worked at IRCAM in Paris, and the composer Fausto Razzi have been active. Berio founded the Tempo Reale centre in Florence in 1987, while the AGON laboratory was established by Luca Francesconi in Milan in 1990. A new festival (the Settimana Internazionale di Nuova Musica), which specialized more specifically in avant-garde music than Venice did, was held at irregular intervals at Palermo from 1960 to 1968; and the Nuova Consonanza performances at Rome, presided over by Evangelisti from 1961, were another important platform for adventurous composers, both Italian and foreign.

Only a very small number of works of the new Italian avant garde of the 1950s and 60s has entered the repertory of the concert-giving institutions, which remain rooted in the music of the past. Those that have done so include Berio's *Folksongs* (1964), *Sinfonia* (1969) and some of his *Sequenzas* (from 1958). Scores like Nono's *Il canto sospeso* (1956), Maderna's *Serenata no.2* (1957), Clementi's *Informels* (1961–3), Donatoni's *Puppenspiel* (1961) and theatrical works such as Berio's *Passaggio* (1962), Nono's *Intolleranza 1960*, Manzoni's *Atontod* (1965), Bussotti's *La passion selon Sade* (1965–6), Evangelisti's *Die Schachtel* (1966) and Guaccero's *Rappresentazione et esercizio* (1968) remain important examples of a phase in Italian music that has been largely neglected by the country's muscial institutions.

Like their predecessors, the leading members of this new generation are individualists, who have never in any full sense formed a 'school', despite certain shared techniques and attitudes. Their total achievement ranges wide, from the colourful, very Italian lyricism of Maderna and the restless, dynamic textures of Franco Donatoni to the kaleidoscopic capriciousness of Niccolò Castiglioni, the provocative, idiosyncratic extravaganzas of Bussotti and the outwardly static yet subtly shifting 'continuum' techniques of Aldo Clementi.

The new musical avant garde has required new performers. From this point of view Italian composers have benefited from the work done by performers interested in and sensitive to new music such as Pietro Scarpini, Sergio Panazzi, Cathy Berberian, Severino Gazzelloni, Bruno Canino, Antonio Ballista, Maurizio Pollini and Giancarlo Cardini. After the student revolts and social protests of 1968, the 1970s saw the encouragement of the new avant garde, linked to the growth of the PCI (Italian Communist Party), which supported its development.

New ventures and festivals dedicated to contemporary music were founded in the 1970s and 80s, among them Musica nel Nostro Tempo in Milan (1975), the Settembre Musica and Festival Antidogma in Turin, the Festival Pontino in Latina (1977), the Festival Nuovi Spazi Musicali in Rome (1978), the Festival G.A.M.O. in Florence (1980) and the Festival Spaziomusica in Cagliari (1982). The RAI supported the output of new music through its four symphony orchestras (Turin, Milan, Rome, Naples) and the Third Programme on the radio. Composers who emerged at this period include Francesco Pennisi (*La lune offensée*, 1971–2; *Carteggio*, 1976), Armando Gentilucci (*Canti di Majakovskij*, 1970; *Trama*, 1977), Salvatore Sciarrinio (*... da un divertimento*, 1970; *Amore e Psiche*, 1973) and Adriano Guarnieri (*Mystère*, 1978; *Poesia in forma di rosa*, 1979).

The 1980s saw a renewed interest in opera and the creation of theatrical works by leading figures such as Aldo Clementi (*Es*, 1981), Berio (*Un re in ascolto*, 1984) and Nono (*Prometeo*, 1984), in addition to operas by composers born in the 1950s such as Lorenzo Ferrero (*Mare nostro*, 1985) and Marco Tutino (*Cirano*, 1987). The latter represented a postmodern neo-Romantic outlook, violently opposed to the values of the avant garde and committed to re-establishing communication between composer and audience and to the fertilization of art music by popular music.

In the 1980s and 90s the public sector in Italy progressively retreated from involvement in contemporary music, with the closure of the RAI choirs and orchestras in Naples, Rome and Milan, a reduced amount of new music in RAI programming and the closure of many local ventures. After Casa Ricordi was taken over by BMG (1994) and reorganized, the company's commitment to contemporary music was much diminished. Despite this negative picture, however, Italian music at the start of the 21st century is represented by a lively group of composers with an international reputation, foremost among them Giorgio Battistelli, Mauro Cardi, Marco Di Bari, Stefano Gervasoni, Ivan Fedele, Luca Francesconi, Giuseppe Soccio, Alessandro Solbiati and Marco Stroppa.

II. Traditional music

1. General features. 2. Narrative singing. 3. Lyrical singing. 4. Other vocal repertories: (i) Children's songs (ii) Work songs (iii) Other polyphonic practices. 5. Music in ritual. 6. Dances and instruments.

1. General features. Oral musical traditions were first studied in Italy in the 19th century. The earliest scholars to approach this repertory were folklorists (including Costantino Nigra, Alessandro D'Ancona, Antonio Casetti, Vittorio Imbriani and Giuseppe Ferraro) who made extensive collections of song-texts, suggested the first classifications of genres and prevalent metrical forms and occasionally provided some musical examples. The first half of the 20th century saw the appearance of some noteworthy studies of specific musical repertories by Alberto Favara, Giulio Fara, Luigi Colacicchi, Giorgio Nataletti and Alfredo Bonaccorsi, among others, but it was only after World War II that comprehensive documentation of the oral musical tradition got under way. Fieldwork initiated in 1954 by Alan Lomax and Diego Carpitella and carried out throughout the entire country by several scholars during the following decades has led to the production of about 200 LPs and CDs since 1954. In the 1950s Ernesto De Martino undertook important research into the rituals of funeral mourning in Lucania and tarantism in Puglia, which marked the establishment of musical anthropology in Italy. But it was only from the 1970s that a body of scientific literature developed in Italy exploring various aspects of the traditional repertory and musical life.

It goes without saying that while the research was being undertaken, profound changes in musical life were taking place in tandem with fundamental changes in the country's social and economic conditions. Growing industrialization led to the abandoning of many traditional farming and pastoral activities and an increase in urbanization; more recently immigration from other European countries, North Africa and Asia has occurred. Many traditional music practices became obsolete, entire repertories fell into disuse, and where music was preserved, it was often associated with the shoring up of cultural identity in individual communities and the need to hold on to alternatives to mass-produced music. Unlike other European countries, Italy saw the appearance of no broad initiatives, either in the mass media or under state auspices, to promote oral musical traditions, nor is there any folk music genre or idiom that is felt to express national identity. The musical picture is one of great diversity and creative independence; there is a rich variety of types of expression, which generally highlight specific regional quality. In summarizing these conditions it is worth examining the main elements of the various musical practices, keeping in mind that under discussion here are

the principal repertories for which there is documentation, regardless of their current state of survival.

First of all, vocal repertories are differentiated in linguistic terms by their texts. Three different linguistic levels are used in songs: Italian (a highly literary, courtly version, far removed from the current spoken language, as evidenced in printed publications from the end of the 15th century), and generally reserved for public repertories, such as *canto in ottava rima* or the *Maggio drammatico*; dialect (generally not the local dialect, but an artificial language which draws elements of the regional dialect into the local version), and mainly used for private pieces such as lullabies and dirges; and a mixed Italian-dialect language, used in many repertories. Still on a textual level, many types of metre are in use, with lines of 11 syllables prevalent in central-southern Italy, and the epic-lyric metre (with a variable number of syllables organized in two hemistiches, one plain, and the other truncated) in the northern ballad repertory. Poetic forms are generally strophic, and display a wide variety of different ways of elaborating the text, many of them highly sophisticated, with the occasional inclusion of added elements (refrains, nonsense syllables).

As to the relationship between the verbal and musical text and the processes of production and performance, two different systems can be observed. The first is based on the composition, transmission and performance of poetic-musical entities which can be defined as 'songs' in the strictest sense, possessing an identity and completeness that is both verbal and melodic. These 'songs' are not tied to a place and a distinct group of performers, but can be found in different areas and among different communities; performers who absorb them into their own repertory can elaborate them and create variant forms. In contrast, the second system does not recognize identifiable poetic-musical entities that can be circulated as such; instead it is based on creative actions that make an impromptu union of text and music, using a 'way of singing' specific to a social group or geographical zone, or both, whose realization is based on principles shared by the whole community. A wide variety of texts can be performed according to such 'ways of singing', which are improvisatory in character. Neither system is specific to a single song genre, and each can be employed alternately by the same performers, but in general the first is prevalent in the north, the second in the south. As to instrumental music, a further division can be observed between a musical idiom based on closed forms and organized into more or less regular harmonic and melodic phrases (typical of northern Italian violin music, for example), and one based on open, improvisatory forms, where the musical discourse uses a series of processes including repetition, variation and the connection of elements which may have no phrase-like character (as can often be found in southern instrumental music and, in particular, in the repertory of the *launneddas*).

Several scholars have attempted to classify Italian folk music by area, from the point of view of vocal style and musical idiom (Lomax 1955–6; Leydi 1973, 1980, 1990), but as knowledge has increased of the many vocal styles, instrumental traditions, musical idioms and vocal polyphonic practices to be found in the country, it has become more and more difficult to define areas of substantially similar characteristics. For this reason material is treated here according to genre, stressing the content, use and function of musical practices, with some indications of musical characteristics and geographical location. The distinctive music of SARDINIA, however, is treated separately.

2. NARRATIVE SINGING. Several principal narrative repertories can be identified: the *ballad* in the oral tradition, traditionally a major presence in the north, becoming increasingly rare towards the south; the *broadside ballad* (found in the north and centre); the narrative song in *ottava rima* (in central Italy); and the southern *storia*. Some types of religious songs, like the *orazioni* and Sicilian *orbi* songs, are also narrative pieces.

The repertory which has received the most attention, starting with Nigra's classic *Canti popolari del Piemonte* (1888) is that of the ballad, whose links to the great European repertory extend even to the inclusion of some examples in variant forms. The Italian ballad is cast in epic-lyric metre (unusually, in central to southern Italy, in lines of 11 syllables), it is strophic (using many different forms), specific texts and melodies are closely linked, and there are variant versions. Ballad narratives have the following main features: the action is stripped to its essentials, concentrating only on the most salient episodes with details omitted, the approach is emotionally detached, there is a non-linear presentation of time, action is dramatized (sometimes giving rise to theatrical presentation, in the Pavia Apennines, Canavese and Loranzè), much use is made of dialogue and the focus is on a number of principal themes, dealing with relationships between men and women.

In Italy ballads have been documented as an essentially female repertory, and the very circulation of ballads and creation of variants can be linked to the mobility of women under the virilocal system found in the north, the fact that women lived together within multiple family households in the old peasant society, and the practice of singing during women's collective work. Ballads can thus be considered the product of a totally female way of representing and interpreting reality, expressing women's perceptions of themselves and how they relate to the world. In peasant society in the past, ballads both had a strong educational role in transmitting models of values and behaviour, and helped to develop imaginative activity. Italian ballads essentially present women's stories, and through these symbolic tales they represent the woman's world view in past peasant society, which stresses female weakness in the face of strength, violence and authority of men, honour as the main socially recognized value of women, death as the likely consequence of legal and moral transgressions. The narratives concentrate on a small number of principal themes: 1. Violence done by a man to a woman (e.g. *Gli anelli*, Nigra 6); 2. Women betrayed by men (e.g. *Cecilia*, Nigra 3); 3. Forbidden love (e.g. *Fior di tomba*, Nigra 19); 4. Virtuous girls (e.g. *La prova*, Nigra 54); 5. Women who break the law (e.g. *Donna lombarda*, Nigra 1, the most famous of all Italian ballads).

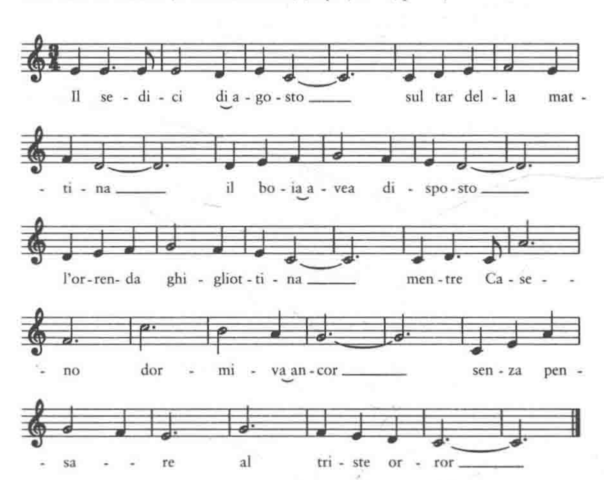
Musical analysis suggests that in the past the ballad repertory was dominated by the practice of two-voice singing; the music examples given by Nigra in 1888 suggest that this was already commonplace in the 19th century. Not only have ballads sung by two voices in parallel 3rds been documented (ex.1), but a large repertory exists of melodies that derive from singing in 3rds where only the lower part, ending on the tonic, or the upper

Ex.1 *L'infanticida* (ballad), Ripalta nouva, Cremona, transcr. T Magrini

part, ending on the third degree of a major scale, has been retained. As well as this repertory, linked to collective performing practice, there are also ballads that are clearly monodic, often based on a minor scale, or, in rare cases, on a different mode (ex.2). Monodic and polyphonic ballads also differ in vocal style. Monodic ballads use a contained delivery in the central register and a declamatory style of singing that focusses on communicating the text; in polyphonic ballads the voice is louder, the melody often moves in a higher register, and the performers are clearly more interested in singing in itself. In both cases, however, the ballad retains its character as an identifiable poetic and musical entity, belonging to the first system of music production and transmission outlined above.

From the 1950s, women's ballads saw a progressive decline in the wake of massive migration from the countryside into cities and the disintegration of multiple families into scattered families; this marked the end of collective occasions for singing and exchanges among women. Moreover, from the end of the 19th century, peasant women in the north became increasingly involved in the new form of seasonal work as rice-weeders. This brought profound changes as much to their lives and the imagery they commanded – they were living apart from their families for the first time, had freer relations with men and could earn an income of their own – as to their repertory of songs and style of singing (linked to choral performance, tense and high-pitched). A repertory of rice-weeders' songs came into existence, preserving only a few of the old ballads (sometimes in altered versions), but giving rise to new songs that bore directly on the women's work experience.

A male song practice, which shares points of contact and exchange with the female practice of ballad singing, has also been documented. Men's songs are predominantly choral and associated with musical entertainment in the classic male gathering-places, chiefly the inn. The male choral repertory is mixed, and may include social, Alpine, comic and risqué songs, as well as some ballads. The unifying element of this repertory is the style of singing, a two-voice, parallel third structure, enriched by octave doublings, drones or additional harmony notes. Generally there is a solo opening before the entry of the chorus, which is loud, emphatic and slow (ex.3). Since this style is very taxing, men often tend to shorten ballad texts, preferring to focus on the cohesion of the group and the musical activity itself rather than the narrative. This may be related to the different function that singing has for a male chorus: as an event it has a looser connection with the textual content of the songs and is more directed towards emphasizing the social and cohesive value of the simple act of singing together. There are interesting examples of this type of male choral singing in the Po valley and the Ligurian hinterland.



Broadside ballads are quite different from the ballads of the oral tradition, both in terms of the way they are produced and their content. They are the creation of folk-music professionals, *cantastorie* (street singers), active in northern and central Italy, and form part of the performances they give in town piazzas, where instrumental pieces and other types of songs are also heard. The songs are a part of the show which is sold to the audience and paid for by the acquisition of various objects, including broadsheets with the song texts (in the past) or pre-recorded cassettes (today). The narrative songs that ballad singers produce are quite different in character from

Ex.2 *Ratto al ballo* (ballad), Carbonizzo (Conati, 1976, p.76)

Ex.3 *Bel ucelin del bosc* (ballad), Farneta, Bologna, transcr. T. Magrini

Ex.4 *Aria di Caserio* (broadside ballad) (Leydi, 1990, p.148)

ballads belonging to the oral tradition: they use a variety of poetic metres, different from epic-lyric verse, employ recurrent musical motifs (as in ex.4) and often have an instrumental accompaniment. With topics drawn mainly from recent crime stories, dealt with in a sensationalist manner, their highly detailed narrative style is directed towards the emotional involvement of the spectators. These songs have also entered the repertory of the oral tradition, but they are easy to distinguish from traditional ballads. The exchange has not been one way: ballad singers have also taken over traditional ballads, re-elaborated in the style of broadside ballads, like *Donna lombarda* or *Cecilia*.

As well as the broadside ballads, the *storie* of southern *cantastorie* are worthy of note. Traditionally, the *storia* is quite a long piece, with a particularly elaborate narrative and a wealth of detail, employing a strict strophic form, with a preference for 11-syllable lines. Lengthy *storie*, concerned with matters of honour and blood, have been documented by folklorists in the past, the most famous being *La baronessa di Carini*, but there are also *storie* concerned with political events, such as *La storia di Muratti* (ex.5), which recounts the historical tale of Gioacchino Murat, the former King of Naples who was shot dead in 1815. In the 20th century Sicilian ballad singers have often collaborated with poets (including Ignazio Buttitta) for their texts. Their performances in

town piazzas, accompanied by guitar, use the traditional visual aid of the *cartellone*, a placard depicting the key events of the tale.

The long *storie* in *ottava rima* found in central Italy are also narrative in content, and are traditionally sung at *veglie*, social gatherings with music; a famous example is the *storia* of *Pia de' Tolomei*, which exists in different popular printed versions. More typical of the work of poets in *ottava rima*, who, in contrast to the *cantastorie*, are not professionals, but specialist interpreters of a song tradition, are re-elaborations of narratives mainly drawn from published classical and Renaissance epic literature. These are heard at competitions in which two performers confront one another, improvising verses according to a specific musical practice, which allows for subjective elaboration of the melodies (as happens in lyrical singing).

Lastly, mention should be made of religious narrative compositions, the *orazioni* that recount Christ's Passion or the lives of saints. Often performed in the past by mendicants, the religious narrative song in Sicily has been the prerogative of the *orbi*, a congregation of blind musicians in existence since 1600 in Palermo, who are the trustees of a wealth of *novene* and *triunfi*, songs commissioned by a believer in honour of a saint who has bestowed a grace.

3. Lyrical singing. This term refers to a system of improvised music-making prevalent in southern and central Italy, but also to be found in the north. The basis of lyrical singing is a creative act, whereby words and music are combined extemporarily. A variety of musical practices are used, by men and women, individually or together. They form an essential part of local culture, often being taken as a potent symbol of local identity. The texts do not recount stories, but express feelings (in most cases addressed to an imaginary female figure), and are subjective in character. They are widely circulated and have given rise to innumerable variants, but are not tied to specific melodies. The principal metre is the 11-syllable line, organized into different poetic forms, and variously elaborated in the course of the song, even with fragmentations and the insertion of verses in contrasting metres. The singing practices are normally local in character and adopt a 'way of singing' peculiar to the community which each interpreter is free to elaborate on individually. There are also specific ways of elaborating the text and organizing a group of performers to participate in the singing and the various forms of accompaniment. Since these singing practices are highly diversified, this overview is limited to the observation of some of the elements that differentiate them.

In some traditions the performance is based on a single, consistent text, a 'continuous discourse' performed as a solo (such as Sicilian carters' songs) or by a group of performers who follow strict rules of alternation. For example, the first performer may sing a couplet, repeated by the others in turn, and elaborated in a particular manner, as in songs *alla verbicarese* or *alla lonnuvucchisa*, or else the singers will alternate, taking single verses and using a technique of fragmentation and repetition which has echoes in 14th-century Italian music. An example of

19. Singing 'alla verbicarese' to the accompaniment of the diatonic accordion

this type is provided by songs 'alla mageraiota' (ex.6). In other traditions, the performance will use several song texts (either complete or in part) in sequence, possibly adding verses of contrasting character or nonsense. Such pieces are generally performed by several singers in turn, and the performance is characterized by the notion of 'interrupted discourse', in that texts on different themes follow on from each other. Lastly, the performance can be organized as a dialogue between two singers alternately using a precise musico-poetic form for each entry (*contrasti*, *stornelli*, *dispetti*, etc.).

The types of lyrical singing discussed so far are all monodic and are performed employing either purely vocal melodies or dance tunes. In the former case, the rhythm is free, the vocal style is often very tense, the singer uses a high register, and the melody is organized in descending segments, frequently moving by step; there is a great deal of melismatic decoration, the melody is often modal, sometimes characterized by modal mobility, and there may be instrumental accompaniment. When a song is performed to an instrumental dance-tune, the singers can still use the same 'gestural' style, or they may adopt less articulated melodies, with a fixed rhythm and a less emphatic vocal style more concerned with communicating the often very dense text. They may even mix the two singing styles, as in ex.7. At any rate, making music within the system of lyrical singing provides ways for participants to test their own creative skill and degree of competence in giving a musical performance, within shared guidelines that determine the possibility of reciprocal communication, interaction and exchange between performers.

Lyrical singing serves many functions. One practice of great interest which has now disappeared is the *serenata* which a man addresses to his beloved; this fulfilled the social function of monitoring pre-marital relations, and in some parts of southern Italy could take the forms of a 'song of love' and 'song of contempt'. The performance of 'songs of love' publicly announced the relationship, while 'songs of contempt' either informed the community that an engagement had been broken off, or else provoked the break by directing highly offensive comments to the woman. The same repertory can be sung today as a form of entertainment within a male group; the function here is to socialize certain subject-matter of an emotional nature, and realize particular models of interpersonal interaction. In some traditions, the performance of lyrical songs may be part of devotional behaviour during religious festivals. In the past there was also frequent recourse to lyrical singing during agricultural work, at social occasions or competitions, where verbal communication and competitive improvisation predominated.

Agricultural work and entertainment are also associated with polyphonic renditions of lyrical songs, and while these are to be found in many regions of Italy, different regional traditions generally display no connections. In the north, the *villotta* (a type of lyrical song in verses of 8 or 11 syllables, now rare in either monodic or polyphonic performance) can be sung in parallel 3rds, while in the Italian communities of Istria it gives way to various types of two-voice, non-parallel discant known as *canto a pera* or *a la longa* in Gallesano, *basso* in Dignano, *mantignada* in Sissano and *butunada* in Rovigno. In central Italy the most significant form is the *vatoccu*, found in Umbria, the Marches and the Abruzzi. This type of discant performed by two voices (either both male or mixed), used to perform lyrical satirical songs with verses of 11-syllable lines, whose chief point of interest lies in the non-parallel movement of the lines (ex.8). Other forms of two-part singing in central Italy, in many respects similar to the *vatoccu*, are known locally by names such as *canto a coppia*, *a recchia*, *alla metitora*, *alla pennese*.

There are also traditions of polyphonic singing in the extreme south accompanied by a drone (ex.9). In SARDINIA forms of lyrical singing show individual aspects when compared to those on mainland Italy, including the monodic 'song with guitar', and the polyphonic *tenore*

Ex.7 Singing for the dance for Madonna dell'Arco, Giugliano, Naples, transcr. T. Magrini

Ex.8 *Vatoccu*, Perugia (*Le polifonie primitive in Cividale: Cividale del Friuli 1980*, pp.344–5)

singing. Mention should lastly be made of the *vjersh* of the Albanian communities in Calabria, a form of great contrapuntal interest, where a brief sequence of verses is interpreted by two and three voices according to a variety of polyphonic models.

4. Other vocal repertories.

(i) Children's songs. The best-known songs for children are lullabies, an enormous repertory with great variations throughout Italy. This repertory is identified not by form or poetic metre nor by a given musical idiom, but uniquely by the occasion for the song – an important moment in the relationship between mother and child. Different functions can be expressed inside this relationship, beyond the mere inducement to sleep through repeated, rocking melodies. Lullabies display a wide range of imagery, with references to everyday life or religion, and as some of them derive from lyrical songs, they make up a repertory in which women create a world of fantasy that goes beyond the dimension of the relationship with the baby. The very melodic articulation of the song and the loud nature of the vocal style are evidence that the lullaby has often been the instrument for women to express them-

Ex.9 *Viddi 'na bella* (work song), Calamonaci, Agrigento (*Le polifonie primitive in Cividale: Cividale del Friuli 1980*, pp.340–41)

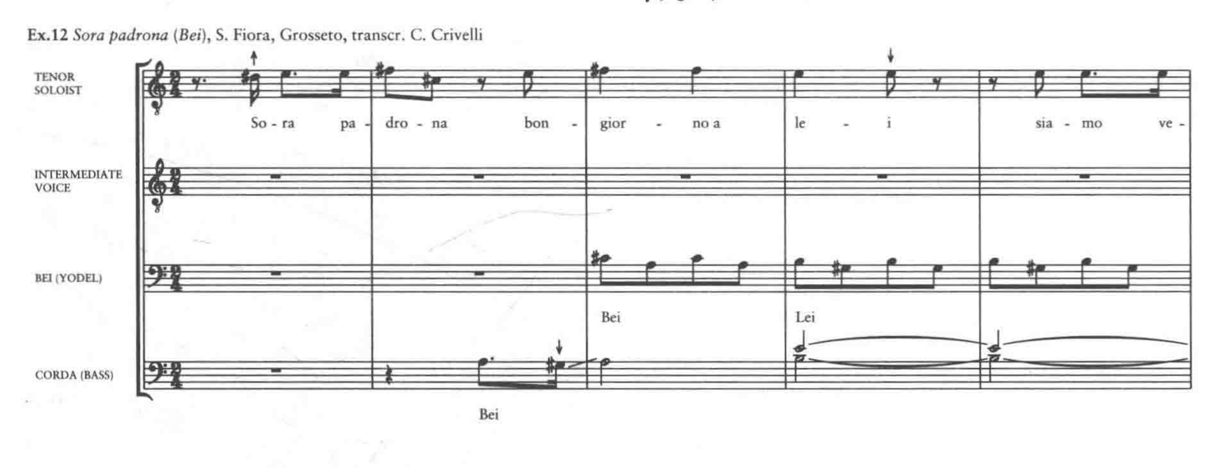
selves musically, and that has developed beyond the traits generally associated with the occasion of its use.

There is also a rich repertory of rhymes and counting songs for children, often using simple melodies and linked to games which, together with tongue-twisters and riddles, traditionally constitute instruments of the child's physical and mental training. Less well known are the songs that children use for their own games, and which may include pieces from adult repertories, like ballads, or, as in Brianza, the medieval *Visitatio Sepulchri*, reworked as children's games.

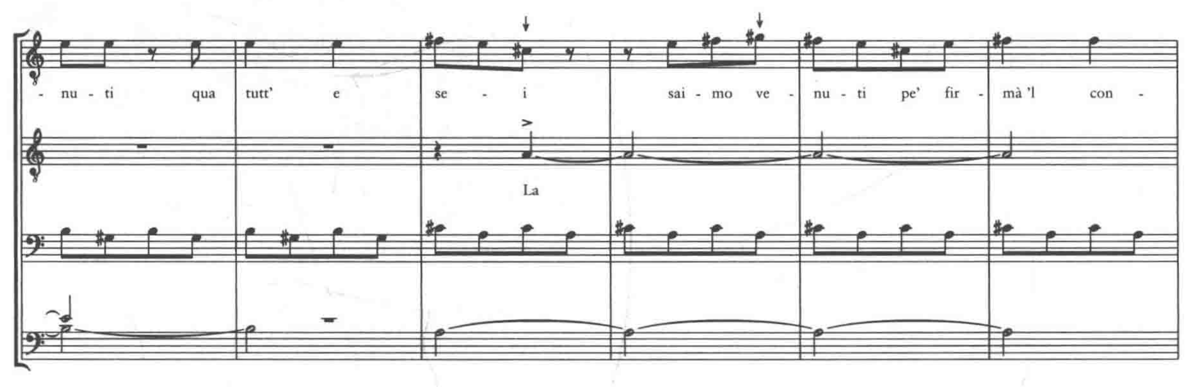
(ii) Work songs. It has already been observed that there are multiple song traditions, many of them lyrical, that performers relate to agricultural work. They take on a variety of names in different locations: *canti alla mietitora* (harvesting songs), *boare*, *canti alla falciatora* (scything songs), carters' or waggoners' songs, *canto alla monnarella*, *vatoccu*, *canto a pennese*, etc. In most cases the singing style is quite taxing, both in terms of vocal production and, for polyphony, in the coordination of voices, a style traditionally sung not while working but during breaks or after the work was done. Other repertories more closely related to work have now generally disappeared, like that of tuna fishers in Sicily, who used sound to coordinate various points in the work of fishing. For salt-workers the principal element lay in counting the boxes of salt transported, while pedlars sang to attract clients and advertise their wares (ex.10). The piledrivers of the Venetian lagoon had work songs, and work was also the context of the repertory of rice-weeders (songs recounting moments of life in the rice-fields or expressing social protest), spinners (working in silk mills) and with other songs of social protest associated, among other things, with labouring and emigration.

(iii) Other polyphonic practices. Besides the polyphonic practices described above, which are associated with specific occasions (such as work or ritual) or repertories (ballads, lyrical singing), the main function of some other singing practices is collective entertainment. Such practices are characterized more by style than by repertory. Among these are several styles of male polyphony in the north of Italy (including that of the Alpine chorus, which is partly connected to folk repertories), which vary in their particular musical choices. In urban Genoa a complex type of five-voice polyphony has developed,

Ex.10 *More* ('Mulberries'), pedlar's song, Rome (Biagiola, 1994, p.21)



Ex.11 *Tutti ne van pe America (trallalero)*, Sestri Ponente, Genoa (Neill and Balma, 1984, p.82)



known as *trallalero*: its characteristics are the use of a falsetto voice (*cuntrètu*), and a voice that imitates a guitar and takes that name (*chitarra*), with the addition of a tenor voice (the soloist who begins the song), a baritone and a bass, the last part being taken by at least three singers (ex.11). *Trallalero* was already documented in the 19th century, but it started to develop from the 1920s particularly. Its musical structure is solidly tonal, most of the texts are very short, it offers no particular message and often resembles nonsense. A singing practice that is similar in many respects is the *bei-bei* of Monte Amiata in Tuscany. This is characterized by a solo voice (tenor), who sings the song text to the accompaniment of the *bei* (a voice that performs a kind of yodel moving in intervals of a 3rd or 6th) and the *corda* (a bass who sings the fundamental notes of the harmony), and sometimes an intermediate voice which fills out the harmonic texture or provides a rhythmic support (ex.12).

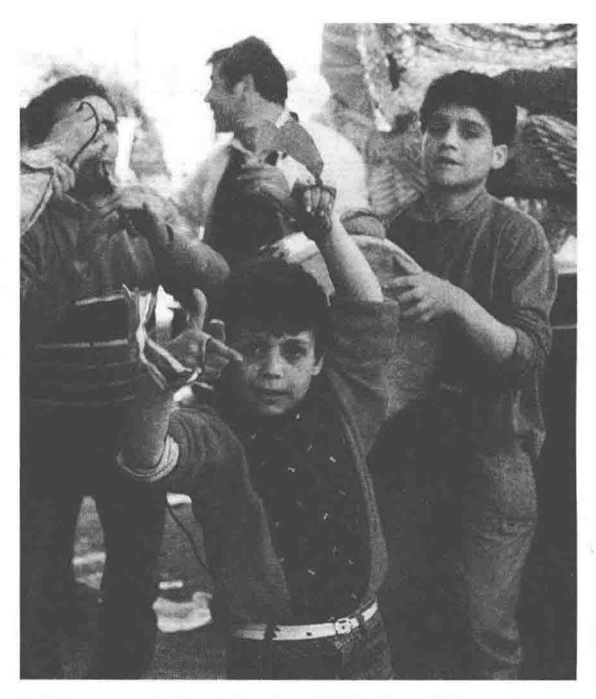
A further form of polyphonic song in which voices imitate an instrumental accompaniment (like the *trallalero* and the *bei*) is found in Rovigno in Istria. This is the *bitinada*, a singing style for three male voices: the upper voice takes the melody and sings the text, while the two lower voices perform an accompaniment of nonsense syllables (*lulu*, *tin tin*, etc.), based respectively on an arpeggio and a rhythmic motif on a repeated pitch. Another category of polyphonic song in Rovigno is the *aria da nuoto*, night song. This is for three voices in choral style (ex.13); as in the other examples, the texts are of varied provenance and are no more than a pretext for collective singing. A further style is the *tiir* of Premana in the province of Como, which aims for maximum socialization during the singing, with no distinction between singers and audience. Men and women together create a complex musical texture in which there are no predetermined roles and great harmonic richness is achieved spontaneously.

5. MUSIC IN RITUAL. Of the principal life-cycle events, birth is not connected in Italy to any specific musical repertory, but marriage was often accompanied by songs and music for the bridal pair. Among the different traditions is the *sonata per la sposa* performed in the pastoral communities of Alta Sabina. This includes three pieces played on the *ciaramella* (here a bagpipe with two chanters and no drone): the *piagnereccia*, played while waiting for the bride outside her father's house, and expressing in music the bride's grief at leaving her family (ex.14), the *camminareccia*, which accompanies the bride's journey to the church, and the *crellareccia*, a dance performed by the newly-weds as they leave the church. Death has traditionally been an occasion of ritual mourning (ex.15) in the south and in Sardinia. Ernesto De Martino devoted one of his greatest works to this

Ex.12 *Sora padrona* (*Bei*), S. Fiora, Grosseto, transcr. C. Crivelli

practice (D1958), examining the rites connected with death in Lucania and, for comparison, in other Mediterranean areas of Europe. He describes ritual mourning as 'protected speech' (D1958, pp.89–103), that is, a cultural model that offers the protection of organized behaviour for the expression of grief. He thus interprets the lament as a technique for weeping (including particular verbal, musical and gestural behaviour) established in order to control and overcome the psychological risks connected to the experience of death, undergone by individuals and the community as a whole.

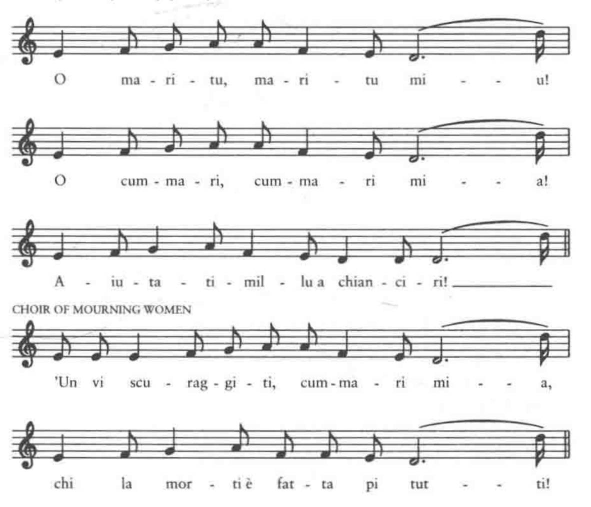
De Martino devoted his most famous work (D1961) to another rite, therapeutic in character, which is found in Puglia. His analysis again concerns a situation of physical and psychological crisis, called tarantism. Traditional culture in Puglia considered tarantism to be poisoning caused by a tarantula bite, which could be cured only through a symbolic rite, featuring music, dance and colour. According to De Martino's interpretation, tarantism aims at symbolically representing and acting out a critical situation (a psychological struggle that cannot be remembered, thus leading to neurosis) that affects all women during the age of sexual development. His study (including an article by the ethnomusicologist Diego Carpitella) reveals the large part played by music during the therapy of tarantism, since music represents the only instrument that can provoke a reaction to the state of complete apathy of those affected, inviting them to dance and thus to represent and overcome the conflict. Towards the end of his life De Martino began studying a phenomenon parallel to tarantism, the Sardinian *argia*.



Ex.13 *Aria da nuoto* ('night song'), Rovigno, Istria (Colzani, 1987, p.89)

Ex.14 *Piagnereccia* (bagpipe melody), Cavagnano di Montereale, L'Aquila (Arcangeli and Palombini, 1984, p.180)

Music plays an important role in a large number of rites that may be either religious or seasonal, or both, varying by region. The cycle of festivals of the winter solstice is the occasion for instrumental performances (the *pastorale* performed on the bagpipe is common in the south), narrative songs relating to Christmas, lullabies for the baby Jesus, songs for Epiphany (such as the *Pasquella* in Romagna and the *Stella* in the eastern Alps) and Christmas novenas. Strictly speaking, the term novena signifies a narrative song in nine sections, corresponding to the nine days preceding the feast day: a widely known piece in Sicily is the *Viaggiu dulurusu*, a narration in nine parts traditionally performed by the *orbi*, that begins at the point where Joseph learns of the imperial decree ordering the census and ends with the Nativity. Carnival was traditionally the period for *veglie* (when songs would be sung and stories told), dances (Bagolino in the province of Brescia has a particularly famous repertory) and rites



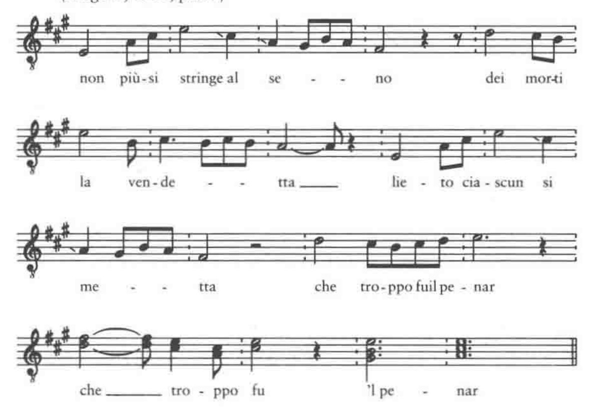
20. Devotional dancing in honour of the Madonna dell'Arco, Naples

which are widely found in many parts of Italy. Often the subject is the death and resurrection of a symbolic figure (the Carnevale, the Vecchia) or the representation of 'the world turned upside-down', and there may be an element of dressing-up (a famous example being the masked *mamutones* of Mamoiada in Sardinia, who form a procession, playing cow-bells and rattles). Sometimes the rites take on an explicitly theatrical dimension (for example, the *Zeza* and the representation of the months in Campania, and the *Befanate* in Tuscany).

In many parts of the country Easter is the occasion for ritual and representational events which culminate in the rites of Good Friday, and many important song traditions are connected to these. In addition to the numerous songs narrating the Passion found in many regions, mention

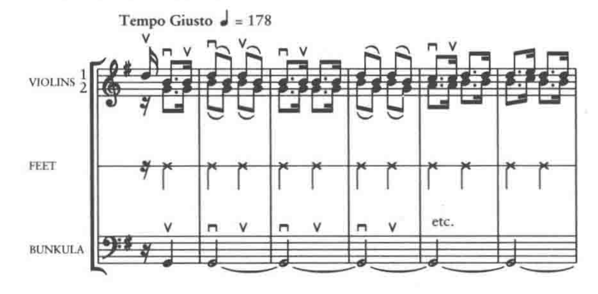
Ex.15 *Repitu* (ritual mourning), Montedoro, Caltanisetta (Favara, 1957, i, 327)

should also be made of polyphonic songs, often liturgical in character and sung in Latin, traditionally sung by groups of men (although recently women's voices have been introduced in some cases) who belong to lay confraternities. There are particularly interesting examples in Emilia, Liguria, Umbria, Campania (ex.16), Sicily and SARDINIA. Particularly in the south, spring and summer see numerous festivals dedicated to the Virgin Mary or to saints, each of which calls for ritual behaviour and involves much singing and dancing (fig.20). Roberto De Simone's recordings of religious festivals in Campania, issued in 1977, are an important piece of documentation.

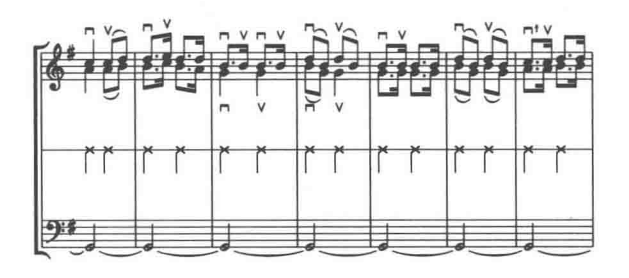


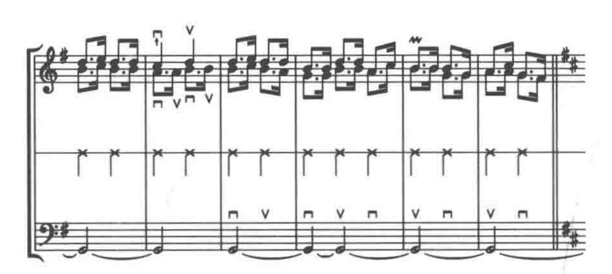
In many central and northern regions the arrival of summer is celebrated in the May (*Maggio*) festival, which, in Emilia and Tuscany takes the form of a proper music-theatre performance, whose origins seem to be traceable to the late 18th century. The *Maggio drammatico* is one of the most important expressions of folk music-theatre in Europe, and while it retains an explicit connection with a seasonal theme (the triumph of summer over winter), it has developed into a complex piece of work, all of it sung. The subject matter is freely drawn from medieval and Renaissance literature, the Bible and other sources, and elaborated by local writers who adapt the material to a recurring dramatic scheme: through a series of adventures a group of heroes (generally Christians) is formed, and they fight an enemy group (generally pagans), until the eventual triumph of the heroes. The dramatic composition is framed by the procession of the *maggerini* (or *maggianti*) followed by a prologue (a series of opening verses often referring to the seasonal theme and introducing the subject-matter), and the final chorus (ex.17), the only polyphonic piece in the presentation, which signals the return to the stage of all the characters who have appeared in the action, representing a communal concluding rite. The drama presented between the prologue and final chorus often has a cyclical structure and is frequently characterized by a number of synchronized actions. The acting style is 'alienated' and in some traditions gestures are used to explain particular words of the text. The musical and poetic structures are closely linked: four lines (or sometimes five in Tuscany) of eight syllables – the dominant metre, related to the flowing action – are intoned on a fluid melodic pattern, articulated in four sections, similar to local forms of lyrical singing. An eight-line stanza (*ottava*) of 11 syllables, intoned on a melody repeated with variations at every couplet, is reserved for the key moments in the drama (death, imprisonment, separation); the *sonetto* (four lines of seven syllables) is used mainly for lyrical scenes and for the final chorus. As well as the singing there are short instrumental episodes (fragments of *liscio* dance tunes performed by violin, guitar and accordion) whose principal role is to divide the scenes and underline dramatic moments. The *Maggio drammatico* is still found in local variants in the Emilian Apennines and in Tuscany.

6. DANCES AND INSTRUMENTS. The principal instrumental music traditions found in Italy are mostly of dance music. Both in terms of dance and of music, the repertories are often profoundly different in the northern and central-southern regions. In northern Italy, the most important dance repertories, prominent in Emilia, Bagolino and Resia, are played by a small instrumental group, based around the violin (whose playing technique retains many elements from Baroque practice). In Emilia these *concertini* have often changed in composition depending on the

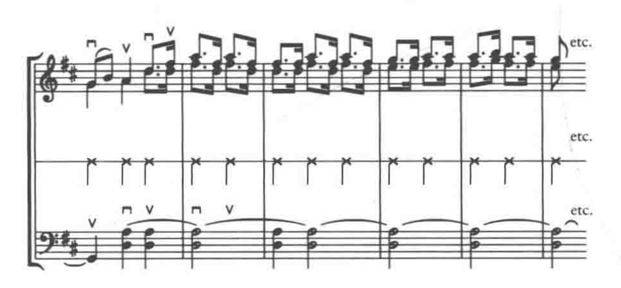


Ex.16 *Miserere*, Sessa Aurunca, Caserta (Macchiarella, 1995, p.27)





Ex.17 *Maggio drammatico* (final *sonetto*, choir), Frassinoro, Modena (Magrini, 1992, p.137)



Ex.18 Dance for two violins and *bunkula*, S Giorgio di Resia, Udine (Straijnar, 1975, p.58)

availability of players, but the classic formation in the early 20th century was two violins (the first having a solo function while the second provided a rhythmic-harmonic accompaniment), guitar (accompanying), a bowed bass instrument (such as a violone, three-string bassett, cello or bass) and whatever other instruments might be available to double the melody and in some cases perform a counter-melody (such as another violin or a viola). The repertory consisted of skipping dances (*ruggero*, *saltarello*, *ballo di Mantova*, *roncastalda*, *monferrina*, etc.), dances with ritual aspects (*ballo di baraben*) and waltzes, polkas and mazurkas, known as *liscio* ('smooth') to differentiate them from skipping dances.

In contrast, the repertory of instrumental groups in Bagolino is tied exclusively to Carnival. These groups consist of two violins, playing the main melody and a doubling or a counter-melody, two guitars (for accompaniment), a bass and a mandolin. The dances (*ariosa*, *bal frances*, *bas de tach*, *muleta*, *pas in amur*, *rose e fiori*, etc.), reserved for the last Monday and Tuesday of Carnival, are complex and sophisticated, and are performed by specially trained dancers from the village. Instrumental groups of the Val di Resia in Istria are made up of a violin (*citira*) which performs the melody alternately in two keys a fifth apart, an optional second violin doubling the melody in 3rds, a cello (*bunkula*) which holds the alternating tonics as a drone, and the stamping of the players, providing rhythmic support (ex.18). The dance repertory (such as the *ta palacowa*, *ta matianowa*, *ta panawa*, *rezianka zagatina*) is performed for the departure of conscripts (young conscripted soldiers), at Carnival or for festivals, and sometimes has vocal accompaniment.

Although the violin is predominant in the north, it is also used in Puglia in the context of tarantism rites: accompanied by a tambourine (taking the rhythmic function essential to the rite), guitar and sometimes accordion, the violin plays an essential role in the music and dance therapy of tarantism. Still in the north, in the Oltrepò pavese region around Pavia a further repertory of skipping dances can be found; examples are *alessandrina*, *monferrina*, *piana*, *giga*, *perigurdino*, *sposina* (dance for a bride), and *povera donna*, a Carnival dance that represents a rite of death and resurrection. The latter repertory is played by a *piffero*, a double-reed instrument belonging to the oboe family, and formerly accompanied by the *müsa* (a bagpipe with a single chanter for the melody and a one single-reed drone), now replaced by the accordion. Today besides the traditional dances many

21. Zampogna (bagpipe)

22. *Ciaramella (shawm), Cilento, Campania*

such groups perform a more recent repertory of *liscio* dances, also used by band groups (the Concerto Cantoni band in Emilia is famous for its repertory).

Many instruments are used in folk traditions, often deriving from art music. Idiophones include castanets, bells and cow-bells, crotales, cymbals, rattles, Jew's harps, setaccio, traccola and triangle. Of the membranophones, tambourines of different sizes are played (which may incorporate various types of idiophones, like small cymbals or bells), as well as double-sided drums and friction drums. Aerophones include end-blown, transverse or vessel flutes, panpipes, clarinets, oboes with or without pirouettes, shells, mouth organs, accordions and band instruments. Apart from the chordophones already mentioned, guitar and mandolin are common, and in the past the harp was found in Viggiano, Basilicata, and the zither in the Tyrol.

Formerly one of the most widely found instruments in various forms throughout Italy was the *zampogna* or BAGPIPE (fig.21). In the north, where apart from the *müsa* mentioned above, types such as the Alpine and Apennine *piva* were formerly played, today it has completely died out except for the Istrian *piva*, which has two single-reed chanters and no drone. The *piva* was once used to accompany singing as well as to play dance tunes (*furlana*, *balùn*, *liscio* dances) to the accompaniment of a tambourine, *simbalo*. The *zampogna* is now most widely found in central-southern Italy and Sicily. The instruments found in this area share a common structural characteristic: they have two chanters played with separate hands, and the drone pipes are mounted together with the chanters in a single block of wood, placed in a goatskin bag. In other respects, the central-southern bagpipes display profound differences. Some have chanters of equal length (the *surdulina* of Basilicata and northern Calabria, the Calabrian and Sicilian *zampogna a paro*, which generally has single reeds and two or three drone pipes), some have chanters of unequal length (*zampogna zoppa* with one, two or no drone pipes, mainly with double reeds, found in central Italy). Some have a key mechanism for the longest pipe to facilitate access to the complete system, presumably taken from the Renaissance SHAWM, such as the *zampogna a chiave* found from Lazio down to Sicily, generally with two drone pipes and double reeds. There is also the Calabrian '*a'moderna*' bagpipe, with chanters of unequal length, three drone pipes and single reeds.

Given the widespread presence of the bagpipe in Italy, its repertories are naturally diverse, using different musical idioms which have yet to be examined in depth. The instrument is used in ritual performance (processions, music for a saint, novenas), for dance (in southern Italy and Sicily the *tarantella* predominates, displaying a variety of choreographic and musical aspects) and to accompany singing. In many cases the bagpipe is accompanied by other instruments, especially the tambourine, different forms of which are found wherever the bagpipe appears in central-southern Italy, and the *ciaramella* (shawm; fig.22). The bagpipe is absent from Sardinia, but a triple clarinet of reed pipes called *launeddas* (played using circular breathing) is found throughout the southern area of the island.

The music played by the *launeddas* is the most refined example of the open, improvisatory forms mentioned earlier and is widespread in the instrumental music of southern Italy. The general structure of the dances (*ballo tondo*) played by professional musicians is completely dominated by the aesthetic notion of thematic continuity (*sonai a iskala*). In practice, the dance is made up of a series of *nodas* or *pikkiades* (short elements endowed with a characteristic tripartite form), each of which is developed in a series of variants that together form a group. The passage from a group based on one *noda* to a new *noda* has to be effected without a perceptible modification in the musical discourse, something that is achieved through a sophisticated variation technique. Similarly, techniques of improvisation based on the

Ex.19 *Ciaramiddata* for double flute, Gialipieri Superiore, Messina (F. Cleopatra and M. Sarica: *Ricerca sul doppio flauto in Italia*, Bologna, 1985, p.33)

connection and variation of short musical elements may be found, for instance in the repertory of the southern bagpipes and diatonic accordion.

The instruments mentioned above are the most important to be found in the panorama of Italian music, both in terms of diffusion and size of repertory. But the country also has many other instrumental traditions, often limited but nevertheless of great interest, such as that of the *chitarra battente* (in Puglia, Campania and Calabria), the *lyra* (found almost uniquely among the Greek-descended communities of southern Calabria), the double flute (in Campania, Calabria and Sicily; ex.19), and simple, double and triple clarinets (such as the Sardinian *benas*).

Ite missa est. The formal dismissal of the Mass consisting of the words 'Ite missa est' ('Go, you are dismissed') answered by 'Deo gratias' ('Thanks be to God'). The use of 'missa' in the sense of dismissal is quite ancient: by the early Middle Ages this meaning had been lost. Jungmann was thus of the opinion that 'this formula is as old as the Latin Mass itself'; it certainly dates from at least the 4th century. In fact the very term 'Mass' (*missa*), which replaced the earlier 'eucharistia', is taken from this phrase. The *Ite missa est* is an element of the Ordinary and was originally sung or chanted at the end of every Mass. In the 11th century, however, a change took place that resulted in the inclusion of the *Ite* only in masses with a Gloria; on other occasions the BENEDICAMUS DOMINO replaced it.

A number of melodies have survived (see Robertson for those in the service books of the abbey of St Denis), and there are 28 troped forms of the *Ite* in manuscripts from St Gallen and St Martial. The first source in which the *Ite missa est* is grouped with the other Ordinary chants is the 14th-century manuscript *F-TLm* 94, containing a collection of cyclic mass Ordinaries as well as a polyphonic mass, the so-called Mass of Toulouse; of the nine cycles, seven include the *Ite missa est* and two the *Benedicamus Domino*. With regard to the cycles of the *Edition vaticana*, Apel remarked that most of the *Ite* chants are identical to the Kyries in each cycle 'thus bestowing upon the cycle a noteworthy trait of musical unity'. Apparently, there was a tradition of adopting Kyrie melodies for the *Ite*, although other chants were also used, both for the *Ite missa est* and for the *Benedicamus Domino* (see Hiley). There is, however, no evidence of an older tradition of such unified cycles; only two of the *Ite* chants in *TLm* 94 are like their associated Kyries. An interesting observation concerning *Ite* melodies was offered by Fischer who showed that the 'Ite missa est V. toni' is in fact a contrafactum of the *Abgesang* of the Minnesang *Meie hât wünnechlîche entsproszen* formerly ascribed to Neidhart von Reuental.

There are very few polyphonic settings, possibly because composers considered the *Ite missa est* a postlude and not really part of the Ordinary. The extant settings are all 14th-century, the most famous being that of Machaut's *Messe de Nostre Dame*. Two other settings, in the Mass of Tournai and the Mass of Toulouse, are in fact motets with an 'Ite missa est' as tenor.

RICHARD SHERR

Iten [Itten], **Wolfgang** [Vital] (*b* Unter-Ägeri, nr Zug, 18 Dec 1712; *d* Auw, Aargau, 2 Jan 1769). Swiss composer. He entered the school of the Benedictine monastery at Engelberg in 1725 and took his monastic vows on 20 February 1729. He was probably taught music by Ildephons Straumeyer, *phonascus* and choir director at Engelberg, and by the composer Benedikt Deuring between 1733 and 1736. Deuring's sacred works were almost entirely lost in a fire at the monastery on 29 August 1729, together with works by Italian and south German composers (including Corelli, Steffani and J.V. Rathgeber), and after the fire Iten composed a new repertory. His first dated works are from December 1735. In 1737 he was made principal Kapellmeister at the monastery; he also played the trumpet.

The majority of Iten's 149 extant works (most in *CH-EN*; some in *E*) are motets, offertories and Marian antiphons for soloists and choir, usually with two violins and organ; two works include parts for the TRUMPET MARINE: *Pastorella*, 1738, and *Aria de S.P.N. Benedicto*, 1751. A *Missa brevis solemnis* (*CH-E* Eis.Mb.Th.199,36), dated 2 February 1739, has also been ascribed to him; it is for four voices and instruments (including two trumpets and timpani). Iten's music exemplifies the prevailing, Neapolitan-influenced concertante style, including recitatives and arias. It is not without a certain elegance, though marred by the occasional clumsiness. He also provided Latin contrafacta for the 40 Italian arias op.1 by his friend Franz Joseph Leonti Meyer von Schauensee (1720–89) and wrote two German Passion plays. For one of these, intended for use on Good Friday 1757 by his congregation in Auw, where he had become parish priest in 1754, he also supplied songs (*CH-EN* Cod.294).

For a full account of Iten's life and activities see J. Willimann: 'Pater Wolfgang Iten (1712–1769), Mönch und Komponist des Klosters Engelberg', *Zuger Neujahrsblatt 1987*, 83–111.

JOSEPH WILLIMANN

Itiberê, Brasílio (da Cunha Luz) (*b* Curitiba, 17 May 1896; *d* Rio de Janeiro, 10 Dec 1967). Brazilian composer. Although he had had music lessons with Leo Kessler in his native city, he studied engineering in Rio de Janeiro and was self-taught in composition. In 1934 he settled in Rio, where he became intimately acquainted with popular music, studying the samba schools and using popular material in such works as *O cravo tropical* for two pianos (1944), some of whose rhythmic figures recall Nazareth's tangos. His investigations of folk music were stimulated by his friendship with Villa-Lobos, who appointed him to teach folk music at the Conservatorio Nacional de Canto Orfeônico in 1942 (he had occupied a similar position at the Universidade do Distrito Federal from 1938). Itiberê's small output was produced between 1934 and 1954. In the early works the characteristics of folk and popular music are clearly evident, but later they were transformed. His best music is in the choral works and the piano pieces, of which the *Estudos* have a high place in the Brazilian keyboard literature. The first is a study in syncopation, the fifth has the typical accompaniment figures of the popular *chôro*, and the sixth is in *embolada* style, with its repeated notes and octaves. Another major piano work is the *Suite litúrgica negra*, based on the ritual *macumba* music.

GERARD BÉHAGUE

Itier, Bernardus (*b* 1163; *d* 27 Jan 1225). French chronicler of St Martial of Limoges and monk. Received as a boy scholar at St Martial in 1177, Itier held a succession of important offices, culminating in appointments as librarian (1204) and precentor (by 1211), posts he evidently held concurrently. Annotations in Itier's hand, scattered through surviving remnants of the St Martial library, testify to his interest in preserving the monastery books. One manuscript that he had bound includes a collection of early polyphonic music. Other musical manuscripts from the St Martial collection very probably owe their survival to his care.

Although not himself a professional scribe, Itier had charge of the monastery scriptorium and knew how to notate music. One composition in his hand, a Parisian motet based on the duplum of Perotinus's four-voice organum *Sederunt* (*F-Pn* lat.2208, f.1), shows a musical connection between Paris and St Martial in Itier's lifetime. The chronicle written by Itier is a central source of information on the monastery.

SARAH FULLER

Iturbi, José (*b* Valencia, 28 Nov 1895; *d* Hollywood, CA, 28 June 1980). Spanish pianist and conductor. He studied at the Valencia Conservatory and then with Victor Staub at the Paris Conservatoire, where he gained a *premier prix* in piano in 1913. During World War I he played in Swiss cafés, then taught at the Geneva Conservatoire, 1919–23. Extensive tours followed. He first played in the USA (where he settled) in 1928; in 1930 he gave 77 concerts on one American tour. In 1936 he was appointed conductor of the Rochester PO, a post he held for several seasons. His connection with films began when his fingers impersonated Chopin's in *A Song to Remember*; he then appeared in several more films. He was the most famous Spanish pianist of his day, with a large popular following; in 1950 he became the first classical musician whose sales

of a single record exceeded a million copies. Some critics held reservations about his Beethoven and Chopin, but his playing of the music of his native land was idiomatic, ebullient and vital. Iturbi composed a number of pieces in a Spanish idiom, including the *Pequeña danza española* for piano and a *Seguidillas* for orchestra. His sister Amparo (1898–1969), with whom he often performed, was also a pianist.

FRANK DAWES

Iturriaga, Enrique (*b* Lima, 3 April 1918). Peruvian composer and teacher. He studied the piano with Lily Rosa and harmony with Sas (1934–9), and then composition with Holzmann at the National Conservatory of Music (1946–50); his studies were completed in Paris (1950–51) with Simone Plé-Caussade and Honegger. He was awarded the Duncker-Lavalle prize twice, the first time in 1947 for *Canción y muerte de Rolando*, the second for *Homenaje a Stravinsky*, and, in 1957, the Landaeta prize in Caracas for his Suite no.1 for orchestra. Appointed professor of composition and harmony at the National Conservatory in 1957, he also taught at the San Marcos University (1964–82), later becoming emeritus professor there, and at the Catholic University (1970–82). In addition, he has collaborated with UNESCO on many regional projects to train music teachers.

Each work in Iturriaga's relatively small output addresses anew the problem of finding a personal style which at the same time expresses the multi-culturalism of Peru. In the early *Pequeña suite*, *Preludio y danza* and *Obertura para una comedia*, he stylizes popular genres, occasionally resorting to irony. In the Suite (1957) the references are more fragmented and dramatic, the rhythm more pronounced and the orchestration characterized by sudden shifts and contrasts. The *Homenaje a Stravinsky* for orchestra without upper strings and *cajón* (1971) is an example of Iturriaga's interest in building textures out of multiple instrumental planes; while the *Llamada y fuga para un santiago* (1990) shows him still employing popular materials in an individual fashion, using an objective and analytical fugal form to arrive at a traditional three-part melody. Iturriaga's musical language has remained, for the most part, one of extended tonality – displaying the use of 'Arequipa 3rds', major and minor 3rds superimposed or juxtaposed to produce bimodal passages – or polytonality. The sober Webern-like serialism of *Vivencias I–IV* (1965), notable for its invention and expressivity, is an isolated example. Throughout his career his vocal writing has remained an important element, in particular in the *Ejercicios poéticos* (1951) and the *Cuatro poemas de Javier Heraud* (1977).

J. CARLOS ESTENSSORO

Ivanoff [Ivanov], **Nicola** [Nikolay] **(Kuz'mich)** (*b* Poltava, 10/22 Oct 1810; *d* Bologna, 7 July 1880). Russian tenor. A singer in the imperial chapel, St Petersburg, he was given leave of absence to accompany Glinka to Italy in 1830, and never returned to Russia. He studied with Eliodorn Bianchi, Andrea Nozzari and Panofka, making his début at the S Carlo on 6 July 1832 as Percy in *Anna Bolena*. He first sang in Paris at the Théâtre Italien in 1833 as Gianetto in *La gazza ladra* and made his London début on 15 April 1834 as Percy at the King's Theatre.

Ivanoff passed the remaining years of his career mainly in Italy. In 1840 he sang in *Guillaume Tell* (given as *Rodolfo di Sterlinga*) at Bologna, where on 19 March 1841 he took part in a performance of Rossini's *Stabat mater* conducted by Donizetti. Engaged at Palermo, he sang Riccardo in the première of Pacini's *Maria, regina d'Inghilterra* (11 February 1843), and made his début at La Scala in the same opera (26 December). In the summer of 1844 he appeared at the Kärntnertortheater, Vienna, in two Donizetti operas, *Maria di Rohan* and *Roberto Devereux*. At Parma the same year he sang the title role of *Ernani*, with an extra aria, commissioned from Verdi and paid for by Rossini, who had adopted the tenor as his protégé. He repeated *Ernani* at the Teatro Apollo, Rome, in 1845. In 1846 at Trieste he sang Foresto in *Attila*, again with an extra aria commissioned from Verdi by Rossini. He returned to Rome (1847–8), Paris (1850) and to Palermo (1852), but by then his voice had nearly gone, and he had to be replaced after two performances.

At the beginning of his career Ivanoff had, to quote Chorley, 'the sweetest voice, as a gentle tenor, that ever sang in Italian or Muscovite throat. Nothing could be more delicious as to tone – more neat as to execution: nothing, assuredly, ever so closely approached an automaton not wound up, as did he, on the stage, by his insignificance of aspect, and his nullity of demeanour'. When later he attempted heavier roles, his voice lost its bloom, but he gained in stage experience and dramatic conviction.

ELIZABETH FORBES

Ivanov, Georgi. *See* TUTEV, GEORGI.

Ivanov, Lev Ivanovich (*b* St Petersburg, 18 Feb/2 March 1834; *d* St Petersburg, 11/24 Dec 1901). Russian choreographer. *See* BALLET, §2(iv).

Ivanov, Mikhail Mikhaylovich (i) (*b* Moscow, 23 Sept 1849; *d* Rome, 20 Oct 1927). Russian critic and composer. He graduated from the Institute of Technology in St Petersburg in 1869 and then studied for a year at the Moscow Conservatory, where he attended Tchaikovsky's composition classes and took piano lessons from Dubuque. From 1870 to 1875 he studied with Sgambati in Rome; during these years he associated with Liszt and his circle of pupils and admirers. On his return to St Petersburg, he began to submit articles on musical topics to the St Petersburg press. In 1879 he edited the musical journal *Voskresnïy listok muzïki i ob'yavieniy*, but the following year he was engaged as permanent music critic on the *Novoye vremya*. His lively and informed articles appeared regularly in that paper until 1918. Conservative in his outlook on music, he adopted a hostile attitude towards the so-called National School. His often ironic and scathing reviews of new music earned him the dislike of many composers.

Ivanov wrote four operas (three of which were performed with some success), several competent if uninspired orchestral works, some choral pieces and some songs. His compositional style has been described as a pale imitation of that of Tchaikovsky. He wrote a history of music in Russia, *Istoriya muzïkal'novo razvitiya v Rossii* (St Petersburg, 1910–12), and articles on Italian literature, and translated into Russian Hanslick's *Vom Musikallsch-Schönen* (a work which had a profound influence on him as a critic) and Nohl's *Die geschichtliche Entwicklung der Kammermusik*. After the Revolution he emigrated to Italy, where he lived quietly until his death.

JENNIFER SPENCER

Ivanov, Mikhail Mikhaylovich (ii). *See* IPPOLITOV-IVANOV, MIKHAIL MIKHAYLOVICH.

Ivanov-Boretsky, Mikhail Vladimirovich (*b* Moscow, 4/16 June 1874; *d* Moscow, 1 April 1936). Russian music historian and composer. He studied law at St Petersburg University, graduating in 1896, and music at the St Petersburg Conservatory, where his teachers included Rimsky-Korsakov. In 1901 he went to Italy to study at the Florence Conservatory; this fired in him an interest in Italian music and inspired him to write his first book, a short monograph on Palestrina. In 1905 he returned to Russia, where he undertook teaching commitments in Moscow and was a council member of the music theory department at the Institute for the History of the Arts in Petrograd. At about the same time he produced a number of compositions; almost all have remained in manuscript, and include a Symphonic Suite (1893), the operas *Adol'fina* (1908) and *Koldun'ya* ('The Sorceress', 1913; performed St Petersburg, 1918), chamber music, piano pieces, choral works and songs. In 1922 he was appointed dean of the faculty of theory and composition at the Moscow Conservatory, and under his supervision the research department was founded (1923).

Ivanov-Boretsky is considered to be the founder of the Moscow school of music historians; he taught many well-known Russian musicologists, including Livanova and Tumanina, who later became professors at the conservatory. He was the first Russian musicologist to write extensively on Western music, and early in his career produced a number of popular pamphlets on Mendelssohn, Schumann, Josquin and others. He followed these with more generalized studies of music history, which formed the foundation of the teaching courses he established at the conservatory.

IGOR BĖLZA

Ivanovich, Cristoforo (*b* Budva, Dalmatia, 1628; *d* Venice, before 6 Jan 1689). Italian librettist and theatre chronicler of Dalmatian birth. He went to Italy in the mid-1650s to escape the war over Crete. He settled first at Verona, where he was a member of the Accademia Filarmonica and the Accademia dei Temperati, which organized opera and theatre performances there. From 1657 he lived in Venice, where he became a member of the influential Accademia Delfica. Soon after moving there he became secretary to Leonardo Pesaro, one of the procurators of S Marco, where in 1676 he obtained the position of *sottocanonico* and in 1681 that of *canonico*. He wrote librettos for Venice, Vienna and Piacenza; he also adapted Moniglia's Florentine extravaganza *Ipermestra* to Venetian taste as *La costanza trionfante*. His exchange of letters with Pagliardi (*Poesie*, Venice, 1675) contains an interesting and rare description of that taste: 'The character of this city likes the heroic to be serious but lively, the pathetic not excessively languid, and the comic full of vigour but easy-going'. His principal contribution to musical theatre is a catalogue of Venetian opera performances from 1637 to 1681 (continued, in a second edition, to 1687), 'Le memorie teatrali di Venezia', published as an appendix to his *Minerva al tavolino* (Venice, 1681, 2/1688). Although it contains many inaccuracies (see Walker), it is a valuable source of information about 17th-century operatic repertory and is the basis for all subsequent catalogues; it also contains an extensive discussion of contemporary theatre practice. Ivanovich's will was proved on 6 January 1689.

WORKS

L'amor guerriero (dramma per musica), P.A. Ziani, 1663; *La Circe* (dramma per musica), Ziani, 1665 (D. Freschi, 1679); *Coriolano* (dramma), F. Cavalli, 1669; *La costanza trionfante* (dramma per musica), G.D. Partenio, 1673 (B. Pasquini, 1679, as *Dov'è amore è pietà*); *Lisimaco* (dramma per musica), G.M. Pagliardi, 1673; *L'africano trionfo di Pompeo* (dramma per musica), 1678 [unperf.]; *La felicità regnante* (serenata), 4 Sept 1681

THOMAS WALKER/NORBERT DUBOWY

Ivanovici, Iosif (*b* ?1845; *d* Bucharest, 28 Sept 1902). Romanian composer and conductor. He studied in Galaţi with Alois Riedl and in Iaşi with Emil Lehr, and became director of the military bands of Galaţi and Bucharest. He composed fanfares, marches, waltzes and potpourris of folk melodies, and in 1889 was awarded a composition prize at the International Exhibition in Paris. His piano and vocal pieces became popular at the soirées of the day, and his fanfare *Valurile Dunării* ('The Danube waves'), also arranged for piano, has become widely known.

WORKS

Military band: Valurile Dunării [The Danube waves] (Bucharest, 1880); Zîna munţilor [The mountain fairy] (Bucharest, 1886); Porumbeii albi [The white pigeons], op.132 (Hamburg, 1894); La fille du marin (Hamburg, 1894)
Pf: La vie de Bucarest (Bucharest, n.d.); Un rêve sur le Volga (Paris, n.d.); Nathalia (Leipzig, n.d.); Abendträume (Leipzig, n.d.); Der Liebesbote (Vienna, n.d.); Im Mondenglanz (Leipzig, n.d.); Sur le bord de la Neva (Paris, n.d.); Wanda (Paris, n.d.); Parade militaire (Bucharest, n.d.)
Many other marches, pf pieces and songs

ROMEO GHIRCOIAŞIU

Ivanov-Kramskoy, Aleksandr (Mikhaylovich) (*b* Moscow, 26 Aug 1912; *d* Minsk, 11 April 1973). Russian guitarist and composer. He studied the guitar with Agafoshin, a student of Segovia, composition with Rechmensky and conducting with Saradzhev. His concert career began in 1933, but he toured very little outside the USSR. He made several recordings and composed over 500 works, including two concertos and other works for the guitar, which reveal him as an excellent musician and an accomplished technician. He was a leading figure in the establishment of the classical guitar in Russia, and his self-study method (1948) is still used there. His daughter, Nataliya Ivanova-Kramskaya, described his life in *Zhizn' posvyatil gitare: Vospominaniya ob otse* [A life dedicated to the guitar: memories of my father] (Moscow, 1995).

JOHN W. DUARTE

Ivanovs, Jānis (*b* Preiļi, nr Daugavpils, 9 Oct 1906; *d* Riga, 27 March 1983). Latvian composer. He graduated in 1931 from Vītols's composition class and Schnéevoigt's orchestral conducting class at the Latvian State Conservatory, where he remained until 1933 in Vītols's practical composition class. From 1931 he worked for Latvian radio, and from 1945 to 1963 he was artistic director of the Latvian radio committee. He was appointed to teach composition at the conservatory in 1944, was made professor in 1955 and continued to teach there until 1983. He was president of the committee of the Soviet Latvian Composers' Union, 1950–51.

Ivanovs worked primarily in symphonic genres, the 21 symphonies standing at the core of his oeuvre. Deeply humanistic thought is evident in his orchestral works, where the language is characterized by broad melodies frequently rooted in the old scales of Latvian folk music, a lyrically dramatic expressiveness and rich textures. In his early works, those of the 1930s, he was to a certain extent subject to Impressionist influences and wrote programme works on the natural features and people of his native province of Latgale, occasionally using folksong melodies. His first three symphonies are also from this

period, though the first two were lost in the war years. With his Fourth Symphony 'Atlantīda' (1941), he arrived at an innovatory monumental concept of symphonism which marked a new stage in the development of Latvian symphonic music. His Fifth Symphony (1945) reflects the experiences of the war years. As a result of the communist party's decree against formalistic music in 1948, performances of Ivanovs's fourth and fifth symphonies were for many years prohibited. The Sixth, 'Latgales' (1949), illustrates scenes of the sufferings and final freedom of his native land; for this he was awarded the USSR State Prize in 1950. Power, energy and lyricism characterize the Seventh (1953) and Eighth (1956). In the Ninth, Tenth and Eleventh, Ivanovs became more deeply involved with psychological and philosophical concepts, and his musical language evolved towards a more complex harmony, making use of polytonality and linear polyphony. His next symphonies deal with wider social themes, the Thirteenth, *Symphonia humana* (1969), being dedicated to Lenin. Nos.14–16, however, reveal a tendency towards simpler forms and are in more of a chamber style. The music of the final symphonies synthesizes dramatic style with sophisticated, lyrical scenes and reminiscences transformed from his early works. Ivanovs's chamber music is characterized by weighty musical ideas, a vivid dramatic quality and laconic form.

JĒKABS VĪTOLIŅŠ

Ivanschiz [Ivanschitz, Ivanschütz, Ivanscics, Ivančić, Ivančič], **Amandus** (*fl* mid-18th century). Austrian composer of south Slav extraction. Only fragmentary information about his life is available. A Pauline monk, he was a member of the Maria Trost monastery near Graz by 1755. He was evidently a prolific and popular composer: there survive about 100 works by him in manuscripts, dating mostly from 1762 to 1772 and scattered throughout the Habsburg Empire and in south Germany. His music is characteristic of the transition from late Baroque to early Classical style, and his best works are his masses and symphonies. The masses are mostly scored for four soloists, four-part choir, two violins and bass and a pair of trumpets; some are of considerable dimensions, and they show distinct Neapolitan traits. The symphonies, many of which have four movements, are scored for strings, sometimes with a pair of trumpets or horns. The trios, entitled variously 'Divertimento', 'Nocturno', 'Sinfonia', 'Sonata' and 'Parthia', are mostly in three movements in the same key; Ivanschiz's frequent use of the viola as the second solo instrument is a forward-looking trait.

DANILO POKORN

Iversen, Henri. *See* SCHULTZE, NORBERT.

Ives, Charles (Edward) (*b* Danbury, CT, 20 Oct 1874; *d* New York, 19 May 1954). American composer. His music is marked by an integration of American and European musical traditions, innovations in rhythm, harmony and form, and an unparalleled ability to evoke the sounds and feelings of American life. He is regarded as the leading American composer of art music of the 20th century.

1. Unusual aspects of Ives's career. 2. Youth, 1874–94. 3. Apprenticeship, 1894–1902. 4. Innovation and synthesis, 1902–8. 5. Maturity, 1908–18. 6. Last works, 1918–27. 7. Revisions and premières, 1927–54.

1. UNUSUAL ASPECTS OF IVES'S CAREER. Ives had an extraordinary working life. After professional training as an organist and composer, he worked in insurance for 30 years, composing in his free time. He used a wide variety of styles, from tonal Romanticism to radical experimentation, even in pieces written during the same period. His major works often took years from first sketch to final revisions, and most pieces lay unperformed for decades. His self-publications in the early 1920s brought a small group of admirers who worked to promote his music. He soon ceased to compose new works, focussing instead on revising and preparing for performance the works he had already drafted. By his death he had received many performances and honours, and much of his music had been published. His reputation continued to grow posthumously, and by his centenary in 1974 he was recognized worldwide as the first composer to create a distinctively American art music. Since then his music has been

frequently performed and recorded and his reputation has broadened further, resting less on his innovations and nationality and more on the intrinsic merits of his music.

The unique circumstances of Ives's career have bred misunderstandings. His work in insurance, combined with the diversity of his output and the small number of performances during his composing years, led to an image of Ives as an amateur. Yet he had a 14-year career as a professional organist and thorough formal training in composition. Since he developed as a composer out of the public eye, his mature works seemed radical and unconnected to the past when they were first published and performed. However, as his earlier music has become known, his deep roots in 19th-century European Romanticism and his gradual development of a highly personal modern idiom have become clear. The first of Ives's major works to appear in performance and publication, such as *Orchestral Set no.1: Three Places in New England*, the *Concord Sonata*, and movements of the Symphony no.4 and *A Symphony: New England Holidays*, were highly complex, incorporated diverse musical styles and made frequent use of musical borrowing. These characteristics led some to conclude that Ives's music could be understood only through the programmatic explanations he offered and was not organized on specifically musical principles. Yet by tracing the evolution of his techniques through his earlier works, scholars have demonstrated the craft that underlies even seemingly chaotic scores and have shown the close relationship of his procedures to those of his European predecessors and contemporaries.

One result of Ives's unusual path is that the chronology of his music is difficult to establish beyond general outlines. His practice of composing and reworking pieces over many years often makes it impossible to assign a piece a single date. That he worked on many compositions and in many idioms simultaneously makes the chronological relationships between works still more complex. There is often no independent verification of the dates Ives assigned to his works, which can be years or decades before the first performance or publication. It has been suggested, too, that he dated many pieces too early and concealed significant revisions in order to claim priority over European composers who used similar techniques (Solomon, C1987) or to hide from his business associates how much time he was spending on music in the 1920s (Swafford, C1996). Recent scholarship, however, has established firmer dates for the types of music paper Ives used and refined estimated dates for various forms of his handwriting, allowing most manuscripts to be placed within a brief span of years (Sherwood, C1994 and E1995, building on Kirkpatrick, A1960, and Baron, C1990). These methods have often come to support Ives's dates, confirming that he did indeed develop numerous innovative techniques before his European counterparts, including polytonality, tone-clusters, chords based on 4ths or 5ths, atonality and polyrhythm. Where a discrepancy exists – in the case of several longer works for example – this may well result from his practice of dating pieces by their initial conception, the first ideas worked out at the keyboard or in sketches now lost. The dates provided here are, then, estimates based on the manuscripts when extant, supplemented by contemporary documents and Ives's testimony.

2. Youth, 1874–94. The Iveses were one of Danbury's leading families, and they were prominent in business and civic improvement and active in social causes, such as the abolition of slavery. Ives's father George E. Ives (1845–94) was exceptional in making music a career. He took lessons in the flute, violin, piano and cornet, following which, during 1860–62, he studied harmony, counterpoint and orchestration with the German-born musician Carl Foeppl in New York. After Civil War service as the youngest bandmaster in the Union Army and two more years in New York, he returned to Danbury and pursued a variety of musical activities, performing, teaching and leading bands, orchestras and choirs in and near Danbury, and sometimes touring with travelling shows. He also worked in businesses connected to the Ives family. He married Mary ('Mollie') Elizabeth Parmalee (1849–1929) on 1 January 1874, and Charles was born late the same year, followed by J. Moss (1876–1939), who became a lawyer and judge in Danbury.

Through his father, Ives was exposed to the entire range of music-making in Danbury. He studied the piano and organ from a young age with a series of teachers and was playing in recitals by his early teens. He became an accomplished performer and composer in two musical traditions, American vernacular music and Protestant church music, and gained his first exposure to a third, European classical music. Additionally, he was an avid athlete and was captain of several baseball and football teams. Ives played the drums with his father's band, and the spirit of band performance echoes in many works of his maturity. He wrote marches for piano, band and theatre orchestra, several of which adopt the then common practice of setting a popular song in one section of the march. His first publicly performed piece may have been the march *Holiday Quickstep*, written when he was 13; the review in the *Danbury Evening News* of the January 1888 première called him 'certainly a musical genius' and declared 'we shall expect more from this talented youngster in the future'.

At the age of 14 he became the youngest salaried church organist in the state, and he worked regularly as one until 1902. He wrote anthems and sacred songs for church services, at first using hymn texts and a hymn-like style (as in *Psalm 42*), and then from about 1893 (in works such as *Crossing the Bar*) adopting the more elaborate and chromatic style of Dudley Buck, with whom he briefly studied the organ around 1895. The hymns he knew from church and from camp-meeting revivals, where his father sometimes led the singing with his cornet, he later regularly borrowed or reworked as themes in sonatas, quartets and symphonies. He heard some classical music in concert performances in both Danbury and New York and learnt rather more through his own study and performance of works by Bach, Handel, Beethoven, Rossini, Schubert, Mendelssohn, Wagner, John Knowles Paine and others on the piano or organ, including many transcriptions. His virtuoso *Variations on 'America'* (1891–2) shows just how skilled an organist Ives was while still in his late teens.

Although he had many teachers for performance, his father taught him harmony and counterpoint and guided his first compositions. Several of these take existing works as models, following the traditional practice of learning through imitation, such as the *Polonaise* for two cornets and piano (*c*1887–9), modelled on the sextet from Donizetti's *Lucia di Lammermoor*. At the same time, Ives's father had an open mind about musical theory and

practice and encouraged his son's experimentation. Bitonal harmonizations of *London Bridge*, polytonal canons and fugues, and experiments with whole-tone pieces, triads in parallel motion and chromatic lines moving in contrary motion to create expanding or contracting wedges, all dating from the early 1890s, show Ives's interest in testing the rules of traditional music by trying out alternative systems. At the time, however, Ives apparently conceived of this merely as playing with music theory, a private activity shared primarily with his father, rather than regarding these new systems as a serious basis for composing concert music. On still another musical plane, it was his father whom he credited with teaching him the songs of Stephen Foster, whose tunes he would later borrow and whose simple diatonic lyricism informs many of Ives's own melodies.

Ives moved to New Haven in early 1893 to attend Hopkins Grammar School and prepare for entrance examinations at Yale (fig.1). He was the organist at St Thomas's Episcopal Church for a year, and then moved to Center Church on the Green in September 1894, the same month he matriculated at Yale. Just six weeks later, on 4 November, his father died suddenly of a stroke. Leaving home, starting university, and especially the death of his principal teacher and supporter marked a sharp break from the past and the end of his youth.

3. Apprenticeship, 1894–1902. Ives began his time at Yale as a virtuoso organist and an experienced composer of popular and church music but with limited exposure to classical music. He continued to compose vernacular works including songs, marches, and glee club and fraternity-show numbers. Several works were published, including an 1896 campaign song for William McKinley. His church music also grew in maturity, as he gradually adopted the elevated choral style of his teacher at Yale, Horatio Parker, in works such as *All-Forgiving, look on me*. The choirmaster at Center Church, John Cornelius Griggs, became a supportive colleague and lifelong friend. But it was in classical music that he learnt the most. For the first time, he had regular access to chamber and orchestral concerts. He apparently audited Parker's courses in harmony and music history during his first two years, and then studied counterpoint, strict composition and instrumentation, sometimes as the only registered student. Comparison of his earlier exercises with the works of his last term shows how much he learnt from Parker. Like Ives's father, Parker encouraged mastering styles and genres through imitation. Ives assimilated the German lied by resetting texts from well-known examples, typically incorporating some aspects of the model's structure or contour while seeking a different figuration and mood. He later recalled that his *Feldeinsamkeit* (*c*1897–8) earned the praise of Parker's teacher George Chadwick for taking 'a more difficult and almost opposite approach' that was 'in its way almost as good as Brahms' and 'as good a song as [Parker] could write'.

1. Charles Ives (left) and Franklin Hobart Miles, pitcher and catcher of the Hopkins Grammar School baseball team, 1894

Ives began his Symphony no.1 under Parker, and later recalled that the second and fourth movements were accepted as his final thesis. In this work there are strong echoes of the symphonic masterpieces he used as models, especially Schubert's 'Unfinished' in the first movement, Dvořák's 'New World' in the slow movement and the work as a whole, Beethoven's Ninth Symphony in the scherzo, and Tchaikovsky's 'Pathétique' in the finale, yet even the most direct references are reworked in fresh and interesting ways. Ives owed to Parker his new-found skills in counterpoint, thematic development, orchestration and composing large forms, along with the concept, foreign to the utilitarian music of Danbury, of music as an experience to be savoured for its own sake. The simultaneous citation of the familiar and assertion of an individual personality is a distinguishing Ives trait, evident even in the music he wrote in a late-Romantic style. This work also set the pattern for Ives's later symphonies and for many of his sonatas in linking movements through the cyclic repetition of themes.

Although he studied music diligently, Ives may not have intended to make music his career. He took the usual round of Greek, Latin, German, French, mathematics, history and political science, and remembered especially fondly his English and American literature courses with William Lyon Phelps, who helped to form Ives's taste in poetry. A Yale education was seen as a preparation for success in business, and much of the social life on the all-male campus was organized around groups through which one could develop friendships and potentially useful connections. Ives was no great scholar outside his music courses, but he was well-regarded and socially successful, chosen as a member of the Delta Kappa Epsilon fraternity and of Wolf's Head, one of the most prestigious of Yale's secret senior societies. Songs of both groups figure in later works recalling his college days, such as in *Calcium Light Night* and the middle movement of the Trio for Violin, Violoncello and Piano. One of his best friends was David Twichell, who invited him to Keene

Valley in the Adirondacks for a family vacation in August 1896; there Ives met his future wife, David's sister Harmony (1876–1969). After graduation in 1898, he moved to New York, living for the next decade in a series of apartments, all wryly dubbed Poverty Flat, with other bachelors with Yale connections. Through his father's cousin, Ives gained a position in the actuarial department of the Mutual Insurance Company. In early 1899 he moved to Charles H. Raymond and Co., agents for Mutual, where he worked with sales agents and developed ways to present the idea of insurance. There he met Julian Myrick (1880–1969), who would later become his partner.

While working in insurance, Ives did not give up all hope of a musical career. He continued to serve as an organist, first in Bloomfield, New Jersey (where for the first time he was also choirmaster), and then from 1900 at the Central Presbyterian Church in New York, a prestigious post. After university, he ceased writing vernacular music and sought to consolidate his training as a composer of art music in the Parker mould. He continued to write lieder to established texts and composed a seven-movement cantata, *The Celestial Country*, modelled on Parker's oratorio *Hora novissima*, whose 1893 première had established Parker's reputation.

He also pursued some new avenues. Parker had focussed on German music; now Ives wrote French chansons, modelled on those of composers such as Massenet. He reworked some of the German songs with new English texts; it would become characteristic of him to reshape older pieces into newer ones, often in different media. In similar fashion, he developed what may have been church service music from his Yale years into a string quartet that used paraphrased hymn tunes as themes. The opening theme of the First Symphony had used elements of two hymns, but the String Quartet no.1 established the pattern for many later works in that it grew out of music he had written for the church, and derived virtually every one of its themes from a hymn tune source. Unaltered hymn tunes were too predictable and repetitive in rhythm, melody and harmony to serve well as themes for movements in classical forms, so Ives ingeniously reshaped them into irregular, Brahmsian themes ripe for development, while preserving a hymn-like, American character. Ex.1 shows the derivation of the opening theme of the third movement from its source, the hymn-tune *Nettleton* ('Come, Thou Fount of Ev'ry Blessing'). With this work Ives began to integrate the different traditions he had learnt, bringing the spirit and sound of Protestant hymnody into the realm of art music.

Most remarkably, Ives's experimentation took on a new seriousness. Armed with techniques learnt from Parker and perhaps inspired by the compositional systems of the Middle Ages and the Renaissance that Parker described in his music history lectures, such as organum, counterpoint and rhythmic stratification (Scott, D1994), Ives began to produce, not mere sketches or improvised 'stunts', but finished pieces that explore new procedures. Most significant is a series of sacred choral works, mainly psalm-settings, that Ives may have tried out with singers where he was organist, although no performances are registered. *Psalm 67* uses transformations of a five-note chord (arranged to create the impression of bitonality) to harmonize a simple melody in a style resembling Anglican chant. *Psalm 150* features parallel triads that are dissonant

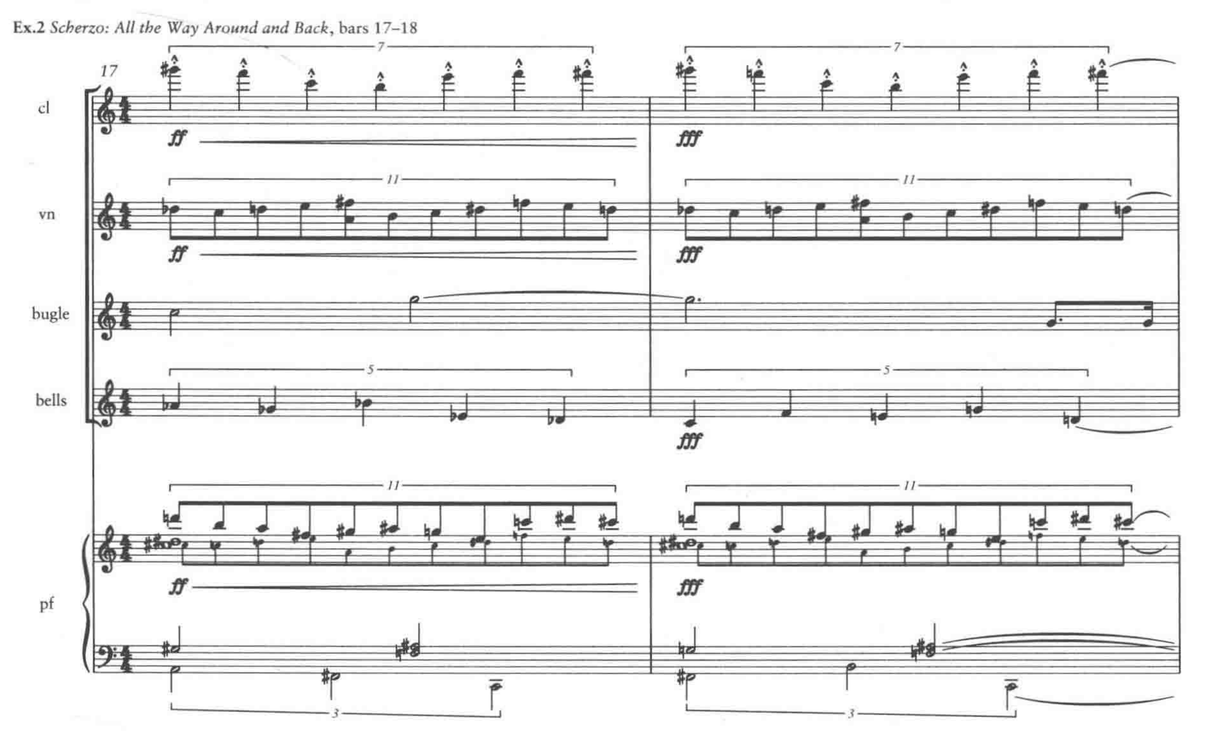
Ex.1 Opening theme of String Quartet no.1, 3rd movt, and its source

against sustained triads. *Psalm 25* deploys angular, dissonant two-voice canons over pedal points and includes a whole-tone passage that expands from a unison to a whole-tone cluster spanning almost three octaves. In *Psalm 24* the outer voices move in contrary motion, expanding from a unison in each successive phrase and moving first by semitones (often displaced by octaves), then by whole tones, 3rds, 4ths, 4ths and tritones, and finally 5ths; after the golden section of the work, there is a contraction, phrase by phrase, using the same intervals in reverse order, to make an approximate palindrome.

Each piece finds new ways to establish a tonal centre, create harmonic motion and resolution, and regulate counterpoint. The technique chosen often responds to the text; for example, the central image of *Processional: Let There Be Light* is perfectly conveyed by the procession of chords formed of 2nds, 3rds, 4ths and 5ths, through increasingly dissonant chords of 6ths and 7ths, to pure octaves. In these systematic experiments in compositional method, Ives established what was to become a 20th-century tradition of experimental composition, one that included the work of Cowell, Charles Seeger, Ruth Crawford Seeger, Cage, and many later composers. These experimental works remained distinct from his concert music, which continued to use the language of European Romanticism.

The climax of Ives's apprenticeship was the première of *The Celestial Country* at the Central Presbyterian Church in April 1902, his most ambitious piece to be performed up to that point. It received pleasant, if mild, reviews from the *New York Times* and *Musical Courier*.

Yet soon after, Ives resigned as organist, the last professional position in music he was to hold. He left behind much of his church music, later discarded by the church, so that what survives of his anthems, songs and organ music for services is only part of what may have been a much larger body of work. Ives apparently concluded that he did not want or would not achieve a career like that of Parker, who survived as a composer by serving as a church organist and teaching at Yale. He would later ironically describe this as the time he 'resigned as a nice organist and gave up music'.



4. Innovation and synthesis, 1902–8. Leaving his church position freed evenings and weekends for composition, and forgoing regular performance allowed Ives freedom to explore without having to please anyone but himself. No longer a Parker apprentice, nor a composer of popular or sacred music, Ives entered a period of innovation and synthesis.

He continued experimenting, especially now in chamber music, whose greater range of sonorities allowed him to extend traditional counterpoint and increase the independence between the parts to create an effect of separate layers. Works such as the *Fugue in Four Keys on 'The Shining Shore'*, *From the Steeples and the Mountains*, *Largo risoluto* nos.1 and 2, and *The Unanswered Question* display polytonal and atonal canons, multiple layers distinguished by rhythm, pitch content and sonority, and the combination of atonal and tonal planes, often with a programme to explain the unusual musical procedures. For example, *Scherzo: All the Way Around and Back* gradually builds up six distinct layers, subdividing each bar into 1, 2, 3, 5, 7, and 11 equal divisions respectively, over which a bugle plays fanfares in common time (ex.2); the piece is palindromic, swelling to a climax and returning in an exact retrograde, a musical analogue to 'a foul ball [in baseball] – and the base runner on 3rd has to go all the way back to 1st'.

Ives now sought increasingly to integrate vernacular and church style into his concert music. In his Second Symphony, the major work of this period, he introduced for the first time both hymn tunes and American popular songs into a piece in the classical tradition. The framework is still European, a cyclic five-movement symphony in late Romantic style with direct borrowings from Bach, Brahms, Wagner, Dvořák and Tchaikovsky; the final two movements are modelled on the finale of Brahms's First Symphony. But the themes are all paraphrased from American melodies, including hymns, fiddle tunes and Stephen Foster songs, reshaped to suit sonata and ternary forms. Like many symphonies which employ national material, the work celebrates the nation's music while conforming to an international style. In other pieces, such as the improvisations and sketches that became the *Ragtime Dances*, Ives began to evolve a more modern and individual idiom that drew on American melodic and rhythmic characteristics, including ragtime, the currently popular style. The many guises the *Ragtime Dances* would eventually assume – from a set of dances for theatre orchestra to movements in his Piano Sonata no.1, *Set for Theatre Orchestra* and *Orchestral Set no.2*, and passages in his second Quarter-Tone Piece for two pianos – illustrate again his penchant for reworking his own music into new forms.

Having abandoned music as a career, Ives cast his lot with insurance. However, in 1905 the New York state legislature launched an investigation of scandals in the insurance business, with Mutual and the Raymond agency as particular targets. Although Ives was not implicated, higher executives were, and the agency was ultimately dissolved. The investigation coincided with two bouts of illness or exhaustion for Ives, in the summer of 1905 and late 1906, possibly the first signs of the diabetes that would later afflict him. While recuperating over Christmas 1906 at Old Point Comfort, Virginia, he finalized plans

Ex.2 *Scherzo: All the Way Around and Back*, bars 17–18

with Myrick to launch an agency affiliated with Washington Life, which had begun as a Mutual subsidiary; it appears that Mutual's management helped with the arrangements. The ideals Ives stated and pursued as a businessman were, ironically, those articulated at the hearings by the president of Mutual: that life insurance was not a scheme for profit, but a way for each policyholder to provide for his family while 'participating in a great movement for the benefit of humanity at large' through mutual assistance. Ives & Co. opened on 1 January 1907, with Myrick as Ives's assistant.

The year 1905 also began changes in Ives's personal life, as he renewed his acquaintance with Harmony Twichell, now a registered nurse. Their courtship was slow, hindered by long absences, infrequent times together, and Ives's shyness. She wrote poems, some of which he set to music in a tonal, Romantic style meant to please her and her family, and they planned an opera that never materialized. Their friendship grew in intensity until they professed their love for each other on 22 October 1907. They were married on 9 June 1908 by Harmony's father, the Rev. Joseph Twichell, at his Congregational church in Hartford, and settled in New York.

5. MATURITY, 1908–18. Harmony played a crucial role in Ives's development. As he noted in his *Memos*, her unwavering faith in him gave him confidence to be himself, although she did not claim to understand all of his music. Moreover, she helped him to find the purpose and the subject matter for his mature work. She wrote to him in early 1908 stating that

> inspiration ought to come fullest at one's happiest moments – I think it would be so satisfying to crystallize one of those moments at the time in some beautiful expression – but I don't believe it's often done – I think inspiration – in art – seems to be almost a consolation in hours of sadness or loneliness & that most happy moments are put into expression after they have been memories & made doubly precious because they are gone.

This upholds the Romantic idea of music as an embodiment of individual emotional experience, but adds two elements that were to become characteristic of Ives's mature music: capturing specific moments that are individual and irreplaceable, and doing so through memory. Her interest in Ives's father and family revived his own, and several pieces over the next decade recall the town band (*Decoration Day, The Fourth of July, Putnam's Camp*), the American Civil War (*The 'St Gaudens' in Boston Common*), camp meetings (Symphony no.3, Violin Sonata no.4, *The Rockstrewn Hills Join in the People's Outdoor Meeting*), and other memories Ives connected to his father. Harmony's interest in literature rekindled his, which had apparently lain dormant since college, and he produced a series of works on Emerson, Browning, Hawthorne, Thoreau and others. Her sense of idealism about America echoed in him, stimulating a rush of pieces on American subjects. The socially committed Christianity of the Twichells reinforced that of the Ives family, as Ives took up subjects from Matthew Arnold's *West London* to the movement to abolish slavery (*Study no.9: the Anti-Abolitionist Riots in the 1830s and 40s*).

Ives's successes in insurance must also have bolstered his self-confidence. After Washington Life was sold in 1908, he took Myrick into full partnership in an agency with Mutual, launched on 1 January 1909. Within a few years, they were selling more insurance than any agency in the country, during a time of dramatic expansion in the industry. Their secret lay in recruiting a wide network of agents to sell policies for them and in preparing detailed guidelines for selling insurance, summarizing the best arguments to be made. Ives established the first classes for insurance agents at Mutual and helped to devise and promote 'estate planning', a method still used to calculate the amount of life insurance one should carry based on expected income and expenses. His pamphlet *The Amount to Carry* became a classic of its kind. He composed during the evenings, at weekends and on vacations, finding particular inspiration at a weekend cabin on Pine Mountain in Connecticut and during family vacations in the Adirondacks.

Ives continued to use American melodies as themes, but turned from the traditional ternary and sonata forms of the First Quartet and Second Symphony to a new pattern that may be called cumulative form. In the outer movements of the Symphony no.3, most movements of the four violin sonatas and the Piano Sonata no.1, and several other works from *c*1908–17, the borrowed hymn tune used as a theme appears complete only near the end, usually accompanied by a countermelody (often paraphrased from another hymn). This is preceded by development of both melodies, including a statement of the countermelody alone. The harmony may be dissonant, and the key is often ambiguous until the theme appears, but the music remains essentially tonal. Cumulative form drew on traditional sources, including thematic development and recapitulation; the 19th-century conventions of a large work culminating with a hymn-like theme and of combining themes in counterpoint; and the church organist practice of preceding a hymn with an improvised prelude on motives from the hymn. Indeed, Ives commented that many of these movements developed from organ preludes he had played or improvised in church, all now lost. However, Ives's synthesis was new. The avoidance of large-scale repetitions, inherent in older forms, allowed him to use hymns essentially unaltered as themes, for the rhythmic and melodic plainness and lack of harmonic contrast that made them unsuitable for the opening theme of a sonata form were perfect for the end of a movement. The process of developing motives and gradually bringing them together in a hymn paralleled, on a purely musical level, the experience Ives remembered of hymn-singing at the camp-meetings of his youth, as individuals joined in a common expression of feeling.

In other works, Ives sought to capture American life, especially American experiences with music, in a more directly programmatic way. *The Housatonic at Stockbridge* (ex.3) evokes a walk by the river Ives and his wife shared soon after their marriage. The main melody (given to second violas, horn and English horn), harmonized with simple tonal triads (in the lower strings and brass, notated enharmonically), suggests a hymn wafting from the church across the river, while repeating figures in distant tonal and rhythmic regions (upper strings), subtly changing over time, convey a sense of the mists and rippling water. Like this work, most of Ives's music about life experiences is composed in layers, distinguished by timbre, register, rhythm, pitch content and dynamic level, to create a sense of three-dimensional space and multiple planes of activity; here the earlier experiments in layering bear rich fruit. *Central Park in the Dark* pictures the noises and music of the city against the background sounds of nature, rendered as a soft series of atonal chords

Ex.3 *The Housatonic at Stockbridge*

in parallel motion. In *From Hanover Square North*, background ostinatos represent city noises in New York, over which commuters on a train platform gradually come together to sing a hymn for those lost in the sinking of the *Lusitania* that morning. When suggesting a memory of his youth, as in *Putnam's Camp*, *The Fourth of July* and *Washington's Birthday*, Ives often infused the background with a collage of tunes related by motif or genre to his main theme, evoking the way one memory will summon up others in a stream of consciousness. Songs such as *The Last Reader* and *The Things Our Fathers Loved* suggest a similar fount of memory through a patchwork of fragments from songs of the past.

These programmatic pieces and songs mix tonality with atonality, traditional with experimental procedures, direct quotation with paraphrases and original melodies. Having developed an impressive range of tools, Ives used them all in his mature works, choosing whatever was appropriate to fit the image, event or feeling he was attempting to convey. Ives wrote in 1925, 'why tonality as such should be thrown out for good, I can't see. Why it should be always present, I can't see. It depends, it seems to me, a good deal – as clothes depend on the thermometer – on what one is trying to do'. Ives's willingness to break rules, even his own, for expressive ends places him with the likes of Monteverdi, Beethoven, Mahler, Strauss and Berg as an essentially dramatic and rhetorical composer. Like them he often coordinated diverse styles within a single movement, using the contrasts to delineate sections and create form as well as for emotional effect. Though this eclecticism has been criticized by those who value systems, refinement, and homogeneity more than rhetorical power, many others have found the mix of elements in Ives's music an apt expression of the heterogeneity of modern, especially American, life.

In 1912 Ives and his wife bought farmland in West Redding, near Danbury, and built a house, soon settling into a pattern of spending May to November in West Redding and the rest of the year in New York. Unable to have children after Harmony miscarried in April 1909 and underwent an emergency hysterectomy, they found a partial outlet for their parental energies in Moss's six children, often hosting one or two of them for extended periods. They opened a cottage on their property to poor families from the city through the Fresh Air Fund; the second family to visit had a sickly infant daughter, whom they cared for and eventually adopted as Edith Osborne Ives (1914–56).

From time to time Ives sought out performances or at least readings of his music, and this encouraged him to have clean scores and parts copied by a series of professional copyists. Walter Damrosch conducted an informal reading of movements from the First Symphony in March 1910; attempts to interest him in the Second and Third had no result. Periodically, Ives invited professional musicians to his home to try out some of his music; the reactions he recorded in his *Memos* ranged from incomprehension to apoplectic criticism of its dissonance and complexity. The USA's entrance into World War I in April 1917 inspired him to write the song *In Flanders Fields* to a text by a Mutual medical examiner, and Myrick arranged for a performance at a meeting of insurance executives. Later the same month David Talmadge (violin teacher to Ives's nephew Moss White Ives) and Stuart Ross performed the Third Violin Sonata for an invited audience at Carnegie Chamber Music Hall.

6. Last works, 1918–1927. The war pulled Ives away from composition into work for the Red Cross and Liberty Loan appeals. He even tried to enlist as an ambulance driver in 1918 but he was turned down for health reasons. At a meeting on 1 October 1918, he argued for Liberty bonds in small denominations to allow the public at large to participate; he won his point, but the same night suffered a heart attack, which kept him from work for a year.

Mindful of his mortality, Ives set about finishing and making available the music he had been composing. Two months in early 1919 were spent at Asheville, North Carolina, where he worked on his second piano sonata, subtitled *Concord, Mass., 1840–60*, with musical impressions of Emerson, Hawthorne, the Alcotts, and Thoreau, and an accompanying book of *Essays Before a Sonata*, his most detailed statement of his aesthetics. The importance of transcendentalism in the sonata and essays has obscured other influences, including that of Beethoven, Debussy, Liszt and perhaps Skryabin on the sonata (and on much of Ives's other music) and that of Romantic aesthetics and liberal Christianity on his philosophy. The famous distinction Ives makes in the essays between 'substance' (more-or-less, the spiritual content of a work) and 'manner' (the means of its expression) derives largely from a 1912 essay on Debussy by Ives's friend John C. Griggs. The sonata and the essays were privately printed in 1920–21 and sent free to musicians and critics whom he hoped to interest in his music. Most reviews were mocking, but a perceptive notice by Henry Bellamann praised the sonata's 'loftiness of purpose' and its 'elevating and greatly beautiful' moments. Bellamann became Ives's first advocate, lecturing and writing on his music, and Ives later set two of Bellamann's poems.

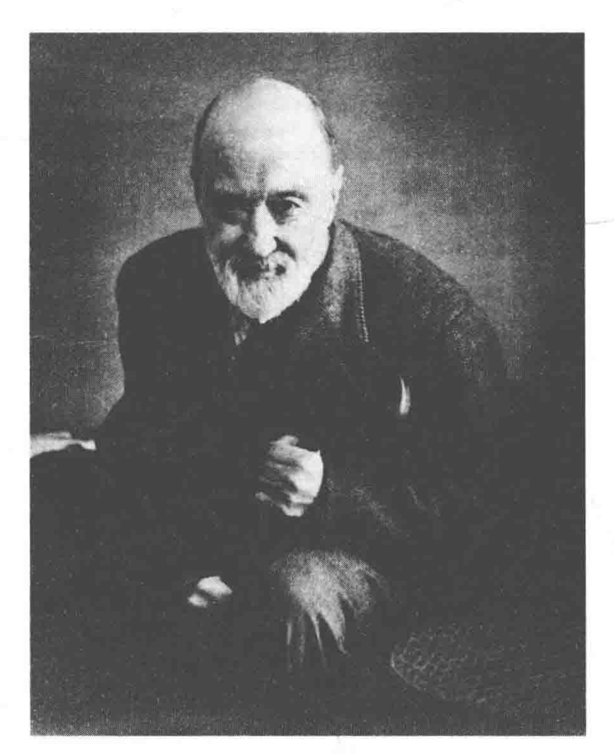
Between 1919 and 1921 Ives gathered most of his songs, including 20 new ones, 20 adapted to new texts, and 36 newly arranged from works for chorus or instruments, into a book of *114 Songs*, privately printed in 1922. Many of the songs use words by Ives or by Harmony, while others set a wide range of texts, from the great English and American poets Ives studied with Phelps at Yale to hymns and poems he found in newspapers or other such sources. The volume encompasses the diversity of Ives's output, from the vast clusters that open *Majority* and the quartal chords and whole-tone melody of *The Cage* to his German lieder and parlour songs from the 1890s. The late songs include a new style for Ives: more restrained, simpler, and with less overt quotation, although still often dissonant and full of contrasts used to delineate phrases and highlight the text. This is illustrated in the song *Resolution* (ex.4), which features four distinctive figurations in its brief eight measures, each using a different collection of pitches and each subtly linked to images in the text: in *a*, a pentatonic melody with dotted rhythms recalls American folksong style, associated with rugged strength and the outdoors, while the wide spacing in voice and piano evokes the spaciousness of 'distant skies'; in *b*, tonal harmonies and secondary dominants suggest hymnody, representing faith; *c* mimics the style Ives associated with sentimental parlour songs, with an undulating melody in dotted rhythm over harmonies tinged with chromaticism, while the reiterated chords and emphasis on G create a sense of marking

place; *d* is again diatonic, suggesting Romantic song through a leap and descent; and *a* returns at the close, as 'journey' harks back to 'walking'.

Once again Ives distributed his publication to musicians and critics, hoping to attract some interest, with little initial success; Sousa found some songs 'most startling to a man educated by the harmonic methods of our forefathers', and the *Musical Courier* called Ives 'the American Satie, joker *par excellence*'. Nevertheless, several of the songs were given their premières in recitals in Danbury, New York and New Orleans, between 1922 and 1924. Ives also completed or revised many other works between 1919 and the early 1920s, including the First Piano Sonata, the second violin sonata, and most movements of *A Symphony: New England Holidays*, *Orchestral Set no.1: Three Places in New England*, *Orchestral Set no.2* and the Symphony no.4 (fig.2). Many of these multi-movement cycles brought together movements first conceived separately, sometimes at different times. The Second Violin Sonata was first performed in 1924 to respectful reviews, but the others had to wait.

In 1923 Ives met E. Robert Schmitz, pianist and head of the Franco-American Musical Society, later renamed Pro-Musica. Schmitz arranged performances of the *Three Quarter-Tone Pieces* for two pianos in 1925 and of the first two movements of the Fourth Symphony in 1927. The symphony was a summation of all Ives had done, drawing on more than a dozen earlier works and encompassing the range of his techniques from pure tonality to the most rhythmically complex textures any conductor had ever seen. It traces a mystical inner journey: the brief opening movement poses 'the searching questions of What? and Why? which the spirit of man asks of life' (in the words of Bellamann's programme note) by means of a choral setting of the hymn tune 'Watchman, Tell Us of the Night'; the second movement is a dream-like collage based on Hawthorne's tale *The Celestial Rail Road*, a satire of the search for an easy way to heaven; the third movement, based on the first movement of the First Quartet, depicts religious 'formalism and ritualism' through a tonal fugue on hymn tunes; and after these two false answers to the questioning prelude the finale suggests the truer path through a meditation on *Bethany* ('Nearer, My God, to Thee') in cumulative form. Despite the work's novelty and complexity, it won encouraging reviews from Olin Downes of the *New York Times* and Lawrence Gilman of the *Herald Tribune*, two of the leading critics of the day.

Ives stopped composing by early 1927; as Harmony later told John Kirkpatrick, 'he came downstairs one day with tears in his eyes and said he couldn't seem to compose any more – nothing went well – nothing sounded right'. Theories abound for his cessation, from the psychological effects of his double life in business and music to the physical illnesses he continued to endure. He may have exhausted himself from the push to complete the Fourth Symphony and other major works. He had started no new large compositions since an attempt at a third orchestral set in 1919, which remained unfinished. The early 1920s had produced a few songs and his choral masterpiece *Psalm 90*, essentially rewritten from scratch around 1923. Around the same time he returned to his ambitious *Universe Symphony* (begun *c*1915), the capstone of his exploration of systematic methods of composition, which features over 20 wholly independent musical strands, each moving in its own subdivision of a metric unit eight seconds in length. This too would remain unfinished, finally appearing in three separate realizations in the 1990s. His last new work was the song *Sunrise* in August 1926. He had still received very few performances, and no professional publications since the 1890s. Ives may have followed the same steps as most composers – first conceiving a piece, then drafting, revising, completing and copying it, and seeing it through to performance and publication – but instead of doing this for each piece in a short span of time, he did it for dozens of pieces at once, stretched over decades.



7. Revisions and premières, 1927–54. After years of health problems, eventually diagnosed as diabetes, Ives retired from business on 1 January 1930. His music was written, but its public career was just beginning. After Bellamann and Schmitz, Ives found an ever-increasing series of advocates who promoted and performed his music. Most important was Cowell, whose quarterly *New Music* printed several Ives works, starting with the second movement of the Fourth Symphony in 1929, and who wrote a series of appreciations of Ives's music emphasizing its pioneering use of innovative techniques. Cowell's New Music Society sponsored the première of the First Violin Sonata in San Francisco in 1928. Also at Cowell's urging, Nicolas Slonimsky approached Ives for a piece for his Boston Chamber Orchestra, and Ives responded by rescoring *Three Places in New England*, which Slonimsky

2. Autograph manuscript of the fourth movement, of Ives's Symphony no.4 (US-NH)

performed in New York, Boston, Havana and Paris in 1931 to generally favourable reviews. In September, Slonimsky conducted the première of *Washington's Birthday* at a New Music Society concert in San Francisco, and the following year he conducted *The Fourth of July* in Paris, Berlin and Budapest. In May 1932 Hubert Linscott and Aaron Copland presented seven of Ives's songs at the first Yaddo Festival of Contemporary American Music, and Ives began to be seen as a forerunner of the current generation of American modernists. These seven songs, *The Fourth of July*, and the *Set for Theatre Orchestra* were published in 1932, followed by more songs in 1933 and 1935, *Three Places in New England* in 1935, *Washington's Birthday* in 1937 (in an issue of *New Music* dated 1936) and *Psalm 67* in 1939. Numerous songs were given premières in recitals during the 1930s in New York, San Francisco, Boston, Dresden, Vienna, Paris (with Messiaen at the piano) and elsewhere. The January 1939 New York première of the *Concord Sonata* by John Kirkpatrick (who had played the world première the previous November in Cos Cob, Connecticut) drew high praise from Gilman in the *Herald Tribune*, who called it 'exceptionally great music … the greatest music composed by an American, and the most deeply and essentially American in impulse and implication'. More premières followed, including the Fourth Violin Sonata in 1940, the Symphony no.3 and the String Quartet no.2 in 1946, and the Piano Sonata no.1 in 1949, each more than a quarter of a century after its completion. Ives was elected to the National Institute of Arts and Letters in 1945, and the Symphony no.3 won the Pulitzer Prize in 1947. Bernstein conducted the New York PO in the première of the Symphony no.2 in 1951, over 40 years after its completion, and the Symphony no.1 was finally performed for the first time in 1953, half a century after it was finished.

Throughout this time, Ives continued to work on his music, copying the full score for *Thanksgiving* during a year in Europe with Harmony in 1932–3, recording his own piano performances and improvisations in London and New York, adding a new ending to the Second Symphony, and pulling old pieces out of his piles of manuscripts. He had photocopies made of his manuscripts and sent them to those who expressed interest in a work. In the early 1930s he dictated reminiscences about his life and his music, intended only to provide information for those writing about him, but published four decades later as *Memos*. Although in *Essays before a Sonata* he had seemed a follower of Beethoven, in *Memos* he emphasized

3. Charles Ives

his experimental works and his invention of novel techniques, presenting himself as the pioneer Cowell and others seemed to want him to be, and credited so much influence to his father that he obscured for decades his deep debts to Parker, to the 19th-century Romantic tradition, and to older contemporaries such as Debussy. He worked for years on a revised edition of the *Concord Sonata*, finally published in 1947. His health gradually weakened, and in May 1954 he died of a stroke while recovering from an operation.

Music continued to appear after his death, and his reputation continued to grow. Harmony Ives gave his manuscripts to the Library of the Yale School of Music in 1955, and John Kirkpatrick published a meticulous catalogue in 1960. The first biography, by Henry and Sidney Cowell in 1955, was followed by a steady stream of theses and articles. The Fourth Symphony was finally played in its entirety in 1965. *Memos* and other writings appeared in 1972. The Charles Ives Society, which became active in 1973, has sponsored a series of critical editions of individual works, with Kirkpatrick and James B. Sinclair the most prominent editors. The 1974 centennial brought the first festivals devoted to Ives's music, and there have been several since. Extensive interviews with those who knew Ives were published in an abridged form (Perlis, C1974), an extremely valuable resource. A second biography appeared during the centennial (Wooldridge, C1974), and a third (Rossiter, C1975) began a current of reconsidering the legends that had grown up around the composer. The first survey of his music (Hitchcock, D1977) provided a succinct overview of his entire output. Since the mid-1980s, studies have appeared that clarify our picture of Ives's life, family, career, and psychology (Burkholder, C1985; Moore, C1985; Feder, C1992; Swafford, C1996); demonstrate his strong links to European composers (Gibbens, C1985; Hertz, D1993; Block and Burkholder, B1996); reveal his use of interval cycles, pitch class sets, and other organizing principles (Winters, D1986; Baron, D1987; Lambert, D1987 and D1997; Roller, E1995); trace the American experimental tradition that began with Ives (Nicholls, D1990); treat major works in depth (Meyer, E1991; Rathert, D1991; Block, E1996); describe Ives's use of stylistic heterogeneity as a formal device (Starr, D1992); and examine his methods of musical borrowing (Burkholder, D1995). He is now regarded more highly for the beauty and power of his music than for his pioneering innovations, which is as it should be, and the meaning and structure of his music are more deeply and widely understood than ever before. His appeal to audiences worldwide continues to broaden, and his place among the leading composers of his time is secure.

See also BORROWING, §12.

WORKS

A chronological listing of Ives's works is neither possible nor appropriate as dates for many works are uncertain, and Ives tended to work on a number of pieces simultaneously, often taking years from first sketch to final revision.

This work-list follows the ordering, numbering and title style in James B. Sinclair, *A Descriptive Catalogue of the Music of Charles Ives* (New Haven, 1999), grouping works by genre and numerically or alphabetically within each genre. Most incomplete works, exercises, arrangements of works by others, unidentified fragments, and lost or projected works are omitted. Dates are of manuscripts when extant; these are based on Gayle Sherwood's datings of the manuscripts by paper type and handwriting, and they may not reflect the entire period of composition if the earliest sketches or final revisions do not survive. Dates in square brackets are from Ives's own hand but represent pieces or stages of composition for which no manuscripts are extant. Printed works are published in New York unless otherwise stated (reprints are not listed). For full details of publication and first performances, see Sinclair.

J. PETER BURKHOLDER (work-list with JAMES B. SINCLAIR and GAYLE SHERWOOD)

Ives [Ive, Ivy], **Simon** (bap. Ware, Herts., 20 July 1600; *d* London, 1 July 1662). English string player, singer and composer. He was probably the 'Simon a musician boy' who was taught by Innocent Lanier in the Cecil household (Hatfield House) in 1609. He may also have been associated with Sir Henry Fanshawe's household at Ware Park, where John Ward worked between about 1607 and 1616; there are several connections between the music of the two composers. He had relatives in Earl's Colne, Essex, was living there in 1625, and may be the 'Simon Ive' who became a supernumerary Groom of the Chamber at court in April 1630. Shirley's masque *The Triumph of Peace*, to which he contributed music, was given by the Inns of Court (1634), and some of the dedications of his lyra viol pieces suggest he moved in London's legal circles. He also wrote songs for Henrietta Maria's visit to Thomas Bushell's estate at Enstone on 23 August 1636; their texts were published that year in Oxford. About that time he contributed a story to Sir Nicholas Le Strange's *Merry Passages and Jests*; another story in the collection concerns his friendship with the poet Francis Quarles.

He became a London wait for 'song and music' in 1637 and was still serving in 1645. According to Anthony Wood, he was 'a singing man in the Cath[edral] Ch[urch] of St Paul in London and a teacher of musick before the Rebellion broke out, after it did break out [he] left his singing mans place, and stuck to his instruction in musick w[hi]ch kept him in a comfortable condition'. He may have taught Anne Cromwell, the protector's first cousin, whose virginal book contains at least 12 pieces by him, and he is listed as one of Susanna Perwich's teachers in John Batchiler's *The Virgin's Pattern* (London, 1661). In 1661 he became a minor prebendary of St Paul's. In his will he left his colleagues a chest of nine viols (five trebles, three tenors and a bass) by Thomas Aldred, a bass viol made by his servant Muskett, and a 'set of Fancies and Innomines of my owne Composition of foure five and six partes'.

Ive's vocal music mostly consists of convivial catches or simple dance songs, though the dialogue *Shepherd, well met, I prithee tell* shows that he was capable of deeper things. He also wrote fine three-part elegies on the death of William Lawes and the barrister and writer William Austin (*d* 1634). Anthony Wood wrote that he was 'excellent at the Lyra-Viol and improved it by excellent inventions'; about 90 pieces for one, two and three lyra viols survive, though some of the solos and duets probably have missing parts, and some of the constituent parts of the duets and trios actually circulated as solos. His bass viol duets are in the tuneful, dance-like idiom established by Ward. The 25 four-part dances, which appear as a set in the British Library, may have been put together for musicians at the Blackfriars Theatre. They include arrangements of pieces by Ward, 'J.L.' (? Innocent Lanier) and 'H.B.' (? Hieronymus or Jerome Bassano), as well as a version of the famous coranto that Bulstrode Whitelocke composed with Ives's help; Whitelocke wrote in his memoirs that it was first played by the Blackfriars musicians, and that they struck it up every time he came to the theatre. Ives has been overshadowed by Lawes and Jenkins as a consort composer, though his dances and fantasias are consistently graceful, tuneful and attractive.

His son, also called Simon (bap. Earle's Colne, Essex, 17 June 1625; *d* ? before 1 July 1662), was a viol player and composer. He was at school in Islington in the 1630s, and took the BA degree at Trinity College, Cambridge, in 1648. He was not a beneficiary of his father's will, so he probably died before him. Three lyra viol pieces by him are known (*Musick's Recreation: on the Lyra Viol*, RISM 1652[7]; *GB-Mp*).

WORKS

VOCAL

Almighty and everlasting God (anthem), music lost, text in J. Clifford: The Divine Services and Anthems (London, 1663)
Lift up your hearts, canon, 3vv, 1652[10]
Sad clouds of grief, elegy for W. Austin, 3vv, *GB-Och*
Lament and mourn, elegy for W. Lawes, 3vv, 1648[4]
Shepherd, well met, I prithee tell, dialogue, 2vv, *F-Pn*, ed. in MB, xxxiii (1971)
5 songs, 1659[5], Select Ayres and Dialogues (London, 1669), *GB-Eu*, *Lbl*, *US-NYp*, 2 ed. in MB, xxxiii (1971)
7 catches, 3–6vv, 1652[10], 1667[6], 1673[4], 1685[4]

Songs for The Triumph of Peace (masque, J. Shirley), 1634, lost
Songs for entertainment at Enstone (1636), lost

INSTRUMENTAL

*c*90 pieces, 1, 2, 3 lyra viols, 1651[6], 1652[7], 1661[4], 1669[6], 1682[9], incl. arrs. of pieces by J. Ward and B. Whitelocke, 5 ed. A.J. Sabol, *Four Hundred Songs and Dances from the Stuart Masque* (Providence, RI, 1978, enlarged 2/1982)
10 airs, 2 b viols, *GB-Lbl*, *US-NH*, 9 ed. G. Sandford (Albany, CA, 1991, 2/1994)
3 airs, a 2, *GB-Lbl*, 1 ed. M. Lefkowitz, *Trois masques à la cour de Charles 1er d'Angleterre* (Paris, 1970)
5 airs, a 3, *Lbl*, *Ob*, *Och*, 2 ed. in Lefkowitz
Pavan, a 4, *Lcm* (frag.)
25 dances, a 4, *D-Kl*, *IRL-Dm*, *GB-Lbl*, *Lcm*, *Ob*, *Och*, *US-NYp*, incl. arrs. of pieces by J. Ward, ? I. Lanier, ? J. Bassano, B. Whitelocke, 9 ed. in Lefkowitz, 3 ed. in Sabol
4 fantasias, a 4, *IRL-Dm*, *GB-Lbl*, *Ob*, *Och*, *US-NYp*, ed. S. Beck (New York, 1947)
In Nomine, a 5, *IRL-Dm*, *GB-Lbl*, *Ob*, *Och*, also attrib. W. Cranford
3 fantasias, a 6, *IRL-Dm*, *GB-Ob*, 1 ed. G. Dodd (London, 1969)
12 or more pieces, arr. kbd, in A. Cromwell's virginal book (MS, 1638, Museum of London; ed. H. Ferguson, London 1974)
4 pieces, kbd, *F-Pn*, *GB-Lbl*, arrs. by ? B. Cosyn of consort pieces or songs by Ives, ed. O. Memed, *Seventeenth-Century English Keyboard Music: Benjamin Cosyn* (New York, 1993)
2 pieces, arr. cittern, 1666[4]

PETER HOLMAN

Ivey, Jean Eichelberger (*b* Washington, DC, 3 July 1923). American composer and pianist. She studied at Trinity College (BA 1944), the Peabody Conservatory (MM in piano, 1946), the Eastman School (MM in composition, 1956) and the University of Toronto (DMus in composition, 1972). In 1967 she founded the electronic music studio at Peabody, and from 1982 until her retirement in 1997 she coordinated its composition department. Ivey summarized her compositional ideals at the 30th anniversary of computer music at Peabody: 'I consider all the musical resources of the past and present as being at the composer's disposal, but always in the service of the effective communication of humanistic ideas and intuitive emotion'. Her early music was tonal and neo-classical, drawing particularly on the styles of Bartók and Ravel; in the 1960s she began to incorporate serial and electronic elements, which gave her music greater fluidity. She has been especially fond of writing for the voice in combination with orchestra, ensemble, piano or tape. Some of her works, including the monodrama *Testament of Eve* (1976), are to her own texts; in general she has preferred poems with a philosophical content, as in *Night Voyage* (1975), after Matthew Arnold's *Self-Dependence*. As a pianist she has toured Europe, Mexico and the USA. She was a director of the League of Composers of the ISCM (1972–5, 1979). Her awards include an Artists' Fellowship from the New York Foundation for the Arts (1992) and grants from the NEA to compose *Sea-Change* (1979) and the Cello Concerto (1983–5). She has written many articles on music and is herself the main subject of the WRC-TV documentary *A Woman is ... a Composer*.

WORKS
(selective list)

Stage: Birthmark (op, 1, Ivey, after N. Hawthorne), 1980–82

Vocal: Woman's Love (S. Teasdale), cycle of 5 songs, Mez, pf, 1962; Tribute: Martin Luther King (spirituals), Bar, orch, 1969; Terminus (R.W. Emerson), Mez, tape, 1970; 3 Songs of Night (W. Whitman, Hovey, Callimachus-Cory), S, a fl, cl, va, vc, pf, tape, 1971; Hera, Hung from the Sky (C. Kizer), Mez, 7 wind, 3 perc, pf, tape, 1973; Night Voyage (M. Arnold), 1975; Testament of Eve (monodrama, Ivey), Mez, orch, tape, 1976; Solstice (Ivey), S, fl + pic, perc, pf, 1977; Prospero (scena, W. Shakespeare), B, hn, perc, 4-track tape, 1978; Crossing Brooklyn Ferry (Whitman), Bar, pf, 1979; Notes toward Time (J. Jacobsen), 3 songs, Mez, fl + a fl, hp, 1984; My Heart is Like a Singing Bird (C. Rossetti), SSA, fls, 1994

SAM DI BONAVENTURA/GEOFFREY WRIGHT

Ivo [Yvo] **Barry** (*fl* 1525–50). French singer and composer, active in Italy. Some sources (including RISM) have confused him with Ivo de Vento. He was one of a group of singers recruited by Jean Conseil for Clement VII's papal court in 1528, and he remained in papal service until at least 1550. During that time he may also have had some connection with the French national church of S Luigi dei Francesi. In 1540 or 1541 he visited France, and on 22 April 1545 he was granted right of succession to some French benefices. Ivo was one of six papal singers chosen to go to the Council of Trent, and during the years 1546–9 he travelled between Trent, Bologna and Rome. Two manuscripts in Perugia (*I-PEc* 431, 322) contain, respectively, a canon and a set of *Regole del contraponto* ascribed to the 'ecc.mo Ivo'. Whether these rules are by Ivo Barry or Ivo de Vento is unclear; whoever wrote them knew only eight modes and appears not to have read Zarlino. Five motets (in RISM 1539[7], 1541[4], 1549[9]) and eight madrigals (*c*1538[20], 1539[24], 1541[15], 1542[17]) have survived. They are in the style of the Roman school associated with Arcadelt, the aging Costanzo Festa and Morales. One of Ivo's madrigals, *Pace non trovo* (in 1539[24]), was exceptionally popular; it was reprinted several times, quoted and paraphrased by Lupacchino and Gero, and made the subject of a remarkable parody composition, Palestrina's *Da fuoco così bel*.

Ivogün, Maria [Kempner, sIlse] (*b* Budapest, 18 Nov 1891; *d* Beatenberg, Switzerland, 2 Oct 1987). Hungarian soprano. She was the daughter of the singer Ida von Günther, from whom she derived her own stage name. Heard by Bruno Walter at an unsuccessful audition for the Vienna Hofoper, she was instantly engaged for Munich, where she appeared in 1913, first as Mimì and then as the Queen of Night. She remained at Munich until 1925, singing such roles as Konstanze, Zerbinetta (in which Strauss described her as 'simply unique and without rival'), Zerlina, Marzelline, Norina, Gilda, Oscar (*Un ballo in maschera*) and Nannetta, often performing opposite her first husband, the tenor Karl Erb, with whom she also recorded duets at that period. In 1917 she sang the part of Ighino at the première of Pfitzner's *Palestrina* (with Erb in the title role), and two years later she created the title part in the same composer's *Das Christelflein*. In 1924 she created a sensation when she sang Zerbinetta at Covent Garden under Walter; a memento of the occasion exists in her exhilarating account of Zerbinetta's aria. The same season she also performed Gilda, and returned for Konstanze in 1927. She made her début at the Salzburg Festival as Zerlina in 1925, the year she moved to Berlin,

where she appeared at both the Städtische Oper and the Staatsoper. There she added to her repertory heavier roles such as Manon, Mignon and Tatyana. She never sang at the Metropolitan but appeared as Rosina in Chicago (1921–2). Ivogün's operatic career faded somewhat prematurely in the early 1930s but she continued to give frequent recitals with the pianist Michael Raucheisen, whom she married in 1933. All who saw and heard her remarked on her personal charm, light and airy to match her vocal qualities. Her numerous recordings bear out the evidence of her contemporaries. After retirement she taught in Berlin, where her pupils included Elisabeth Schwarzkopf and Rita Streich.

Iwaki, Hiroyuki (*b* Tokyo, 6 Sept 1932). Japanese conductor. He studied percussion at the Tokyo National University of Fine Arts and Music while studying conducting with Akeo Watanabe and Hideo Saito. He became an assistant conductor at the NHK SO in 1954, principal conductor in 1963 and subsequently conductor for life. He led the NHK SO on several world tours between 1960 and 1983, and conducted the Bamberg SO on a Japanese tour in 1968. He served as music director of the Fujiwara Opera Company, 1965–7, and has conducted many other orchestras, including the Tokyo Metropolitan SO, the Japan PO, the Residentie-Orkest in The Hague, the Berlin PO and the Vienna PO. In 1988 he organized the Orchestra Ensemble Kanazawa and became its director. Iwaki is a renowned interpreter of contemporary music and has often performed works by Japanese composers abroad. He has given many premières, including those of several orchestral works by Takemitsu. He has also recorded frequently, and won a *grand prix du disque* in 1976 for his recording of orchestral works by Messiaen.

MASAKATA KANAZAWA

Izarra, Adina (*b* Caracas, 27 Aug 1959). Venezuelan composer. She studied in Caracas with Alfredo del Mónaco, then at the University of York (doctorate, 1988), where her teachers included Hoyland (composition) and Orton (electro-acoustic music). She was appointed a lecturer in music at the Simón Bolívar University in Caracas.

Izarra is one of the emerging Latin American composers of the post-1950 generation, and her work has earned international recognition in festivals worldwide. Her early works show the influence of post-war European experimentalism, but since 1982 she has used the rhythmical and instrumental resources of traditional Venezuelan music with varying degrees of abstraction and manipulation. Her harmonic language is dissonant, with tonal resolutions on unisons, while her melodic material often imitates the calls of Venezuelan birds, notably in works for the flute, for which she employs a variety of extended techniques (e.g. *Pitangus sulphuratus*). After 1990 Izarra has experimented with minimalism, medieval techniques and Baroque forms, such as isorhythm, canon and the Spanish folía. She pays special attention to the guitar, composing prolifically for her husband, Rubén Riera. Izarra's approach stems from a playful exploration of contemporary compositional tools, but her style always manifests assured technique and refined expression.

Iznaola, Ricardo (*b* Havana, 21 Feb 1949). American guitarist of Cuban birth. After the Cuban revolution his family moved to Colombia and then to Venezuela. He studied at the Escuela Superior de Música in Caracas with Manuel Perez Días, and subsequently with Regino Sainz de la Maza in Madrid and with Alirio Diaz at the summer school in Caracas. He won many international prizes, including first prize at the Francisco Tárrega Competition in 1968 and 1971. In 1969 he began his international career, touring Asia, Europe and North and South America, and the next year made the first of many recordings, concentrating particularly on Spanish and South American music. He gave his London début in 1976. In 1983 he was appointed professor of guitar at the University of Denver. He has published many articles, compositions and arrangements, and two books on the guitar, *Kitharologus: the Path to Virtuosity* (Heidelberg, 1993) and *On Practising* (Aurora, CO, 1992). Iznaola is a virtuoso recitalist of immense technical resources and powerful intellect, with a deep awareness of Hispanic culture.

GRAHAM WADE

J

Jabayev, Jambyl (*b* Semirechye, Zhetysay, 28 Feb 1846; *d* Alma-Ata, 22 June 1945). Kazakh poet-singer. He was an apprentice of the poet-singer (*aqyn*) Suyumbai. Between 1870 and 1912 he was undefeated in contests (*aitys*), and in 1919 he was the winner at the first meeting of Zhetysu poets. He was an expert on and performer of the epic songs (*dastan*) *1001 noch'* ('1001 Nights'), *Shakhname*, *Leyila i Medjnun*, *Kyz-Zhibek* and *Edige*, and the author of the epics *Utegen-batyr* ('The Epic Hero *Utegen*') and *Suranshi-batyr* ('The Epic Hero *Suranshi*'). In 1934 he took the grand prize at the first Republican meeting of Kazakh art masters. He took part in festivals of Kazakh arts in Moscow four times following the first ten-day festival of Kazakh literature and art in Moscow in May 1936. His many awards included the Order of the Red Banner of Labour (1936), the Order of Lenin (1938), the Badge of Honour (1939) and State Prize Laureate (1941). In 1941 he composed his famous poem *Leningrad tïk örenim* ('People of Leningrad, my Children!').

Jabayev lived during the period of the suppression of Kazakh nomadic culture under Soviet rule and the transition from oral traditional music to culture based on the written language, and he became a symbol of this turning-point in Kazakh history. After his death, his life and works were commemorated in many ways. In 1946 the Museum and Mausoleum of Jambyl was opened, and in December 1949 the prizes of Abai and Jambyl for literature and art were established. A province, a town and many districts, schools and farms were named after him, and his songs were translated into all the languages of the former Soviet Union as well as other languages.

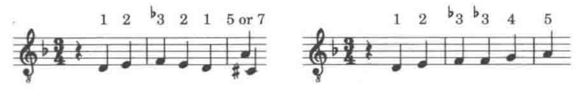
Jablonski, Marek (Michael) (*b* Kraków, 5 Nov 1939). Canadian pianist of Polish birth. He received his elementary musical training from his mother. When he was ten his family emigrated to Edmonton, Alberta. In 1957 he was a scholarship student at the summer music school at Aspen, Colorado, where Rosina Lhévinne heard him and accepted him as her pupil. Winner of the 1961 competition of the Jeunesses Musicales of Canada, he made his first extended tour of that country and performed with the Montreal SO under Zubin Mehta in Montreal (1962) and New York (1963). He has since played throughout Europe and the Americas, making his London début in 1969. He shows an affinity with 19th-century Romantic music, and has made many recordings of Chopin; he also gives intelligent and persuasive performances of 17th- and 18th-century keyboard music. In 1983 he was appointed to the Royal Conservatory of Music in Toronto, and he has given masterclasses in Canada, the USA and Europe.

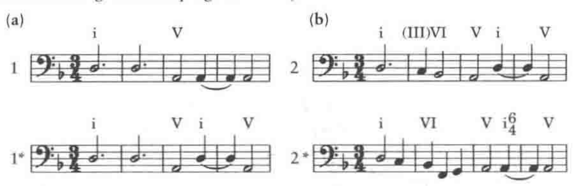
ERIC McLEAN



Jácaras (from Sp. *jácaro*, *jaque*: 'ruffian' and *jacarandosa*: 'lively'). A Spanish and Hispano-American dance and musical pattern used in stage productions, church villancicos and instrumental variation pieces in the 17th and 18th centuries. It belongs to the class of dances known as *bailes*, is rowdy and rambunctious in character and, as is customary with *bailes* (as opposed to *danzas*), is accompanied by castanets. According to Cotarelo y Mori, *jácara* originally designated 'a gathering of ruffians and rogues, their life and customs, or ... the picaresque woman; but it had to do more with the noisy and high-spirited than with the criminal'. J. Corominas (*Diccionario crítico etimológico de la lengua castella*, Madrid, 1954–7) defined *jácara* as a lively song or brief entr'acte in which the knavish life is normally depicted, and described its development into a popular genre used to entertain theatre audiences between acts or at the end of presentations. *Jácaras* were often placed immediately after the first act of a *comedia*. They are recognizable from certain musical features and by the likable low-life characters or *graciosos* who sing them; the names Escarramán, Zurdo, Zurdillo, Talaverón and Clarín are associated with the genre. Particularly vivid examples involving blind characters, drunken horseplay or reprieves from imminent death (where a *jácaras* is performed in celebration) are found in Sebastián de Villaviciosa's *El hambriento*, the anonymous *El pardo*, León Marchante's *Borracho y Talaverón* and *Pulga y chispa*, and in *La rubilla* by Francisco de Avellaneda. Numerous further instances show up in the works of Calderón de la Barca, Cervantes, José de Cañizares, Francisco Gómez de Quevedo, Juan Vélez de Guevara and many others.

The church became as enamoured as the theatre with the *jácaras* – indeed, no other subgroup of villancico is more numerous. They are nearly always in a minor key (D minor being the most common) and in bouncy 6/8 metre with occasional hemiola, and are just as catchy and spirited as their counterparts in the theatre. Structurally, sacred *jácaras* settings usually consist of an *estribillo* (refrain) performed by the entire ensemble and a series of brief *coplas* (couplets or stanzas), usually set for a smaller group of soloists. Gutiérrez de Padilla's performance instructions for *A la xácara xacarilla* indicate that the

estribillo should be sung after every third *coplas*. Several *jácaras* texts commonly recur and would have been familiar to audiences of the time; two of the most common opening lines are 'Oigan, escuchen, atienden a la jacarilla' ('Listen, hear me out, pay attention to the *jácara*') and 'Vaya, vaya a la jacarilla' ('Rejoice, rejoice in the *jácara*').



Although the melodic and harmonic material of the *jácaras* was not rigorously standardized, some elements recur in many instrumental settings. Indeed, several popular melodic motifs appear in almost every surviving example for Baroque guitar or keyboard; two of the commonest are shown in ex.1. Two standard harmonic

Ex.1 Defining melodic motifs of *jácaras*

progressions, shown with their variants in ex.2, serve as the underpinning for many *jácaras*. Both consist of four-bar units with pronounced hemiola in the last two bars.

Ex.2 Defining harmonic progressions of *jácaras*

It became almost a cliché to present these two phrases in the prescribed order at the beginning of instrumental settings, as is seen in the opening phrases of the *jácaras* by Santiago de Murcia, Ruiz de Ribayaz, Sanz, Gueráu and Martín y Coll, and those in *E-Mn* 811, all of which show strong filial relationships. Although the preferred key is D minor, with G minor appearing as the second preference, scrutiny of performance parts reveals that many G minor settings were actually performed a 4th lower. Santiago de Murcia, Sanz, Ruiz de Ribayaz, Torres y Martínez Bravo and Roel del Río all described this practice, labelling it the 'Spanish style' and stating that musicians in Spain transposed down a 4th whenever they saw a G (treble) clef. The assertion is corroborated by performance instructions for *De sus galas aprendan divinan madre* (in *GCA-Gc*) and in the performance parts of *Oigan, escuchen, atienden* in the Biblioteca Nacional de Bolivia, La Paz (MS 59/273).

Among the many melodic and harmonic patterns (*folías*, *villanos*, *vacas*, *canarios*, *marizápalos* etc.) that served as the basis for improvisation in guitar and keyboard anthologies, the *jácaras* was of supreme importance, taking second place only to the *pasacalles* in popularity and number.

CRAIG H. RUSSELL

Jacchini, Giuseppe Maria (*b* Bologna, 16 July 1667; *d* Bologna, 2 May 1727). Italian cellist and composer. He was a young cleric at the basilica of S Petronio and probably sang as a choirboy in the *cappella musicale*. He may well be the 'Gioseffo del Violonzino' engaged from 1680 to 1688 as an extra player for the feast of St Petronius each 4 October. He studied composition with G.A. Perti and the cello with Domenico Gabrielli. According to Padre Martini, he learnt to play so well that he 'approached the sublimity of skill of his master'.

On 31 October 1689 he was accepted as a regular cellist at S Petronio through the intervention and patronage of Count Pirro Albergati, to whom he dedicated his op.4. He served there until the dissolution of the *cappella musicale* in January 1696, receiving an increase in wages in 1693. In 1701 a regular orchestra was again engaged at S Petronio and he played there from March of that year until his death in 1727. He became a member of the Accademia Filarmonica on 16 December 1688, though not without opposition from those who accused him of not attending the spiritual exercises and sacred functions of the academy. His name was drawn as *principe* of the Accademia Filarmonica in April 1709, but he declined to serve on the grounds that he did not want such a dignity; his name was excluded from further drawings, but since he was aggregated in the rank of composer he was allowed to compete for the music to be performed on the patronal feast each year. He submitted sonatas, a hymn and numerous settings of the *Salve regina* for many years. During this period he served as *maestro di cappella* in the Collegio dei Nobili and at the church of S Luigi in Bologna.

Jacchini was known as an excellent cellist in both church and theatre, being especially adept at accompanying singers; probably he furnished elegant solo episodes of the kind found in some of his published instrumental works. He was justly famous during his lifetime for his trumpet and string sonatas, continuing the Bolognese tradition set by Cazzati, Torelli, Perti and P. Franceschini. A letter from one Stefano Frilli to Perti dated 'Florence 8 August 1699' (*I-Bc*) indicates the popularity of Jacchini's trumpet works even outside Bologna. Frilli writes 'I brought from there [Bologna] (given to me by a copyist) a sinfonia with trumpet by Signor Jacchini, which was very well liked, and every time [it was performed] they asked who is this [composer], rejoicing with you that he is your pupil'.

Besides his imaginative writing for both trumpet and violins, his works often contain solo passages for cello. In some movements the cello alternates with the trumpet in imitative dialogues, or accompanies it as an obbligato instrument, a practice also favoured by his teacher Gabrielli. All these works (now in *I-Bsp*) come from the

years 1690–95 when the *cappella musicale* was at its height under the direction of G.P. Colonna. The presence of an excellent trumpeter, G.P. Brandi, engaged annually for the patronal feast during this period, must have inspired this festive music. Passages for cello are often briefly imitative of the trumpet, or they alternate between episodic diminutions of the bass line and a more strict adherence to the continuo part.

His op.4 is made up of ten concertos, of which six have a part for cello obbligato. These are brief solo passages, usually four to eight bars long, using scalic or four-note sequential patterns (nearly always in the fast movements). A sonata for cello solo in a collection entitled *Sonata a tre di vari autori* from the late 17th or early 18th century shows an advanced level of virtuosity with the addition to the above techniques of repeated arpeggiated chords. The music reveals the gradual liberation of the cello from the role of continuo instrument and its somewhat tentative assumption of a more solo role.

ANNE SCHNOEBELEN

Jaches de Wert. *See* WERT, GIACHES DE.

Jachimecki, Zdzisław (*b* Lwów, 7 July 1882; *d* Kraków, 27 Oct 1953). Polish musicologist, composer and conductor. He studied music with Stanisław Niewiadomski and Henryk Jarecki at Lwów and musicology with Guido Adler in Vienna (1902–6), where he took the doctorate with a dissertation on Gomółka's psalms. During his stay in Vienna he also studied composition under Herman Grädener and Arnold Schoenberg. In 1911 he completed the *Habilitation* at Kraków with a work on Italian influences on Polish music. He was successively lecturer in music history (1911), reader (1917) and full professor (1921) at Kraków University and later director of its musicology institute until his death. He gave courses at the universities and learned institutions of Rome, Padua, Bologna, Venice, Frankfurt, Vienna and Budapest. In 1934 he initiated a series entitled Rozprawy i Notatki Muzykologiczne, in which he intended to publish works by Kraków musicologists.

Jachimecki's main field was the history of music; his studies are generally comprehensive explorations of their subject. He wrote a number of monographs on composers including Chopin, Haydn, Mozart, Moniuszko, Szymanowski, Wagner and Wolf, several versions (gradually expanded) of the history of Polish music, and a great many valuable papers on specific problems treated in detail. His wide interests in music history included early music and contemporary composers. His attention always focussed on important problems and his work on Polish music in particular was often of a pioneering nature.

He was an active music and theatre (especially opera) reviewer, and wrote many popular articles on music, contributed to musical periodicals such as *Muzyka* and *Muzyka polska*, and non-musical newspapers including *Głos narodu*, *Przegląd polski* and *Ilustrowany kurier codzienny*. Between 1908 and 1924 he conducted symphonic concerts in Kraków; he also composed symphonic pieces and, in particular, songs (published in Kraków and Warsaw), chiefly to texts by Polish poets such as Asnyk, Rydel and Staff.

ZYGMUNT M. SZWEYKOWSKI

Jachino, Carlo (*b* San Remo, 3 Feb 1887; *d* Naples, 23 Dec 1971). Italian composer. After studies in Lucca and with Riemann in Leipzig (1909–10), he held teaching posts in Parma (1928–33), Naples (1933–8) and Rome (1938–51), then became director of the conservatories of Naples (1951–3) and Bogotà, Colombia (1953–6). From 1961 he was artistic director of the S Carlo opera house, Naples. As a composer he was an unpredictable eclectic. He made his name with *Giocondo e il suo re*, the only one of his operas that appears to have been performed. It was frequently revived in Italy, despite criticism from certain quarters of its overt indebtedness to Puccini and Zandonai. A few years later, in the Second and Third Quartets, he was working in a fresher, more vivacious style characterized by crisply dissonant diatonicism. The orchestral works of the 1930s, however, show unreliable taste: the *Fantasia del rosso e nero*, with its chromatic angularities and xylophone-obsessed rhetoric, is no more persuasively personal than *Giocondo*. Nor are his postwar excursions into strict dodecaphony any more convincing: it is significant that, after mingling dodecaphony with tonal elements in the First Piano Concerto, he reverted to straightforward tonality in the Second and all subsequent works. His books include *Tecnica dodecafonica* (Milan, 1948).

WORKS
(*selective list*)

Dramatic: Giocondo e il suo re (op, 3, G. Forzano, after Ariosto: *Orlando furioso*), 1915–21, Milan, Dal Verme, 24 June 1924; other stage works, unperf., some inc.; film music
Orch: Sonata drammatica, vn, orch, 1930; Pastorale di Natale, 1932; Fantasia del rosso e nero, 1935; Pagine di Ramon, 1937; Pf Conc. no.1, 1952; L'ora inquieta, str, 1953; Pf Conc. no.2, 1957; Vc Conc., 1960; Variazioni su un tema car a Napoleone I, 1966; other works
Chbr and solo inst: Sonata, 9 insts, 1922; 3 str qts, 1925, 1927, 1930; Trio, fl, vc, pf, 1954; Quintetto dell'alba, cl, hn, str trio, 1956; other chbr works, kbd pieces
Choral music, songs
Principal publishers: Curci (Naples and Milan), Mercurio (Rome), Ricordi, Senart/Salabert

JOHN C.G. WATERHOUSE/R

Jachmann-Wagner, Johanna. *See* WAGNER family, (2).

Jacinto, Frei (*fl* early–mid-18th century). Portuguese composer. Only his 'Sonatas para Cravo do Sr. Francisco Xavier Baptista' survive (in the National Library, Lisbon). Their style indicates that he may have been a contemporary of Carlos de Seixas and Domenico Scarlatti, so it is possible that most of his compositions were lost in the Lisbon earthquake of 1755. His sonatas or toccatas, which emphasize Baroque motivic play rather than *galant* simplicity, compare favourably with the best of Seixas's works. One (ed. M.S. Kastner, *Cravistas portuguezes*, i, Mainz, 1935) is in binary form and shares with several of Seixas's sonatas a return to the tonic before the first double bar. The other (ed. Kastner, *Cravistas portuguezes*, ii, Mainz, 1950) is an undivided but repeated movement with patterns of note repetition identical with those in Seixas's sonata no.50 (PM, x, 1965).

KLAUS F. HEIMES

Jack (Fr. *sautereau*; Ger. *Docke*, *Springer*; It. *salterello*). (1) The essential part of a harpsichord action that carries the plectrum past the string, plucking it and making it sound (*see* HARPSICHORD, fig.1).

(2) The pivoted vertical lever in a piano action that forces the hammer upward when the key is depressed (*see* PIANOFORTE, figs.32 and 33).

Jackslide [guide, slide]. The wooden, slotted strip which guides the jacks and holds them in position. It is either of one-piece construction (a BOXSLIDE) or two-piece. In the two-piece design the top slide (upper guide) is usually movable and the lower guide fixed (*see* HARPSICHORD, fig.1). In 18th-century French instruments the guides were often covered with leather, with punched slots as the bearing surface for the jacks, in order to reduce action noise. The term 'register' is sometimes used to denote a jackslide.

See also REGISTRATION, §II, 1.

Jackson, Francis (Alan) (*b* Malton, Yorks., 2 Oct 1917). English organist and composer. He was a chorister and pupil of Sir Edward Bairstow at York, whose influence was to mould his entire life. While organist of Malton parish church (1933–40) he became an FRCO (1937), gaining the Limpus Prize. His first composition was an organ impromptu in honour of Bairstow's 70th birthday, written in Itlay during wartime service and first performed in York Minster in 1945. A year later he succeeded his mentor as master of the music at York, remaining there until 1982, when he retired to concentrate on composing. Like Bairstow, Jackson became a prolific composer of choral and organ music and many of his works have found a firm place in the repertory.

Jackson made an international name as a recitalist, particularly in the USA, and in his day probably gave more inaugural recitals than any of his contemporaries, one of his great strengths being the ability to demonstrate an organ colourfully and comprehensively. His recordings include classic performances of Bairstow and Willan. He has played recitals in virtually every major British venue, including several at the Royal Festival Hall and a notable one at Westminster Abbey in 1957 for the International Congress of Organists. Among his most significant organ works are four sonatas (1969, 1972, 1979, 1985) and a concerto, first performed in Dunfermline Abbey in June 1985. For many years he was in demand as a consultant on organ design, his outstanding achievements being the rebuilt York organ and the new organ in Blackburn Cathedral (1970), for which he composed his Sonata in G minor. He gained his DMus (Durham) in 1957, became a Fellow of Westminster Choir College, Princeton, New Jersey, in 1970, and was president of the Royal College of Organists from 1972 to 1974. He was awarded the OBE in 1978 and an honorary doctorate from the University of York in 1983.

STANLEY WEBB/PAUL HALE

Jackson, George K(nowil) (*b* Oxford, bap. 15 April 1757; *d* Boston, MA, 18 Nov 1822). English-American composer, teacher and editor. He reportedly studied under Nares at the Chapel Royal, and while in London he taught privately, wrote a number of sacred and secular compositions and published a *Treatise on Practical Thoroughbass* (1785). St Andrews University granted him a doctorate in music (1791), which probably was an honorary award.

By 1797 he was in New Brunswick, New Jersey; there, while professor of music at a private academy, he presented concerts of popular and art music which received favourable attention throughout the state. He moved to New York in 1801 and remained there, teaching and giving concerts, until 1812 when he moved to Boston. Jackson played a prominent part in that city's musical life as a teacher, composer, conductor, organist, music seller and consultant to the newly formed Handel and Haydn Society.

Jackson's reputation rested mainly on his skills as an organist and teacher, but he also wrote nearly 100 compositions. He was essentially a conservative composer, making much use of figured bass and of fugal techniques. His keyboard pieces do not reflect his own apparent proficiency as a performer, but often are clearly didactic. His few surviving hymns and chant settings are stolidly harmonized in textbook style, but the settings of *Dr. Watt's Divine Songs* are tuneful and show a degree of sophistication in their use of chromatic inflection and broad melodic curves not usual in contemporary settings of Watts.

WORKS

for further details see GroveA (C. Kaufman) and Kaufman (1968)

Sacred: Ponder my words (Ps v), 3vv, op.2 (London, *c*1790); Dr. Watt's Divine Songs Set to Music, op.1 (London, *c*1791); David's Psalms, 1v, org (Boston, 1804); Pope's Universal Prayer and his Celebrated Ode, The Dying Christian (A. Pope), SST, vn (n.p., n.d.); Sacred Music for the Use of Churches (n.p., n.d.); 7 hymn tunes, 2 canons, pubd in The Boston Handel and Haydn Society Collection of Church Music (Boston, 1822/*R*); Benedictus, Gloria, pubd in Music of the Church (Philadelphia, 1828); TeD, 4vv, org, *US-NO*; 2 Books of Sacred Amusements, *NO*

Other vocal: A Favorite Collection of [10] Songs and Duetts, 1v, hpd/pf, op.3 (London, 1791); [6] New Bagatelles, 1v, pf (n.p., *c*1801); A New Musical Score of [13] Easy Canons: Sacred to Masonry, 1–12 vv (New York, *c*1807); many other songs, some pubd, some *Bh*, *NO*, others lost

Inst: A Favourite Sonata, hpd/pf, op.4 (London, *c*1795); Ov. with Double Fugue and Grand March, *c*1801, lost; Va Conc., *c*1805, lost; 2 petits duos, pf 4 hands (Boston, *c*1807); Duo, pf 4 hands (Philadelphia, *c*1808); A Musical Coalition ... to Which is Added a Musical Pardoy, fl, pf, drum (n.p., n.d.); Toccamento, org/hpd/pf, *NO*

Pedagogical: A Treatise on Practical Thorough Bass, op.5 (London, 1785); Instruction Book to the Piano Forte (New York, 1825), lost; Book ... for the Theoretic Part of Instruction, *NO*; I rudimenti da musica, or Complete Instructor for the Piano Forte, lost

Edns: Dr. Jackson's Selection, pf, ?8 vols. (New York, 1801–12); A Choice Collection of Chants, 4 vv (Boston, 1816); The Choral Companion (Boston, 1817)

CHARLES H. KAUFMAN

Jackson, George Pullen (*b* Monson, ME, 20 Aug 1874; *d* Nashville, TN, 19 Jan 1953). American folksong scholar. He was educated at Dresden Conservatory (1897–8), Vanderbilt University, the universities of Munich and Bonn and the University of Chicago, where he took the doctorate in 1911 with a dissertation on Romantic literature. Shortly after joining the German department of Vanderbilt University in 1918 he became interested in the music of the large southern singing groups such as the Sacred Harp Singers (together with Alan Lomax he made recordings of their performances, 1942). His study of the music, as found in collections published in the early 19th century, resulted in the book *White Spirituals in the Southern Uplands* (Chapel Hill, NC, 1933/*R*), which introduced an important body of American folk music to scholarly and general readers. It was followed by two collections of the music, namely *Spiritual Folk-Songs of Early America* (Locust Valley, NY, 1937/*R*) and *Down-East Spirituals* (New York, 1943/*R*), two further studies, *White and Negro Spirituals ... with 116 Songs as Sung by both Races* (New York, 1943/*R*) and *The Story of 'The Sacred Harp', 1844–1944* (Nashville, TN, 1944), and a final anthology, *Another Sheaf of White Spirituals* (Gainesville, FL, 1952/*R*). He also founded and directed numerous organizations, including the Nashville SO (1920) and the Tennessee State Sacred Harp Singing Association (1939).

RICHARD JACKSON

Jackson, John (*d* Wells, March 1688). English organist and composer. His name first appears as *informator choristarum* at Ely Cathedral for a single quarter in 1669. The following year he moved to Norwich as Master of the Choristers, thence in 1674 to Wells, where he was appointed organist and vicar-choral on 9 September. He was also made Master of the Choristers, though perhaps not immediately; thus, in 1678–9 he was paid £10 as organist, £20 as Master of the Choristers and £23 'in augmentation', the latter presumably his share of the vicars' revenues. His widow Dorothea was granted administration of his estate in December 1689.

Jackson's Service in C survives in score (*GB-Ob* Tenbury 1020), but much of his church music is incomplete as it stands. However, a fair idea of its style can be gained from an organbook (*Lcm* 673), which obviously hails from Wells. It is probably in his hand, and also contains some chants (the 'Welles Tunes'), four of which are by him. Two of his smaller anthems were printed in John Playford's *Cantica Sacra* (RISM 1674[2]), and Tudway included *Hallelujah, the Lord said unto my Lord* in his collection (*Lbl* Harl. 7338). There is 'A Simphony by Mr. John Jackson' in *Musicks Hand-Maide* (2/*c*1668), and a suite of instrumental pieces in Wells Cathedral (Vicars' Choral 9). A number of convival catches are in Playford's *The Second Book of the Pleasant Musical Companion (*RISM 1686[4]).

WORKS

GB-Lcm refers to the Wells organbook Lcm 673

SERVICE MUSIC

Service in C, full with verses (TeD, Jub, San, Ky, Doxology, Cr, Mag, Nunc), *GB-Lcm* (inc.), *LF* (inc.), *Ob*, *WO* (inc.), *WB* (inc.)

IAN SPINK

Jackson, Judge (*b* Ozark, AL, 12 March 1883; *d* Ozark, 7 April, 1958). American composer and tune book compiler. In about 1900 he moved to southeast Alabama, where he learned shape-note hymn singing from other blacks and became a singing-school teacher. During the 1920s he composed shape-note songs in both the folk-hymn and gospel-hymn styles, encouraging his friends and pupils to do the same. His *The Colored Sacred Harp* (1934/*R*) was the first new collection in four-shape notation to be published in the 20th century, and the only tunebook to contain mostly songs by black composers. In the 1950s he began regular broadcasts of black shape-note singing over radio station WOZK in Ozark. After his death black singers continued the radio programmes, made television broadcasts, and used his book at such annual events as the Alabama and Florida Union State Sacred Harp Singing Convention and the Jackson Memorial Sing in Ozark.

DORIS J. DYEN

Jackson, Mahalia (*b* New Orleans, 26 Oct 1911; *d* Chicago, 27 Jan 1972). American gospel singer. She grew up in the musically conservative context of the Baptist faith, but found the music of a nearby Holiness church more congenial. She was also inspired by the blues recordings of Bessie Smith, Mamie Smith and Ma Rainey, to which she listened secretly because blues were associated with the Devil by the members of her church. In 1927 she moved to Chicago, where she sang professionally first with the choir of the Greater Salem Baptist Church and from 1932 with the Johnson Gospel Singers, one of the first professional touring gospel groups. In the mid-1930s she began a 14-year association with Thomas A. Dorsey, touring with him to promote his songs. The success of her recording *Move on up a little higher* (1947), which sold more than a million copies, established her as the 'Gospel Queen'. Her blues-inspired singing is shown particularly well in *Let the power of the Holy Ghost fall on me* (1949), which won the French Academy's Grand Prix du Disque. In 1952 she toured Europe and by the mid-1950s had her own radio and television programmes in Chicago, appearing frequently on national shows. She sang at President John F. Kennedy's inauguration in 1961. Although she was invited to appear in nightclubs and to perform secular music, she always rejected such offers. She did extend her scope, however, by making use of large choruses and string orchestras, and also made a recording of Duke Ellington's *Black, Brown and Beige* with his orchestra (1958). Jackson was not the first, and possibly not the finest, African-American gospel singer, but it was largely through her compelling contralto voice and her personality that people of all races throughout the world came to respect gospel music as an idiom distinct from the classical African-American spiritual.

HENRY PLEASANTS/HORACE CLARENCE BOYER

Jackson, Michael (Joseph) (*b* Gary, IN, 29 Aug 1958). American pop singer, songwriter and producer. He first achieved fame, aged 11, as the lead singer of the JACKSON FIVE. Michael was the focal point of the group, with a vocal style and dance moves heavily indebted to James Brown. His precocious mastery of soul singing is fully evident on the group's first Motown release, *I want you back* (1969), in which he displays an infectious sense of uptempo timing and an impressive range of vocal resources, effectively showcased on a finely crafted tune. In 1971 Jackson released his first records as a solo artist, revealing a predilection towards ballads. Like those of the Jackson Five, his early solo recordings were remarkably successful.

However, Jackson's solo career did not progress until the late 1970s. In 1978, while working on the film of the musical *The Wiz*, he met Quincy Jones. The two collaborated on Jackson's next album, *Off the Wall* (Epic, 1979), which outsold his previous solo efforts and garnered favourable critical notices. Jones and Jackson successfully updated Jackson's sound, presenting him as a mature artist capable of appealing to dancers and top-40 radio programmers alike. Jackson's voice had deepened somewhat, but retained its trademark flexibility, rhythmic drive and melodic sensitivity that perfectly fit the album's combination of funk, pop and disco. Jackson's next album, *Thriller* (Epic, 1982; again produced by Jones), became an international phenomenon, breaking all sales records, and selling approximately 45 million copies. *Thriller* successfully synthesized aspects of pre-existing

styles: soulful, middle-of-the-road ballads ('The girl is mine', sung with Paul McCartney), slick funk-disco ('Billie Jean') and funky heavy metal ('Beat it'). This stylistic blending enabled Jackson to transcend boundaries between audiences that music industry experts believed were unassailable. Furthermore, aware that MTV had become the most effective tool for promoting recordings, Jackson began conceiving his songs in relation to video presentation. The videos for *Billie Jean*, *Beat it* and *Thriller* were mini-films, small narratives with relatively huge budgets. *Billie Jean*, released first, was not played much on MTV due to the channel's *de facto* colour policy; *Beat it*, however, because of its funk-metal fusion, was repeatedly shown on the video channel amid rumours of pressure from Walter Yetnikoff, the head of CBS/Epic. Jackson's understanding of how to employ his singing and dancing skills within the rhetoric of videos enabled him to exploit his abilities as a performer rather than as a musician per se. Viewed in this way, the magnitude of his success is inextricable from the age of music video.

On his next albums, *Bad* (Epic, 1987) and *Dangerous* (Epic, 1991), Jackson struggled to match the critical and commercial success of *Thriller*. Although they both sold over 20 million copies there was a sense in which Jackson was repeating himself (the formulaic funk of *Bad*) or groping for new ideas (the attempts to incorporate aspects of new jack swing in *Dangerous*). In terms of video, Jackson also appeared to be repeating himself, returning over and over to the street-gang, *West Side Story*-style, *mise-en-scène* of *Beat it*. An exception to this is the Afrocentric, Egyptian fantasy of 'Remember the Time' from *Dangerous*. Although he had devoted much effort to humanitarian causes throughout the 1980s and early 90s (including co-writing *We are the world* (CBS, 1985) with Lionel Ritchie for USA for Africa), by the mid-1990s his career was in danger of being overshadowed by tabloid-style scandals and his brief marriage to Lisa Marie Presley, the daughter of Elvis.

DAVID BRACKETT

Jackson, Milt(on) [Bags] (*b* Detroit, 1 Jan 1923; *d* New York, 9 Oct 1999). American jazz vibraphonist. After an early engagement in Dizzy Gillespie's sextet (1945–6) and big band (1946) he worked with Howard McGhee, Charlie Parker, Woody Herman and others (1948–9). In 1948 he recorded the blues *Misterioso* and other titles as a participant in Thelonious Monk's celebrated sessions for the Blue Note label. He returned to Gillespie from 1950 to 1952, and during the same period issued some recordings under the name of the Milt Jackson Quartet. By the end of 1952 this group was renamed the MODERN JAZZ QUARTET. Jackson's career was centred around the MJQ until 1974; only in the summer months when the MJQ did not perform did he regularly take on other jazz engagements as a leader or sideman. Following the group's dissolution he toured alone, performing with local bands in various cities, but from 1981 until 1997 he rejoined his African-American colleagues in the MJQ on a regular basis. Jackson was the first vibraphonist (he actually played the Deagan vibraharp) in the bop style. His improvisations exhibit great rhythmic variety, with sudden outbursts of short notes often adjoining languid, sustained phrases. He utilized a wide range of dynamics to highly expressive ends. His great control of rhythm and dynamics is clearest in his masterly improvisations at slow tempos, but he also had a fondness for the 12-bar blues, and has recorded many excellent blues solos. He was one of the first vibraphonists to slow the speed of the instrument's oscillator to about 3·3 revolutions per second (as opposed to Lionel Hampton's vibrato speed of about 10 per second), thus warming his long notes with a subtle vibrato and avoiding the nervous shimmy on shorter notes that is heard in the work of earlier players. Jackson wrote a number of well-known jazz tunes, such as *Bluesology* (1951, Dee Gee), *Bags' Groove* (1952, BN), *The Cylinder* (1959, on the album *Ballad Artistry*, Atl.) and *Ralph's New Blues* (1955, on the MJQ's album *Concorde*, Prst.), the simple pentatonicism and formal design of which often contrast sharply with the complexity of his improvisations.

THOMAS OWENS

Jackson, Richard (Hammel) (*b* New Orleans, 15 Feb 1936). American music librarian and musicologist. He studied the organ at Loyola University (BM 1958), musicology at Tulane University (MA 1962), and library science at Pratt Institute (MSLS 1968). After holding positions at the New Orleans Public Library (1958–9), the Maxwell Music Library at Newcomb College, Tulane University (1959–62) and the library of the New School for Social Research (1962–5), he became head of the Americana Collection in the music division of the New York Public Library (1965–91), where he has prepared exhibitions on Copland, Carter, Gottschalk and the New York PO, among other subjects. As a musicologist, Jackson specializes in 19th- and early 20th-century American classical and popular music. He has edited collections of Gottschalk's piano music (1973) and Stephen Foster's songs (1974), and in 1976 published the anthology *Popular Songs of 19th-Century America*; he also acted as editorial consultant for the collected works of Scott Joplin and for the publications of the Wa-Wan press. Other publications include articles in various journals and two bibliographies of American music (1973, 1977); he co-edited *The Little Book of Louis Moreau Gottschalk* (1976). He was associate editor of the *American Choral Review* (1967–91).

PAULA MORGAN

Jackson, Roland (*b* Milwaukee, 31 Oct 1925). American musicologist. He studied at Northwestern University (BM 1947, MM 1948), with Gurlitt in Freiburg (1951), with Handschin in Basle (1952), and with Bukofzer, Lowinsky and Kerman at the University of California at Berkeley, where he took the doctorate in 1964 with a dissertation on Trabaci's keyboard music. He taught at Northland College (1948–50), the University of Arkansas (1958–61), Ohio University (1961–2) and Roosevelt University in Chicago (1962–70); in 1970 he joined the staff of the Claremont Graduate School in Claremont, California; he retired from teaching in 1994. His scholarly interests include the music of Marenzio, analysis of musical styles and the history of performing practice. In 1988 he founded and became editor of the journal *Performance Practice Review*. He has applied computer technology to his studies in analysis, which have ranged from the music of Bach to works of the early 20th century. Much of his research has centred on Italian keyboard music, particularly that of Frescobaldi and the Neapolitan school of the period around 1600; he traced the development of this music from the late Renaissance to the early Baroque, examining both harmonic and melodic styles.

PAULA MORGAN

Jackson, Walker (*d* Ballingarry, Co. Limerick, late Feb/March 1798). Irish musician and composer. He was a member of a wealthy landed family long established in Co. Limerick, a Justice of the Peace, and also the president of a convivial Limerick society *Cuideachta gan Cúram* (company without care). He was an early composer for the uilleann pipes, which had not reached their fully

developed form in his time. The jig *Jackson's Morning Brush*, his most famous tune, and one of several of his compositions still played traditionally, was composed in the 1770s and published in gentlemen's magazines of the decade. He also wrote *Jackson's Turret*, named after the tower in which he lived in Ballingarry.

A Collection of Favourite Irish Tunes composed by W. Jackson Esq. was advertised in the *Hibernian Journal* of 3 March 1780 as published by John Lee of Dublin, but no copy of this work is known to survive. About 1790 it appears to have been reprinted as *Jackson's Celebrated Irish Tunes*, which contains 13 pieces, almost all double jigs. It is interesting that Jackson composed no reels or hornpipes, which first came into the Irish tradition from Britain in the 18th century. The collection was pirated and individual tunes were frequently printed in other collections. Through confusion with another later Jackson, a Co. Monaghan musician, far more tunes have been credited to Walker Jackson than he composed.

NICHOLAS CAROLAN

Jackson, William (i) [Jackson of Exeter] (*b* Exeter, 29 May 1730; *d* Exeter, 5 July 1803). English composer, essayist, organist and painter. The son of a grocer, he was given a liberal private education and studied with musicians at Exeter Cathedral and other visiting musicians in the city. Some early sources identify John Silvester, organist at Exeter between 1741 and 1753, as his teacher, but Jackson himself did not provide any names; he asserts that his own efforts were the chief impetus for his knowledge of music and aspirations to follow a musical career. From about 1746, according to Jackson's recollection, he continued his study in London with John Travers, organist of the Chapel Royal. Because of limited funds, after less than two years Jackson was obliged to return to Exeter, where, to avoid confusion with an Oxford-based musician, he adopted the designation 'Jackson of Exeter' on the title-pages of all his published work. He made his career as an independent teacher and performer until Michaelmas 1777 when he was appointed sub-chanter, organist, lay vicar and master of the choristers at the cathedral. He remained in the service of the cathedral until his death. He was survived by his wife (née Bartlett), two sons and a daughter; the sons pursued successful careers in diplomatic service. A monument was erected to him in the vestry of St Stephen's, Exeter, where he is buried.

Throughout his life Jackson was active as a composer in a variety of media, though the largest proportion of work published in his lifetime was secular vocal music. The popularity of many of his individual songs, his two volumes of canzonets for two voices and small scale pieces for vocal ensembles, is evidence of a market for modest works for amateur performance. The *Elegies* op.3 (among Jackson's most popular works in terms of critical reception and financial success), however, make demands upon the technical abilities of the singers beyond those normally associated with amateurs. The variety of instrumental resources used in the accompaniments in the first three collections of solo songs opp.1, 4 and 7 also suggest the availability of professional resources. Many of these works were almost certainly written for the concerts promoted at Bath by his friend Thomas Linley (i) which drew upon the prodigious talents of the Linley children and professional instrumentalists working in the city. Other publications from the 1760s similarly reflect Jackson's attempt to move between music suitable for amateur performance and that more clearly intended for professional execution. The *Hymns* op.6, for example, offered simple settings of selected psalms by Tate and Brady, alternatively for three voices or unison voices with continuo, while the ode and anthem op.5, are clearly concert works.

Jackson's first dramatic work was *Lycidas*, which was performed as an afterpiece at Covent Garden on 4 November 1767 and repeated at Bath on 26 November. The work (not published and now lost) commemorated the death in September of Edward, Duke of York (brother of George III). Bath was also the venue for the most successful performance of Jackson's largest scale choral work, *An Ode to Fancy*, based on words by Joseph Warton. The treatment of this material is typical of Jackson's attitude to his words; passages of the poem are omitted, rearranged and restructured to provide the framework for a substantial choral work – the composer refers to it in his autobiography as an oratorio – for solo voices, chorus and orchestra.

Although Jackson refers to unpublished sets of harpsichord 'lessons' written during the London years and at the time of his return to Exeter, only two collections of instrumental music were published. The *Six Sonatas* op.2 for harpsichord with optional violin (*c*1757) are among the earliest English examples of the genre and are notable for their adventurous treatment of texture. The *Eight Sonatas* op.10 for harpsichord and string quartet (*c*1773) are more mature in their handling of form

Jackson entered into full-time musical employment for the first time when he took up his duties at Exeter Cathedral in 1777. His immediate predecessor in the post of organist and choirmaster, Richard Langdon, had caused increasing difficulties for the cathedral authorities through absences and, according to Jackson writing in 1801, 'I found a bad choir, which I was determined, if possible, to make a good one. By degrees I succeeded and it is now, and has been for many years, the best in the kingdom'. Much of his activity was directed towards establishing a new repertory and the composition of services and anthems for the church became a major preoccupation. None of his music for the cathedral was published until after his death when his pupil and successor, James Paddon (1768–1835), edited a selection of anthems and services in 1819. The authenticity of the Service in F, formerly questioned, is confirmed by Jackson's autobiography. This work and especially the *Te Deum*, which long remained in use in the Anglican church, was composed in a simple contrapuntal idiom to meet the deficiencies of the Exeter choir which he inherited; other services in the Paddon collection are in a more elaborate style. The composer John Davy and the singer Charles Incledon were among the pupils or choristers trained by Jackson.

Although the cathedral records show no period of absence for Jackson he must have been away from Exeter for some relatively extended periods. In 1785 he undertook a ten-week tour of Europe (his only period out of England) during which he visited France and northern Italy, passing through the Low Countries on his return. The primary focus for this visit was to follow his artistic, not his musical interests, and especially to see mountains. He was also absent in 1780 when his comic opera *The Lord of the Manor* was produced at Drury Lane. Two of

Jackson's earlier songs had been introduced with new texts into the production of Sheridan's *The Duenna* (21 November 1775). The new opera, a more substantial three act work, was very successful, with 21 performances during its first season, and was regularly revived in successive years. In 1812 Henry Bishop, in collaboration with, among others, C.I.M. Dibdin and Jackson's former pupil John Davy, produced an adapted version at Covent Garden (24 October 1812) which contributed to the continued popularity of the opera during the first half of the 19th century. Jackson's opera was unusual in that it was immediately published in a full orchestral score as well as the more customary vocal score format. The score demonstrates a command of a variety of idioms; it includes a substantial three-movement overture on a symphonic scale, as well as large-scale ensembles and solo items which make considerable demands upon the singers, yet it was the simpler, more sentimental, songs such as 'When first this humble roof I knew' and 'Encompass'd in an angel's frame' which perhaps ensured the popularity of the work. These, together with the canzonets *Love in thine eyes* and *Time has not thinn'd my flowing hair* and the reworking of Arne's *Where the bee sucks*, were among his most popular works and were frequently reprinted in single editions and popular anthologies. Jackson's second opera, *The Metamorphosis* was less successful than its predecessor, running for only three nights. It was not revived, though a vocal score was published.

In addition to the libretto of *The Metamorphosis* Jackson wrote substantial prefaces to several of his publications. That to *12 Songs* op.4 in particular is an important statement of the composer's aims, stressing as it does the aspiration of setting only the highest quality verse in a musical style based upon the traditions of a national melody which owed little to the fashionable excesses of Italian opera. Jackson is fiercely critical of descriptive word-painting which seeks to express the sound of the text, rather than its inherent sentiment. These principles underlie all the composer's vocal music, whether conceived for professional or amateur performers. The often trenchant views expressed in the prefaces are an important contribution to the musical aesthetic of the period.

Jackson maintained friendships with a wide circle of literary figures and he published two collections of his own essays, *Thirty Letters on Various Subjects* and *The Four Ages*. The essays cover a wide range of general subjects as well as artistic topics. His most significant musical commentary is the essay *Observations on the Present State of Music in London* (1791). This rather pessimistic account of fashions of the age, regretting the inhibiting influence on English music of the cult of Handel and the triviality of Italian Opera, also includes the comment that the 'present SYMPHONY bears the same relation to Good Music, as the ravings of a Bedlamite do to sober sense'. This was read by many, including Burney (who dismissed the pamphlet in a savage review in the *Monthly Review*), as an attack on Haydn and his reception in London. In 1792 Jackson was jointly responsible for establishing a literary Society in Exeter, and may have made three contributions to a volume of essays published by the society in 1796.

Jackson was also an enthusiastic amateur landscape painter. His circle of acquaintances among contemporary artists included both Reynolds and Gainsborough and *The Four Ages* includes interesting reminiscences of both men. In 1771 Jackson exhibited two oil landscapes at the Royal Academy exhibition, and a small number of paintings which show the strong influence of Gainsborough, have been attributed to him. His portrait was painted by Gainsborough, Opie and Downman, his son-in-law; Jackson recalled other portraits being undertaken by Rennell, Humphrey, and Morland.

The breadth of Jackson's interests as a practising musician, artist and writer is unusual. He remains one of the most distinctive voices of his period in England; his music owes little to the influence of Handel and even less to the fashionable style promoted through the continued popularity of the Italian Opera. Perhaps because of his provincial base he maintained an independence of thought, yet he was among the first composers in England to show an awareness of the styles of early Classical music both in his harmonic language and his extensive use of dynamics. His best music is to be found in his secular vocal works, where he demonstrates an ability to blend a natural melodic style with a sensitivity to text. His posthumous reputation has been affected both by the continued popularity of his bland cathedral services and by the rather negative portrayal of his character by Burney, with whom he had a long-standing literary rivalry. Writing in *Rees's Cyclopaedia* after Jackson's death, Burney described him as possessing 'selfishness, arrogance, and an insatiable rage for superiority', though he grudgingly commended his ability to create an 'elegant and plaintive melody to elegiac poetry'. Most of the other contemporary accounts do not share this view of his personality; rather they speak warmly of his intellectual integrity and personal qualities.

WORKS

all printed works published in London

STAGE

all performed in London

Lycidas (afterpiece, 1, W. Jackson, after Milton), Covent Garden, 4 Nov 1767; music lost

The Lord of the Manor (comic op, 3, J.S. Burgoyne), Drury Lane, 27 Dec 1780; as op.12 (1781); many songs pubd singly

The Metamorphosis (comic op, 3, Jackson and R. Tickell), Drury Lane, 5 Dec 1783; as op.14 (1783)

OTHER SECULAR VOCAL

op.	
1	Twelve Songs, 1v, 2 vn, [va], bc (*c*1755)
3	[Invocation and 6] Elegies, 4vv, bc (*c*1760)
4	Twelve Songs, 1v, 2 vn, [va, 2 hn], bc (*c*1765)
7	Twelve Songs, 1v, 2 vn, [va, 2 fl, 2 hn], bc (*c*1770)
8	An Ode to Fancy (Warton), S, T, 4vv, orch (*c*1770), incl. an ov.
9	Twelve Canzonets, 2vv, bc (1770), the Linley edn (*c*1797) adds a canzonet no.13
11	Six Quartets, 4vv, bc (*c*1775), arrs. of songs: 4 by Arne, 1 by Greene, 1 by Jackson
13	A Second Set of Twelve Canzonets, 2vv, bc (*c*1782)
15	Twelve Pastorals, 2vv, bc (1786)
16	Twelve Songs, 1v, pf/str (*c*1790)
17	Six Epigrams, 2–4vv, pf (*c*1795)
18	Six Madrigals, 2–4vv, pf (*c*1798)

Numerous songs and canzonets from opp.1, 4, 7, 9, 13, 15 and 16, pubd singly and in 18th-century anthologies; other songs and partsongs in 18th-century anthologies

Queen of every moving measure, song, in W. Seward: *Anecdotes of some Distinguished Persons*, iv (London, 1796), 180–85

SACRED VOCAL

op.	
5	An Anthem selected from the Psalms ['Hear me O God'] and an Ode written by Pope ['A dying Christian to his Soul'], 4vv, 2 vn, va, bc (1766), the Ode scored for 4vv, bc

6 [Twelve] Hymns, 3vv, bc (1768), also possible for 1v, bc

Anthems, services and hymn tunes in *GB-EXcl*, *Lbl*, *Lcm*, some ed. J. Paddon, *William Jackson: Anthems and Church Services* (London, 1819)

INSTRUMENTAL

op.
[2] Six Sonatas, hpd, vn (*c*1757)
10 Eight Sonatas, hpd, 2 vn, va, vc (*c*1773)

Concerto in 7 parts, str, *c*1749, cited in K. Mummery, *Catalogue of Music N.S.11* (Bournemouth, 1957)
Fairy Fantasies, ?insts, mentioned by Burney and others, ?lost

WRITINGS

Thirty Letters on Various Subjects (London, 1783, 3/1795); nos.8, 10, 17 with a brief memoir in *The Harmonicon*, viii (1830), 355–8
Observations on the Present State of Music in London (London, 1791); extracts in *The Harmonicon*, iv (1826), 46–7
'Handel', in W. Seward: *Anecdotes of some Distinguished Persons*, iv (London, 3/1796), 467 only
The Four Ages together with Essays on Various Subjects (London, 1798/*R*)
'William Jackson of Exeter, Musician', *Leisure Hour*, xxxi (1882), 273–8, 360–62, 433–6, 504–6, 569–71, 620–25, 718–20 [an autobiography, journal of the tour of 1785, essays on Gainsborough and Reynolds, letters from Gainsborough to Jackson; based on papers inherited by Jackson's grandson]
?*A First Book for Performers on Keyed Instruments* [cited by early biographers as an anonymous work of Jackson but not authenticated]
Anonymous review of *BurneyH*, iii, iv in *Critical Review*, lxviii (1789), 94–103, lxx (1790), 618–32
'A Short Sketch of my own Life', *Gainsborough's House Review* (Sudbury, 1996–7), 57–113 [autobiography and tour notes from Jackson autograph MS, incl. reproductions of sketches made on the tour of 1785]
Other anonymous reviews and critical essays must exist but have so far not been identified

RICHARD McGRADY

Jackson, William (ii) [Jackson of Masham] (*b* Masham, Yorks., 9 Jan 1815; *d* Bradford, 15 April 1866). English composer. He was known as 'Jackson of Masham' to distinguish him from William Jackson 'of Exeter' (1730–1803). He was the son of a miller, John Jackson, and left school at 13 to work in the mill and bakery. In his free time he taught himself first to repair, and then to construct, organs; he also learnt how to play various instruments, and the elements of thoroughbass, using tutors and scores from the public library. In 1832 he was appointed first organist of Masham church. In 1839 he went into business as a tallow-chandler, but in the same year his first composition, an anthem, was published. He progressed to a prize glee (1840), a setting of Psalm ciii (Huddersfield Choral Society, 1841), and finally, in 1844, to the highest rung of the ladder – an oratorio, *The Deliverance of Israel from Babylon*, given at Leeds in 1847.

In 1852 Jackson made music his profession and settled at Bradford, where he became organist of St John's (1852–6) and of Horton Lane Independent Chapel (1856). He was conductor of the Bradford Choral Union (male voices), chorus master of the Bradford Musical Festivals of 1853, 1856 and 1859, and conductor of the Festival Choral Society from 1856. In 1858 he brought his chorus of 210 singers to London and performed to the queen at Buckingham Palace. He was also in business as a music seller in Bradford.

Jackson composed several oratorios and cantatas for the Bradford Festival. He did not live to conduct his last major work, *Praise of Music*, composed for the festival of 1866. He also composed a number of anthems, glees and songs, and published three hymnbooks and *A Singing Class Manual* (London, 1849). It is evident from the oratorios that he was thoroughly steeped in the music of Handel, though there are also reminiscences of Haydn and Mozart; of the later style of Spohr and Mendelssohn there is no trace. Jackson was never able to overcome his lack of thorough technical training, and his scores are full of blunders and crudities, yet they have a certain primitive strength, particularly in passages of declamatory recitative.

Jackson's second son, William (*b* Bradford, 1853; *d* Ripon, 10 Sept 1877), became organist of Morningside parish church, Edinburgh; he composed a few songs and partsongs.

WORKS

Choral, with acc.: Ps ciii, 1841; The Deliverance of Israel from Babylon, orat (Leeds, 1844); Mass, E, 4vv, org (London, 1846); Isaiah, orat (London, 1851); Ps ciii [2nd setting] (London, 1856); The Year, cant (London, 1859); Full Service, G (London, 1864); Praise of Music, sym., 4vv, orch (London, 1866)
Anthems, glees, partsongs, songs
Slow movement & Rondo, pf (Leeds, 1844)

NICHOLAS TEMPERLEY

Jackson Five [The Jacksons]. American soul group. Its original members were the Jackson brothers, 'Jackie' (Sigmund Esco) (*b* Gary, IN, 4 May 1951), 'Tito' (Toriano Adaryll Jackson) (*b* Gary, 15 Oct 1953), Jermaine (La Jaune) (*b* Gary, 11 Dec 1954), Marlon (David) (*b* Gary,

12 March 1957) and Michael (Joseph) (*b* Gary, 29 Aug 1958). Although they were first marketed in 1969 by Motown Records towards pre-teen audiences, the music had a broader appeal, and the group – and especially its youngest member, MICHAEL JACKSON – displayed precocious talent. The Jackson Five's sound was initially modelled on the music of the fellow African-American group the Temptations, who by the late 1960s had developed an ensemble approach featuring rapid tradeoffs among the vocalists, all of whom occupied a different tessitura. Between 1969 and 1974 the group recorded a remarkable string of top-20 hit singles (including *I want you back*, *ABC* and *I'll be there*), all of them written and produced by the Motown staff. In 1976 'Randy' (Steven Randall) Jackson (*b* Gary, 29 Oct 1961) replaced Jermaine, and the group changed direction, moving to Epic Records and changing their name to the Jacksons. They wrote and produced the material for two albums, *Destiny* (1978) and *Triumph* (1980), both of which surpassed their earlier efforts for Epic and which initiated the second successful phase of their career. These records are securely within the disco mainstream of the time, and feature their trademark superlative vocal abilities. Their album *Victory* (1984) was accompanied by the largest-grossing and most widely covered tour of the time, but Michael's unprecedented success produced unmanageable tensions within the group. In 1989 the Jacksons, without Michael, released *2300 Jackson Street*, an album which found them treading water artistically amid increasing scandals and controversies surrounding the family. For further information see G. Brown: *The Complete Guide to the Music of Michael Jackson and the Jackson Family* (New York, 1996).

DAVID BRACKETT

Jacob [Jacobs], **Benjamin** (*b* London, 15 May 1778; *d* London, 24 Aug 1829). English organist, pianist and conductor. He was taught the rudiments of music by his father, an amateur violinist. When seven years old he had lessons in singing from Robert Willoughby, a well-known chorus singer, and became a chorister at Portland Chapel. At eight he learned to play the harpsichord, which he then studied, together with the organ, under William Shrubsole, organist of Spa Fields Chapel, and Matthew Cooke, organist of St George's, Bloomsbury. In 1788 he became organist of Salem Chapel, Soho, and just over a year later he was appointed organist of Carlisle Chapel, Kennington Lane. Towards the end of 1790 he moved to Bentinck Chapel, Lisson Green, where he remained until December 1794, when the Rev. Rowland Hill invited him to become organist at Surrey Chapel. In 1796 he studied harmony under Samuel Arnold and he became a member of the Royal Society of Musicians in 1799. In 1800 he conducted a series of oratorios given under the direction of Bartleman in Cross Street, Hatton Garden. Jacob's compositions comprise songs, canzonets and glees; he also published two collections of sacred music (*A Collection of Hymn Tunes ... composed for the use of the Surrey Chapel*, 2 vols. (London, [1815]) and *National Psalmody* (London, *c*1815) as well as arrangements.

Jacob achieved a distinguished reputation as an organist, and from 1808, in association with Samuel Wesley and Crotch, he gave a series of organ recitals at Surrey Chapel. The programmes included airs, choruses and fugues by J.S. Bach, without any interspersion of vocal pieces. During 1808–9 Samuel Wesley addressed to him, as to a kindred spirit and a member (together with Vincent Novello) of the 'Sebastian Squad', a remarkable series of letters concerning Bach.

In 1825 Jacob left Surrey Chapel for the newly erected church of St John's, Waterloo Road. This led to a dispute between him and Hill, resulting in *A Statement of Facts relating to the Expulsion of Mr Jacob from the Organ of Surrey Chapel* (London, 1825), in which the musician triumphed over the divine.

W.H. HUSK/CHRISTOPHER KENT

Jacob, Gordon (Percival Septimus) (*b* London, 5 July 1895; *d* Saffron Walden, 8 June 1984). English composer, teacher and writer. He was educated at Dulwich College and, after active service in World War I, studied with Stanford, Howells, Boult and Vaughan Williams at the RCM. He was on the teaching staff there from 1924 until his retirement in 1966, and his pupils included Malcolm Arnold, Imogen Holst, Horovitz and Maconchy. He took the DMus (London) in 1935 and was awarded the John Collard Fellowship by the Worshipful Company of Musicians in 1943. Subsequent honours included the FRCM (1946), honorary RAM (1947) and CBE (1968).

He wrote textbooks that reveal the extent and nature of his craftmanship. *Orchestral Technique* (London, 1931) was followed by *How to Read a Score* (London, 1944), *The Composer and his Art* (London, 1955) and *The Elements of Orchestration* (London, 1962). He undertook the editorship of the Penguin scores in 1948, and contributed to a number of works of reference and textbooks.

Jacob's active career as composer spanned 60 years, during which time the character of his output faithfully reflected the changes in opportunity open to composers of a conservative idiom. Early Prom performances were succeeded by increasing orchestral and choral commissions, and in the 1950s he was a respected figure, providing music for the Festival of Britain (1951) and for the coronation of Queen Elizabeth II (1953). In common with other more traditional composers of the time his music went into eclipse with the rise of the avant garde in the 1960s. However, he was able to find fresh outlets by writing for the new wind band movement (especially in the USA) and for amateur and school orchestras.

In the BBC TV documentary 'Gordon Jacob' (directed by Ken Russell, 1959) the composer said: 'I personally feel that the day that melody is discarded, you may as well pack up music altogether'. His music shows the influence of the early 20th-century French and Russian rather than Teutonic schools, and is characterized by clarity of structure and instrumental writing that shows a keen awareness of the capabilities and limitations of every instrument.

ERIC WETHERELL

Jacob, Gunther (Wenceslaus) (*b* Kaceřov, nr Loket, Bohemia, bap. 30 Sept 1685; *d* 21 March 1734). Bohemian composer, organist and choirmaster. He began his career as a singer at the Benedictine monasteries at Kladruby (1696) and St Mikuláš in the Old Town of Prague (from 1698). There he studied music with Prokop Smrkovský and Isidor Vavák (organ); at 16 he began to compose. During his studies of law and theology, Jacob was active from 1707 as assistant organist at the same monastic church and in 1711 he probably succeeded Vavák as choirmaster; some sources cite Jacob as choirmaster from 1705 and Vavák as organist, 1695–1713. As a member of the Benedictine order he accepted the name Guntherus and took his monastic vows on 1 November 1710. In 1719 he was appointed tutor of Countess Lažanská's children in Manětín, where he stayed several times during the following years. On his numerous travels he visited Vienna and Lower Austria (1727), as well as some monasteries in Bohemia and Moravia (Rajhrad, Brno). His place of death is unknown.

Jacob was a renowned composer not only in his country, but also in Austria, Hungary and Bavaria; some of his works were offered in the catalogues (1736, 1748) of the Augsburg publisher J.J. Lotter. Of his large output (more than 100 compositions are listed in the inventories of the Osek and Rajhrad monasteries) only a minor part has survived.

Jacob is one of the most remarkable figures of the late Baroque in Bohemia. His point of departure as a composer was the works of his Prague contemporaries M. Wentzeli, F.L. Poppe and J.I.F. Vojta. Among his most important compositions are the masses from *Acratismus*, as well as several bass arias (*Aria de ascensione*, *Ave regina*, *Cantata pentecostalis*). His inclination for the Venetian polychoral style is attested by a mass for three choirs and three organs (1717; not extant). But survivals of the old concertato are generally superseded in Jacob's output by the instrumental idiom of the concerto style with wide-ranging themes, uniform rhythmic energy and running basses. Jacob wrote in both luxuriant counterpoint and continuo-homophony. His large works have multipartite structure with short instrumental introductions followed by contrasting solo and tutti sections without clearly designed architecture; he did not employ da capo forms. His treatment of words is expressive and emotional; his intensely dramatic attitude towards the text is most clearly evident in the recitatives. Despite occasional cross-relations, chromatic progressions and abrupt harmonic changes, Jacob's harmonic vocabulary is rather monotonous. He was at his best when writing for solo voices with obbligato solo instruments and organ continuo. Some traits of his musical language (melodic motifs of folk character, syncopated and dance rhythms, passages of parallel progressions in 6ths and 3rds) testify to Jacob's affinity to the Czech pre-Classical idiom.

MILAN POŠTOLKA/JIRÍ SEHNAL

Jacob, Maxime [Clément] (*b* Bordeaux, 13 Jan 1906; *d* Tarn, 26 Feb 1977). French composer and organist. He studied in Paris with Nat (piano), Koechlin (harmony) and Gédalge (composition), and came to notice when his *Ouverture d'orchestre* was given at the Champs Elysées in 1923. The conductor was Désormière, who in the same year joined Jacob in the Ecole d'Arcueil, a group formed around Satie. In 1929 Jacob converted to Catholicism and took holy orders. As a Benedictine novice at En-Calcat (Tarn) he made an intensive study of Gregorian chant and learnt the organ under Cabié and Duruflé; he took the name Clément. His later career was interrupted only by short periods as a soldier (1939–40) and an army chaplain (1944–5). Jacob's music of the 1920s has a melodic richness and a spontaneity that caught the spirit of the time. The style, derived from Bizet, Gounod, Mendelssohn, Poulenc and Milhaud, was intended to delight. One result of Jacob's conversion was a deepening of outlook. Simple harmonies gave place to a greater use of dissonance, and to modal shifts influenced by plainsong; above all, there was a move to more weighty subjects.

RICHARD COOKE

Jacobacci, Vincenzo. *See* JACOVACCI, VINCENZO.

Jacob de Senleches. *See* SENLECHES, JAQUEMIN DE.

Jacobelus Bianchy. *See* BIANCHY, JACOBELUS.

Jacobi, Christian August (*b* Grimma, 25 May 1688; *d* after 1725). German composer. The son of Samuel Jacobi, he studied theology and philosophy at the University of Leipzig, and then from December 1714 at Wittenberg, where he also was organist. In 1717 he applied unsuccessfully for the post of organist at Luckau, Lower Lusatia. From 1717 to 1721 he is recorded as Kapelldirektor at Forst, Lower Lusatia, in the service of Duchess Elisabeth of Saxe-Merseburg. He failed to obtain his father's post at Grimma in 1721, and in 1725 was again in Wittenberg.

C.A. Jacobi's ten extant church cantatas (at *D-Dl*, *LUC* and *MÜG*; 1 ed. W. Steude, Stuttgart, 1994), some of which are for soloists, derive formally from the early church cantata as cultivated at Grimma until 1721; but they show new and original experimental traits. They display a certain independence, especially in the recitatives, from Telemann's style, which was regarded as the definitive style in Middle Germany. They incline towards a harmonic and modulatory richness reminiscent of J.S. Bach; but one cannot infer from this that Jacobi was familiar with Bach's style.

WOLFRAM STEUDE

Jacobi, Erwin R(euben) (*b* Strasbourg, 21 Sept 1909; *d* Zürich, 27 Feb 1978). Swiss musicologist of Alsatian origin. He studied economics in Munich and Berlin – receiving the diploma in engineering in 1933. He lived in Israel from 1934 to 1952, and after working for many years as an agricultural and industrial economist he studied the harpsichord with Frank Pelleg and music theory with Paul Ben-Haim (1951–2). He completed his training with Landowska, Curt Sachs, Eduard Müller and Hindemith, under whom he received the doctorate at Zürich University in 1957 with a dissertation on the development of music theory in England. From 1956 he lived in Switzerland as an interpreter and teacher, and in 1961 he was appointed lecturer at the Zürich University musicology department. In 1970–71 he was visiting professor at the University of Iowa and in 1971–2 at Indiana University.

Jacobi's research centred on the theory and practice of music in the 17th and 18th centuries. As well as making a complete edition of Rameau's theoretical works, a subject to which he devoted numerous writings, he was concerned with Baroque performing practice, particularly of harpsichord music, and the continuo. Jacobi wrote extensively on Albert Schweitzer, a family friend, and edited his writings on music. In years of collecting he built up an important music library, which included original sources of music theory from the Middle Ages to the present, French Baroque harpsichord music and more than 300 Schweitzer autographs. For his work on Rameau the French government appointed him a Chevalier de l'Ordre des Arts et des Lettres in 1975.

JÜRG STENZL

Jacobi, Frederick (*b* San Francisco, 4 May 1891; *d* New York, 24 Oct 1952). American conductor and composer. In New York he studied with Gallico, Joseffy, Rubin Goldmark, Ernest Bloch and, at the Hochschule für Musik in Berlin, with Juon. From 1916 to 1917 he was assistant conductor of the Metropolitan Opera in New York; he taught harmony at the Master School of United Arts (1924), and composition at the Juilliard School of Music (1934–50), where his composition pupils included Haieff, Ratner, Starer and Robert Ward. As a director of the American section of the ISCM and a member of the executive board of the League of Composers, he worked to further the cause of living composers in the USA. His frequent contributions to *Modern Music* focus on American composers, on Stravinsky and on more general topics, as in the article 'In Defense of Modernism' (May–June 1940). Jacobi also lectured at the University of California at Berkeley, at Mills College and for the Julius Hartt Musical Foundation at Hartford, Connecticut. He won an honourable mention in the Coolidge Competition of 1924, and in 1945 he was given the David Bispham Award for his opera *The Prodigal Son*, based on early 19th-century prints illustrating the biblical story.

Jacobi's compositions reflect a modernism informed by American, Judaic, Classical and Romantic traditions. In the 1920s his study of Amerindian music led him, like many of his contemporaries, to try to adapt indigenous material to Western art forms: his String Quartet (1924) and the *Indian Dances*, given their première by Koussevitzky with the Boston SO in 1928, were a product of this synthesis. It was in the 1930s, however, after being commissioned to write a Friday Evening Service for Temple Emmanuel in New York, that he turned down the main path of his own stylistic development. After composing *Sabbath Evening Service*, sung in Hebrew, his music began to include more of such elements as mysticism (framed within a neo-classical structure), Hebraic melody and other aspects of his Jewish spiritual and cultural heritage. Examples are the Cello Concerto (1932), *Hagiographa* (1938), three biblical narratives based on the books of Job, Ruth and Joshua, and his final work, the *Friday Evening Service* no.2 (1952).

WORKS
(*selective list*)

Op: The Prodigal Son (3, H. Voaden), 1943–4, concert perf., Chicago, 1947; staged Toronto, Arts and Letters Club, 22 April 1952

Choral: The Poet in the Desert (C.E.S. Wood), Bar, 4vv, orch, 1925; Sabbath Evening Service, Bar, 4vv, 1930–31; Saadia, hymn, male vv/SATB, 1942; Ahavas Olom, T, 4vv, org, 1945; Contemplation (W. Blake), 4vv, pf, 1947; Ode to Zion (J. Halevi), 4vv, 2 hp, 1948; Ashrey Haish (Zionist song by M. Zaira), arr. 4vv, str, 1949; Arvit l'shabbat, Friday Evening Service no.2, cantor, 4vv, org, 1952

Orch: The Pied Piper, sym. poem, 1915; A California Suite, 1917; The Eve of St Agnes, sym. poem, 1919; Sym. no.1 'Assyrian', 1922; Indian Dances, 1927–8; Conc., vc, orch, 1932; 3 Psalms, vc, orch, 1932; Pf Conc., 1934–5; Vn Conc., 1936–7; Ave rota: 3 Pieces in Multiple Style, small orch, pf, 1939; Rhapsody, hp, str, 1940; Night Piece, fl, small orch, 1941 [after Sym. no.1, movt 2], arr. fl, ob, cl, str qt, pf, 1944; Ode, 1941; Concertino, pf, str, 1946; 2 Pieces in Sabbath Mood, 1946; 4 Dances from The Prodigal Son, 1946; Sym. no.2, C, 1947; Yeibichai: Variations for Orch on an Amer. Indian Theme, 1947; Music Hall, ov., 1948

Chbr and solo inst.: Nocturne, str qt; 3 Preludes, vn, pf, 1921; Str Qt on Indian Themes, 1924; Str Qt no.2, 1933; 6 Pieces for Use in the Synagogue, org, 1933; Scherzo, wind qnt, 1936; Swing Boy, vn, pf, 1937; Hagiographia, 3 Biblical Narratives, str qt, pf, 1938; Shemesh, Palestinian folksong arr., vc, pf, 1940; Fantasy, va, pf, 1941; Ballade, vn, pf, 1942; Impressions from the Odyssey, vn, pf, 1945; Music for Monticello, fl, vc, pf, 1945; Str Qt no.3, 1945; Meditation, trbn, pf, 1947; Sonata, vc, pf, 1950; 3 Quiet Preludes, org, 1950; Night Piece and Dance, fl, pf, 1953

Pf: 6 Pieces, 1921; Pieces for Children, 1935; Dances from The Prodigal Son, 2 pf, 1944; Fantasy Sonata, 1945; Moods, 1946; Prelude, 1946; Toccata, 1946; Introduction and Toccata, 1946; Suite fantasque, 1948

Songs: 3 songs (F.L. Koch, S. Teasdale, A. Brome), 1v, pf, 1914; 3 Songs (S. Naidu), 1v, pf, 1916; Vocalise, 1921; 3 Poems (G. Chaucer), 1v, pf, 1922; 2 Assyrian Prayers, 1v, orch, 1923; Vocalise, 1930; Dunam Po, Palestinian folksong arr., 1939; From the Prophet Nehemiah, 3 excerpts, 1v, 2 pf, 1942; 3 Songs (P. Freneau), 1v, pf, 1948

GUSTAVE REESE/MARJORIE MACKAY-SHAPIRO

Jacobi, Georg [Jacoby, Georges] (*b* Berlin, 13 Feb 1840; *d* London, 13 Sept 1906). German violinist, conductor and composer. He first studied the violin at the age of six in Berlin with Eduard and Leopold Ganz, moving to Brussels in 1849 to study with Bériot. At the onset of Bériot's blindness he went to Paris, where, on Halévy's recommendation, he joined Massart's class at the Conservatoire (1852); he also studied composition with Réber, Gevaert and Chéri. After winning the *premier prix* for violin in 1861 he played for two years at the Opéra-Comique, and then won the competitive post of first violin at the Opéra, where he played in many notable productions, including *Tannhäuser*. He also formed a string orchestra of 16 players which gave a successful series of concerts at the Société Nationale des Beaux-Arts.

From 1868 to 1870 Jacobi was conductor at the Bouffes-Parisiens, where he directed many Offenbach performances as well as composing some operettas (according to Fétis, two or three 'without value or consequence'). On the outbreak of the Franco-Prussian War he moved to London to conduct at the Alhambra Theatre for the 1871–2 season; he remained for 26 years, composing 103 ballets and divertissements, which were also widely performed abroad. His comic operas include *The Black Crook* (which ran for 310 performances) and *La mariée depuis midi*; he also wrote incidental music for Henry Irving's productions at the Lyceum. In 1898 he transferred to the Crystal Palace, for which he wrote two ballets, and was briefly conductor at the London Hippodrome. He taught at the Royal College of Music from 1896. His concert works include two violin concertos, a viola concerto, violin pieces and songs.

H.V. HAMILTON/JOHN WARRACK/R

Jacobi, Michael (*b* Sanne, nr Salzwedel, 1618; *d* Lüneburg, 19 Oct 1663). German composer. He attended several schools including, for three years, one in Stockholm, where his elder brother was Kantor. In 1641 he enrolled at the University of Strasbourg, where he studied law for about two years. After that he travelled through France, Italy, Austria, the Netherlands and Denmark: he is said to have earned his living partly as a guide, partly as a soldier, and wherever he went he continued his musical education, especially in Italy. There is evidence from at least 1647 onwards of his fruitful collaboration with Johann Rist, on whose recommendation he was appointed civic Kantor at Kiel in 1648. From 1651 until his death he was Kantor at the Johanniskirche, the principal church of Lüneburg.

Many documents important for the history of the office of the Protestant Kantor date from Jacobi's time at Lüneburg. They illustrate the difficulties facing a Kantor in the wake of the Thirty Years War and at the same time show what could be achieved by an active and single-minded musician. For instance, Jacobi drew up new regulations for the itinerant singing necessary for the maintenance of his pupils, and he insisted that the city establish choral scholarships and engage instrumentalists to accompany church music; furthermore, supplies of music for the school choir were increased and many instruments obtained or donated. The first Passion performances in Lüneburg took place during Jacobi's term of office. He also exerted himself successfully on behalf of school theatre productions. Thus, 40 years before J.S. Bach attended its Michaelisschule, Jacobi gave the musical life of Lüneburg a decided stimulus.

As Kantor, Jacobi performed mainly new concerted church music. Most, however, of his own compositions that are so far known are the simple settings of texts by Rist, to whose dictates he clearly subjugated himself. Rist rejected the Italian song style as a vehicle for devotional texts, through which he wished to appeal to people of all classes. Thus he demanded from Jacobi a simple style renouncing all virtuosity and intensive interpretation of the words. While other composers of the Rist circle strove for a balance between a simple song style and musical expression, in Jacobi's work interpretation of the words is seldom achieved by expressive turns of melody and unusual intervals or through the accompaniment. A certain schematism is in evidence: time signature, tempo and key are determined by the two basic emotions – elegies are in minor keys and are to be performed slowly, songs of praise, thanksgiving and joy are in quick triple time and major keys – and almost every line of text ends with a stressed cadence. Rist expressly stated that Jacobi had obeyed his wishes, even though he was capable of composing sophisticated and unusual melodies too. Most of his occasional compositions, in which he did not need to observe Rist's instructions, also, however, consist chiefly of strophic arias in a simple, syllabic, declamatory style. The concertos for larger forces in the collection *Timor Domini* have not yet been investigated.

WORKS

Neue musikalische Kreutz- Trost- Lob- und Dank Schuhle (J. Rist), 70 lieder (Lüneburg, 1659)

Timor Domini, 11vv/insts (Lüneburg, 1663)

27 occasional works, mostly for weddings and funerals, 1–5vv, 2–4 insts, bc, pubd Hamburg and Lüneburg (1651–62)

5 further lieder, pubd separately (1652–6), now lost; for titles see *MGG1* and Walter

22 lieder in allegorical plays (Rist): Das friedewünschende Teutschland (Hamburg, 1647), Das friedejauchzende Teutschland (Nuremberg, 1653); 21 ed. in Schletterer

2 lieder in J. Rist: Neuer himlischer Lieder sonderbahres Buch (Lüneburg, 1651)

22 lieder in J. Rist: Frommer und gottseliger Christen alltägliche Haussmusik (Lüneburg, 1654)

12 lieder in J. Rist: Neue musicalische Katechismus-Andachten (Lüneburg, 1656)

2 lieder in J.R. Ahle: Neu-gepflanzten thüringischen Lust-Gartens ander Theil (Mühlhausen, 1658)

1 lied in 1660[2]

O Domine Jesu Christe, 2vv, 2 vn, bc, *RUS-KA*

For further edns of lieder see Winterfeld (1), Zahn (13), Krabbe (1), Vetter, ii (4); 1 ed. W. Lott (Leipzig, 1938)

MARTIN RUHNKE

Jacobi, Samuel (*b* Grossgrabe, Upper Lusatia, 1652; *d* Grimma, 26 June 1721). German copyist and composer. After studying at the Kreuzschule in Dresden from 1671 and, from 1675, at Leipzig University, he obtained on 8 March 1680 the post of *quartus* and Kantor at the Fürstenschule of St Augustine at Grimma, Saxony, a post which he held until his death. His importance lies not in his compositions (26 short *Evangelienkonzerte* in *D-Dl*, motets) but in his activity as copyist of a large collection of church music, now in the Sächsische Landesbibliothek, Dresden. It stands beside the Bokemeyer (Berlin) and Düben (Uppsala) collections in its importance in preserving sources of the German and Latin sacred *Konzerte* of German and Italian composers of the generation after Heinrich Schütz and of the early church cantata. The copies, most of which bear dates of performances, attest to the highly developed cult of church music under Jacobi's direction at the Grimma Fürstenschule.

WOLFRAM STEUDE

Jacobi, Viktor (*b* Budapest, 22 Oct 1883; *d* New York, 10 Dec 1921). Hungarian composer, later active in the USA. He studied music at the National Hungarian Royal Academy of Music from 1903 to 1905, forming a close friendship with his fellow students, the future operetta composers Emmerich Kálmán and Albert Szirmai. His first operetta, *A rátartós királykisasszony* ('The Haughty Princess'), was produced in 1904 while he was still a student, and this was followed by several others. However, it was with *Leányvásár* ('The Marriage Market', 1911) and *Szibill* (1914) that he achieved major international success. When war broke out he was in London, and he fled to America, becoming an American citizen. He supervised productions of earlier works, collaborated with Fritz Kreisler on *Apple Blossoms* (1919) and wrote *The Half Moon* (1920) and *The Love Letter* (1921). After his death a piece entitled *Miami* was arranged from his music and given in Budapest in 1925.

WORKS
(*selective list*)

first performed in Budapest unless otherwise stated

Stage: A rátartós királykisasszony [The Haughty Princess] (fairytale), 1904; A legvitézebb huszár [The Brave Hussar] (musical play), 1905; A tengerszem tündére [The Nautical Fairy], 1906; Teáskerosza [Rambler Rose] (operetta), 1907, rev. Washington, 1917; Van, de nincs [There Is, but There Isn't] (operetta), 1908; Janoska (Spl), 1909; Leányvásár [The Marriage Market] (operetta), 1911; Szibill [Sybil] (operetta), 1914; Apple Blossoms (operetta), New York, 1919, collab. F. Kreisler; The Half Moon (musical play), New York, 1920; The Love Letter (musical comedy), New York, 1921

Jacob Polonois. *See* REYS, JAKUB.

Jacobs, Arthur (David) (*b* Manchester, 14 June 1922; *d* Oxford, 18 Dec 1996). English writer on music. He was educated at Manchester Grammar School and Oxford. His first appointment as music critic was with the *Daily Express* (1947–52); after that he wrote, mainly as a freelance critic, for many newspapers and journals including the *Sunday Times*, the *Financial Times*, the *Musical Times* (where he served briefly as editor) and especially *Opera*, of which he was deputy editor (1961–71); he also contributed articles to journals and symposia. In 1964 he was appointed professor at the Royal Academy of Music, and taught, as guest professor, in the USA, Canada and Australia. In 1979 he was appointed head of the music department at Huddersfield Polytechnic; he retired, as professor, in 1984.

Jacobs's wide interests are reflected in the variousness of his publications. Opera is prominent among them: he was much concerned with new forms of music-theatre, and a strong advocate of the performance of opera in English. He translated many operas, from French, German, Italian and Russian, including works by Handel, Rossini, Verdi, Tchaikovsky, Strauss and Schoenberg, mostly in a brisk, fluent style; he also wrote an original libretto for Maw's *One-Man Show* (1960). His critical writing is clear and forthright; he had a passion for accuracy and was quick to note careless and sloppy thinking. In his last years he was able to pursue research on the late Victorian and Edwardian eras, producing two valuable volumes that perceptively examine the achievement of two central figures, Sullivan and Wood, in a broad social context.

STANLEY SADIE

Jacobs, Marion Walter. *See* LITTLE WALTER.

Jacobs, Peter (*b* London, 17 Aug 1945). English pianist. He trained at the RAM, where his principal teachers were Alexander Kelly (piano) and Eric Fenby (harmony). Since his début at the Wigmore Hall, London, in 1975, he has established a reputation as a sympathetic and communicative champion of neglected 20th-century music, most notably by English and French composers. His many recordings include works by Harold Truscott, Alan Bush, Billy Mayerl, John Foulds, Benjamin Dale, Maurice Emmanuel, Cécile Chaminade, Trevor Hold and Betty Roe (of whom the last two have dedicated works to him), and the complete piano music of Bridge, Vaughan

Williams, Balfour Gardiner and Déodat de Sévérac. In 1973 he formed a piano duo with Elisabeth Lightoller and in 1994 became an associate of the RAM.

JEREMY SIEPMANN

Jacobs, René (*b* Ghent, 30 Oct 1946). Belgian countertenor and conductor. He studied classical philology at the University of Ghent, later taking singing lessons from Louis Devos in Brussels and Lucie Frateur in The Hague and attending Alfred Deller's masterclasses. He has performed with many of the leading early and Baroque ensembles including those directed by Alan Curtis (with which he made his début in 1974 as Clerio in Cavalli's *Erismena*, in Amsterdam), Nikolaus Harnoncourt, Gustav Leonhardt and Sigiswald Kuijken. During the 1970s he founded his own group, Concerto Vocale, which he has successfully directed in operas by Cavalli and Handel. He conducted *L'incoronazione di Poppea* in his own performing edition at Montpellier in 1989, and at the Festwochen der Alten Musik in Innsbruck the following year. Jacobs also teaches performing practice in Baroque singing at the Schola Cantorum, Basle. His recordings as a singer include Cesti's *Orontea*, Lully's *Le bourgeois gentilhomme*, Charpentier's *David et Jonathas*, and Handel's *Admeto*, *Alessandro* and *Tamerlano*. Recordings under his direction include *L'incoronazione di Poppea*, Cavalli's *Giasone* and *Calisto*, Handel's *Flavio* and *Giulio Cesare* and Telemann's *Orpheus*. He both directed and sang the title role in Cavalli's *Xerse*. As an opera director he is imaginative, with a lively dramatic sense and a strong rapport with singers.

NICHOLAS ANDERSON

Jacobson, Maurice (*b* London, 1 Jan 1896; *d* Brighton, 2 Feb 1976). English composer, pianist, adjudicator and publisher. He began to learn both the violin and the piano at the age of seven. At 16, a piano scholarship at the Modern School of Music, London, enabled him to receive lessons from Busoni. In 1916 he won a composition scholarship at the RCM, where, with a break for military service, he studied with Stanford and then Holst until 1922. Before leaving the RCM, Jacobson accompanied the tenor John Coates for two years. He also began a lifelong association with J. Curwen & Sons, originally as a reader and editor, becoming a director (1933) and chairman (1950–72). He resumed concert appearances during World War II, giving recitals, notably, with the contralto Kathleen Ferrier. Jacobson was highly regarded in festival adjudicating, with which he was involved for 50 years. As an extension of such work, he was chairman of the National Youth Orchestra's executive committee (1950–67), and was a guiding light behind the National Festival of Music for Youth from its inception in 1970. He was made an OBE in 1971.

According to a list of his works prepared for his centenary year in 1996, Jacobson wrote 350 published compositions and arrangements. Among these are the cantata *The Lady of Shalott*, the Symphonic Suite for Strings and his greatest composition, the cantata *The Hound of Heaven*, a setting of Francis Thompson's poem.

MICHAEL JACOBSON

Jacobsthal, Gustav (*b* Pyritz [now Pyrzyce, Poland], 14 March 1845; *d* Berlin, 9 Nov 1912). German musicologist. He studied music with Heinrich Bellermann, and history, at the University of Berlin (1863–70), taking the doctorate in 1870 with a dissertation on mensural notation in the 12th and 13th centuries; he completed the *Habilitation* in 1872 at the newly founded Strasbourg University and taught there as an external lecturer. In 1875 he was appointed reader and organized a department which included an extensive research library. At that time he was also conductor of the Akademische Gesangsverein and composed numerous *a cappella* works intended for liturgical as well as concert performance. From 1897 to 1905 he was professor of musicology, the only person to hold such a post at a German university at the time.

In his writings Jacobsthal concentrated mainly on the music of the Middle Ages; his chief work deals with chromatic alteration in Western chant. His studies of Palestrina's works reveal them as a source for German Romanticism and identify their value in the context of 16th-century polyphonic style. These ideas were not recognized until the 1920s, when they established a new musicological perspective. Jacobsthal developed an approach to musicology which used research methods from history and philology, thereby paving the way for the research of medieval music undertaken by his pupils Friedrich Ludwig and Peter Wagner.

ALFRED GRANT GOODMAN

Jacobsz [Jacobs], Hendrik (*b* Amsterdam, 1629; *d* Amsterdam, 1704). Dutch violin maker. He is reputed by some to have been a pupil of Nicolò Amati, but this seems unlikely; he probably became familiar with good Italian instruments that had been taken to Amsterdam, perhaps also those of the Austrian maker Jacob Stainer. Jacobsz was the most celebrated of the Dutch makers, but instruments made entirely by him are quite rare. His copies of the Amati 'grand pattern' achieve the ultimate in visual elegance, the sweeping outlines highlighted by the use of jet-black whalebone for the dark strips of purfling. The varnish is of Italian quality. He spelt his name either Jacobsz or Jacobs on his labels. Through his marriage in 1676 he acquired a stepson, Pieter Rombouts, who eventually took over from him; Rombouts's work is increasingly evident in Jacobsz's later instruments, especially in the broad purfling.

CHARLES BEARE

Jacobus Corbus de Padua (*fl* 2nd half of the 14th century). Italian composer. Only a partly legible three-voice ballata by him, *Amor m'à tolto el cor*, survives, in the fragment

I-ST 14 (f.1, originally f.133), copied at S Giustina, Padua, by Rolando da Casale. The piece (ed. in PMFC, x, 1977, p.135) shows French characteristics in its notation (*senaria imperfecta = tempus imperfectum prolatio maior*) and texting (only the discantus is texted). A grammarian named Jacobus Corbus was active in Padua in 1354.

KURT VON FISCHER

Jacobus de Bononia. *See* JACOPO DA BOLOGNA.

Jacobus de Navernia (*fl c*1300). French or Spanish theorist. He may have been one of the 'cantores de Navernia' mentioned by Admetus de Aureliana. Admetus and Jacobus are known only from citations by Robert de Handlo in his treatise of 1326 (*CoussemakerS*, i, 397–8, 400–01; ed. P. Lefferts, Lincoln, NE, 1991). Jacobus distinguished three kinds of hocket, each respectively using smaller note values and rests, a typology similar to that of Walter Odington.

See also THEORY, THEORISTS.

GORDON A. ANDERSON/PETER M. LEFFERTS

Jacobus de Regio (*fl* mid-15th century). Theorist. A Carmelite, he is known only by a brief treatise on proportions, copied into the Faenza Codex (*I-FZc* 117) by Johannes Bonadies at the Carmelite convent in Reggio nell' Emilia on 14 September 1474. His treatise is one of the earliest to apply the theory of proportions to mensural music, which he illustrated with two-part examples.

GORDON A. ANDERSON/BONNIE J. BLACKBURN

Jacobus de Tuderto. *See* JACOPONE DA TODI.

Jacobus of Liège [Iacobus Leodiensis, ?Iacobus de Montibus, ?Iacobus de Oudenaerde, Jacques de Liège] (*b* Liège, *c*1260; *d* Liège, after 1330). Franco-Flemish theorist. His principal work, the *Speculum musice*, is the largest surviving medieval treatise on music, containing 521 chapters arranged in seven books. The first five books deal with speculative music, the sixth with ecclesiastical chant and the seventh with discant in refutation of Ars Nova teaching on rhythm and notation. The *Speculum* is thus an encyclopedic work in the tradition of Hieronymus de Moravia and Walter Odington. It is without parallel, however, in its scope and cogency as a statement of the theory and practice of the Ars Antiqua.

1. LIFE. Information and conjecture about Jacobus of Liège have accumulated piecemeal. The *Speculum* was originally attributed to Johannes de Muris. Coussemaker based this conclusion on a 16th-century inscription and the proximity of the two authors in a Paris manuscript, ignoring the direct contradiction between the teachings of the two treatises. The author of the *Speculum* stated, moreover, that his name could be discovered from the initial chapter of each book; this gives the acrostic 'Iacobus'. Smits van Waesberghe proposed the identification of 'Iacobus' with a Iacobus de Oudenaerde, canon of Liège and professor at the University of Paris in 1313. Another possible identification may be found in the Berkeley Manuscript of 1375 (*US-BEm* 744), whose anonymous author refers to a certain 'Iacobus de Montibus' in connection with Boethian theory, a major concern of the *Speculum musice*. The surname 'de Montibus' could refer to an unspecified mountainous region or, possibly, to the city of Mons in Belgium. Bragard conjectured that he was born in or near Liège in about 1260 and spent his early years there, receiving a musical training imbued with the theories of Franco of Cologne. Bragard identified the treatise on the consonances (*Tractatus de consonantiis musicalibus*) printed by Coussemaker as Anonymus 1 (*CoussemakerS*, i, 296–302) and a companion work on psalm tones (*Tractatus de intonatione tonorum*) cited in books 1 and 6 of the *Speculum* as early works of Jacobus. (Both works are attributed to Jacobus in the edition by Smits van Waesberghe, Vetter and Visser, 1988, together with a third treatise, *Compendium de musica*, also ascribed to him). From several remarks in the treatise it appears that he studied in Paris, where he laid the foundation of his later work by mastering the first two books of Boethius's *De institutione musica*. The *Speculum* may have been among the 'many things' which Jacobus said he had begun in Paris, especially since the voluminous quotations in books 1–5 suggest ready access to an extensive library. Books 6 and 7 may have been composed at Liège, since book 6 draws upon the *Questiones in musica* (*c*1100) found in two Liégeois manuscripts, while book 7 cites two motets of Petrus de Cruce according to another Liège source.

2. 'SPECULUM MUSICE': BOOKS 1–5. In the preface to book 1 Jacobus described the general plan of his work and justified its vast scope by the assertion in chapter 1 that music 'taken in a general sense, objectively extends to almost everything, God and created beings, corporeal and incorporeal, heavenly and human, theoretical and practical knowledge'. His principal sources were Boethius for speculative music, Guido of Arezzo and his followers for chant theory and Franco 'the German' for discant.

The first book deals with material necessary for understanding musical consonances (i.e. intervals). The preliminary materials – definitions of music and the *musicus*, the inventors of music – draw not only upon standard authorities (Boethius, Isidore of Seville, Plato), but also upon Aristotle, Robert Kilwardby (*d* 1279) and Petrus Comestor. After discussing the various ways in which the four mathematical sciences of the Quadrivium treat measures and proportions, Jacobus passed to the divisions of music: *mundana*, *humana* and *instrumentalis* (Boethius); harmonic, rhythmic and metric (Isidore); modest and lascivious (Boethius); practical and theoretical. This preliminary material is marked off by a chapter summarizing the matters to be treated. There follow basic definitions: sound, tone, motion, time. Necessary mathematical concepts are introduced: unity; number and the division of number; proportions (multiple, superparticular, superpartient), their compounds and properties; the numerical means (arithmetic, geometric, harmonic) and a collocation of the three. After an account of the Pythagorean harmony (6:8:9:12), book 1 closes with

examples of continuous superparticular proportions and their multiplication.

Book 2 deals with musical consonances, especially as related to the monochord. It opens with a résumé of the classical doctrine of consonance and dissonance, including the thesis that consonances are found in the multiple and superparticular proportions. This axiom is later used to determine the consonance of specific intervals. The discussion of whether the unison is a consonance exemplifies the scholastic method of the treatise as a whole. Varying authorities are marshalled and judgment rendered in a long *responsio*. The various intervals, their names, division and so on are discussed, together with compounds of the 5th, octave, octave and 5th, and double octave. Jacobus refused to admit chants having a range of more than an octave but cited the motet *Non pepercit deus* (Anonymus 1, *CoussemakerS*, i, 307*a*) to show that this did not apply to measured music. In discussing the 4th he compared the genera of the ancients (diatonic, chromatic, enharmonic) with the species of the moderns (tone, tone, semitone; T ST T; ST T T). In addition to the usual consonances and their compounds Jacobus also treated the comma, diesis, apotomē and intervals such as the tetratone, the pentatone (which had no place in the gamut except for 'false mutations') and the hexatone (six 9:8 whole tones rather than the 2:1 ratio of the octave). Book 2 concludes with a complex monochord partition.

The third book, according to the general preface, 'speaks of those consonances which Boethius treats more expressly'. The entire book is in fact taken up with the numerical discussion of proportions and intervals and their division in terms of those proportions.

Book 4 considers the comparison of consonances (chapter 1) 'with respect to their general conformity and differences, height and depth, order, whether they are simple or compound, with respect to whole and part, intervals, species, perfection and imperfection, and some other proportions'. In comparing consonances according to their use Jacobus cited ecclesiastical chants using intervals other than the six (up to the perfect 5th) approved by Guido. Species of 4th, 5th and octave are given correctly (descending) according to Boethius. The extension of the concept of species to other intervals is in fact the work of Johannes Cotto rather than, as Jacobus stated, of Guido. After proving that the octave was the prime consonance Jacobus cited several historical orderings of consonances. Concord is divided into perfect, imperfect and intermediate, with the sensible proviso that 'this is not sufficient for concord unless the mixture of such sounds be pleasing and grateful to the ear'. The ensuing discussion of concord and the complementary exposition of discord, also divided into perfect, imperfect and intermediate, draws not only upon Boethius but also upon more recent authorities: Johannes de Garlandia, Franco, Anonymus 1 (i.e. ?Jacobus) and Anonymus 2. The chapter comparing concords with respect to a cadence is of particular interest. Cadence is defined as 'a certain order or natural inclination of a more imperfect concord toward a more perfect one' (iv, 1). A 2nd above or below and a minor 3rd resolve to the unison; the major 3rd seeks the 5th, the 4th either the unison or the 5th. The 5th itself is stable but is perfected by the unison or octave. The major 6th resolves to the 5th or to the octave, as does the minor 7th. (Neither the minor 6th nor the major 7th is mentioned.) The unison and octave are thus the most common endings for discant and organum, although the 5th is often used for one discanting voice above a tenor.

Jacobus summarized the contents of book 5 as the three genera of the tetrachord, their properties, the tetrachords of the Greater and Lesser Perfect Systems, the division of the monochord and various descriptions of its partition according to the three genera. The principal sources of this book are Boethius (books 1, 4, 5) and Guido of Arezzo. The three genera are compared to (but not equated with) the three hexachords, natural, hard and soft. The monochord, according to the moderns, contains two octaves and a 6th, gamma–$\overset{e}{e}$, one note more than Odington's system. After describing Guidonian and other monochord divisions Jacobus posited the addition of a sixth tetrachord (for his monochord diagram, *see* THEORY, THEORISTS, fig.4).

3. 'SPECULUM MUSICE': BOOKS 6–7. In the prologue to book 6 Jacobus announced a shift of emphasis, from speculative music as represented by Boethius to practical music: the modes or tones both ancient and modern; their *differentie*; psalm tones; music and the many things necessary for performing skilfully. Since Boethius derived the modes from octave species Jacobus began with an account of the species of octaves, 5ths and 4ths. To the classical account of eight modes he appended Guido's description of the 1st, 2nd, 3rd and 4th modes of medieval chant. This treatise on the modes or tones according to Boethius concludes with an account of the Greater Perfect System, Greek note names and the 8th (Hypermixolydian) mode added by Ptolemy.

The treatise on ecclesiastical modes opens with a monochord description and an account of tetrachords and species according to Guido and his followers. A curious chapter compares these to metrical feet (T = long, ST = short, thus e.g. T ST represents a trochee). An explanation of the terms *modus*, *tropus* and *tonus* as applied to intervallic constructions is extended to a parallel between music and rhetoric. The eight church modes are described with their regular and irregular finals. In the chapter on affinities (by 4th, 5th and octave) Jacobus twice referred to Liégeois practice. The structure and range of each of the eight modes is described in detail according to Guido, after which the modes are compared by their species construction and their use of B/B♭. Hexachords are described with natural and irregular mutations. The final portion of book 6 is largely concerned with notation and chant repertory: systems of letter notation; modal structure and chants ending in C or A. A tonary gives examples of *differentie*, psalm tones, antiphons and mass chants according to the ecclesiastical modes. Characteristic opening formulae are provided as indexes of the modes.

Book 7, on measured music, provides the raison d'être of the *Speculum*: the refutation of modern errors and the vindication of traditional authority, especially Franco 'the German' and 'a certain one called Aristotle' (Magister Lambertus). 'Measured music', began Jacobus, 'is the harmonious joining of distinct notes, equal or unequal, performed simultaneously under some measurement of time.' Since this always required at least two voices, he turned first to an account of discant, which he defined as 'double song', made by adding at least one part to a plainchant tenor. The relationship of the parts was governed by the perfect consonances and contrary motion, and added voices must consider their relation not only

with the tenor but also with the other parts. He devoted a chapter to 'inept discantors', some of whom did not even know plainchant, while other more learned composers wrote beautiful but difficult discants, abandoning the example of the ancients.

In categories of discant composition he distinguished organum purum from those which are measured in all parts: hocket, copula and discant 'simply performed' comprising conductus, motets, *fuge*, cantilena and rondellus. He next turned to the time relationships of measured music. For the ancients the basic value was a *brevis recta* divisible into two unequal or three equal parts. The moderns also employed an imperfect *brevis* divisible into two equal parts, and they divided the three equal parts of the *brevis recta* into three smaller units each. These smaller note values imply a slowing in performance tempos apparent in Jacobus's remark that the Franconian *semibrevis* equalled the minim of the moderns. The division of the *brevis* into as many as seven *semibreves* is attributed to Petrus de Cruce, a division into as many as nine to 'another'. (Jacobus 'seems to remember' having heard in Paris a triplum composed by Franco himself in which the *brevis* was divided into more than three *semibreves*.)

Rhythmic modes and note values are cited according to Franco. In addition to the *longa*, *duplex longa*, *brevis* and *semibrevis* of the ancients, the moderns employed the *maxima* and the *minima* and further complicated notation by such forms as a semiminim with tail and flag. Jacobus reluctantly proposed a lozenge tailed obliquely to indicate a major *semibrevis*, a simple lozenge to indicate a minor *semibrevis*. Considerable space is devoted to the point-by-point refutation of the nine 'conclusions' on imperfection of Johannes de Muris (*CoussemakerS*, iii, 109–13). Finally, the ancient and modern styles are compared as to perfection, subtlety, freedom and stability. In the course of this Jacobus cited the varying signs used by the moderns to indicate perfect and imperfect mode and time. In an epilogue he reviewed the lengthy progress of his work and prayed an entrance into the everlasting heavenly chorus of praise.

FREDERICK HAMMOND/OLIVER B. ELLSWORTH

Jacobus Theatinus [Giacomo da Chieti] (*b* Chieti; *fl* 15th century). Italian theorist. His treatise, entitled *Summa in arte musica*, is transmitted in *I-PAVu* Aldini 361, ff.36–47 (extract ed. A.G. Galuzzi, *Il 'De partitione licterarum monocordi' di Jacobus Theatinus*, Cremona, 1975); this manuscript is a miscellaneous collection of music treatises and compositions, written in the 15th century in the Veneto (suggesting that Jacobus worked there at that time). The treatise deals with the division of the monochord, intervals and ecclesiastical modes, the usual topics of *musica plana* at the end of the Middle Ages.

See also THEORY, THEORISTS.

BEATRICE PESCERELLI

Jacoby, Hanoch [Heinrich] (*b* Königsberg [now Kaliningrad, Russia], 2 March 1909; *d* Tel-Aviv, 13 Dec 1990). Israeli composer, conductor and string player. He studied the viola and composition with Hindemith at the Berlin Hochschule für Musik (1927–30). From 1930 to 1933 he played in the Grosses Orchester des Südwestdeutschen Rundfunks. With the rise of the Nazis, he left Germany and, after a year's sojourn in Istanbul, emigrated to Palestine. In 1934 he settled in Jerusalem where he joined the Palestine Music Conservatory (1934–47) and the Jerusalem String Quartet (1934–9), both of which were founded two years earlier by the violinist Emil Hauser of the Budapest String Quartet. He was appointed to the Jerusalem New Conservatory and Academy of Music in 1947 (assistant director, 1949–54; director, 1954–8). He later moved to Tel-Aviv, where he played the viola in the Israel PO until 1974. During 1974–5 he served as guest artist and professor of music at the Technion, Israeli Institute of Technology, Haifa. Thereafter, he led the Herzliyah String Quartet, and finally his own quartet.

Jacoby composed in a conservative, tonal style. He believed in writing accessible music that could be performed by amateur groups. He argued that 'there is only one way to be progressive: to appear to be reactionary, and not to follow any fashion' (Toeplitz, 1972 and Fleisher, 1997). Influenced by his teacher, Hindemith, and by the oriental melodies that he heard from the young Israeli singer Brakhah Tsefirah, he combined Israeli and oriental Jewish melodic styles with European counterpoint. Some of his compositions, especially the cantata *'Od yavo yom* ('The Day will Come', 1944), the Suite for Strings (1946), *Kinnor hayah le-David* ('King David's Lyre') in honour of the birth of the state of Israel (1948) and *Judean Hill Dance: Hora Variations* (1952), gained popularity during the 1950s and early 1960s and were considered Israeli cultural symbols. During his later years, he wrote a series of pedagogical compositions for string instruments, all of which are based on Jewish tunes from Mediterranean and Middle Eastern countries. His music enjoyed a revival during the 1990s.

ELIYAHU SCHLEIFER

Jacomelli, Geminiano. *See* GIACOMELLI, GEMINIANO.

Jacomelli [Giacometti; Del Violino], **Giovanni Battista** (*b* Brescia, *c*1550; *d* 19 Jan 1608). Italian instrumental virtuoso. He was praised while still a young man for his mastery of counterpoint, his lute playing and above all for his talent as a viol player. In 1571 Duke Guglielmo Gonzaga offered him a high salary to go to Mantua, but Jacomelli declined; in 1576 after similar negotiations he still preferred to remain in Rome, giving as principal reasons Mantua's bad climate and the plague. He was approached yet again in 1581, but stayed in Rome, where he served briefly as *maestro di cappella* at the confraternity of S Rocco in 1574–5, a body that he worked for later in his career; he was also employed by the confraternity of the Gonfalone. He served briefly as organist at S Giovanni in Laterano in 1581, and later that year he joined the papal choir as a tenor, a post that he held until 1585 when he was expelled for joining the Congregazione dei Musici di Roma. At this time his harp playing drew much attention, and in 1586 G.M. Nanino called him the best violinist in Rome. In May of the same year he finally entered the service of the Gonzaga court where he was assured of a lifelong position and received a high salary. After a short time, and probably because he had been denied the post of *maestro di cappella*, Jacomelli gave up the position. Shortly afterwards he entered the service of the Medici in Florence, and in 1589 he participated in the *intermedi* performed with Bargagli's *La pellegrina* to mark the marriage of Ferdinando de' Medici and Christine of Lorraine. In Florence he also worked at the Compagnia dell'Arcangelo Raffaello, at SS Annunziata, where he played the organ. In Peri's foreword to *Euridice*, published in 1601, Jacomelli is said to be 'most excellent in every part of music, who has almost changed his name to Violino, being a marvellous violinist'; Peri also wrote that in the performance of *Euridice* in Florence on 6 October 1600 'Messer Giovanbattista dal Violino' played a *lira grande*. In 1603 he is mentioned, together with Caccini, as one of the best-paid musicians of the Medici court in Florence.

Although he was praised for his command of counterpoint, his compositions were not held in high esteem in Mantua according to Pompeo Strozzi, the chargé d'affaires in Rome. Only one of his works survives, the eight-voice motet *Benedicam Domino*, published in Carlo Berti's *Motecta* (Venice, 1596). However, his development as a virtuoso is particularly interesting; he first strove for perfection on the viola da gamba, later turned to the harp, and during the 1580s became prominent as one of the earliest violin virtuosos.

PIERRE M. TAGMANN/IAIN FENLON

Jacomi de Senleches. *See* SENLECHES, JAQUEMIN DE.

Jacopo da Bologna [Jacobus de Bononia; Magister Jachobus de Bononia] (*fl* northern Italy, 1340–?1386). Italian composer and music theorist. He belonged to the first generation of Italian trecento musicians.

1. LIFE. Despite his important and influential position in early trecento music, no archival information has come to light about him. He was evidently a native of Bologna. According to FILIPPO VILLANI's Florentine chronicle (see Galletti; also ed. G. Tanturli, Padua, 1997), 'Jacobus Bononiensis' worked together with Giovanni da Cascia at the court of Mastino II della Scala (*d* 1351) in Verona. Jacopo was presumably somewhat younger than Giovanni, to judge from his portrait (see illustration) in the Squarcialupi Codex (*I-Fl* 87), and younger also than Piero, who was likewise at the Scaligeri court. (If the evidence of another picture can be trusted – for illustration *see* PIERO – Jacopo and Giovanni were distinctly younger than Piero; see Fischer, 1973.) A further date is established by the madrigal *O in Italia*, whose text refers to the birth of twin sons to the Milanese ruler Luchino Visconti on 4 August 1346. As other of his texts show (e.g. *Lo lume vostro*, which perhaps hints at the conspiracy against Luchino in 1341, and the motet *Lux purpurata*, on which see N. Pirrotta, CMM, viii/4, p.i and PMFC, xiii, 1987), Jacopo was at the Visconti court during the reign of Luchino (1339–49). It was presumably after the death of the prince that he moved to Verona, where he remained until not later than 1352 (the death of Alberto della Scala). It was probably in Verona that he composed the

Miniature thought to portray Jacopo da Bologna: detail of initial from the Squarcialupi Codex (I-Fl Med.Pal.87, f.7v)

madrigal *Non al suo amante* – the only known contemporary setting of a Petrarch text – about 1350 (see Petrobelli).

During this period, and during his years at Milan, Jacopo, Giovanni and Piero, in competition with each other, wrote several works whose texts refer to the same names, make the same allusions, or are even wholly identical. The name 'Anna' thus appears twice each in works by Jacopo and Piero, and four times in works by Giovanni (the 'Anna' cycle, otherwise called the cycle of the 'perlaro' – a tree that grew near the river Adige – must refer to the period at Verona; see Paganuzzi). The name 'Spina' (alluding perhaps to the Malaspina family who fled to Verona) also appears in works by Jacopo and Giovanni as well as in an anonymous rondello, *Gaiete, dolze parolete mie* (ed. in CMM, viii/2, 1960; PMFC, viii, 1972). 'Varino' appears as a dog's name in Jacopo's caccia *Per sparverare* and again in the caccia *Con bracchi assai*, which was set by both Giovanni and Piero at the Visconti court (and in which the river Adda is referred to). The name 'Margherita' appears twice in works by Jacopo and once in a work by Piero (*Lucida petra* by Jacopo, *Sì come al canto de la bella Iguana* by both); it is not clear whether this refers to the illegitimate daughter of Mastino II or to Margarita Pusterla, the mistress of Luchino Visconti – though 'Iguana' seems to indicate the region of Verona and Padua rather than Milan. Another work which shares its subject matter in the manner of a competition piece is *Vestìse la cornachia*, closely related to Giovanni's *Fra mille corvi*.

After 1352 Jacopo apparently re-entered the service of the Visconti. This is suggested by the texts of the madrigals *Sotto l'imperio* (?1354) and *Fenice fu'* (?1360). The triple madrigal *Aquila altera*, undoubtedly a late work on grounds of style, refers either to the coronation in Milan of Charles IV in 1355 or, more likely, to the marriage of Gian Galeazzo Visconti and Isabella of Valois in 1360. It is also very likely that Jacopo and the poet Petrarch were personally acquainted: as well as the setting of *Non al suo amante*, a further possible connection with Petrarch is Jacopo's reference, side by side, to 'Fioran' (the musician Floriano, known from Petrarch's letters), 'Filipoti' (Philippe de Vitry) and 'Marcheti' (Marchetto da Padova) in his madrigal *Oselleto salvazo*.

Jacopo's association with music theory is known also from the treatise *L'arte del biscanto misurato secondo el maestro Jacopo da Bologna*, which is influenced by French notational theory. This work raises the possibility that Jacopo may have been a university teacher. Several autobiographical madrigal texts (cf *Io me sun un che*, *Oselleto salvazo*, *Vestìse la cornachia*) suggest that he may also have been active as a poet. In these pieces Jacopo placed other composers of his time in a critical perspective.

It is possible that Jacopo lived beyond 1360, for a 'Jachopo da Bolongnia' is recorded in the *laudesi* company at Orsanmichele, Florence, in 1373 (Wilson); also, a 'minister de salteri' is recorded at the court of Aragon in Spain between 1378 and 1386, called 'Jacobo de Bolunga' and 'Jaquet de Bolunya' (Gómez Muntané).

2. WORKS. 34 works can be attributed confidently to Jacopo: 25 two-voice madrigals, seven three-voice madrigals and cacce, a *lauda*-ballata and a motet. To these may be added several madrigals of doubtful authenticity, and a motet fragment (*Laudibus dignis merito*, see PMFC, xiii, 1987) which is very probably Jacopo's and whose text incorporates an acrostic on the name of 'Luchinus dux'. Jacopo's works were in very wide circulation; they are found in northern Italian as well as Tuscan sources. The richest sources for his music are *I-Fl* 87 (27 pieces), *Fn* 26 (22 pieces) and *F-Pn* 6771 (20 pieces, of which at least 18 occur together in the first fascicle). The continuing popularity of Jacopo's works in the first two decades of the 15th century is attested by the citation of at least two works in Prudenzani's Saporetto (see Debenedetti) and of five intabulated pieces in *I-FZc* 117. The appearance in Italian literary sources of the Quattrocento of many poems set by Jacopo also testifies to this popularity.

Jacopo's compositional technique has its starting-point in the early Trecento pieces of *I-Rvat* Rossi 215 and the works of Giovanni da Cascia and Piero. The madrigals are always fully texted in all voices. In the two-voice pieces there is no crossing of parts – with the exception of the caccia-madrigal *Giunge'l bel tempo* (which may have been written in association with Piero's *Cavalcando*). Parallel 5ths and octaves abound in those madrigals which can be regarded as early works (e.g. *Con gran furor*, *Entrava Febo*, *In su' be' fiori*, *Quando veg'io*). The tenor is still barely independent in these pieces and often has passages of long sustained notes. In the later works of Jacopo these features disappear. Musical construction and handling of texts are such that the improvisatory elements still to be found in Giovanni's works give way increasingly to an overall shape that is governed by text. The tendency is evident in tonal structure, for more than half of Jacopo's pieces begin and end on the same pitch; it is equally evident in the increasingly independent shaping of the tenor and in the growing motivic relationship between voices which came about through imitation, strict or free (as in *Fenice fu'*). The simultaneous enunciation of syllables found in the older madrigal is thus broken in places (ex.1). Characteristic of Jacopo are

Ex.1 *Fenice fu'*

the monophonic transitional phrases between two lines of text; these feature later, too, in the early works of Landini. The fact that change of mensuration occurs only between strophe and ritornello serves to underline a unified formal conception. The specifically Italian *divisiones* of *octonaria* and *duodenaria* are predominant.

The three-voice non-canonic madrigals that make their first appearance with Jacopo fall into two stylistic groups apparently representing two distinct stages of development. *In verde prato* perhaps represents a first attempt at three-voice writing. The two upper voices, moving above the tenor, display frequent parallel movement in perfect consonances; the text is underlaid so that almost every syllable falls on the upbeat of the bar. *I' senti' zà* and *Sì comal canto* are both rather more progressively written. It is no accident that these three works survive in two- as well as three-voice versions. Quite another matter are two of Jacopo's late works, the madrigals *Aquila altera* (composed to three separate texts under the influence of the French motet) and *Sotto l'imperio*, which survive

exclusively in three-voice form. Here too the two upper voices, clearly following the model of the caccia, move above the tenor; but each voice moves independently, through the occasional use of imitation. From Jacopo comes the first known polyphonic *lauda*-ballata (*Nel mio parlar*); it survives in two- and three-voice versions with textless tenor. His three-voice motet *Lux purpurata* is distinguished by a particularly Italianate euphony and by the way in which its tonality is restricted almost entirely to the area d–a–d. The textual clarity of the upper voices is striking; they present much of the texts in alternation over the tenor.

Jacopo's stylistic development was the product of a highly conscious and theoretically schooled artistry. This finds expression not least in the texts of the madrigals referred to above as autobiographical, reflecting as they do a certain degree of selfconsciousness. Jacopo's ideal of musical style – not unlike that of Petrarch – was a 'suave dolce melodia', which he contrasted with the 'gridar forte' that he opposed (see *Oselleto salvazo*). His works exerted a fundamental influence on the styles of both Landini and Bartolino da Padova, and with his allegorical madrigals he founded a new genre that was also cultivated by Bartolino and Johannes Ciconia.

WORKS

Editions: *The Music of Jacopo da Bologna*, ed. W.T. Marrocco (Berkeley, 1954) [M]
The Music of Fourteenth-century Italy, ed. N. Pirrotta, CMM, viii/2 (1960) [P ii]; viii/4 (1963) [P iv]
Italian Secular Music, ed. W.T. Marrocco, PMFC, vi (1967/R) [W]
all except motet and doubtful works ed. in M, P iv and W

MADRIGALS

Aquila altera/Creatura gentil/Uccel di Dio, 3vv (*Saporetto*, sonnet no.25, see Debenedetti; inst version in *I-FZc* 117)
Con gran furor, 2vv
Di novo è giunto, 2vv
Entrava Febo, 2vv
Fenice fu' e vissi, 2vv
Giunge'l bel tempo, 2vv (canonic caccia-madrigal)
Io me sun un che, 2vv (2 ritornellos; inst version in *FZc* 117)
In su' be' fiori, 2vv
In verde prato, 2, 3vv
I' senti' za' l'arco, 2, 3vv (Senhal: 'Spina')
Lo lume vostro, 2vv (It. and Lat. text; acrostic: 'Luchinus'; Senhal: 'Isabella')
Lucida petra, 2vv (inc. text)
Nel bel zardino, 2vv
Non al suo amante (Petrarch), 2vv (laude: 'Per sua benignitate', 'Per noi ricompensare'; described in *Saporetto*, sonnet no.48, see Debenedetti; inst version in *FZc* 117)
O cieco mondo, 2vv (2 ritornellos; inst version in *FZc* 117; text wrongly attrib. 'Guido Cavalcanti, see D'Agostino)
O dolce apress'un bel perlaro, 2vv (strambotto-like form; Senhal: 'Anna')
O in Italia felice Liguria, 2vv (text mentions date 4 Aug 1346)
Oselleto salvazo (Jacopo), 2vv
Osellетto salvazo (Jacopo), 3vv (canonic caccia-madrigal)
Posando sopra un'acqua, 2vv
Prima virtute, 2vv (2 ritornellos)
Quando veg'io, 2vv
Sì come al canto, 2, 3vv (Senhal: 'Margherita'; text also set by Piero)
Sotto l'imperio, 3vv (inst version in *FZc* 117)
Straccias'i panni, 2vv
Tanto che sit', aquistati, 2vv
Tanto soavemente, 2vv
Un bel perlaro, 2vv (inc. text; Senhal: 'Anna')
Un bel sparver, 2vv
Vestìse la cornachia (?Jacopo), 2vv (cf Giovanni da Cascia: Fra mille corvi)
Vola el bel sparver, 2vv

Nel mio parlar, 2, 3vv (lauda-ballata; inc. text; see Wilson)
Per sparverare, 2, 3vv (caccia)

MOTETS

Lux purpurata/Diligite iusticiam, 3vv, M, P iv (acrostics: 'Luchinus', 'Vicecomes')

DOUBTFUL WORKS

Madrigals: Avendo me' falcon, 2vv, P ii; Du'anzoliti, P ii (cf *Saporetto*, no.29; see Debenedetti); Gridavan tutti, 2vv, P ii (see Fischer, 1958–61); Nel prato pien de fior, 3vv, P ii (see Fischer, 1958–61); Spesse fiate, 2vv, P ii
Motet: Laudibus dignis merito, ?3vv, P iv (fragment of 1v only; acrostic: 'Luchinus dux', see Plamenac, and Corsi, 1970)

THEORETICAL WORKS

L'arte del biscanto misurato secondo el maestro Jacopo da Bologna, ed. J. Wolf, *Theodor Kroyer: Festschrift zum sechzigsten Geburtstag*, ed. H. Zenk, H. Schultz and W. Gerstenberg (Regensburg, 1933), 17–39; also ed. P.P. Scottolin, *Quadrivium*, xv (1974), 11–74; Eng. trans. in M

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Jacopone da Todi [Jacobus de Benedictis, Jacobus de Tuderto, Jacopo dei Benedetti] (*b* Todi, between 1228 and 1236; *d* Collazzone, ?1306). Italian poet. He appears to have been a lawyer but, according to the hagiography, he was converted in about 1268 to the life of religion by the tragic death of his young wife. In 1278 he was admitted to the Franciscan order, attaching himself to their most rigorous branch, the *Spirituali* (zealots). He may have begun to write *laude* at about this time; several of these poems have polemical contents. As a result of his actions against Pope Boniface VIII, in 1298 he was imprisoned for five years. His main poetic output is represented by 92 *laude* that are definitely attributable to him; the attribution to him of Latin prose works and that of the sequence *Stabat mater* is more doubtful. The early transmission of his poetry was within the boundaries of the Franciscan repertory, but his *laude* later spread into the repertory of the Tuscan confraternities of *laudesi*, whose oldest surviving musical collections are the Cortona *laudario* (*I-CT* 91; 1260–91), which includes two poems by Jacopone, and the Florence *laudario* (*I-Fn* Magl. II.I.122, B.R.18; early 14th century), containing five more.

DAVID FALLOWS, JOHN STEVENS/GIANLUCA D'AGOSTINO

Jacotin (*fl* 1st half of the 16th century). Composer(s). The name appears on chansons and sacred works published from 1519 to 1556, with reprints continuing into the last quarter of the century. Although all the pieces attributed to Jacotin may be the work of a single composer, his identity is still a subject of speculation. Since the name Jacotin, common to many French and Flemish musicians of the Renaissance, is a diminutive of Jacques, Jacotin has been confused with Jacques Arcadelt, Giaches de Wert, Jacquet de Berchem and Jacquet of Mantua. The 'Jacotin' found in documents in Milan and Ferrara between 1468 and 1500 is certainly too early to be this composer, as may be the 'Jacob Godebrye alias Jacotin' at Antwerp Cathedral from 1479–1529.

Between 1516 and 1521, the singer Jacotin Le Bel (Giacomo or Jacques Level) served the papal chapel and the church of S Luigi dei Francesi in Rome. A musician of the same name was a singer and canon in the French royal chapel from 1532 to 1555. In the absence of evidence to the contrary, it has been argued that the Roman and the French Le Bel are probably the same person. On that assumption, Le Bel (not to be confused with Firmin Lebel, teacher of Palestrina) seems the likeliest contender for the identity of Jacotin the composer, and his life would span roughly the period 1490 to 1555.

Jacotin published over 30 chansons, most of them in the great Parisian collections of Attaingnant. Typically, they are scored for four voices and in the common practice of the time incorporate pre-existent melodies in the superius or tenor. The text receives crisp accentuation through lively rhythms and frequent repeated notes. Chordal passages deftly alternate with light, imitative polyphony. Two well-known chansons attributed in some sources to Jacotin are of questionable authenticity: *Auprès de vous* is more often ascribed to Claudin de Sermisy and *Qui veult aimer* is probably the work of Arcadelt.

There are no masses among the sacred works, and only a few motets and *Magnificat* settings. *Magnificat III toni* is a polyphonic elaboration of the plainsong formula. As in the other *Magnificat* settings, each of several distinct sections is set off by the number of voices required, varying from two to four. One of the motets published in 1519, *Interveniat pro rege nostro*, doubtless written for Louis XII (*d* 1515), links the composer to the French court; the text is an intercession for 'our king, now and in the hour of his death'.

GEORGE NUGENT

Jacovacci [Jacobacci], **Vincenzo** (*b* Rome, 14 Nov 1811; *d* Rome, 30 March 1881). Italian impresario. As a youth he was interested in the theatre, though he made his living as a fishmonger. His first contract to manage a theatrical season was in 1835 at the Teatrino Fiano, Rome. Gradually he moved to larger Roman theatres: in 1838 the Valle, in 1840 the Apollo, and in 1846 the Argentina, the Alibert and the Anfiteatro Corea (which he had restored). Not all of his enterprises were successful: he was arrested when too many tickets were sold for the première of Donizetti's *Adelia* (February 1841; sung by Giuseppina Strepponi), and in 1848 he was bankrupt, although he survived through handling his creditors cleverly.

With Barbaia, Lanari and Merelli, Jacovacci was one of the most celebrated impresarios of the 19th century. His fame was tied to the Teatro Apollo, then the largest in Rome, and his reputation rested on spectacular and dignified performances, ballets with classical subjects and an uncanny ability to sidestep the obstacles of the papal censors. Most of the operas he mounted were traditional; only under pressure did he present *Lohengrin* and Massenet's *Le roi de Lahore*. He had absolute confidence in Verdi from *Nabucco* onwards and in 1848 dedicated the season to his works. He gave the premières of *Il trovatore* (1853) and *Un ballo in maschera* (1859), and the first Italian performance of *La forza del destino* (1863). Verdi complained that stinginess had made Jacovacci engage for *Ballo* inadequate singers unsuited to their roles, and he haggled for cheaper rates from the publisher Ricordi. He wrote the impresario a letter (5 June 1859) ironically suggesting he avoid further talk of new operas and put on instead the works of Paisiello, Gluck and Lully – all in the public domain.

MARVIN TARTAK

Jacovelli [Iacovelli], **Mercurio** (*b* Rieti; *fl* 1585–90). Italian composer. According to the dedication of his *Primo libro de canzonette a quattro voci* (Venice, 1588[23]) he was then working in his native town. The volume is dedicated to Giuliano Cesarini, Marchese of Civitá Lavinia and Duke of Civitanova, whose family the composer had evidently served for some time; it contains 18 pieces by Jacovelli and one by G.J. Coppola. The canzonette are through-composed and written in a straightforward, square-cut and largely homophonic style. In the dedication, Jacovelli mentioned an earlier collection of *laudi spirituali* for four voices (lost) also dedicated to Cesarini.

STEVEN LEDBETTER/IAIN FENLON

Jacquard, Léon (Jean). French cellist, member of a string quartet formed by JULES ARMINGAUD.

Jacquemart le Cuvelier. *See* CUVELIER, JO.

Jacquemin de Senleches. *See* SENLECHES, JAQUEMIN DE.

Jacques, (Thomas) Reginald (*b* Ashby de la Zouch, 13 Jan 1894; *d* Stowmarket, 2 June 1969). English organist and conductor. During service in World War I he received wounds which continued to affect his health throughout his life, but which led him, through contact with Sir Hugh Allen at Oxford during convalescence, to study music at Queen's College, where he was appointed organist and director of music in 1926, and a Fellow in 1933. He was conductor of the Oxford Orchestral Society, 1930–36, but in 1931 he began a remarkable conductorship of the Bach Choir in London which continued for 30 years; he established, though he did not originate, the choir's annual Lenten performances of the *St Matthew Passion*. In 1936 he also formed the Jacques Orchestra. He became music adviser to the London County Council, 1936–42, and from 1940 to 1945 the first director of the wartime Council for the Encouragement of Music and the Arts (CEMA), the forerunner of the Arts Council of Great Britain. He continued to conduct orchestral and choral concerts throughout World War II. He inaugurated with his orchestra the morning concerts at the first Edinburgh Festival (1947), and conducted the Bach Choir's recording of the *St Matthew Passion* in English, issued on 21 discs in 1949. Jacques represented a traditional type of English choral leadership, whose characteristic approach to Bach (massive, devotional and in the vernacular) was challenged

by his younger contemporaries but forged a strong bond between amateur choral singers and their audiences. He was forced by ill-health to give up conducting in 1960. He published a number of folksong and choral arrangements, an instructional manual, *Voice Training in Schools* (London, 1934, 2/1953), and compiled with David Willcocks *Carols for Choirs* (1961). He was made a CBE in 1954.

ARTHUR JACOBS

Jacques de Cysoing (*b* Cysoing; *fl* mid- to late 13th century). Franco-Flemish trouvère. He was probably a member of the noble Flemish family Cysoing; several manuscripts refer to him as 'messire'. He addressed one of his songs, *Li nouviaus tans*, to a Count of Flanders, probably Gui of Dampierre (ruled 1251–1305), and mentioned also the Battle of Mansourah (1250). An *envoi* by Thomas Herier (*fl* 3rd quarter of the 13th century) refers to 'Jakemon' at 'Cyson' (R.2034), suggesting that Jacques was active up to that time. Jacques composed at least nine chansons, all of which survive with music. All his melodies have the conventional *ABABx* form, and most survive in only one or two chansonniers. The melody of one, however (*Nouvele amour*), is extant in eight versions, two of which are on a contrafactum text (R.512). This song is unusual also because the music of the first two verses returns at the end, although its text is not in rondeau form; this rounded musical structure may help explain its popularity. Another of his works, *Quant la saisons*, is a *chanson avec des refrains*, having a different *refrain* (appearing in only one manuscript, *F-Pn* fr.12615) at the end of each of its eight stanzas. Some of these *refrains* are extant in other songs.

ELIZABETH AUBREY

Jacques le Polonais. *See* REYS, JAKUB.

Jacquet. French family of instrument makers and musicians. Marceau Jacquet (*d* before 1620), and four of his sons (Marcel, Guillaume, Sébastien and Jehan *le cadet*) were master builders and the family was related to or had close ties with the Lorillart (Lorillac) family of instrument makers, the Duchesne family of painters, the painter Philippe de Champaigne, the lutenist René Mesangeau, and the organists Claude de la Barre and Louis-Claude Daquin. The accompanying illustration summarizes what is known about the genealogical connections among the more important members of the family.

Another son of Marceau, Jehan Jacquet *l'aîné* (*d* Paris, before 1644), a 'maître espinetier', was highly regarded as an instrument maker. In *Harmonie universelle* (1636–7) Mersenne referred to him as one of the best harpsichord makers of his time. His son, Claude Jacquet (i) (*b* Paris, bap. 28 Jan 1605; *d* Paris, 1661), 'm[aîtr]e faiseur d'instrumens' and 'joueur d'instrumens de musique' worked in a style so similar to his father's that only a few instruments can be positively identified as being made by him. A 1652 two-manual harpsichord by Claude Jacquet (i) (now in the Ringling Art Museum, Sarasota, Florida) exhibits in several respects (scaling, case construction, placement of 8′ bridge) characteristics intermediate between contemporary Flemish and Italian models and significantly different from mid-18th-century French instruments. As late as 1784, in the edition of *Affiches, annonces et avis divers* for 9 July, a 'clavecin fait en 1646 par Jacquet' was offered for sale.

Claude Jacquet (ii) (*b* Paris; *d* Paris, 6 Nov 1702) was the son of Jehan Jacquet *le cadet* (*b* Paris, *c*1575; *d* Paris, *c*1656–8) and was *maître de clavecin* and organist of the church of St Louis-en-l'Ile, Paris. Pierre Jacquet (*b* Paris,

Jacquet family tree

*c*1666; *d* Paris, 28 June 1739), a son of Claude Jacquet (ii), was active in Paris in 1695 as an organist and *maître de clavecin*. In 1702 he was organist of St Nicolas-du-Chardonnet, Paris, and from 1704 also of his father's church, St Louis-en-l'Ile. An offertory for organ by him, *O filii* (in *F-V* 160) is an attractive piece in variation form. The other son of Claude Jacquet (ii), Nicolas Jacquet (*b* Paris, *c*1662; *d* Bordeaux, 20 Oct 1707), was organist of St Pierre, Bordeaux. Anne Jacquet, elder daughter of Claude Jacquet (ii), was a harpsichordist or viol player in the musical household of Marie de Lorraine, Duchess of Guise, during the 1680s. Her sister, ELISABETH JACQUET DE LA GUERRE, is the most distinguished member of the Jacquet family, highly regarded as a harpsichord player and organist, and especially as a composer.

Jacquet de Berchem. *See* BERCHEM, JACQUET DE.

Jacquet de La Guerre, Elisabeth (*b* Paris, bap. 17 March 1665; *d* Paris, 27 June 1729). French harpsichordist and composer. She came from a family of master masons and musicians (*see* JACQUET family), and from the age of five played the harpsichord and sang at the court of Louis XIV. Noticed by Madame de Montespan, she stayed for three years in her entourage. On 23 September 1684 she left the court to marry the organist Marin de La Guerre. Their son, as precociously gifted as his mother, died at the age of ten.

In Paris Elisabeth Jacquet gave lessons and concerts for which she was soon renowned throughout the city. Her first compositions were dramatic works, of which only the libretto of *Jeux à l'honneur de la victoire*survives. Her first publication, *Les pièces de clavessin . . . premier livre*, dates from 1687. In 1694 her only *tragédie en musique*, *Céphale et Procris*, was performed at the Académie Royale de Musique with little success, but the prologue was revived in 1696 at Strasbourg, where Sébastien de Brossard had founded an academy of music. In 1695 Brossard made copies of her first trio sonatas and those for violin and continuo. Only in 1707 did she publish her six *Sonates pour le viollon et pour le clavecin* and the *Pièces de clavecin qui peuvent se jouer sur le viollon*, followed later by her two collections of *Cantates françoises sur des sujets tirez de l'Ecriture* to texts by Antoine Houdar de Lamotte, and by three secular *Cantates françoises*. Whereas all her other works were dedicated to Louis XIV, this last was addressed to the Elector of Bavaria, Maximilian II Emanuel. *Le raccommodement comique de Pierrot et de Nicole* is a duet which went into *La ceinture de Vénus*, a play by Alain-René Lesage performed at the Foire St Germain in 1715. Elisabeth Jacquet's last work seems to have been a *Te Deum* sung in August 1721 in the chapel of the Louvre in thanksgiving for the recovery of Louis XV from smallpox.

Elisabeth Jacquet was the first woman in France to compose an opera, and she is also remembered for her innovative work in the Italian genres of cantata and sonata, as well as for her music for accompanied keyboard. The *Pièces de clavessin* of 1687 are remarkable for their balanced structures and their *préludes non mesurés*. Her sonatas, both manuscript and printed, are conspicuous for their variety, rhythmic vigour and expressive harmony, as well as for certain innovative features in the violin writing. Her 12 sacred cantatas show a fine balance between a style appropriate to the genre and the restraint required by the subject; no other composer of the time handled the genre so consistently. The secular cantatas are characterized by dramatic qualities and a quest for formal freedom. In *Le Parnasse françois* Titon du Tillet devoted a long and appreciative notice to her, and her portrait is shown in a medallion with the motto 'I contended for the prize with the great musicians'.

WORKS

STAGE

Les jeux à l'honneur de la victoire, ballet, *c*1691; lost, lib *F-Pn*
Céphale et Procris (tragédie lyrique, prol, 5, Duché de Vancy), 15 March 1694 (Paris, 1694)

VOCAL

CATHERINE CESSAC

Jacquet of Mantua [Colebault, Jacques] (*b* Vitré, 1483; *d* Mantua, 2 Oct 1559). French composer active in Italy. He was one of the leading composers of sacred polyphony between Josquin and Palestrina. He was known simply as Jacquet (Giachetto, Iachettus), and has often been confused with Jacquet de Berchem. Details of his early years are lacking, but he was doubtless related to the French singer Antoine Colebault, called Bidon, a favourite of Leo X. Papal records of 1519 identify him as singer to the Modenese house of Rangoni, whose service he probably entered some years earlier. Several north Italian manuscripts compiled around 1520 contain a group of his motets. Twice he won support from the Este family: in 1516 and 1524 from Sigismondo and in 1525, along with Willaert, from Duke Alfonso I. Jacquet and Willaert later jointly set psalms for double chorus. About 1526 Jacquet turned his sights on Mantua, whose musical life he would dominate for the next 30 years. He was granted citizenship in 1534 and from then until 1559 he was titular *maestro di cappella* of Mantua Cathedral. His status was unusual, however, in that he had direct responsibility not to the cathedral or court but rather to a single patron, Ercole Cardinal Gonzaga (1505–63), Bishop of Mantua, papal legate to Charles V and ultimately president of the Council of Trent. His correspondence often conveys esteem and affection for the composer. Jacquet's first wife died in 1527; he remarried before 1540. His income was inadequate for the support of his family and he died in debt, leaving his wife and daughter destitute. Notified of their plight, Ercole awarded them a pension.

In response to his patron's zeal for the Counter-Reformation, Jacquet specialized in religious music almost to the exclusion of the secular. He was prolific and one of the most widely published and admired composers of his time. Scotto and Gardane undertook collected editions of his sacred works. *Aspice Domine*, most famous of the motets, was known in over 40 sources, including seven instrumental intabulations. He won recognition from the music-loving Medici popes Leo X and Clement VII. Theorists from Lanfranco and Vanneo to Artusi and Cerone praised his works and ranked him with Gombert and Willaert. His influence was felt long after his death. Younger composers such as Ruffo, Vaet, Monte, Palestrina, Lassus and Merulo drew models from his works.

In all his sacred music Jacquet appears less the innovator than the skilled craftsman alert to the new currents of his time. Smoothly arched melodies, symmetry of phrase, careful balance of all parts and an overall grace and fluency reveal him a worthy successor to Mouton. Early works retain features of the preceding generation: predominantly four-voice texture with voice-pairing, fauxbourdon-like progressions, broad melismas, multisectional structure, occasional homophonic passages and reliance on traditional 'constructivist' techniques. As he matured, he turned increasingly to pervading imitation as the generating principle. Sectionalism gives place to a supple, unbroken rhythmic flow; purely chordal writing is rare and melodies are more syllabic and closely reflect word accent. The full sonority of five-voice writing dominates the later work.

Among his most significant works are his masses. His technique changed gradually over several decades. At first (e.g. *Missa 'Si bona'*), he used fairly literal quotation of the model with various rearrangements of its elements and comparatively little free material; later (e.g. *Missa 'Anchor che col partire'*), he employed highly sophisticated variation of the model and extensive use of free material. Among the imitation masses, the *Missa 'La sol fa re mi'* owes its conception to the earlier mass of the same title by Josquin, and the 'tribute' masses for Duke Ferdinand of Calabria and Duke Ercole II of Ferrara are both indebted to Josquin's noted *soggetto cavato* mass, *Missa 'Hercules dux Ferrariae'*.

The motets show even more clearly Jacquet's stylistic change and also demonstrate the nature, scope and diversity of function of the motet in his time: liturgical and extra-liturgical pieces for services, occasional tributes to princes of church and state, and completely secular motets for courtly diversions. Among the earliest, *Sufficiebat nobis* looks back to methods of the past, quoting Hayne's *Mon souvenir* in the superius twice, first in normal values, then in diminution. In *Sancta Trinitas* the top line of a four-voice motet by Févin finds an imposing new eight-voice setting. Noteworthy among the motets on plainsong tenors is a Proper cycle for the Assumption. *Dum vastos*, an extraordinary tribute to Josquin, weaves in its second part phrases from that master's best-known motets. *Hesperiae ultimae* celebrates a state visit to Mantua by Philip II of Spain, and *Enceladi* (later expanded into a mass) salutes the Gonzagas and their highly prized horses. The vast majority, however, use sacred texts, usually an antiphon, responsory, gospel or hymn. Structurally, half the motets are cast in two parts of roughly equal length, often with motivic relationships between the parts and occasionally, as in a responsory, a common ending for both. Among the rest, the single-movement type dominates; the three-part motet is rare.

Jacquet's most productive period occurred between 1520 and 1540, the years in which most of the masses and motets were composed. Later his attention gradually shifted to works in less elaborate style. The cathedral's final payments to him were for vesper hymns (1556) and psalms in fauxbourdon (1558). The hymns resemble the motets but are generally shorter and simpler in style. A posthumous collection provides for the alternation of plainsong and polyphony in successive stanzas. The polyphonic stanzas paraphrase the plainsong model and strict canon occurs frequently. The *Magnificat* settings also paraphrase chant, sometimes in imitation over a cantus firmus in long notes, other times alternating imitation of the chant with imitation of free motives. The psalms composed in collaboration with Willaert, in which two four-voice choruses alternate, are antiphonal rather than true polychoral settings. In the two passions Jacquet seems to have followed the example of Sermisy in distinguishing turba from narrative by a change in the number of voices (from five to two). Even here, however, Jacquet avoided strictly chordal writing, setting each short movement contrapuntally in motet style.

occasional, state, secular etc.

Cantemus Domino gloriose, 4vv, 1544 (for Giulio Boiardo of Scandiano)
Dum vastos Adriae, 5vv, 1554[16] (tribute to Josquin)
Enceladi Coeique soror, 5vv, 1549[8] (tribute to the Gonzagas and their horses)
Formoso vermi, 5vv, 1544[6] (for Giacomo and Camilla dal Verme of Verona)
Hesperiae ultimae, 5vv, 1554[16] (tribute to Philip II of Spain)
Jam nova perpetuo, 5vv, 1544[6] (text paraphrased from Virgil; for Cristoforo Madruzzo, Bishop of Trent)
Jucundum mea vita (Catullus), 5vv, 1541[3]
Nos pueri tibi principi, 4vv, 1541[4] (for Francesco Gonzaga)
O angele Dei, 4vv, 1539a, J iv (for Ippolito II d'Este)
O Domine Jesu Christe, 4vv, 1539a, J iv (for Ippolito II d'Este)
Ploremus omnes, 5vv, 1539b, J v (lament for Cesare of Aragon)
Quis incredibili non exultet, 4vv, 1539a, J iv (probably for Pope Clement VII)
Si vera incessu, 5vv, 1541[3]

MOTETS OF DOUBTFUL AUTHENTICITY

Aspice Domine de sede, 4vv, 1539a, S xi, ed. H.C. Slim: *A Gift of Madrigals and Motets* (Chicago, 1972), ii (also attrib. Claudin de Sermisy)
Convertimini ad me, 5vv, *D-Sl* 34 (also attrib. Ruffo)
In nomine Jesu, 5vv, 1545[3] (also attrib. Werrecore)
Jubilate Deo, 6vv, 1542[5] (also attrib. Morales)
Laudem dicite Deo nostro, 5vv, 1540 (also attrib. Manchicourt)
Orabat Jesum mulier, 5vv, *D-Rp* A.R.940 (also attrib. Morales and Rore)
O sacrum convivium, 5vv, ed. in CMM, xxxi/10 (1970), 3 (probably by Arcadelt)
Salve regina, 6vv, *I-Rv* S.Borr.E.II.55–60, ed. in CMM, xxviii/2 (1973), 58 (also attrib. Verdelot)
Veni electa mea, 5vv, *I-Bc* Q27 I (also attrib. Gombert)

OTHER SACRED WORKS

Himni vesperorum totius anni (Venice, 1566), 26 hymns, J ii
Magnificat tertii toni, 4vv, 1542[9]; Magnificat octavi toni, 4vv, 1542[9]; Magnificat quarti toni, 4vv, 1562[1]; several Magnificat settings in *I-CMac* VIII, *I-Mc* S Barbara 49
I salmi appertinenti alli vesperi per tutte le feste dell'anno (Venice, 1550[1]) [collab. Willaert and others]; ed. in CMM, iii/8 (1972)
I sacri et santi salmi di David profeta (Venice, 1554[17]) [collab. Rore]
I salmi a quattro voci (Venice, 1570[2]) [collab. Rore]

Orationes complures (Venice, 1567), Lamentations, St Matthew Passion, St John Passion (ed. in Schmitz), several hymns

SECULAR

Canamus et bibamus, 4vv, 1531[4]
Doulce espérance, 4vv, 1544[9]
Vostre dolce parole, 4vv, 1534[16]

GEORGE NUGENT

Jacquot, Jean (*b* Le Havre, 27 March 1909; *d* Paris, 5 July 1983). French musicologist. He studied at the universities of Paris and Lyons, taking the doctorat ès lettres in 1950 with a dissertation on George Chapman (Paris, 1951). In 1943 he joined the CNRS where he was appointed director of research in 1958. In 1967 he founded the CNRS's Groupe de Recherches Théâtrales et Musicologiques, made up of three theatrical teams and a musicological one. The musicological team has specialized in the study of the relationship of music to the other arts and of its function in drama and in festivals, particularly in the Renaissance and Baroque periods; it is also responsible for editing the collection Corpus des Luthistes Français included in the Choeur des Muses series, directed by Jacquot from 1954. Jacquot took a continued interest in English drama and music of the Elizabethan period, but always tried to place the subject in its European context and to relate the study of the arts to that of society as a whole. He organized many of the CNRS conferences on musical and theatrical topics and edited their proceedings. His non-musical writings include the study *Shakespeare en France* (Paris, 1964) and a critical edition of Chapman's *Bussy d'Ambois* (Paris, 1960).

CHRISTIANE SPIETH-WEISSENBACHER

Jadassohn, Salomon (*b* Breslau [now Wrocław], 13 Aug 1831; *d* Leipzig, 1 Feb 1902). German composer, theorist, teacher and conductor. He studied first in Breslau and later at the Leipzig Conservatory. He left Leipzig to study the piano with Liszt in Weimar (1849–52); there he heard Wagner's *Lohengrin*, which greatly impressed him. After returning to Leipzig, he studied with E.F. Richter and privately with Moritz Hauptmann. Jadassohn taught the piano in Leipzig, then conducted the synagogue choir (1865), the Psalterion choral society (1866) and the Musikverein Euterpe concerts (1867–9). In 1871 he was appointed teacher of harmony, counterpoint, composition and piano at the conservatory, and in 1893 named royal professor. His students included Busoni, George Chadwick, Delius, Grieg, Karg-Elert and Felix Weingartner.

Although successful as a performer, theorist and teacher, Jadassohn considered himself primarily a composer. He wrote works for piano, chamber ensemble, orchestra, chorus and solo voices, comprising over 140 opus numbers, but was perhaps best known for his canonic compositions: the Serenade for Orchestra op.35, two serenades for piano opp.8 and 125, the ballet music op.58 and the vocal duets opp.9, 36, 38 and 43. He also edited and arranged works by Bach, Brahms, Chopin, Mendelssohn, Schubert, Schumann, Wagner and others.

Jadassohn's numerous theory texts deal with harmony, counterpoint, form, instrumentation, analysis, pedagogy, melodic theory, figured bass and ear training (see Damschroder and Williams, 1990). The five volumes of *Musikalische Kompositionslehre* (1883–9) appeared in several editions up to the 1920s. The *Lehrbuch der Harmonie* (1883) shows the practical aim of Jadassohn's

writings. It draws on Gottfried Weber's step theory, as transmitted through the practical manuals of Friedrich Schneider and E.F. Richter. It most resembles Richter's harmony manual (1853), although – because of Jadassohn's exposure to the music of Liszt and Wagner – it goes further in its discussions of chromaticism and enharmonicism. Jadassohn states that

> any progression may be sanctioned in which one or two tones common to the two chords are held in the same part or parts. But even without this natural bridge of a sustained tone, the progression may be good when the several parts are led in true vocal style from the tones of the first chord to those of the second.

In analysing *Tristan und Isolde* (in *Melodik und Harmonik bei Richard Wagner*, 1899), Jadassohn emphasized chordal meanings, indicating 11 key changes in 12 bars.

Jadassohn's treatise on form asserts that individual musical ideas shape their structure. Formal types are listed and the variant possibilities in their realization are illustrated with examples mainly from the works of Beethoven, whom he credited with many innovations.

JANNA SASLAW

Jadin. French family of musicians of Flemish origin. They were active in France in the 18th and 19th centuries.

(1) **François Jadin** (bap. Gray, 7 Aug 1731; *d* Versailles, 11 June 1790). Bassoonist and oboist. His father Nicolas-Emmanuel Jadin (bap. 1704; *d* 1758) had his musical training at the cathedral of St Aubain in Namur and emigrated to the Franche-Comté in 1720. In 1731 he was an oboist in the Beauffremont regiment. François probably went to Paris when his father died, and married Marie-Marguerite Raiffer there in 1760. In the same year he entered the royal chapel at Versailles as a bassoonist. In September 1770 he succeeded Hotteterre, and became one of the *grands hautbois* of the *chambre et écurie du roi*. He was appointed gentleman usher to Victoire, Louis XVI's aunt, in 1777. He took part in various concerts, including the Concert Spirituel of 1768, and in 1782 was granted a pension to which another was added in 1786, the year of his retirement.

Jadin's brothers Georges Jadin (i) (bap. 1742), an oboist and Jean-Baptiste Jadin (bap. 9 Sep 1744; *d c*1789-90), a violinist, both played at the Namur Cathedral before entering the bishop's small chamber chapel. They both went to Brussels, where in 1763 Georges was engaged as a member of Charles of Lorraine's chapel orchestra. Jean-Baptiste then seems to have gone to Paris; his compositions (published in Brussels) include six quartets op.1 (1777), six symphonies op.4 (1778) and six trios (two violins, cello) op.5 (1778). Jadin's three sons were also musicians. Paul-Adrien Jadin (*b* 12 Aug 1762; *d* after 1790) played in the king's bodyguard at the time of his marriage in Paris on 9 June 1790. Valentin-François Jadin (*b* 8 Dec 1763; *d* after 1841) succeeded his father as gentleman usher to Victoire of France in 1788, and held the appointment until 1792. He taught the piano, and was also a composer of several keyboard works and romances. Wagner stayed with him in 1841, and gives an amusing description of him in *Mein Leben*. Georges Jadin (ii) (*b* Versailles, 31 Aug 1773; *d* after 1813) was a singer, making his début at the Théâtre Feydeau in a two-act *folie*, *L'histoire universelle*. According to Fétis, he taught singing in Paris until 1813, and music at the college of Pont Levoy. His compositions include a number of piano pieces and romances.

(2) **Louis-Emmanuel Jadin** (*b* Versailles, 21 Sept 1768; *d* Paris, 11 April 1853). Composer and teacher, son of (1) François Jadin. A *page de la musique* to Louis XVI, he is thought to have taken lessons from Piccinni before joining the Montansier theatre company around 1783. He may have given piano lessons to Marie-Antoinette. During the Revolution he joined the National Guard and took part in the national festivals of the time. He visited Rouen, where he gave concerts in 1795 with Boieldieu, Nancy (where he is said to have helped Bertin d'Antilly leave France in 1797), Lyons and Bordeaux. He was appointed professor of solfège at the Paris Conservatoire on 19 July 1796, and then professor of piano, but left as a result of the financial cuts on 20 May 1798. He returned on 20 July 1802 to teach solfège, and the piano from January 1805; he retired from the Conservatoire on 1 January 1816. In June 1804 he took over the Théâtre Molière, which had a repertory consisting of *opéras comiques* and vaudevilles, and conducted its orchestra himself. He left the theatre in December of the same year, after giving the

premières of his *Mon cousin de Paris* and *La grande'-mère* there on 23 June and 17 October respectively. He was appointed *gouverneur des pages* of the royal chapel on 1 January 1815, and held the post until 1 January 1830. On 1 May 1821 he was made a Chevalier of the Légion d'Honneur. He retired to Montfort-l'Amaury in 1830, but returned to Versailles four years later and moved to Paris in 1844.

His works for piano, written during a period when the instrument was undergoing many new developments, provide a wealth of information about the various styles prevalent in Paris from the 1780s to the 1820s. While he was one of the very first to publish a work indicating the use of a damper (*con sordini* in three sonatas dedicated to Madame Victoire of France, 1784), his moderation in using the pedals was praised by the *Correspondance des amateurs musiciens* on 1 January 1804, in an account of one of his concertos: the writer of the piece compared his style to that of Clementi and Hüllmandel, adding that 'he knows the resources of his art and of the piano'. In the opinion of Fétis, his work as a whole lacked verve and novelty, although 'at the age of 60 he composed violin quintets deserving more success than they have had'. His string quartets also exhibit fine writing.

He was one of the first French composers to write an opera to an Italian text, *Il signor di Pursognac* (1792). His first opera (*Guerre ouverte*, given its première in 1788) already contained music in the Italian style. While some of his operas are more French in style (e.g. *Le défi hasardeux*, 1796), others present a stylistic ambiguity falling between the French and Italian manners (*Le coin du feu*, 1793). *Mahomet II*, his only attempt to write a *tragédie lyrique*, was produced at the Opéra in 1803 but was not a success. According to the writer of an obituary that appeared in the *Revue et gazette musicale de Paris* of 17 April 1853, a *Libera me* for three male voices 'marked by very religious feeling', was performed by the students of the Conservatoire, conducted by Elwart, at Notre-Dame-de-Lorette on 13 April 1853 during the offertory of his funeral mass.

WORKS

(*selective list*)

printed works published in Paris unless otherwise stated

STAGE

opéras comiques, first performed in Paris unless otherwise stated

Guerre ouverte, ou Ruse contre ruse (cmda, 3, Dumaniant [A.-J. Bourlin]), Versailles, 1788, excerpts *F-Pn* (1789)

Constance et Gernand (1, P. Desriaux), Français Comique et Lyrique, 15 July 1790

Joconde (3, Desforges [P.-J.-B. Choudard], after La Fontaine), Monsieur, 14 Sept 1790, excerpts (1790)

La religieuse danoise, ou La communauté de Copenhague (3, A.-L. Bertin d'Antilly), Montansier, 13 Dec 1790; also as Le duc de Waldeza

La vengeance du bailli, ou La suite d'Annette et Lubin (cmda, 2, C.-S. Favart and C.-N.-J. Favart), Monsieur, 30 April 1791

L'heureux stratagème (comédie lyrique, 2, G. Saulnier), Opéra, 13 Sept 1791, *Po*, ov. *Pc**

Amélie de Monfort (3, Cottereau, after N.B. de La Dixmerie), Feydeau, 13 Feb 1792

Il signor di Pursognac (after Molière), Feydeau, 23 April 1792, *Pc**, excerpt *Pc**

L'avare puni (1, Verneuil), Feydeau, 4 Aug 1792

Les talismans (opéra à grand spectacle, 3, P.-U. Dubuisson), Louvois, 12 Jan 1793

Le coin du feu (comédie, 1, E.-G.-F. de Favières), OC (Favart), 10 June 1793 (n.d.)

Le siège de Thionville (drame lyrique, 2, Saulnier and Dutilh), Opéra, 14 June 1793, *Po*, 1 air (n.d.)

Le congrès des rois (cmda, Desmaillot [A. F. Eve]), OC (Favart), 26 Feb 1794, collab. Dalayrac, Grétry, Méhul and 8 others

Alisbelle, ou Les crimes de la féodalité (3, Desforges), National, 27 Feb 1794, *A*, excerpt (n.d.)

L'apothéose du jeune Barra (tableau patriotique, 1, F.-P.-A. Léger), Feydeau, 5 June 1794

Agricol Viala, ou Le jeune héros de la Durance (fait historique et patriotique, 1, L. Philipon de la Madeleine), Amis de la Patrie, 1 July 1794, ov. and airs (n.d.)

L'écolier en vacances (comédie, 1, L.B. Picard), OC (Favart), 13 Oct 1794

Le cabaleur (cmda, 1, J.-A. Lebrun-Tossa), OC (Favart), 11 Jan 1795

Le lendemain de noces (1, Léger), Feydeau, 18 April 1795

La supercherie par amour, ou Le fils supposé (comédie mêlée de musique, 3, C.-J. Loeuillard d'Avrigny), OC (Favart), 12 May 1795

Loizerolles, ou L'héroïsme paternel (1, Ducaire), Amis de la Patrie, 25 Dec 1795

Le mariage de la veille (1, Loeuillard d'Avrigny, after Voltaire: *La femme qui avoit raison*), OC (Favart), 2 Jan 1796, excerpts (n.d.)

Other insts: Sonate, op.1, hp; 3 fantaisies, hp; 3 nocturnes, fl; 22 andantes, org, *Pc*; Marche funèbre, org, *Pc*
Pedagogical: Méthode complète de piano, with A. de Garaude (1822); Méthode d'harmonium (1845)
Many arrs. of works by H.-M. Berton, Boieldieu, Carafa, Catel, Chapelle, J.B. Cramer, Dalayrac, Deshayes, H. Georgeon, Grétry, Kreutzer, Méhul, Mélesville, Mozart, Paër, Sacchini and others

(3) Hyacinthe Jadin (*b* Versailles, 27 April 1776; *d* Versailles, 27 Sept 1800). Pianist and composer, son of (1) François Jadin. A pupil of Hüllmandel, he may also have been taught by his father. He published his first work in 1785 and made his Parisian début in 1789 at the Concert Spirituel, playing a piano concerto of his own composition. In 1791, after his father's death, he seems to have become a member of the orchestra of the Théâtre Feydeau, where he remained until 1794. He composed and performed music for the Revolutionary festivals (although he was not a member of the Institut National de Musique) and made his first attempts at writing opera; only *Cange* achieved any success. He was appointed professor of piano at the Paris Conservatoire in 1795, and taught there until his death, training a number of women pupils, including Rose Dumey (who won the *premier prix* for piano in 1797, the first time the prize was awarded) Thérèse Desmarre, Annette Solère and Joséphine Grétry. From 1795 he performed as a pianist in several Parisian concerts (including the concerts Cléry and Wenzel). His last known public appearance was on 3 June 1800 at Versailles, where he played one of his piano concertos. An obituary signed M.L. appeared in the *Courrier des spectacles* of 11 October 1800, describing him as 'a skilful harmonist and elegant composer, a good son and an excellent friend' ... 'mourned for both his moral qualities and his rare talents'.

Jadin's best-known work comprises his piano concertos and sonatas, trios and string quartets. Their formal clarity and concision (the sonatas frequently include a re-exposition which first appears in the second subject) are combined with fine harmonic and melodic writing. The Largo of his Quartet op.2 no.1 has some affinity with Mozart's 'Dissonance' Quartet K465. His Third Concerto for piano and orchestra breaks new ground in introducing the soloist with a *récitatif à volonté*, accompanied by the strings.

WORKS

printed works published in Paris

STAGE

Le testament mal-entendu (cmda, 2, Ducray-Duminil), 1793, unperf., lost
Cange, ou Le commissionaire de Lazare (fait-historique, 1, A.-P. Bellement), Paris, Amis de la Patrie, 21 Nov 1794, lost
Attrib.: L'orpheline (vaudeville, 1, Patrat), Paris, Feydeau, 4 April 1796, lost

VOCAL

Occasional works: Marche du siège de Lille (*c*1792; Hymne du 21 janvier (1794), Hymne du 10 germinal (1796), Chanson pour la fête de l'agriculture (1796), all repr. in Pierre (1899); Hymne à la paix, Paris, Favart, 1797, lost

HERVÉ AUDÉON

Jadlowker, Hermann (*b* Riga, 17 July 1877; *d* Tel-Aviv, 13 May 1953). Latvian tenor. After training as a cantor (which permanently influenced his style), he studied at the Vienna Conservatory with Joseph Gänsbacher and made his début at Cologne in 1899 as Gomez in Kreuzer's *Nachtlager in Granada*. In 1900 he went to Stettin, then to Riga, and in 1906 to the court theatre in Karlsruhe, where he began to attract international attention, particularly through his singing of Georges Brown in *La dame blanche* and of Raoul. The German emperor heard him during a Wiesbaden festival and arranged for his engagement at the Royal Opera House, Berlin, in 1909. From 1910 to 1912 he sang at the Metropolitan, where he made his début as Faust, created the King's Son in Humperdinck's *Königskinder* opposite Farrar and sang Rodolfo (*La bohème*), Turiddu, Canio, Lohengrin, Max and Pinkerton. In 1912 Strauss chose him for Bacchus in the première of *Ariadne auf Naxos*.

Although intrinsically a lyric tenor with amazing coloratura agility, Jadlowker sang such roles as Florestan, Tannhäuser, Parsifal and Otello, which gradually took their toll. He left the Berlin company in 1921 and thereafter seldom appeared in opera, though he sang Armand Mirabeau in the first performance of Lehár's *Frasquita*. He left a wide range of recordings, which show the skill of his coloratura and the peculiarly doleful timbre of his voice.

LEO RIEMENS/ALAN BLYTH

Jaeger, August (Johannes) (*b* Düsseldorf, 18 March 1860; *d* London, 18 May 1909). German editor and writer on music. His family moved to England in 1878. A capable violinist and pianist, he was first employed by a firm of map printers before joining the music publishers Novello & Co. in 1890 at the instigation of C.L. Graves (1856–1917). Although nominally publishing office manager, Jaeger's shrewd powers of aesthetic and critical judgment were to place him in a position of artistic adviser to the largely non-musical directors. His extensive correspondence with Elgar and Parry provides significant insights into the composers' creative lives, personalities and working methods, and he was also a formative influence on Samuel Coleridge-Taylor (MS correspondence in *GB-WOr*).

Jaeger's unerring critical instinct led Elgar to extend the coda of the finale of his Variations on an Original Theme ('Enigma') and prevented him from grossly underestimating the full dramatic potential of the climax of *The Dream of Gerontius*. His veneration of Beethoven's adagios is reflected in Elgar's musical portrait of him as 'Nimrod' in the Variations. Parry, also a recipient of Jaeger's cajoling, coaxing and humouring, was urged to leave administration and the composition of choral works in favour of instrumental and symphonic writing, and, at his suggestion, made revisions to *A Vision of Life*. During his terminal illness Jaeger in turn was a beneficiary of Parry's understanding and generosity. Jaeger also secured performances of choral works by Elgar and Parry in Germany under the direction of Julius Buths.

CHRISTOPHER KENT

Jaegerhuber, Werner (Anton) (*b* Port-au-Prince, 17 March 1900; *d* Pétionville, 20 May 1953). Haitian composer. He studied composition at the Vogt'sches Konservatorium in Hamburg. In 1921 he visited Haiti briefly and became interested in the music and folklore of his native country. He returned to Haiti permanently in 1937 and worked as a music teacher, composer and amateur painter.

Jaegerhuber was interested in producing a Haitian national musical style based on the country's folk music. He made many transcriptions of Haitian folksongs for use in his own compositions, and worked with the ethnographer Louis Maximilien on the latter's *Le vodou haïtien*, a study of Vodou rituals. He also produced a study, 'Chants vodouesque', which was published posthumously (*Bulletin du Bureau nationale d'ethnologie d'Haïti*, no.2, 1945, pp.77–101). His output includes orchestral and chamber 1985 works, as well as choral

pieces and solo songs which set texts in German, French, English and Haitian creole. Stylistically his music is eclectic: his most popular works are those based on Haitian themes, especially the *Messe folklorique haïtienne*, which has a Latin text set to melodies inspired by the Haitian voodoo ceremony. Jaegerhuber also arranged folksongs, which he published in *Complaintes haïtiennes* in 1950 for the Haitian Ministry of Tourism.

WORKS
(*selective list*)

MICHAEL LARGEY

Jaëll, Alfred (*b* Trieste, 5 March 1832; *d* Paris, 27 Feb 1882). Austrian pianist. He was first taught the piano and the violin by his father Eduard, a Viennese pianist, and appeared publicly as a pianist as early as 1843. In 1844 he became a pupil of Moscheles in Vienna and later travelled through Europe and the USA as a celebrated virtuoso; his sensitive interpretations of Chopin were particularly highly praised. The King of Hanover appointed him court pianist in 1856. He married the pianist Marie Trautmann in 1866 and moved to Paris, from which base the couple set out on concert tours of Europe. Jaëll served the cause of contemporary music, supporting Schumann and Brahms in Italy, England and France, and he was also a friend of Liszt. He composed a number of virtuoso piano pieces and concert paraphrases in the popular style of the time.

HORST LEUCHTMANN

Jaëll [née Trautmann], **Marie** (*b* Steinseltz, nr Wissembourg, Alsace, 17 Aug 1846; *d* Paris, 4 Feb 1925). French pianist and teacher. She was taught the piano by Hamma in Stuttgart and then by Herz at the Paris Conservatoire, where she won a *premier prix* in 1862. In 1866 she married Alfred Jaëll, with whom she gave concerts throughout Europe and in Russia. Her repertory included the principal works of Schumann (six concerts, Salle Erard in 1890) and Liszt (six concerts, Salle Pleyel in 1891), and she was the first French pianist to play the 32 sonatas of Beethoven (Salle Pleyel in 1893). As a composer she received the advice chiefly of Saint-Saëns, who dedicated to her his first concerto and the *Etude en forme de valse*.

She was a friend and pupil of Liszt and from 1882 spent several weeks each year at Weimar, where she performed at his *musicales* and did secretarial work; Liszt wrote (unpublished) variations based on her waltz for piano four hands. She was the first to use the physiological characteristics of the hand to improve piano technique and to replace mechanical technical drill by a scientifically planned practising method adapted to the peculiarities of the hand's anatomy. In collaboration with Dr Charles Féré, medical superintendent of the psychiatric clinic at Bicêtre, near Paris, and starting from a study of muscle behaviour and the sense of touch, she tried, through scientific analysis of the movements involved in striking the keys and producing tone, to develop an awareness of the physical act of playing and an ability to create a mental image of sounds. A principal aim of her method, which she set forth in several theoretical volumes, was economy of movement. Her pupils included Albert Schweitzer and Eduardo del Pueyo. She composed piano pieces and songs which, though essentially Romantic, reveal an assimilation of the innovations of the time. Her symphonic poem *Ossiane* was performed in Paris in 1879.

HORST LEUCHTMANN/CHARLES TIMBRELL

Jaffa, Max (*b* London, 28 Dec 1911; *d* London, 30 July 1991). British violinist of Russian origin. He studied with Wilhelm Sachse, Max Mossel at the GSM (1926–32) and Sascha Lasserson. From the age of 14 he played in a local cinema and led the orchestras at the Strand Corner House and the Trocadero. He led the Piccadilly Hotel Orchestra from 1927 to 1939, and on the recommendation of Sir Landon Ronald led the Scottish (later Scottish Symphony) Orchestra in Glasgow for a season, where he worked under Weingartner, Beecham and Barbirolli. He served in the RAF during World War II. In 1947 he was engaged by the BBC for the London Studio Players and later teamed up with the pianist Jack Byfield and the cellist Reginald Kilbey to form the Max Jaffa Trio, which became one of the most popular ensembles of the day. From 1959 to 1986 Jaffa was musical director for the Scarborough Corporation, where he gave concerts every summer with his 'Max Jaffa and the Spa Orchestra', and from 1960 to 1986 he toured throughout the world giving concerts on cruise liners. Jaffa's numerous recordings reveal his consummate artistry based on an impeccable

technique, together with a warmth and lyricism which place him firmly in the old school of violin playing. He was created an OBE in 1962 and was made an honorary fellow of the GSM in 1964. He wrote an autobiography, *A Life on the Fiddle* (London, 1991).

MARGARET CAMPBELL

Jaffe, Stephen (*b* Washington, DC, 30 Dec 1954). American composer. He studied composition at the Geneva Conservatoire and the University of Massachusetts, Amherst. Thereafter he worked with Crumb, Rochberg and Wernick at the University of Pennsylvania where he received the master's degree (1978). Three years later he joined the music department at Duke University and established the prominent concert series Encounters: With Music from Our Time. He was awarded the Prix de Rome in 1981 and received the Brandeis University Creative Arts Citation in 1989. Other honours include the Kennedy Center's Friedheim Award (1991) and the American Academy of Arts and Letters' Lifetime Achievement Prize (1993). In 1999 Jaffe was named Mary D.B.T. and James H. Semans Professor of Music Composition at Duke University.

Jaffe's style forges a path between American modernist traditions of the 1960s and 70s and the more pluralistic approaches of the 1980s and 90s. Although his work shows a deep understanding of many different types of music, his compositions are unique and resist easy description. Later works, such as *Offering* (1996), engage challenging paradoxes within various strata: materials traditionally understood as tonal are used in a non-tonal manner, and a mercurial interplay exists between lyrical, sensual impulses and taut, lean structural groundings. One of the most distinguished composers of his generation, his works have been performed throughout the USA and Europe.

WORKS

Orch: Sym. 'Three Lives', 1973–5, unpubd; Rega-Raga, jazz ens, 1974, unpubd; 4 Images, 1983, rev. 1987; The Rhythm of the Running Plough, chbr orch, 1985–8; Autumnal, 1986; Vn Conc., 1999

Vocal: 3 Yiddish Songs (L. Rudnitsky, A. Suztkever, S. Kacerzinsky), Mez, orch/chbr orch, 1975–7, arr. S, hn, vn, vc, pf, 1987; 3 Images (H. Martinson, F. García Lorca, W. Witman), nar, vv soloists, chorus, chbr orch, 1979; Four Songs with Ensemble (Martinson, R. Francis, D. Levertov), Mez, a fl + fl, va, vc, pf, 1988; Fort Juniper Songs (Francis), S, Mez, pf, 1989; Pedal Point (Francis, M. Oliver), Bar, 3 va, 4 vc, hp, timp, 1989, rev. 1993; The Reassurance (T. BRYAN GILLIAM

Jagamas, János (*b* Dej, 8 June 1913; *d* Cluj-Napoca, 15 Sept 1997). Romanian-Hungarian musicologist and composer. After studying composition at the conservatory in Cluj (now Cluj-Napoca) (1936–40) he studied under Albert Siklós and János Viski at the Budapest Academy of Music and was a folk music research pupil of Kodály (1941–2). In 1948 he became director of the Cluj Conservatory and subsequently held posts as fellow (1949–60) and director (1956–8) of the Cluj section of the Folklore Institute, senior fellow at the Hungarian Arts Institute in Cluj (1949–50) and lecturer (1951–65) and senior lecturer (1965–76) at the Cluj Academy of Music teaching folklore, musical form and counterpoint. Jagamas collected over 6000 Hungarian and Romanian folksongs in Transylvania and the Moldau region, and was a leading specialist in East European folk music research: his chief interests were the history of folk music collecting, the relationship of folk music to art music and questions of national musical language. He also worked on the modernization of music education. His folksong arrangements include *Öt gyermekkar három szólamra* ('Five Three-Part Children's Choruses', Bucharest, 1955). He was awarded the Széchenyi Prize in 1993.

ANDRÁS BENKŐ/FERENC LÁSZLÓ

Jagdhorn (Ger.). A hunting HORN.

Jagdmusik (Ger.: 'hunt music'). The German application of the term denotes the entire code of musical signals for the hunt, but more particularly that body of harmonic hunting music which relates specifically to the horn, and which has been exploited for its symbolism of the outdoors by composers from the mid-18th century to the present day. The earliest collections of hunting-calls include Dame Juliana Berners's *Book of Hawkinge, Hunting and Fysshing* (*c*1345), *Trésor de vénerie* by Hardouin de Fontaines-Guérin (1394), *La vénerie* by Jacques du Fouilloux (Poitiers, ?1561) and Sir George Turbervile's *The Noble Art of Venerie or Hunting* (London, 1576). Each consists of single-pitch signals in a rhythmic tablature. In the 17th century there grew up a practice known as 'jerking', whereby single or double acciaccaturas from a neighbouring overtone were supposedly sounded before the beat in repeated-note calls (ex.1).

Ex.1 Single and double 'jirking' or 'tayauté'

Single-pitch signals predominated until the second half of the 17th century, although the increase in the tube length of some hunting instruments and the advent of the *cor à plusieurs tours* in France towards the end of the 16th century also made available a larger number of pitches in the overtone series (*see* HORN, §2(i)). Mersenne described in *Harmonie universelle* (1636–7) and *Harmonicorum libri XII* (1648) how chordal signals might be produced by manufacturing four or more single-note horns of different sizes and sounding them simultaneously. He also noted that some horn players commanded the same range as trumpeters. The features characteristic of later hunting horn music – triadic figures and the dactyls of 6/8 metre – are found in a number of 17th-century pieces of programme music scored for strings only, including the 'Chiamata a la caccia' in Cavalli's opera *Le nozze di Teti e di Peleo* (1639) these pieces also indicate that, in both form and melody, the early triadic horn signals were borrowings from the contemporary trumpet signal known as the CHIAMATA. Lully employed a similar idiom in the five-part piece entitled 'Le[s] cors de chasse' in *Les plaisirs de l'Ile enchantée* (1664), adding to the strings the sounding of single-pitch *trompes* at some cadences. In Vienna, C.A. Badia included triadic signals in an obbligato for horn pitched in F in *Diana rappacificata con Venere e con Amore* (1700).

In 1705 André Danican Philidor *l'aîné*, Louis XIV's music librarian at Versailles, transcribed the *trompe de chasse* signals of the French court hunt and added a further set of signals of his own composition (*F-V* 1163). Both sets include signals containing conjunct movement in the higher clarino range in addition to movement in the lower traidic range. J.-B. Morin used some of these signals in the divertissement *La chasse du cerf* (1708), as did J.-B. Prin in his collections of music for the trumpet marine. By the second quarter of the 18th century the Marquis de Dampierre, master of the hunt to Louis XV, composed a body of hunting music in which the idiom of the various hunting signals found perfect alliance with the musical properties of the *cor de chasse*. From Dampierre's fanfares and flourishes all later hunting music derives. A large collection of his fanfares was published in Serré de Rieux's *Les dons des enfants de Latone* (Paris, 1734). Dampierre's hunting-calls were introduced to Bohemia by Franz Anton, Count Sporck, and published by him in various anthologies, from 1701 to 1725, with their texts translated into German. Bach drew upon this hunting music for his horn parts. In the 'Hunting' Cantata BWV208 the French practice of 'tayauté' is retained (ex.2), and the *Brandeiser Jägerlied* which Sporck made popular appears unaltered in Bach's 'Peasant' Cantata BWV212. Horn-calls deriving from Sporck's collections are to be found in Keiser's opera *Octavia* (1705) and in many of Handel's operas, most notably *Giulio Cesare*. Fux wrote a fanfare for two horns in his overture to M.A. Ziani's opera *Meleagro* (1706) which resembles the opening fanfare in Bach's first Brandenburg Concerto.

From the mid-18th century onwards composers began to adopt these calls in increasingly abstract form. Early examples of this process include the *Jagdsinfonie* (1755) by Leopold Mozart, the Symphony in D ('La chasse', 1772) by Carl Stamitz and the Symphony no.73 ('La chasse', 1782) by Haydn. The hunting music style was adapted to string and vocal music and used to evoke an outdoor atmosphere, as in the opening bars of Mozart's 'Hunt' Quartet K458 and the final movements of his horn concertos which again borrow directly from Sporck and Dampierre. Various early hunting flourishes appear in the 'Herbst' section of Haydn's oratorio *Die Jahreszeiten* (1801). Weber's opera *Der Freischütz* (1821) abounds with four-part horn-calls in the 18th-century idiom; its famous Hunting Chorus is a direct descendant of that in Fux's *Elisa* of 1719.

The horn parts of Brahms's symphonies contain quotations from these earlier calls, however abstract; in the final movement of the Horn Trio op.40 many fanfares appear. The animated outdoor manner pervades Schumann's Conzertstück for four horns and orchestra (1849), while hunting symbolism is used poetically in the Royal Hunt and Storm in Berlioz's *Les Troyens* (1863). Smetana reverted to the traditional keys of C and D for his richly pictorial hunting fanfares of *Má vlast* (1874). The earlier idiom is completely integrated into the horn parts of Richard Strauss's music and finds its ultimate parody in the horn-call from *Till Eulenspiegel*. Britten's Serenade for Tenor, Horn and Strings relies much on the music of the hunt for its effect; other 20th-century examples of the hunting-music idiom include the final movements of the horn quartets by Hindemith and Tippett.

Jagdmusik can also mean an ensemble, usually of horns, for playing the music of the hunt. Augustus the Strong of Saxony maintained an octet for this purpose, as did Emperor Charles VI of Austria. After 1700 two oboes were added to the usual assortment of horns at the court of the Elector of Brandenburg, and after about 1725 the combination of two horns, two oboes and two bassoons

Ex.2 Bach, BWV208

was understood to form a *Jagdmusik*. In the last decades of the century two clarinets were added, but by this time a type of chamber music specifically for this ensemble had grown up and it was known more commonly as a *Harmonie* (*see* HARMONIEMUSIK). In recent years Ernst Paul of Vienna has revived the old imperial hunting ensemble as the *Lainzer Jagdmusik*. In the 1860s Bismarck suppressed the harmonic hunting-calls and the practice of playing them on the 16′ horn and substituted the 2′ *Fürst-Pless-Horn*. A new code of calls was introduced for greater ease in playing on this limited instrument. The instrument and its music have gained considerable popularity, but this later tradition is not to be confused with that of the 18th century.

HORACE FITZPATRICK/PETER DOWNEY

Jäger, Andreas (*b* Rosshaupten, nr Füssen, 4 Nov 1704; *d* Füssen, 24 April 1773). German organ builder. Known as 'Orglmacher zu Füessen' since 1733, he built six organs for churches in that town: St Sebastian (two organs, 1734 and 1772; the first was moved to the Spitalkirche in 1772); the Franciscan church (1735); St Mang (1753–4; great organ and chancel organ); and Frauenkirche am Berg (1773–4; probably completed by Anton Weyrather). In Swabia and Upper Bavaria he built organs in Hindelang (1749); Murnau (1749); Altstädten (1760); and Benediktbeuren (1771). He was also active in the Tyrol, building organs for Kappl (1737); Fliess (1739); the Spitalkirche, Latsch (1741); the Franciscan church, Schwaz (1756; rebuilding); the Cistercian abbey, Stams (1757; chancel organ); the parish church, Stams (*c*1757); Ischgl (1758–9); the Servite church, Innsbruck (1760); the Franciscan church, Hall (1761); the Benedictine abbey, Fiecht (1772); the Spitalkirche, Innsbruck (1764); the parish church, Bolzano (1764–6); the Spitalkirche, Bolzano (1768); and the Franciscan church, Reutte (1769). The specifications of Jäger's organs include rich choruses, stopped diapasons and flutes (the wooden 4′ flutes often being stopped), and strings of a narrow scale. In his larger instruments he also made use of reeds, thus showing his taste for colourful sounds. The two organs of St Mang, Füssen, are especially remarkable both for their outer appearance and their inner structures. The front of the main organ embraces the windows of the west façade, like the Gabler organ in Weingarten. The chancel organ has a low, closed case without any front pipes; most of the wooden pipes are arranged horizontally. For the Pedal chests of the Benediktbeuren organ, Jäger employed a special construction of his own invention: an early type of ventil-chest.

ALFRED REICHLING

Jahn [Jan, Ianus], **Martin** (*b* Merseburg, *c*1620; *d* Ohlau, Silesia [now Oława, Poland], *c*1682). German composer. Nothing certain is known about his early years, but his *Selig sind die Toten*, which survives in a manuscript at Strasbourg, may be an early work originating there. He is recorded from 1643 as a matriculated student at Königsberg (now Kaliningrad) and he wrote his *Musicalische Jubel-Frewde* (1644) for a university celebration there. After his student years he led a very unsettled life and was typical of the Kantors and clergymen who in Germany at this time were persecuted for their religious beliefs. In 1648 he went to Upper Silesia as a musician, and possibly as a preacher too, in the service of the Protestant Strzela family at Steinau in the Neustadt district. At the instigation of the Bishop of Neisse, however, he was forced to leave by 1650. After a short stay at Meissen he was offered, through Count Sigismund Seifried von Promnitz, a post as Kantor at Sorau (now Żary, Poland). In 1654 he had to leave Sorau and went to Sagan, Silesia, where Protestant worship was still allowed. He worked there as headmaster and Kantor of the school until, in 1663, he became pastor at nearby Eckersdorf. He probably remained there until 1668, when the death of the Protestant Princess von Lobkowitz meant that he had to move. He was Kantor at Ohlau, probably until his death.

Jahn expressly stated that his *Musicalische Jubel-Frewde*, which is for up to six choirs, was 'after the Italian style' and implied that the polychoral writing that had originated in Italy in the 16th century was still considered modern in Königsberg in 1644. The lost first edition of his *Passionale melicum* (1652), a collection of 50 four-part hymns, was innovatory in that it was confined to Passion hymns. The second edition (1663) was greatly expanded to include 250 pieces, of which only the melody and bass are given. Of the 111 melodies (for the 250 texts) six are from the French psalter, 18 are by Heinrich Pape, 17 by Georg Joseph and eight by Johannes Crüger; 14 other composers of the time are represented by one to three melodies each. Of the remaining 32 anonymous melodies about ten are probably by Jahn himself; it is still open to question, however, whether 'Du grosser Schmerzensmann', which is still printed in hymnbooks today, can be attributed to him. His settings of Luther and the Genevan psalter and his *Euthanasia melica* were all announced for publication after 1663, but it is uncertain whether they ever appeared.

WORKS

Musicalische Jubel-Frewde, 7–22 and more vv (1–6 choirs), bc (Königsberg, 1644)
Passionale melicum (50 sacred lieder), 4vv (Berlin, 1652, lost; rev. 2/1663, 250 lieder, 1v, bc); 2 ed. in *ZahnM*
Jesu dulcis memoria, 5vv (Zittau, 1662)
1 funeral motet, 4vv (Sagan, 1654)
Selig sind die Toten (cant.), 4vv, 3 str, bc (org), *F-Sm*; ed. S. Fornaçon (Berlin, 1957)
Ich freue mich im Herren, 5vv, 7 insts, bc (org), *PL-WRu*

Luthers Lieder, 5vv; Genfer Psalter, 5vv; Euthanasia melica (400 funeral songs): after 1663, publication doubtful

FRITZ FELDMANN

Jahn, Otto (*b* Kiel, 16 June 1813; *d* Göttingen, 9 Sept 1869). German philologist, archaeologist and musicographer. After attending the universities of Kiel, Leipzig and Berlin, Jahn rapidly became one of the leading classical scholars of his day, in the study of Greek mythology, in textual criticism – he published editions of Persius and Juvenal – and in archaeology, in which he made a notable contribution to the history of Greek vase-painting. He became professor at Greifswald in 1842 and director of the archaeological museum at Leipzig in 1847, but involvement in the political unrest of 1848–9 caused his dismissal. In 1851 he edited in vocal score the second version (1806) of Beethoven's *Leonore*. In 1855 he went to Bonn as professor of philology and archaeology and retained this post until shortly before his death.

It is remarkable that such a dedicated career should have left Jahn any time for extended work on music, although in his youth it had rivalled his passion for the classics. While his family had wide musical contacts and he was active as a performer, he seems to have had little academic training in music, which makes his biography of Mozart all the more remarkable an achievement. The preface explains how the idea of writing it came from a conversation with Gustav Hartenstein at Mendelssohn's funeral on 7 November 1847. Jahn had apparently planned a life of Beethoven, but having realized that study of Mozart was an essential preliminary, became totally involved in the latter. (His Beethoven material passed to Thayer and the material on Haydn, about whom he also intended to write, went to Pohl.)

Apart from Baini's study of Palestrina (1828) and Winterfeld's book on Giovanni Gabrieli (1834), no musical biography had previously been written on the scale of Jahn's *W.A. Mozart*. Its strength lay in its method, especially in the lucid presentation of a huge mass of material, much of it new, collected by intensive research and, above all, critically assessed. Jahn took great pains with the historical and social background. The weaknesses of his book are those inseparable from his generation, since musicology, as it is now understood, hardly existed in the 1850s. There is, for instance, little value in most of what he wrote about the origins of Mozart's style. Moreover, his view of the composer was inevitably coloured by the romantic, idealizing tendencies of the mid-19th century.

The first, four-volume edition (Leipzig, 1855–9) was replaced by his substantial revision (2 vols., 1867) which benefited much from Köchel's catalogue of 1862. This was the basis of Pauline Townsend's English translation (1882). The third and fourth German editions (1889–91 and 1905–7) were both prepared by Herman Deiters. Herman Abert's fifth edition (1919–21) attempted the most drastic revision, including much new dating and some extensive new chapters, notably on the piano concertos. Abert's daughter Anna Amalie undertook some minor revisions in the 1955 edition, which included a new separate index. It seems doubtful that Jahn's book is susceptible of the further revision needed to take full account of the subsequent mass of new Mozart research.

ALEC HYATT KING

Jahnn, Hans Henny (*b* Stellingen, nr Hamburg, 17 Dec 1894; *d* Hamburg, 29 Nov 1959). German writer, publisher and authority on organ building. In 1921, with Gottlieb Harms, he founded the UGRINO religious community; among its aims was the revival and publication of early music through its own publishing house, founded in 1923, to which (apart from his years of exile to Denmark, 1933–45) Jahnn belonged and of which he became the sole owner in 1956. His rebuilding in 1923 of the Schnitger organ in Jacobikirche, Hamburg, became the model for the *Orgelbewegung*, whose first congress he organized with Günther Ramin in Hamburg in 1925. As co-founder of the German Council of Organists in 1927, he directed the council's experimental section from 1931 to 1933 and was organ consultant for Hamburg; during his exile in Bornholm he was adviser to the Copenhagen firm of Frobenius. Over 100 organs were restored or newly built according to his plans, including the Klopstock organ at Altona-Ottensen, the organ of the Pädagogische Akademie, Kiel, the Maximilian organ in Düsseldorf, the Cavaillé-Coll organ in Metz Cathedral, the organ at St Petri, Malmö, and the organ at the German broadcasting service in Berlin. Several of the new instruments explored Jahnn's original ideas for the development of the instrument, including those at the Lichtwarkschule, Hamburg, built by Kemper in 1931, and the Ansgarikirche, Langenhorn, near Hamburg, built by Hammer in 1931, both of which feature unusual pedal ranges and have segregated 'masculine' and 'feminine' registers.

Jahnn wrote several articles and two books expounding his ideas about sound and the technical aspects of organ building. He also wrote a number of important Expressionist plays and novels; his first published drama, *Pastor Ephraim Magnus*, earned him the Kleist prize in 1920.

DIETRICH KILIAN/HERMANN FISCHER

Jähns, Friedrich Wilhelm (*b* Berlin, 2 Jan 1809; *d* Berlin, 8 Aug 1888). German scholar, singing teacher and composer. He studied singing with Charles Detroit and sang as a treble in the chorus of the Royal Opera, studying further with Stümer and Lemm. Deciding against a career as an opera singer, he studied theory and composition with Louis Gorzizky. In 1835 he declined a post as music director in Halberstadt in view of his growing reputation as a singing teacher in Berlin. He founded the Jähnsscher Gesangverein in 1845 and conducted it until 1870, introducing much contemporary music. He was made royal music director in 1849; later he taught declamation at Scharwenka's conservatory. At the same time, he undertook the work by which he is now best known, the systematic collection, collation and classification of Weber's works and the publication of a thematic catalogue, *Carl Maria von Weber in seinen Werken* (1871).

The first production of *Der Freischütz* in Berlin in 1821 had made a decisive impression on Jähns, then only 12. After Weber's death, he came to know the family (there is a fine, sensitive portrait of him by Weber's son Alexander), and he was able to draw extensively on Weber's letters, diaries and other documents in the preparation of his catalogue. Taking Köchel's Mozart catalogue as his example, he added to his thorough documentation a substantial amount of critical comment. If this now seems too consistently that of a dedicated enthusiast, the documentation has stood the test of time very well, and impressively few additions and corrections have been needed. The work is also notable for the first use of the term 'Leitmotiv', though Jähns's application of it is unsystematic. His collection of Weber material, which includes manuscripts, printed music, documents, books, letters, pictures, playbills, mementos and other related material, was deposited in the then Royal Library, elaborately catalogued as *Weberiana*, and is now lodged with added material in a special Weber memorial room in the library (Deutsche Staatsbibliothek). Of his many writings on Weber, often pioneering in their research, *Carl Maria von Weber: eine Lebensskizze* (1873) is a pamphlet of 50 pages providing a summary biographical outline. Jähns also made a number of editions and arrangements of Weber's music, and himself composed some instrumental music as well as many songs and choruses.

JOHN WARRACK

Jairazbhoy, Nazir A(li) (*b* Clifton, Bristol, 31 Oct 1927). Canadian and American musicologist of Indian origin. After schooling in England and India he studied at the University of Washington with Arnold Bake (BA 1946–51) and at the School of Oriental and African Studies, University of London (1956–62, 1967–71), where he took the doctorate in 1971 with a dissertation on the evolution of north Indian rāgas from the earliest historical treatises to modern performing practice. He worked there as a lecturer in Indian music (1962–9) and chairman of the music panel (1969) before being appointed associate professor in Asian studies at the University of Windsor, Ontario (1969–75). In 1975 he became professor at UCLA, where he served as first chair of the newly founded ethnomusicology department (1988–90), before retiring in 1994; he was also president of the Society for Ethnomusicology (1975–7). In 1983 he founded the Archive and Research Centre for Ethnomusicology (a unit of the American Institute of Indian Studies) in New Delhi, which has constituted a unique resource for Indian and foreign researchers.

Jairazbhoy's contributions to the study of Indian music have been diverse. In his dissertation *The Rāgs of North Indian Music* (1971), he illustrated how perception of various types of melodic symmetry, both tetrachordal and non-tetrachordal, structures the evolution of rāgas and adds to their inherent dynamism by leading to non-consonant resolutions in performance. Elsewhere he has refuted the notion that intonation in present day practice accords with the 22-*śrūti* (microtonal interval) system described in the *Nāṭyaśāstra*, whose musical sections probably belong to the Gupta period (4th–5th centuries). His other writings include work on perception, the measurement of time values, and the technical aspects of fieldwork and laboratory research. His output also includes publications and videos regarding Rajasthani folk performance (1984), a collection of humorous allegorical tales (*Hi-Tech Shiva*, 1991), and restudies (with Amy Catlin) of field trips undertaken by his mentor, Bake, in the 1930s and by himself in the 1960s and 70s. Some of his works, including *Hi-Tech Shiva* and the 'fictive documentary' video *Retooling a Tradition* (1994), display a remarkably innovative and often whimsically post-modern sensibility.

LUCY DURÁN/PETER MANUEL

Jakob, Friedrich. Swiss organ builder, associated with the firm of THEODOR KUHN.

Jakobos Peloponnesios [Iakōbos Peloponnēsios; Jakobos the Protopsaltes] (*b* ?Peloponnesos, 1740; *d* Constantinople, 23 April 1800). Romaic (Greek) composer and hymnographer. A student of Joannes of Trebizond, he was first *domestikos* at the Ecumenical Patriarchate of Constantinople from 1764 until 1776, when he was invited to teach at the Second Patriarchal School of Music with Daniel the Protopsaltes and Petros Peloponnesios. He later returned to the patriarchal cathedral, chanting as *lampadarios* (*c*1784–9) and, after the death of Daniel, as *prōtopsaltēs* (1790 until his own death). Highly respected for his erudition, he was invited by Patriarch Gregory V to revise and correct the liturgical books of the patriarchate, for which he also wrote the texts of two contrafacta kanons in honour of St Euphemia.

In 1791, together with PETROS BYZANTIOS, Jakobos founded the Third Patriarchal Music School, and in 1797 he successfully led opposition within the patriarchate to the proposed notational reforms of Agapios Paliermos, an action characteristic of his conservative stance in a period of artistic change. Described by Chrysanthos of Madytos as a traditionalist suspicious of innovation and lacking the steady rhythmic sense of Petros Byzantios, Jakobos shunned the new syllabic and neumatic styles popularized by PETROS PELOPONNESIOS and his students. He preferred instead to sing, teach and compose within the highly ornate received tradition of the medieval and post-Byzantine sticherarion, in which scores were realized with reference to an orally transmitted body of melodic formulae (*theseis*).

Jakobos's most significant contribution to the preservation of the older melodic style was the massive *Doxastarion* transcribed by his student Georgios of Crete in 1794/5, which contains a cycle of 'abridged' melismatic *stichēra* for the liturgical year. This work was later transcribed into Chrysanthine notation by CHOURMOUZIOS THE ARCHIVIST and published, in an edition by Theodore Phōkaeus, in 1836. Other chants for the Divine Office include eight Great Doxologies; 'abridged' settings of the opening verses of Lauds ('Hoi ainoi') at Orthros and the 'lamplighting' psalms at Hesperinos, the *polyeleos* (Psalm cxxxiv) in mode 4, two kalophonic *heirmoi*, and the 11 morning Gospel hymns of the Emperor Leo VI. He also wrote a number of Cherubic Hymns for each of the eucharistic liturgies (St John Chrysostom, the Presanctified Gifts, St Basil). Most of these works were first printed in Chrysanthine editions (see bibliography). (For a fuller list of works, including references to manuscripts featuring the original post-Byzantine notation, see Chatzēgiakoumēs, 1975, pp.299–302.)

ALEXANDER LINGAS

Jakova, Prenkë (*b* Shkodra, 27 July 1917; *d* Shkodra, 16 Sept 1969). Albanian composer, conductor and teacher. He was taught the clarinet and solfège by Gjoka at the Franciscan high school in Shkodër before moving to the state grammar school, from which he graduated in 1934. At this time he was receiving violin lessons and becoming acquainted with opera through vocal scores and foreign broadcasts, as well as with Shkodran folksong. In 1935 he founded a band whose younger members included the composers Harapi, Zadeja, Daija and Gjoni. While working as a teacher in remote northern villages (*c*1938–42) he collected folksongs, arranging them for band. A few months' study at the Accademia di S Cecilia, Rome, in 1943 was his only academic training. In 1950 he conducted the newly founded amateur Shkodran SO in what was reputed to be the first choral-orchestral concert in Albania, featuring works by Kono, Trako, Daija and Zadeja, as well as Glinka and Dargomïzhsky. The orchestra became a permanent institution in 1951 under the local House of Culture, and Jakova was appointed its director the following year. He achieved greatest prominence during his lifetime with the stagings of his two operas, *Mrika* in 1958 and *Gjergj Kastrioti – Skënderbeu* in 1968. The latter was commissioned by Enver Hoxha for the 500th anniversary of the death of Scanderbeg, Albania's greatest national hero: as a result the work was much debated, and negative reviews might have been a factor in the composer's suicide.

One of the most eminent figures in Albanian music, Jakova represented the link between an older generation of semi-professional musicians and a younger generation of professionals who were trained abroad. He not only inspired many of the younger composers under communism but also provided Albania with its first opera and many fine songs, including *Në njerën dorë kazmën në tjetrën pushkën* ('The Pick in One Hand, the Rifle in the Other'), which became the signature tune of Albanian Radio's world service. He proved himself an accomplished opera composer: his arias, such as *Mrika*'s breathtaking Ç'jan Këto trazime ('What is this Upset?'), and recitatives, beyond their echoes of folksong, betray a deep feeling for the musical inflections of the Albanian language. He also showed an unfailing instinct for dramatic timing and characterization, demonstrated in *Mrika* by the gradual development of the heroine from a naive peasant girl to a woman ready to fight for both personal happiness and for society. Though *Mrika* and *Skënderbeu* (containing at least a dozen beautiful arias and choruses) are both number operas, Jakova uses leitmotifs – at least five in the latter, Scanderbeg's own being based on a whole-tone scale and an augmented fifth interval. If *Mrika*'s libretto might nowadays arouse some political objections, Jakova's reputation as one of Albania's greatest melodists remains nonetheless secure.

WORKS

(*selective list*)

Stage: Xhuxhmaxhuxhët or Kopshti i xhuxhmaxhuxhëve [Dwarfs of The Garden of the Dwarfs] (children's operetta, K. Jakova), 1938, Shkodra, 1941; Juda Makabe (melodramma, Gj. Fishta), 1945, Shkodër, 1945; Dasma Shkodrane [Shkodran Wedding] (folk ritual), Shkodër, 1947; Gruri i ri [The New Grain], (musical tableau, D. Shuteriqi), Tirana, 1950; Dritë mbi Shqipëri [Light over Albania] (veprim muzikor [musical action], 2 scenes, Ll. Siliqi), 1951, Tirana, July 1952; Ushtarët e popullit [People's Soldiers] (melodramma, 3, A. Varfi), 1953; Mrika (op, 4, Siliqi), Shkodër, 1956–8, rev. in 3 acts, Tirana, 1959; Dhitë e egra [Wild Goats] (children's operetta, Jakova), Shkodër, 1961; Ylli guximtar [Dauntless Star] (puppet theatre, A. Skanjeti), Shkodër, 1962; Miqësia u mbrujt me gjak [Friendship is Defended with Blood] (musical tableau), 1964; Gjergj Kastrioti – Skënderbeu, (op, 2, Siliqi) [orchd by Jakova, T. Daija, T. Harapi, Ç. Zadeja, M. Krantija], 1966–7, Tirana, 17 Jan 1968; Ushtri e popull, një e të pandare [Army and People, an Undivided Entity] (musical tableau), Elbasan, 1968; incid music (incl. S' njof pendim [Repentance is Unknown to Me] 'Song of the First Slave Girl' and Vallja e Skllaveve [Dance of the Slaves], 1v, 2 fl, ob, hp, T drum, 1962, music for an unidentified tragedy), film scores

Choral: Dimni e trumcaku [Winter and Sparrow], SATTBB; Tantum ergo, e, SAATTBB, hmn, 1941; Hymni i Kolegjës Françeskane, e, vv, 1941; Tantum ergo, d, 1942; Ave Maria, e, 1v, hmn, 1942; Litanit e Zojës [Litany to St Mary], F, T, B, 3vv, hmn, 1943; Kantatë Miqsisë Shqiptaro-Sovjetike [Cantate to the Albanian-Soviet Friendship] (J. Dini), mixed chorus, pf, 1951; Atdhe i heronjve [The Fatherland of Heroes] (cant., A. Çaçi), 1956; Në mes dallgësh sypatrembur qëndron [You Remain Fearless Amidst the Waves] (?cant., P. Sekuj), 1960; Partisë [To the Party] (cant., V. Skënderi), 1960; Litanit e Zojës no.1, g, S, A, T, B, hmn, n.d.; Litanit e Zojës no.2, F, S, A, TI–II, B, hmn, n.d.

Songs (1v, pf unless otherwise stated): Mërdhin trumcaku [The Sparrow Freezes], children's song, chorus, 1937; Kënga e bariut [The Song of the Shepherd], 1940; Kujtimi [Remembrance], 1940; O sa bukur [Oh, How Beautiful], 1941; Dhimbja [Heartache], 1941; Vjollca [Violet] (Jakova), 1941; Zot, erdhen gjindja te huaj [O Lord, Arrive the Gentiles], before 1944; Juda Makabe (Fishta), before 1944; Fryn veriu [A Breath of Winter], chorus, 1946; Gruri i ri [The New Grain] (Shuteriqi), 1950; Mbjelljet pranverore [Spring Sowings] (T. Gjyli), 1952; Pranvera e re [The New Spring] (Gjyli), 1952; Dhuratë zemre [A Present from the Heart] (S. Gera), 1955; Më prit në krahe [Waiting for Me with Open Arms] (Gera), 1955; Moj bardhoshe [O Pale Faced Maiden] (Gera), 1955; Ndije zogun nëpër hije [Listen to the Bird amidst the Shadows], 1955; O e mirë që shkon për ujë [O Fair Maiden, Heading for the Spring] (Gera), 1955; Eshtë e thjeshtë [She is Simple] (Gera), ? after 1956; Gojëdhënë Shqip [Albanian Tradition] (Gera), 1960; Margjelo (F. Ndocaj), 1960; 1 qershori [June 1st] (V. Bala), 1961; Në njerën dorë kazmën në tjetrën pushkën [The Pick in One Hand, the Rifle in the Other] (P. Sekuj), 1961; Syrin si qershia [Eyes Like Cherries], 1962; Shqiptarëve lidh në besë (L. Gurakuqi), 1964; Elegji për Luigi Gurakuqin, 1965; Monolog (Siliqi), B, orch, 1969; Ave Maria; O sanctissima; Kënga e Zojës së Shkodrës [Song of Our Lady of Shkodër], ?vv; Ora e Shqipnisë [The Hour of Albania], B, orch

Inst: Nina-nana [Lullaby], waltz, c, ?pf; Potpuri këngësh shqipë [Potpourri of Albanian Songs], band, 1938; Molla [Apple], accdn, 1940; Kërcim [The Leap], waltz, ?pf, 1941; Spartakiada, march, band/orch, 1955; Vallë [Dance], band, 1956; Jemi vëllezër [We are Brothers], 1960; Brigada 27 [The 27th Brigade], march, band, 1969

MSS in Jakova family, Shkodra, Theatre of Opera and Ballet, Central State Archive, both Tirana

GEORGE LEOTSAKOS

Jalāl al-Dīn Rūmī. *See* RŪMĪ, JALĀL AL-DĪN.

Jale. A modern German method of solmization which provides a separate syllabic note name for each rising or falling semitone of the chromatic scale. The names given to the ascending degrees of the major scale in any key are *ja*, *le*, *mi*, *ni*, *ro*, *su*, *wa* and *ja*. This apparently random sequence is logically constructed. The vowels follow the normal sequence *a*, *e*, *i*, *o*, *u*; and the positions of the diatonic semitones are marked by repetition of *i* and *a* respectively. Consonants are those which immediately follow the German alphabetic names A–H, but omitting some considered to make unsuitable vocables: *j*, (*k*), *l*, *m*, *n*, (*p*), (*q*), *r*, *s*, (*t*), (*v*), *w*. The same sequences are combined to produce the chromatic note names (ex.1).

Ex.1

je li no ru sa
ja le mi ni ro su wa ja
la me ri so wu

Introduced by Richard Münnich in his *Jale: ein Beitrag zur Tonsilbenfrage* (Lahr, 1930), the method aims to improve vocal intonation by distinguishing between enharmonic equivalents without introducing the complications of the earlier EITZ METHOD.

BERNARR RAINBOW

Jalilov, Tohatsïn (*b* Andijan, Ferghana valley, 1896; *d* 1966). Uzbek composer. Jalilov occupied the role of bastakor, a composer in the oral tradition who creates new melodies and texts as well as setting the verse of classical Central Asian poets. A *bastakor* also provides a link between Eastern compositional traditions and those of Europe. Jalilov was active as a performer in chaykhonas ('tea houses') and other gathering places; his outstanding abilities on the *ghijak* and *tanbur* and also his gifts as a composer of new songs gave rise to his nomination by Uzbeks as a *Hafiz* ('folk singer', after the Persian poet), a highly respected role in Uzbek society. Many of his own songs reflect the new social and historical ideas of his era but utilize typical Uzbek melodies and rhythms. From 1919 he collaborated with the revolutionary poet Khamza Khakim-zade Niyazi in a new theatrical company in which they sought to unify old and new forms of entertainment. As a performer in Qarï-Yakubov's Uzbek Ethnographic Ensemble he visited Moscow, Leningrad, Kazan' and Ufa as well as Paris (1925) and London (1935). This ensemble was unique for its presentation of a whole range of music from the Ferghana valley. Jalilov served as artistic director of the Akhunbabayev Theatre in Andijan (1928–34), the Uzbek Musical Theatre, Tashkent (1934), and the Uzbek Philharmonic SO (1937–40) before directing the Mukimi Theatre of Musical Drama (1940–49) where he was responsible for the foundation of Uzbek music drama. Although he composed in many different genres, he often did so as a *bastakor*, thus creating new compositions which had as their basis sophisticated melodies from the Uzbek tradition. He also assisted Russian composers in the process of the creation of new (for Central Asia) genres, mainly in opera and musical drama. Besides being a People's Artist of Uzbekistan (1937) he was a deputy of the Supreme Soviet of Uzbek SSR.

WORKS
(*selective list*)

Takhir va Zukhra (op), 1939, collab. B. Brovtsïn; Kurban Umarov (musical drama, S. Abdulla and Chusti), 1941; Asrlar, 1943, collab. B. Nadezhdin; Nurhon (musical drama, K. Yashen), collab. Ya. Sherfetdinov, 1942; Alpamysh, 1953, collab. Nadezhdin; Ravshan va Zulhumor, 1957, collab. G. Mushel'; over 40 incid music scores; over 200 songs

RAZIA SULTANOVA

Jalowetz, Heinrich (*b* Brno, 3 Dec 1882; *d* Black Mountain, NC, 2 Feb 1946). Austrian conductor. He grew up in Vienna and studied at the university there with Guido Adler, completing the doctorate (1908) with a dissertation on Beethoven's early melodic technique (*SIMG*, xii, 1910–11, 417–74). Together with Berg and Webern, with whom he shared a lifelong friendship, he was one of the first disciples of Schoenberg. He held appointments at opera theatres in Wiesbaden, Regensburg, Danzig, Stettin, Prague, Vienna, Cologne and Liberec. After his emigration to the USA in 1939 he taught music history and theory at Black Mountain College near Asheville, North Carolina. A renowned conductor in the Mahler and Zemlinsky tradition, Jalowetz gave the first Berlin performance of Schoenberg's *Gurrelieder* in 1923. Among his compositions and arrangements are songs and stage music for *Traumstück* and *Traumtheater* by Karl Kraus, a piano score for Zemlinsky's opera *Der Zwerg* (1921) and a four hand piano version of Schoenberg's *Pelleas und Melisande* (1924). His writings include articles on Berg, Webern, Zemlinsky and Schoenberg.

MSS and correspondence in *CH-Bps*

ERNST LICHTENHAHN

Jam, the. English new wave rock group. Its members were Paul John William Weller (*b* Woking, 25 May 1958; vocals and electric guitar), Bruce Foxton (*b* Woking, 1 Sept 1955; bass guitar) and Paul Richard Buckler (*b* Woking, 6 Dec 1955; drums). Between 1977 and 1981

the Jam recorded more than 20 hit songs written by Weller, most of them vignettes of city life, contemporary equivalents of the work of his 1960s heroes, the Who, the Kinks and the Small Faces. The most striking of these were *In the City*, *Down at the Tube Station at Midnight*, *Eton Rifles*, *Going Underground* and *Town Called Malice*.

Musically, the Jam followed the broad punk rock pattern with gruff, unadorned singing by Weller, fast tempos and abrasive guitar accompaniments. Onto this, however, the group grafted simple vocal harmonies and more sophisticated song structures. Their final hit, *Town Called Malice* (Pol., 1982), incorporated a soul music bass line and presaged Weller's next musical move. In 1982 he formed the Style Council to perform more pointed lyrics in a jazz and soul style. His outstanding work of the 1990s was the solo album *Wildwood* (Go-Disc, 1993) which was nominated for the Mercury Music Prize in 1994. For further information see P. Hewitt: *The Jam: a Beat Concerto* (London, 1996).

DAVE LAING

Jamaica. The third largest of the Caribbean islands, with an area of about 11,000 km². Formerly part of the British West Indies, gained independence in 1962 and is a member of the British Commonwealth.

1. Introduction. 2. Instruments. 3. Music genres: (i) Ritual and ceremonial (ii) Social songs (iii) Work-songs (iv) Recreational.

1. INTRODUCTION. Columbus arrived in Jamaica on his second voyage (1494), naming the island Santiago. During the early 16th century it was colonized by the Spanish and by the time of the English conquest (1655) the indigenous Arawak Indians had been virtually exterminated. With the introduction of slaves from West Africa, beginning in the 16th century, blacks soon outnumbered Europeans, and the 20th-century population is predominantly creole or black with European, Chinese, Indian and Syrian minorities. Although English is the official language, creole (a mixture of English, Spanish and French combined with features from various African languages) is widely spoken and is often the language of folksong texts. Many Jamaicans belong to the Anglican Church but other religions include the Baptist, Roman Catholic, Jewish, Hindu, Muslim and Ethiopian Orthodox faiths. African and non-Christian cults (for example, the Kumina) and Afro-Christian revivalist sects (such as the Zion Way Baptist and the Pukkomina) are particularly important in rural areas.

Jamaican music is as varied as the people who inhabit the island. Since many are of African descent, much folk music retains features and functions of black African music, blended with elements of European (primarily British) music. Africans were brought from different cultural, ethnic and linguistic backgrounds, but despite centuries of slavery and considerable acculturation, African traits are basic to most seemingly European-derived Jamaican folk genres. During the slave era, Europeans continued to visit and settle in Jamaica. In the mid-19th century Chinese and Indian indentured labourers were brought to work on the sugar-cane plantations, and immigrants from the Middle East established themselves as businessmen and traders. East Indian music is still heard in some areas, but the music of Asian communities has remained separate from the mainstream of Jamaican culture.

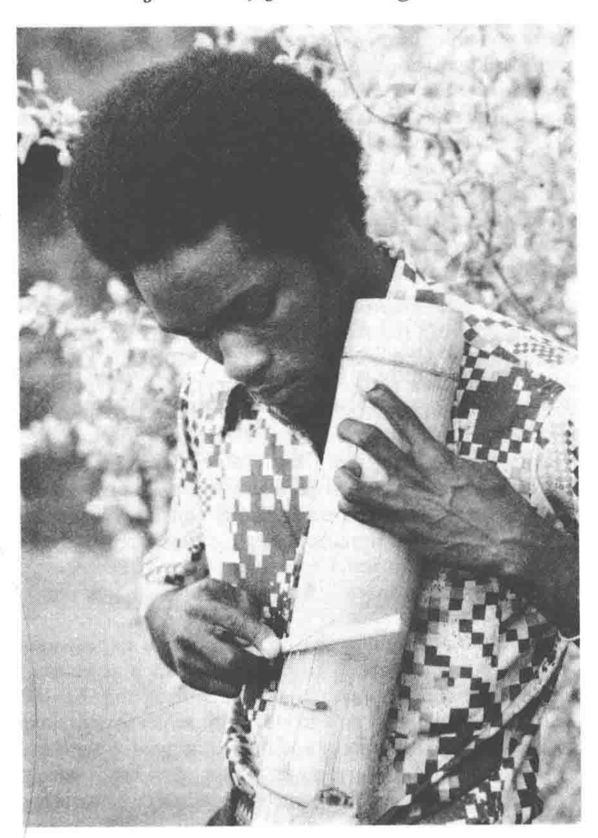
Jamaican folk music has varied uses and functions. In cult ritual it is used to establish contact with spiritual forces. There may be little demarcation between sacred and secular, and even in work, social and recreational music there may be religious overtones. Music is used to censure and advise, to transmit messages and gossip, to teach group values and to pass on vital social skills and information. Jamaicans adapt their music freely to the occasion. Songs used at wakes may be adaptations of dance tunes; a secular song may be used in a religious setting. The same tune may be used by different groups for different purposes with varied rhythms and improvised ornamentation.

2. INSTRUMENTS. Drums are the most important Jamaican instruments. They are used to accompany dancing and singing (both sacred and recreational) and to communicate with ancestral spirits in rituals. Drums of African and Indian origin have been absorbed into Jamaican usage. The names of drums may vary, even though their functions generally are similar. Drum frames are made of wood, clay and metal; wooden ones are made from hollowed tree trunks, hollow trunks like bamboo and trumpet tree trunks, barrels and, in the case of the Jamaican *goombay* drum, lengths of board fitted at right angles. Tin drums may be tin boxes such as those for the Jamaican Nago and Ettu song and dance celebrations, or tin frames with skin stretched across, as in some village bands. The East Indian *tassa* drum, used in Jamaica (and also in Trinidad), is a clay or metal bowl about 22·5 to 30 cm in diameter with a goatskin stretched across the open end and secured by thongs.

Drums are tuned by tightening the membranes in various ways: the skin of the *tassa* drum is heated over an open fire; for other drums, water or rum is put on the skin; pegs at the sides of the *goombay* drum are hit, forcing its inner frame against the membrane, thus tightening it and raising the pitch. Drums are played with one or two padded or plain sticks, or with the hands; they are either stood on the ground, placed between the knees, gripped under the arm, hung around the neck or straddled. Straddled drums include the Kumina and *tambo* drums; the drummer uses his heel to change the pitch as he plays the drum with his hands.

Drums are not always used for rhythm; when played in pairs one usually sustains a particular rhythmic pattern while the other improvises in accordance with the rite or occasion. In Kumina the pairs are called respectively *kbandu* and 'playing cast', while in Jonkunnu and the Revivalist cults they are called bass and side drum. When a single drum is used the steady rhythmic pattern is often maintained by sticks, maracas and other percussion instruments.

Sacred drums must be baptized before use, in honour of the deity to whom they are dedicated. This may require a special ceremony to ensure that the drums will perform their function of communicating between humans and spirits. If sacred drums are used for any other purpose, for example to assist research, the drummers must propitiate the spirits. Sacred drums may be played by anyone who knows the rhythm needed to address the particular deity or spirit. Each rite requires special drums, and the drums of different deities, groups or nations are stored in order of importance and power; they are never mixed and may even be kept in separate rooms.



Jamaican aerophones and chordophones include the *vaccine* 'boom pipe' or 'bamboo bass' (fig.1), the *abeng* (cow horn), gourds and the bamboo violin (fig.2). The boom pipe is a length of bamboo over one metre long and 5–7 cm in diameter. The player blows in energetic puffs, or pounds it on the ground, producing a deep sound of fixed pitch. Played together, boom pipes may produce two or three different pitches in sequence or harmonically as required. The *abeng* is played by the Maroons. These are descendants of former slaves of the Spaniards in the early 17th century, who were released by the Spaniards following the conquest of Jamaica by the British in 1655. The Maroons carried on prolonged and successful guerilla warfare against the British. This ended in 1738 with a treaty giving the Maroons a measure of autonomy in their areas of settlement. The *abeng* played an important part in their wars and is still used to relay messages. Its fundamental pitch can be altered by manipulation of the lips and of the thumb-hole on the horn's concave side, near the pointed end.

Bamboo violins (a type of idiochord bowed zither; fig.2) used to be found in isolated areas and were sometimes played with virtuosity. A suitable joint was cut from a green bamboo plant and four strings made by lifting fibres off the main stem. Under these strings a bridge was placed, cut in such a way that the tension of each string gave the required pitch. The bow, soaked in water before use, was made from a length of bamboo (about 50 cm). Gourds are widely used for rattles and maracas. One Kumina group, apparently unique in Jamaica, used hollow gourds as wind instruments; the player blew across a small opening at the top of the gourd producing one hooting note of indefinite pitch.

Many wind and string instruments are used in traditional celebrations; some are still made by hand out of natural materials, but there is a growing tendency to use man-made materials and factory-made instruments. Guitar-like instruments used to be made with gourds forming the resonating chambers, but now the bodies of home-made guitars and banjos are made of wood. Some have four strings, others six. String bass instruments have one to four strings that may be stretched over a length of bamboo or wood or over a resonating chamber as in the double bass. They are sometimes played with a bow but more often plucked. Plucked string instruments such as guitars and banjos are widely played, and are used in secular bands for instrumental solos and to accompany many song and dance genres.

1. Vaccine ('boom pipe' or 'bamboo bass')

2. Three-string bamboo violin

Violins and similar bowed instruments are used throughout Jamaica, mainly for dance music; they are held against the left side of the rib cage and played in florid style.

Flutes, formerly made from bamboo, reeds and hollow stems of plants, are now rarely played, though the indigenous performance style is often heard on more modern instruments such as piccolos and penny whistles. Bamboo is still combined with other materials to make instruments that sound like clarinets, trumpets and saxophones. Bamboo saxophones were made by bending the stem of a living plant into the desired shape and leaving it to grow to the right size. The rhumba or 'bass box', a type of lamellophone, is used in Jamaica by bands for dance and other secular genres. As with the African *sansa* or *likembe*, tongues of metal are attached to a sound box, each tongue producing a tone of deep quality.

3. Music genres. The indigenous music of Jamaica can be divided into five categories: ritual, ceremonial, social,

work and recreational. Only since the upsurge of national pride following independence have Jamaican scholars begun to study their music. It is not possible to know exactly how the early slaves used music. It must have been a means of expressing emotion, maintaining vital links with the past from which they had been uprooted and communicating with spirits. Ritual, ceremonial and social genres were probably the most common and these still have great importance in Jamaican society at the turn of the century.

(i) Ritual and ceremonial. Christianity was introduced to Jamaica with the Anglicans and Quakers (in the 17th century), the Methodists (1789), the Moravians (1874) and the Baptists (early 19th century). The slaves soon fused aspects of Christian belief with African tribal ritual, resulting in Afro-Christian syncretized spirit cults of various categories. The Zion Way Baptist and the Pukkumina are both revivalist cults; the Kumina incorporates non-Christian deities and is considered African by its devotees. Jamaicans also categorize cults as 'spiritual' (City Mission, Baptist, Free Church, Pentecostal Holiness) and 'temporal' (Anglican, Methodist, Seventh-Day Adventist).

Some Jamaican cults share concepts and expressions with other cults of the African diaspora such as Haitian Voudoun, Cuban Santeria and Trinidadian Shango. Through ritual music, cult groups communicate with their gods, goddesses, ancestors and heroes, as well as with the forces of nature at levels which the outsider is rarely allowed to observe; consequently the use of cult music for study or publication is limited. Several rituals involve sacrifices and purification by fire or herbal baths, while all include music. Leaders strive to activate the psychic links that connect humans with the supernatural forces. The symbolism of sound, word, gesture and movement is usually understood by cultists alone and at times only by those at the top of the cult hierarchy. Ritual music usually derives from speech: it includes chanting, improvised melodies and choruses accompanied by drums, cymbals and other percussion, clapping, stamping, groaning and percussive breathing.

The followers of the Kumina cult sing *bailo* (generally with English texts) and 'country' songs, an improvised genre that incorporates many Congolese words and is designed to appease or amuse the spirits. Adherents believe that the 'country' songs are taught by the spirits only to those they possess. Kumina songs are usually for a leader and chorus, have melodies with short phrases, and are accompanied by drums (the *kbandu* and the 'playing cast'). Revivalist cult music, on the other hand, is often based on Christian hymns and is accompanied by 'trumping' (loud rhythmic breathing), hand-clapping and foot-stamping; cultists often sing in 'unknown tongues' (using non-lexical syllables). The popular genre *ska*, which originated in western Kingston, derives from these songs.

Since the 1940s, Rastafarianism has been a strongly influential cult. There are several groups of Rastafarians, some of which are Christian. All claim allegiance to Africa and many maintain that their music is African. In its short history, Rastafarianism has significantly affected national life, especially through its music, poetry, art and general regard for nature. The popular Jamaican music form REGGAE owes much of its development to Rastafarian music and musicians.

The dominant feature of this cult music is drumming, using drums from Buru, a Christmas masquerade which dates back to the days of slavery. There are three types of drums: bass, *fundeh* and repeater. All three are double-headed barrel drums, made from staves with goat-skin heads. The bass drum is 50–70 cm in diameter and is played with a padded stick. The *fundeh* (20–25 cm) and the repeater (20–23 cm) are smaller and are played with the fingers. The repeater is always smaller than the *fundeh*, to produce a higher pitch. Drumming provides the foundation for distinctive chanting which is accompanied by other percussion (e.g. maracas, tambourines and scrapers).

In all cult groups that use ancestral languages, ritual songs often include words that ensure secrecy within a small and select group of devotees. This does not apply, however, in the case of events open to the public or to Revival and Rastafarian songs, which all use widely known Jamaican speech style.

Jonkunnu (Junkanoo), originally a Christmas celebration during the early days of slavery, combines West African and English traditions. After the abolition of slavery, Jonkunnu was celebrated on 1 August to commemorate freedom. Processions are led by drums, fifes and men wearing traditional costumes and masks. In some areas where Buru (a variant of Jonkunnu) is practised, the whole procession sings the chorus to a leader's solo, usually about an embarrassing or scandalous local event. Songs are similar in style to *mento* (see below).

Hosay (Hussey, Hussein), celebrated mainly by East Indians in Jamaica as well as Trinidad, is a Muslim festival honouring three Islamic heroes: Hussein, Hassan and Ali. Models of elaborate bamboo mosques, tall paper stick-puppets and a moon are carried by men who dance to the accompaniment of Indian drums; sword and stick-fighting are also included.

(ii) Social songs. These refer to daily activities and events in the life cycle (birth, puberty, marriage, death) and may reflect social and moral standards and group attitudes. They include songs of censure and advice. It is significant that most songs of the life cycle are associated with death, perhaps because the life span of the slave was short, and hardship, illness and death were ever-present concerns. Although the rites of death vary, all share the belief that human life is only one stage in the spiritual journey towards perfection. Upon death it is important to find out what the fate of the soul will be, for the form and content of certain ceremonies depend on this information. Some songs are for comfort, others for laughter, to censure the host or to mourn. The singing may be contemplative and comforting, or, more often, strident and full-throated. Gestures and dance movements are at times gentle, at others quite abandoned. On occasion, two different groups gather at the home of the deceased: one remains inside to comfort, the other keeps a little way off to give frank and often irreverent comments and warnings.

Little of the music connected with marriage and fertility ceremonies survives. Weddings are often preceded by celebrations which include songs and dances accompanied by drums, sometimes with flutes, clarinets, guitars and violins, and music and dancing follow the solemnization of the marriage.

(iii) Work-songs. This tradition in Jamaica is one of the oldest, and although cooperative labour continues, with

increasing industrialization and mechanization, work-songs are becoming obsolete. Slaves were not allowed to talk during work (almost all their waking hours) but they exchanged news, messages and even ridiculed their masters in song, without attracting unfavourable attention. The songs took on the rhythm of the tasks and helped to lighten the labour. A conch (*lambi*) or a cow horn is still used to summon workers to a 'digging match' (cooperative work session). A farmer who wanted to clear his land for planting needed many hands to complete the task quickly and well; friends gathered at his farm with the tools, and he furnished food, drink, water and a 'singer man'. This singer man's function was to maintain rhythmic unity in the work being done; unity was enhanced by the call and response singing of the singer man and workers. The singer man also clowned to entertain the workers and had to be able to improvise topical lyrics. Most work-songs were associated with agricultural labour, but there were songs for almost every task: planting, reaping, fishing, weaving nets, hauling houses, washing clothes and housework. Most of the men's songs were in robust leader and chorus style, but women often sang alone or in an integrated group. Generally work-songs have short, catchy tunes and are in two sections: the verse is sung by the *bomma* (the caller, who does not participate in the work) and the chorus by the *bobbin*. Rhythmic accompaniment is provided by pickaxes, mallets, cutlasses or other tools used in the work at hand.

(iv) Recreational. Calypso originated in Trinidad and Tobago but has spread throughout the Caribbean. These songs are entertaining, aiming chiefly to amuse, but they also philosophize and appeal to civic duty. The lyrics are topical. Steel bands, guitars, drums and other percussion instruments are used to play calypsos and to accompany calypso singers.

Limbo is a contest to see who can dance, bending backwards, under the lowest horizontal bar. Now performed throughout the West Indies for entertainment, limbo originated from the way a slave would attempt to escape, without being seen by guards, by going under rather than over a fence. Maroons of Jamaica used it as part of *masumba*, a now obsolete traditional game. *Mento* is an indigenous Jamaican song and dance style characterized by a strong syncopation on the last beat of each bar. The songs are often used to ridicule or censure people in veiled or symbolic terms.

The quadrille is a set of dances of European origin used in Jamaica and throughout the West Indies. In Jamaica dances include the mazurka, polka, schottische and *mento*. Quadrille bands include drums and other percussion instruments; guitars, banjos, string bass or rhumba box supply the harmony; and fiddle, flute, saxophone, trumpet, clarinet (often home-made), harmonica, voice, or comb and paper (as well as guitars and banjos) supply the melody. These village bands usually have up to 15 players and their repertory, in addition to these European-derived set dances, may include popular tunes played in *mento* style. In the 19th century, bands frequently played at *bruckins* and *brams* (outdoor dances), *bowsarrows* (costumed country dances), maypole dances, 'crop-over' dances for the cane harvesting and for many other folk festivals. Very few folk and traditional bands remain, however, and music for traditional events is now often heard through recordings. Live performance sometimes incorporate amplified bass guitar and there is one amplified fiddle in use.

Singing games were a strong feature of Jamaican life up to the middle of the 20th century and were performed both by adults and children. They are still used for entertainment and socializing at village fairs, *dinkies* (wakes) and at moonlight revels. Children and adults usually play these games separately, even if both groups are present. Whether the games are of European or African origin, they are transformed by Jamaican speech and song styles and are altered to suit the particular group and occasion. Most of the games stress participation rather than competition and teach skills considered important in society. *Cantefables* (traditional prose tales with brief sung verses) and story songs are used to enliven stories, to underline characterization and for narration purposes. The function of the music dictates the form and style, which may be recitative, chant (ex.1), lyrical melody or a combination of these.

Ex.1 Chant from folk story, transcr. O. Lewin

Since political independence there has been an increasing attempt to study traditional song and dance genres and to revive folk forms. Groups such as Rastafarians, Tambo and Ettu dancers and the Kumina cultists, which in the past functioned more exclusively in their own settings, began to participate in the public independence festivals which began in 1963. Recently, expositions and competitions have been promoted by the government, tourist industry and private enterprise. Many of these are staged in Kingston, Montego Bay, Ocho Rios and other main urban centres. Kingston has many performance venues and a well-publicized programme of musical events; however, much vibrant but unadvertised musical activity takes place all over the island, fairly spontaneously as well as for seasonal and locally-marked occasions.

OLIVE LEWIN/MAURICE G. GORDON

Jambe de Fer, Philibert (*b* Champlitte, *c*1515; *d* ?Lyons, *c*1566). French composer and writer on music. He probably moved to Lyons at an early age. Jacques Moderne published his motet *Salve salutaris* there in 1547, and Loys Bourgeois, in a polemic against Simon Gorlier written in 1554, referred to the Protestant Jambe de Fer with Francesco de Layolle and François Roussel as 'maistres de chapelle'. In 1561 he was involved in a lawsuit with the Lyonnais printer Jean d'Ogerelles, who published a volume of his psalm settings (now lost) without naming him on the title-page. In 1564 Jambe de Fer organized the music for Charles IX's entry into Lyons. In the same year he dedicated his four- and five-part settings of psalm translations by Clément Marot and Théodore de Bèze to the king, praising Charles's religious tolerance.

Most of Jambe de Fer's works are settings of the psalms translated by Marot, de Bèze, Jean Poitevin and others. The monophonic melodies in *Les 150 pseaumes* (Lyons, 1555) derive partly from those published for Marot's verses in 1551, with new melodies for Poitevin's texts. Several of the melodies appear to be tenor parts from a lost polyphonic setting. Three polyphonic collections survive: *Psalmodie de 41 pseaumes royaux* (Lyons, 1559), which adds seven new melodies to those of The Geneva Psalter, and two editions of *Les 150 pseaumes de David* (both Lyons, 1564). His polyphonic psalms are either simple note-against-note harmonizations of the traditional tunes stated in the tenor, or only slightly more elaborate compositions based on newly invented melodic material.

He also wrote a treatise, *Epitome musical des tons, sons et accordz, es voix humaines, fleustes d'Alleman, fleustes à neuf trous, violes, & violons* (Lyons, 1556; repr. in Lesure), one of the earliest introductions to music in French. The first and less original part explains the rudiments of music (e.g. scales, clefs, solmization, notation). In the second he briefly described the ranges, tunings, fingerings and playing techniques of the flute, the recorder, the viola da gamba and the violin. With its woodcut illustrations and charts the book is a rare and invaluable source of information. He was the earliest author to treat the violin at such length, and the only one to draw a comparison between Italian and French practices that provides insight into national differences.

For a fingering chart from *Epitome musical, see* RECORDER, fig.4.

WORKS

Les 100 psalmes de David mis en francois par Iean Poictevin, 4vv (Poitiers, 1549), lost
Les 150 pseaumes du royal prophète David, traduits en rithme françoyse par Cl. Marot, M. Jan Poitevin, M. Seve Lyonnois, et autres, 1v (Lyons, 1555); melodies ed. in Pidoux, i
Psalmodie de 41 pseaumes royaux, fidelement traduits en bien-sonnants vers françois … et coronnez en chef d'un royal sonnet, inspirant divine affection, 4vv (1559)
[Les 150 psaumes de David] (Lyons, 1560), lost [works by Jambe de Fer]
Cent et cinquante pseaumes de David, mis en rime francoise par Cl. Marot et Th. de Bèze, 4, 5vv (Paris, 1561), lost
Les 22 octonnaires du psalme CXIX de David traduicts par Iean Poictevin, 4vv (1561), lost
Les 150 pseaumes de David, mis en rime francoise par Cl. Marot et Th. de Bèze: avec les 10 commandements de la loy, 4, 5vv (Lyons, 1564); 2 ed. in Douen
Les 150 pseaumes de David mis en rime francoise par Cl. Marot et Th. de Bèze avec un sonnet sur la devise du roy Charles IX … seconde édition, 4, 5vv (Lyons, 1564)
Salve salutaris, motet, 4vv, 1547[2]; ed. in Dobbins
Comme le cerf, psalm, 4vv, 1559[14]; ed. in Douen
Femme qui honneur veult avoir, chanson, 4vv, 1552[4]
Odes (Horace), lost (see Lesure)

HOWARD MAYER BROWN

James, Harry (Haag) (*b* Albany, GA, 15 March 1916; *d* Las Vegas, NV, 5 July 1983). American jazz and popular trumpeter and bandleader. He began playing professionally at an early age with his father's circus band, and worked for a year with Ben Pollack (1935–6) before becoming a leading member of Benny Goodman's band (1937). James's exciting playing was given great prominence by Goodman, and is shown at its most typical on his recording of *Ridin' High* (1937, on the album *Jazz Concert, no.2*, Col.). After leaving Goodman in late 1938 James formed his own big band, which by the early 1940s had an enormous following. This was one of the first big bands to add a string section. One of its greatest hits was *You Made Me Love You* (1941, Col.), on which James delivered the melody in a highly sentimental manner with a distinctive, wide vibrato. Further wartime successes featuring the singers Helen Forrest (*I Don't Want to Walk without You*, 1941, *I Cried for You*, 1942, Col.) and Dick Haymes (who replaced Frank Sinatra) made the band even more popular than Glenn Miller's. James reorientated towards jazz from the mid-1940s. He appeared in several films, including *Springtime in the Rockies* (1942, with his second wife, the film star Betty Grable), *Best Foot Forward* (1943) and *The Benny Goodman Story* (1955), and in the 1950s made regular tours with the band, travelling to Europe in 1957. From the 1960s to his death, although he spent long periods in Nevada, he performed frequently in New York and occasionally toured abroad.

James's admiration for the playing of Louis Armstrong never overwhelmed his individuality; he was noted for the boldness of his style, the richness of his tone, his range and his stamina. The popularity that he gained with his bravura performances of such test pieces as *Carnival of Venice* and *Flight of the Bumble Bee* (both 1940, Var.) has tended to obscure the fact that he was a very fine jazz improviser, possessing a verve that enhanced many small-group and big-band recordings. A collection of his scores and other materials is held in the American Heritage Center of the University of Wyoming in Laramie.

JOHN CHILTON/R

James, Henry (*b* New York, 15 April 1843; *d* London, 28 Feb 1916). American novelist. He received an eclectic and cosmopolitan private education, thus gaining the intimate knowledge of Europeans and Americans that he displays so prominently in his writings. James ranks as one of the most acclaimed writers and critics of the USA, but after 1876 he made his home in England and in 1915 became a British citizen.

The best-known operatic adaptations of James's fiction are Benjamin Britten's *The Turn of the Screw* (1954) and *Owen Wingrave* (1971), both based on novels of the same titles. Other well-known operas include Thea Musgrave's *The Voice of Ariadne* (1974; based on James's short story *The Last of the Valerii*), Oakley Hall's *The Portrait of a Lady* and Douglas S. Moore's *The Wings of the Dove* (1961). Dominick Argento (1988) and Philip Hagemann (1988) wrote operas based on *The Aspern Papers*, and the novel *Washington Square* was the basis of *L'hérétière* (1974) by Jean-Michel Damasse as well as operas by Catherine Sloper (1978) and Thomas Pasatieri (1976).

MICHAEL HOVLAND

James, (Richard) Ifor (*b* Carlisle, 30 Aug 1931). English horn player. His mother was a soprano and his father a notable brass band cornet player. He studied at the RAM in London with Aubrey Brain, and in 1953 joined the Hallé Orchestra, where he later played as principal; in 1955 he became principal of the Liverpool PO. In 1964 he moved to London to concentrate on solo repertory; he also freelanced with many London orchestras and played with the Philip Jones Brass Ensemble. He has specialized in playing high Baroque parts on the B♭/F-alto horn, conferring a new degree of acceptability on that instrument. He has given the first performances of concertos by Fricker and Hoddinott, and works by McCabe, Whettam and Wilfred Josephs. During the 1970s he took up conducting brass bands, and has commissioned works from composers outside this field, including Edward Gregson (Tuba Concerto). He was appointed to teach at the RAM in 1964 and the RNCM in 1972, and in 1983 became professor at the Hochschule in Freiburg.

James has contributed to British horn playing a fusion of the style of Aubrey and Dennis Brain with the technical facility of brass band playing: he excels in fast technical passages, and has an expressive response to melodic line in music of all periods; unlike most British players he is prepared to use a degree of vibrato. His recordings include Bach's Brandenburg Concertos with Benjamin Britten, concertos by Haydn, Mozart and Richard Strauss, and ensemble works.

OLIVER BROCKWAY

James, John [Jack] (*d* London, *c*1745). English organist and composer. Having unsuccessfully competed for various London church jobs, on 12 March 1730 James was elected to the organist's post at St Olave, Southwark. His annual salary of £25 was reduced in 1732 to £20 and then restored to the original amount in April 1734. Nevertheless, two years later, on 27 April 1736, he informed the members of the vestry that he intended to resign. He then moved on, it appears, to St George-in-the-East (in 1738), but there is no surviving documentary evidence to confirm this.

James's curiously undistinguished career is explained by the character of the man himself: according to Hawkins, James not only 'paid very little attention to his interest' but was 'so totally devoid of all solicitude to advance himself in his profession, as to prefer the company and conversation of the lowest of mankind to that of the most celebrated of his own profession'; his manners too 'were to so great a degree sordid and brutal, that his associates were butchers and bailiffs, and his recreations dog-fighting and bull-baiting'. Even worse, he 'indulged an inclination to spirituous liquors of the coarsest kind ... even while attending his duty at church'. It has not been possible to establish whether the John James buried at St George-in-the-East on 25 July 1746 was the organist. A son, Handel James, was a Thames waterman.

As a player and extempore performer on the organ James was evidently admired by his contemporaries, but seemingly very little of his own music was actually written down, and apart from three songs — *Ye mortals that love drinking* (*c*1735), *Ye thirsty souls* (*c*1735) and *Celinda* (*c*1740) — none of it was published during his lifetime. A funeral anthem, written for himself, also survives (in *GB-Lbl*) and there are a number of organ voluntaries in a variety of manuscript sources (chiefly *Bu* Shaw-Hellier 812, *Lco* (5 ed. H.D. Johnstone, Oxford, 1986), *Lbl*, *Ldc*,

Mp and the private collection of Guy Oldham). There are also at least five (possibly seven) pieces composed for the Microcosm, a huge astronomical clock with attached barrel organ built by Henry Bridges of Waltham Abbey. Four of these were published anonymously in *A Collection of Voluntaries* in 1770 and were later included (together with a double fugue in C to be found in *Lco*) in a so-called 'Microcosm Concerto' printed in Edward Jones's *Musical Remains* (1796) where they were arranged for the harp and attributed to Handel. Completed in 1733, the clock was widely exhibited in Britain and in colonial America; its central mechanism (but not the organ) is preserved in the British Museum.

H. DIACK JOHNSTONE

James, Philip (*b* Jersey City, NJ, 17 May 1890; *d* Southampton, NY, 1 Nov 1975). American composer and conductor. He studied the organ with J.W. Andrews, J.F. Bridges and Alexandre Guilmant, and composition with Homer Norris, Rubin Goldmark, Rosario Scalero and Elliott Schenck, with whom he also studied conducting. He received a baccalaureate degree from City College, CUNY (1910), and an honorary doctorate from New York College of Music (1946). During World War I he served in the 308th Regimental US Army Band and after the armistice became associate conductor of General John Pershing's American Expeditionary Forces General Headquarters Band. He went on to conduct the Broadway production of Victor Herbert's *My Golden Girl*. He co-founded and conducted the New Jersey Orchestra (1922–9) and conducted the Little Bamburger Orchestra in its weekly broadcasts on WOR radio (1929–36). In 1923 James assisted Albert Stoessel in founding the music department at New York University. He acted as department chair from 1934 to 1955. He also served as secretary of the MacDowell Association, vice-president of the Institute of Arts and Letters, president of the Society for the Preservation of American Music, and as a juror for the Naumburg award, the Prix de Rome and other competitions.

James's choral works are strongly influenced by English cathedral music and his Welsh heritage, while his orchestral works respond to French and German late-Romanticism. Progressive in their use of polyrhythms and polytonality, these works reveal a mastery of orchestration. The compositions for organ are virtuoso in nature and the songs, in a Victorian style, were popular with major artists of the time.

WORKS
(*selective list*)

INSTRUMENTAL

Orch: Col. Averill March, band, 1917; Ov. in Olden Style on French Noëls, 1926; Song of the Night, sym. poem, 1931; Station WGZBX, suite, 1931; Suite, vn, vc, db, str orch, 1933; Bret Harte Ov. no.3, 1934; Gwalia (A Welsh Rhapsody), 1937; Festal March 'Perstare et praestare', band, 1942; Sym. no.1, 1943; E.F.G. Ov., band, 1944; Sym. no.2, 1946; Miniver Cheevy and Richard Cory (melodramas), spkr, orch, 1947; Fanfare and Ceremonial, march, band, 1955

Chbr and solo inst: Pensée d'automne, org, 1907; Meditation à Ste Clotilde, org, 1915; Fête, org, 1921; Org Sonata no.1, 1929; Suite, ww qnt, 1936; Alleluia-Toccata, 1949; Passacaglia on an Old Cambrian Bass, org, 1951; Requiescat in pace, org, 1955

VOCAL

Sacred choral (all with org): Mag and Nunc, D, S, T, B, SATB, 1910; By the Waters of Babylon (Ps cxxxvii), anthem, 1920; The Nightingale of Bethlehem (cant., F.H. Martens) S, A, B, SATB, 1920; The Lord is My Shepherd (Ps xxiii), anthem, S, SATB, 1926; Hark! A Thrilling Voice is Sounding (16th-century, trans. E. Caswall), anthem, 1958; Mass in Honor of St Mark, rev. 1966

Secular choral: I Know a Maiden Fair to See (H.W. Longfellow), madrigal, SATB, 1913; General William Booth Enters into Heaven (V. Lindsay), TTBB, tpt, trbn, perc, 2 pf/(pf, org), 1932; The World of Tomorrow (V. Hitchcock, rev. H. Thompson) (cant.), SATB, orch, 1938; Skyscraper Romance (A. Bonner) (cant.), S, B, SSA, pf, 1949; Chorus of Shepherds and Angels (W.H. Auden) (cant.), SSA, str orch, 1956

Solo (all 1v, pf): Transit (A.McC. Sholl), 1914; Evening (W. Griffith), 1919; The Victory Riders (T. Garrison), ballad, Bar, 1919; My Heart is Like a Sweet-Toned Lute (Martens), 1927; Uncertainty (M. Moore), 1945

D. ROYCE BOYER

James Taylor Quartet [JTQ]. British funk-jazz group. Led by James Taylor on the Hammond organ, it spearheaded the acid jazz movement of the mid-1990s. Leading the changes to dance music and pop caused by acid house, their instrumental début LP included furious organ reworkings of the theme to the television series 'Starsky and Hutch'. The cornerstone of their next album, *Mission Impossible* (Re-elect the President, 1987), was also a cover of a theme tune; it was followed by *The Moneyspyder* (Re-elect the President, 1987), *Wait a Minute* (Urban, 1988), *The First 64 Minutes* (1988) and *Get Organised* (Pol., 1989). JTQ continued to release albums between 1990 and 1995, notably *Do Your Own Thing* (Pol., 1990) and *In the Hands of the Inevitable* (Acid Jazz, 1995), and toured the UK and Europe. Their live shows became a focus of the acid jazz movement – an antidote to the increasing use of technology in dance music – producing albums such as *Absolute*, *The JTQ Live* (both 1991) and *The BBC Sessions* (Nightracks, 1995). JTQ struggled to cross-over into mainstream success, recording *Party to the Bus Stop* (1992) and *Stratosphere Breakdown* (1995) as the New Jersey Kings. Finally touring the USA in the late 1990s, they gained new critical acclaim from US journals, a part on the film soundtrack to *Austin Powers* (1997) and production work for Tina Turner.

IAN PEEL

Jamet, Marie-Claire (*b* Reims, 27 Nov 1933). French harpist. She studied under her father, Pierre Jamet, at the Paris Conservatoire, gaining *premiers prix* for the harp (1948) and chamber music (1951). She made her début with the Pasdeloup Orchestra in 1950, and was principal harpist with the ORTF PO from 1957, being given special solo status with the ORTF National Orchestra in 1963. From 1976 to 1992 she was solo harpist with the Ensemble InterContemporain under the direction of

Boulez. She was a professor at the Paris Conservatoire (1984–95) and from 1980 to 1995 she taught at the Ecole Normale de Musique. With her husband Christian Lardé as flautist she re-formed the harp quintet established by her father; the ensemble performed widely from 1959 to 1978. Jamet has given a number of important premières, including works by Jean-Michel Damase, Alain Bancquart, Ton-That-Tiêt (*Chu Ky VII*) and Boulez (*Répons*), in addition to chamber works by Jean Françaix and Yoshihisha Taira. She is a Chevalier of the Légion d'Honneur.

ANN GRIFFITHS

Jamet, Pierre (*b* Orléans, 21 April 1893; *d* Gargilesse, Indre, 17 June 1991). French harpist. He studied the piano from the age of five; in 1905, with the patronage of Gustave Lyon, he took up the cross-strung chromatic harp. Alphonse Hasselmans heard him play and persuaded him to take up the pedal harp instead; he entered Hasselmans's harp class at the Paris Conservatoire at the age of 16, winning a *premier prix* in 1912. In March 1917, after working on a pedal harp version with the composer, he took part in the first performance of Debussy's Sonata for flute, viola and harp, written the previous year with the chromatic harp in mind. This led to a first performance of Debussy's *Danse sacrée et danse profane* on the pedal harp, with the composer at the piano. In 1922 Jamet joined the Quintette Instrumental de Paris, which from 1944 was known as the Quintette Pierre Jamet. Many works for the quintet's combination of flute, harp and string trio were written by, among others, Roussel (1925), Françaix (1932), Daniel-Lesur (1946) and Jolivet (1954). Jamet was solo harpist at the Paris Opéra, 1936–59, and of the Concerts Colonne, 1938–48. From 1948 to 1963 he was professor of the harp at the Paris Conservatoire. In 1962 he founded the Association Internationale des Harpistes et Amis de la Harpe, and after his retirement he organized annual international masterclasses and a harp festival in Gargilesse. Jamet was an Officier of the Légion d'Honneur and a Chevalier de l'Ordre des Arts et Lettres.

ANN GRIFFITHS

Jammers, Ewald (Karl Hubert Maria) (*b* Cologne-Lindenthal, 1 Jan 1897; *d* 26 June 1981). German librarian and musicologist. He studied musicology (with Schiedermair), history, German philology and ethnology at Bonn University (1914–17, 1919–24), taking the doctorate in 1924 with a study of the Jena song manuscript; he passed the state philological examination in 1925. After working as a student assistant at the State Library of Saxony in Dresden (1925–7), and passing the professional librarianship examination at the Leipzig University Library (1927), he became assistant librarian until 1944, and then Bibliotheksrat at the Dresden State Library, having had charge of its department since 1931. After a period teaching in a Gymnasium at Bergheim (1946–50), he held a post as librarian at the Düsseldorf State and Civic Library (1951–2). From 1951 he was a Bibliotheksrat (from 1957 Oberbibliotheksrat) at Heidelberg University Library, where from 1953 he was in charge of the manuscript department. From 1956 he was also honorary professor in early music at Heidelberg University. He retired in 1962.

Jammers's numerous wide-ranging works on early music history concentrated on Byzantine music, the chorale, Minnesang and medieval polyphony. His creative, independent and comprehensive assessments stemmed from a detailed knowledge of musicology, Germany philology and theology, combined with systematically integrated palaeographical, linguistic, rhythmic, melodic and harmonic analysis.

HANS HEINRICH EGGEBRECHT

Jam session [Jam]. An informal gathering of jazz or rock musicians playing for their own pleasure. Jam sessions originated in the 1930s as spontaneous diversions among jazz musicians, free from the constraints of professional engagements; they also served the function of training young musicians in a musical tradition that was not formally taught and accepted in music schools and academic institutions until the 1960s. In the late 1930s jam sessions came to be organized by entrepreneurs for audiences; this undermined their original purpose, and by the 1950s true jam sessions were becoming increasingly rare. However, in the 1970s and 80s jam sessions made a comeback among younger jazz musicians, especially those trained in conservatories. The loft scene of the late 1970s, so-called because of its establishment of abandoned lofts as concert venues in the Village in New York, can also be seen as a quasi-commercial offshoot of the jam session. The idea of a jam session, or simply jamming, has come to mean any meeting of musicians, in private or public, where the emphasis is on unrehearsed material and improvisation.

GUNTHER SCHULLER

Jan. *See* MAISTRE JHAN.

Jan, Gauhar (*b* Allahabad, 1870; *d* Mysore, 1930). North Indian vocalist of Armenian Jewish descent. Her mother Malka Jan took her in 1881 to Benares (now Varanasi), where they embraced Islam. Influenced by Malka Jan's benefactor, mother and daughter began to train in music and dance under the Lucknow *kathak* dancer Ali Bux. Gauhar Jan later received training from Ustad Nazir Khan of Rampur, Pyare Saheb of Calcutta and Maharaj Bindadin of Lucknow.

Her first public appearance was in 1887 for the Maharaja of Darbhanga, Bihar, who appointed her as court musician-dancer. She soon became one of the most sought-after vocalists in India, performing in concerts at conferences in Lucknow, Allahabad and Calcutta. At the peak of her career, she lived in an ostentatious residence in Calcutta and commanded fees of Rs 1000 per peformance. Some of the earliest Indian records were Gauhar Jan's. She was one of the most celebrated and flamboyant courtesan singers of the early 20th century, having sung in 20 languages and made some 600 78 r.p.m. recordings. She and Janaki Bai, another courtesan singer, were paid Rs 3000 per recording session. She was popular in both North and South India and is said to have been equally competent in both Hindustani and Karnatak styles. She is also said to have sung *khayāl* just as well as *thumrī*, *holī* and light songs and she is credited with a number of original compositions. She served as court musician in Rampur and later in Mysore, where she spent her last years.

AMELIA DUTTA

Jan, Karl von (*b* Schweinfurt, 22 May 1836; *d* Adelboden, 4 Sept 1899). German writer on ancient Greek music. After studying at Erlangen, Göttingen, and Berlin, where he taught for a time, he held posts in Gymnasien at Landsberg, Saargemünd and Strasbourg. He was outstandingly well equipped both as classical scholar and as musician, and between 1859 and 1899 he published numerous articles on fundamental aspects of his subject; many of these articles are still valuable. A major contribution was his admirable *Musici scriptores graeci* (1895), which remains the standard text for many of the technical theoretical treatises (see GREECE, §I); this volume also included a summary list of manuscripts, now superseded by RISM, B/XI (1988). In 1899 Jan published

as a supplement a collection of editions and transcriptions of the then-known fragments of ancient Greek music, which was not superseded until the appearance of Egert Pöhlmann's *Denkmäler* in 1970.

Janáček, Leoš [Leo Eugen] (*b* Hukvaldy, Moravia, 3 July 1854; *d* Moravská Ostrava, 12 Aug 1928). Czech composer. His reputation outside Czechoslovakia and German-speaking countries was first made as an instrumental composer, with a small number of chamber and orchestral pieces written between his operas, which he considered his main work. The balance has now been largely redressed and he is regarded not only as a Czech composer worthy to be ranked with Smetana and Dvořák, but also as one of the most substantial, original and immediately appealing opera composers of the 20th century.

1. Early life and studies (1854–80). 2. The Organ School, folk music, the early operas (1881–1904). 3. From 'Jenůfa' in Brno (1904) to 1917. 4. The last years (1917–28). 5. Sources of inspiration. 6. Musical style. 7. Operatic style and conventions. 8. Writings. 9. Posthumous reputation and scholarship.

1. EARLY LIFE AND STUDIES (1854–80). Janáček was born into the Czech cantor tradition. Both his grandfather (Jiří, 1778–1848) and his father (Jiří, 1815–66) were teachers, musicians and leading cultural figures in the poor communities they served. In 1838 Janáček's father married Amálie Grulichová and in 1848 he moved with her and their five children to a full teacher's post in the village of Hukvaldy. Leoš was the fourth of the eight children born there and to relieve the crowded home he was sent, when he was 11, to be a chorister at the Augustinian 'Queen's' Monastery in Old Brno. Brno played a vital role in Janáček's development; in particular the choirmaster of the monastery, Moravia's leading composer, Pavel Křížkovský, took a keen interest in his musical education.

Janáček was to follow his family's teaching tradition and by September 1869, after completing his basic schooling, including three years at the German Realschule in Old Brno, he went on a state scholarship to the Czech Teachers' Institute (c.k. Slovanský Ústav ku Vzdělání Učitelů). He passed his final examinations (excelling in music, history and geography) in July 1872 and served the compulsory two-year period of unpaid teaching at a school run by the institute. In 1872 he also took over the monastery choir when Křížkovský was transferred to Olomouc Cathedral. Janáček's hard, thorough work enabled him to perform a wide variety of music at the services – Palestrina, Lassus, Haydn and contemporary Czech and German works – and led to his appointment (1873) as choirmaster of a working-men's choral society, Svatopluk (founded 1868). Janáček raised the level of the society from its Liedertafel traditions, moving the concerts out of the taverns into the new Besední Dům, and widened the repertory. It was for Svatopluk that he wrote his first choruses (JW IV/1–8), mostly, simple four-part settings of folk texts in the style of Křížkovský.

In the autumn of 1874, after completing his period of unpaid teaching, Janáček obtained leave to study with Skuherský at the Prague Organ School for a year, during which he completed the first two years of the three-year course. Extremely poor, with no money even for a piano, he was unable to take full advantage of the musical life of Prague. Several student exercises, mainly church and organ works (JW II/1–6; VIII/1–4), date from this period. Returning to Brno in 1875 he resumed all his previous activities: teaching and conducting the monastery choir and Svatopluk, from which, however, he resigned in October 1877, nine months after becoming conductor (1876–88) of the Czech middle-class Beseda choral society (founded 1860). After a few months he turned the male-voice Beseda choir into a mixed body, and, with help from the monastery choir and pupils from the institute, he mustered a force of 250 singers for large-scale choral works, Mozart's Requiem (1878) and Beethoven's *Missa solemnis* (1879). He also championed Dvořák, introducing to Brno audiences his Moravian Duets and Serenade for Strings, a model for Janáček's own works for string orchestra, the Suite JW VI/2 (1877) and the *Idylla* JW VI/3 (1878). He came to know Dvořák personally and the two men went on a walking tour of Bohemia in the summer of 1877.

Janáček had returned to the Prague Organ School (June–July 1877) for a month of special study in which he worked through binary and ternary forms (JW VIII/5). Two years later, on a year's paid leave from the Teachers' Institute, he enrolled at the Leipzig Conservatory (October 1879–March 1880). There his teachers included Oscar Paul (whose history lectures he also attended at the university) and Leo Grill. As in Prague, poverty prevented his taking full advantage of his new surroundings: he attended the Gewandhaus concerts, but never went to the opera. Most of Janáček's Leipzig compositions are lost but his frequent letters to Zdenka Schulzová chronicled his life in this period almost to the hour, and from them we know exactly what Janáček wrote. Although initially attracted by Paul, rather than to Grill, who had shown little interest in his first, overambitious offering, a piano sonata (JW X/5), Janáček soon settled down to a course of extremely hard study under the strict and systematic Grill. With him he progressed, via 14 two- and three-part fugues JW X/6 and seven romances for violin and piano JW X/8, to a set of piano variations JW VIII/6 and a series

of rondos JW X/14. From the two surviving pieces, one of the romances (JW VII/3) and the Schumannesque piano variations, it is clear that Janáček had acquired smoother and more imaginative technique than in his earlier instrumental works. Although he mentioned in his letters a plan of continuing his studies with Saint-Saëns in Paris, he enrolled, after the Easter vacation, at the Vienna Conservatory (April–June 1880), where he studied with Franz Krenn. His pieces at Vienna were more ambitious: a four-movement violin sonata JW X/16, entered for the Vienna Conservatory competition, nine songs of a song cycle *Frühlingslieder* JWX/17, entered for the Vincenz Zusner competition, and three movements from a string quartet JW X/18. Janáček failed to win either competition; none of these pieces survive.

2. THE ORGAN SCHOOL, FOLK MUSIC, THE EARLY OPERAS (1881–1904). Before leaving for Leipzig Janáček had already become engaged to his piano pupil Zdenka Schulzová (1865–1938), the daughter of the director of the Teachers' Institute, Emilian Schulz. By the time he returned to Brno Janáček had been recognized by the education ministry as a 'full teacher of music' (May 1880) at the Teachers' Institute and he and Zdenka were married on 13 July 1881, shortly before Zdenka's 16th birthday. In addition to all his earlier activities Janáček began to realize his ambition of founding an organ school in Brno. A committee was established under the auspices of the Jednota pro Zvelebení Církevní Hudby na Moravě (Society for the Promotion of Church Music in Moravia) and on 7 December 1881 Janáček was appointed director; teaching began in September 1882, at first in the Teachers' Institute until separate premises were acquired (1884). From 1886 to 1902 he also taught music at the Old Brno Gymnasium. At the Beseda he added to the repertory some of Dvořák's major choral works as well as works by Brahms, Smetana, Tchaikovsky, Saint-Saëns and Liszt; he established singing and violin classes (1882), a permanent orchestra and (1888) piano classes. When the Provisional Czech Theatre opened in Brno in 1884 he founded a journal to review its activities. This was the *Hudební listy*, published by the Beseda, with Janáček as editor and chief contributor. The journal lasted until 1888; Janáček's relationship with the Beseda became increasingly difficult and he resigned in 1890. His married life, too, was no easier. The tensions between a fervently patriotic Czech and very young girl from a staid German middle-class background proved unbearable and the couple separated from the autumn of 1882 (soon after the birth of their daughter Olga) until the summer of 1884. A son, Vladimír, was born in 1888 but died of meningitis in 1890.

After his return from Vienna Janáček virtually stopped composing, partly through lack of time, partly because his studies in Vienna had ended disappointingly and partly because he was unsure where his talents lay. During this period he wrote only a few choruses, notably the *Mužské sbory* ('Male-Voice Choruses') JW IV/17 and the mixed-voice *Kačena divoká* ('The Wild Duck') JW IV/18. The latter was written for a collection of school songs (1885), requested by his friend Berthold Žalud; the former was dedicated to Dvořák, who was startled by the boldness of the modulations.

In 1887, three years after the opening of the Brno Czech theatre, Janáček began to compose his first opera, *Šárka* (JW I/1), to a verse libretto by the well-known Czech poet Julius Zeyer. Zeyer had intended the work for Dvořák (who toyed with it) and consequently refused the unknown and inexperienced Janáček permission to use his text. By then Janáček had already written and revised the work; it remained unperformed until 1925. Janáček had already begun working with the philologist and folklorist František Bartoš (1837–1906). The two men had known each other from Czech cultural activities in Brno but Janáček's post (from 1886) at the Czech Gymnasium in Old Brno, where Bartoš had taught since 1869, brought them together as colleagues and led to their collaboration on two important editions of Moravian folksongs: a collection of 174 songs (JW XIII/1, published 1890) and the massive definitive collection of 2057 songs and dances (JW XIII/3, published 1899–1901). Even before his work with Bartoš, Janáček had shown an interest in the folk music of his native region. Disappointed by the fate of his first opera, Janáček now immersed himself completely in a study of Moravian folk music.

In addition to the folksong editions he brought out with Bartoš he popularized his discoveries in a series of orchestral dances and dance suites such as the *Valašské tance* ('Valachian Dances') JW VI/4 and the Suite for orchestra JW VI/6. That Janáček thought he had found his true direction is signalled by the opus numbers, op.2 and op.3, which he added to these two works, the only ones to be so honoured (the putative 'op.1' is thought to be the early piano variations JW VIII/6). Folkdances similarly formed the basis for two stage works: *Rákoš Rákoczy* JW I/2, hurriedly put together for the 1891 Jubilee Exhibition in Prague, and the one-act opera *Počátek románu* ('The Beginning of a Romance') JW I/3, which consists of little more than folkdances with added voice parts. The libretto was adapted from a short story by Gabriela Preissová, who wrote the play *Její pastorkyňa* ('Her Stepdaughter'). When Janáček realized the far greater possibilities of this play as the basis for an opera, also in a Moravian rural setting, he became dissatisfied with his unassuming but favourably received earlier work and withdrew it after four performances (1894).

Janáček worked on *Jenůfa* (as the opera has become known abroad) for two or three years, during which period he wrote the prelude, *Žárlivost* ('Jealousy'), and Act 1. But then he stopped. His life was immensely busy at the time, since he was teaching at several institutions including the Teachers' Institute (to 1902), the Old Brno Gymnasium (to 1896) and the Organ School, of which he remained director. In addition to his folksong editions with Bartoš, there were preparations for the Prague Ethnographic Exhibition in 1895 (Janáček was responsible, with Lucie Bakešová, for the Moravian contribution). Janáček's busy life, however, may not account fully for his stopping work on *Jenůfa*. The rather different idiom of the later two acts suggests that he may have found his technique inadequate to the demands of the libretto and spent about five years rethinking his approach to composition and to opera in particular. This theory is supported by his writings of the period, which in analyses, introductions and music reviews examine a wide range of compositions by other composers (the process begins with his enthusiastic review (JW XV/149) of Tchaikovsky's *Queen of Spades*, which he regarded as a new sort of opera). An important catalyst was the gradual formulation of his ideas on 'speech melody', his habit of jotting down in musical notation scraps of overheard speech, often

with notes on the circumstances, and making inferences about the emotional state of the speaker. Some indication of the new direction is given by the cantata *Amarus* JW III/6, written directly after Janáček's trip to Russia (summer 1896), and the earliest work which suggests the style of the mature composer. Its deep personal resonance (the subject matter reflected in Janáček's lonely life at the monastery) may have been a factor; it is significant that the keyboard miniatures (*Po zarostlém chodníčku*, 'On the Overgrown Path', JWVIII/17) that he began writing in 1900, shortly before he resumed work on *Jenůfa*, are also autobiographical.

Towards the end of 1901 there are indications that he was working on Act 2 of *Jenůfa*. A few months later his daughter Olga, who was now almost 21 and wanted to become a Russian-language teacher, left for Russia to stay with Janáček's younger brother František, who had settled in St Petersburg. Within a month she caught typhoid fever and although she recovered enough to return to Moravia by the summer, her constitution, already undermined in childhood by chronic rheumatic heart disease, was fatally weakened. Her long illness cast a shadow over the composition of the rest of the opera: Janáček played it to her four days before she died, on 26 February 1903.

Jenůfa was a very different work from its predecessor. The success of its première in Brno (21 January 1904) was however probably due more to its Moravian setting than to the provincial audience's awareness of its stature. The performances suffered from a tiny and inadequate orchestra and Janáček, moreover, made substantial alterations before the work was published (1908). He had submitted both *The Beginning of a Romance* and *Jenůfa* to the Prague National Opera before settling for Brno premières. Karel Kovařovic, chief conductor at Prague, eventually went to see *Jenůfa* at Brno but still declined to take it up; possibly he remembered Janáček's scathing criticism (JW XV/70) of his own opera *The Bridegrooms* many years earlier (1887).

1. Leoš Janáček and Zdenka Schulzová before their marriage in 1881

3. FROM 'JENŮFA' IN BRNO (1904) TO 1917. In 1904, the year of the première of *Jenůfa*, Janáček reached the age of 50 and resigned from his post at the Teachers' Institute. He concentrated on composition and on running the Organ School, which with a bigger grant acquired a new building in 1908 to accommodate 70 students. Janáček remained director until 1919, refusing an offer in 1904 of the directorship of the Warsaw Conservatory.

Janáček submitted his next opera, *Osud* ('Fate') JW I/5 (1903–7), to the newly opened theatre in the Prague Vinohrady district. Although it was accepted there, production was continually postponed and despite Janáček's threatened lawsuits it was never performed during his lifetime. Its exploration of unusual subject matter (it was semi-autobiographical) and a widening of the musical language mark an advance on *Jenůfa*, but its clumsy libretto by Janáček and a 20-year-old schoolteacher has stood in its way. Libretto problems also dogged his next opera, *Výlet pana Broučka do měsíce* ('The Excursion of Mr Brouček to the Moon') JW I/6. Janáček began it in 1908 and after working to little effect with a long succession of 'librettists', he made virtually his own libretto from Svatopluk Čech's satirical novel, composing many versions until he temporarily abandoned it in 1913.

Most of his other compositions during this period were choruses and small instrumental works. For piano he added more pieces to *On the Overgrown Path*. Together with another suite *V mlhách* ('In the Mists') JW VIII/22 and the sonata JW VIII/19 these constitute almost all Janáček's major solo piano music. The sonata had been first performed in 1906 at the Klub Přátel Umění v Brně (Club of the Friends of Art in Brno), founded in 1900 and whose music section Janáček inaugurated in 1904. The club provided the opportunity for performing small-scale works, for instance the Piano Trio JWX/22, based on Tolstoy's novella *The Kreutzer Sonata*, written for and performed at a Tolstoy evening at the club in 1909. *In the Mists* was Janáček's entry for a competition sponsored by the club and was published by it towards the end of 1913. The club also published the vocal score of *Jenůfa* (in 1908) and the 'ballad for orchestra' *Šumařovo dítě* ('The Fiddler's Child') JW VI/14 (in 1914).

The finest works from this period are the three great male-voice choruses, *Kantor Halfar* ('Halfar the Schoolmaster') JW IV/33 (1906), *Maryčka Magdónova* JW IV/34–5 (1906–7) and *70.000* JW IV/36 (1909). These were the culmination of the line of choruses that Janáček had written continuously from his first compositions for Svatopluk. Their texts, drawn from Petr Bezruč's *Slezské písně* ('Silesian Songs'), had a deep social and patriotic appeal for Janáček and perhaps this fact, together with their physical setting near his native Hukvaldy, explains the strong response they elicited from him.

By his 60th birthday, shortly before the outbreak of World War I, Janáček was respected in Brno as a composer, as an active folklorist and as the director of the chief music teaching institution in Moravia. Outside Moravia he would have been known, if at all, by fewer than 30 printed compositions, mostly connected with his

folk and teaching activities and a few smaller choruses, keyboard pieces and liturgical works. Very few of these had been performed outside Brno. Of his larger works his folk ballet *Rákoš Rákoczy* had been staged in Prague in 1891; his orchestral prelude *Žárlivost* ('Jealousy') JW VI/10, now detached from *Jenůfa*, was performed in Prague in November 1906 (conducted by František Neumann); his *tableau vivant Otče náš* ('Our Father') JW IV/29 was given a concert performance in Prague a few days later. The cantata *Na Soláni čarták* ('The Čarták on Solaň') JW III/7, requested for the 50th anniversary of the male choir Orlice, was duly given its première in 1912, and performed by the choral society Žerotín in Olomouc in 1913. The most promising of these larger ventures was a performance of *Amarus* under Vilém Zemánek with the Czech PO in October 1912, since Zemánek then asked Janáček to write a new orchestral piece for the Czech PO, *The Fiddler's Child*. However, the first performance, scheduled for March 1914 under Janáček, was aborted during rehearsals and the piece was not given until 1917.

Janáček's best hope of fame at the time would have appeared to be his choruses. The Smetana Choral Society in Plzeň had come across the print of Janáček's 1885 male-voice choruses JWIV/17 and performed the third chorus, 'Ach vojna, vojna' ('Ah, the War'), in Plzeň with such success in March 1905 that that summer it was taken on tour to Spa, Belgium: the first public presentation of any Janáček work outside the Czech lands. The Plzeň Smetana Society went on to perform the remaining choruses from the group and Janáček showed his gratitude by sending it manuscripts of the first two Bezruč choruses (JW IV/33 and 35). At about the same time Janáček had chanced to hear the Moravian Teachers' Choral Society and had sent the conductor Ferdinand Vach two choruses (nos.1 and 3) from his still unpublished set JW IV/28. Vach's choir gave the first performance the same year with such success that the choruses became standard repertory pieces, toured in Prague, Vienna, Munich and Paris as well as many locations in Moravia. Even more remarkable was the choir's espousal of the much more ambitious second setting of *Maryčka Magdónova* (JW IV/35), which it performed many times in 1908, and later toured as far as Russia.

By now Janáček was at least more prosperous: in 1910 he and his wife moved into a house specially built for them in the grounds of the Organ School's final location in Kounicova ulice; and in 1912, instead of the usual holidays in Moravia, the couple ventured abroad to the Adriatic coast of present-day Croatia. A plan for a return visit two years later was abandoned because of the outbreak of World War I.

For Janáček, however, the most significant event of the period was the acceptance late in 1915 by the Prague National Theatre of his opera *Jenůfa*, after the persistent intervention of his friend Dr František Veselý, Veselý's wife Marie Calma Veselá and the critic Karel Šípek. Kovařovic's resistance had been overcome only with great difficulty and with the condition that he revise the opera. Thus on 26 May 1916 Janáček's opera was performed in Prague, carefully prepared in a cut and reorchestrated version by Karel Kovařovic with a fine cast including Gabriela Horvátová as the Kostelnička. It was an instant and sustained success. Universal Edition published Kovařovic's version in piano score and full score and energetically promoted productions in Vienna, Berlin and other German cities. The Prague German writer Max Brod, who had reviewed the opera enthusiastically, made the German translation. Brod became Janáček's champion, the translator of most of his later operas and wrote the first book about him.

This single event transformed Janáček's fortunes and above all his confidence in himself. He had abandoned *Brouček* in 1913. Now he took it up again and with a fresh set of librettists, notably Viktor Dyk and F.S. Procházka, he revised the existing opera, adding a final 'epilogue' act. Shortly after, he approached Procházka about a sequel, a second excursion to 15th-century Hussite wars. This was completed remarkably quickly, by the end of 1917. In January 1918 Janáček discarded the added 'epilogue' act of the first excursion and so the two excursions found their final form as a 'bilogy' now entitled *Výlety páně Broučkovy* ('The Excursions of Mr Brouček') JW I/7, published by Universal Edition in 1919 and staged the following year at the Prague National Theatre.

There were also other consequences of Janáček's new fame. His married life, never easy, had lost much of its meaning at the death of the Janáčeks' surviving child Olga, and although he and Zdenka had eventually achieved a stable and reasonably contented companionship, it was easily upset by Janáček's interest in other women. By far the most serious of his affairs was that with Gabriela Horvátová. She had been keenly supportive at the time of the Prague *Jenůfa* and Janáček was swept off his feet by this assertive woman. He attended most of the repeat performances in Prague of *Jenůfa* in order to see her and took a holiday with her in Luhačovice in 1917. Their passionate relationship is documented by an incomplete correspondence and by a devastating account in Zdenka Janáčková's memoirs. By the time the affair had cooled (in 1918), Zdenka had attempted to commit suicide and the couple had gone through a form of divorce, supervised by their two lawyers but not the courts, whereby Janáček continued to support Zdenka and she continued to look after him.

4. THE LAST YEARS (1917–28). In the years between the Brno and the Prague premières of *Jenůfa* Janáček was not composing at full capacity. His chief interest was opera and there was little chance of his operas being performed outside Brno and thus little incentive for further works. *Jenůfa*'s success in Prague and abroad changed this. The amazing creative upsurge in a man well into his 60s can also be partly explained by his patriotic pride in the newly acquired independence of Czechoslovakia shortly after the end of the war in 1918. The event had been anticipated in Brouček's second excursion, where Janáček's intention was not so much satiric (as in the first excursion) but patriotic – an appeal to a more heroic past – and it was to the first president of the Czechoslovak Republic, T.G. Masaryk, that the score was dedicated. Similar intentions are signalled by dedications of two orchestral pieces: *Ballada blanická* ('The Ballad of Blaník') JW VI/16, written in autumn 1919 and also dedicated to Masaryk, and *Taras Bulba* JW VI/15, begun in 1915, completed in 1918 and dedicated to the Czech armed forces.

A final reason for Janáček's remarkable late flowering was his friendship with Kamila Stösslová, the wife of an antiques dealer David Stössel. Janáček had met the couple on holiday in Luhačovice in the summer of 1917 and fell in love with Kamila, then almost 27 (Janáček was 62) and

strikingly beautiful. Zdenka Janáčková at first welcomed Janáček's new friend, finding the good-natured if unsophisticated Kamila a useful ally against Horvátová, while David Stössel, then in the army, helped the Janáčeks with provisions during the war. Since the Stössels were then living in Přerov, in Moravia, visits between the two couples happened quite frequently and Zdenka and Kamila corresponded even more regularly than Janáček did with Kamila. In this way the relationship continued for ten years. Its ups and downs are documented in over 700 letters from Janáček to Kamila (only a few of hers survive) and taken as a whole they provide a rich source for Janáček's personal world in the final years of his life. Until April 1927 Kamila successfully kept Janáček at arm's length and the much-damaged relationship between Janáček and his wife improved.

The creative gains were immediately apparent. He began his song cycle *Zápisník zmizelého* ('The Diary of One who Disappeared') JW V/12 within days of returning from his meeting with Kamila in July 1917; the subject matter of a young farmer deserting his home and parents to live with a gypsy woman had resonances in Janáček's attraction to the dark-haired and dark-skinned Kamila. Further fantasies may have been fuelled by his next new opera *Káťa Kabanová* JW I/8 (1920–21), in which the heroine is drawn away from her constricted family life by the arrival of a handsome stranger. In his letters to her Janáček stressed his identification of Kamila with both the gypsy (in the *Diary*) and Káťa, as he did with the heroines of his next two operas *Příhody lišky Bystroušky* ('The Cunning Little Vixen') JW I/9 (1922–3) and *Věc Makropulos* ('The Makropulos Affair') JW I/10 (1923–5).

In betweeen he found time to compose incidental but by no means insubstantial works. The First String Quartet JW VII/8, written at the request of the Czech Quartet, was completed in less than a month in 1923. The same year he began a four-movement symphonic work *Dunaj* ('The Danube') JW IX/7; he wrote the wind sextet *Mládí* ('Youth') JW VII/10 in the spring of 1924 and the Concertino for piano and chamber ensemble JW VII/11 early the next year.

By the time he had passed his 70th birthday Janáček's change in fortune was remarkable. He had retired from the Brno Organ School (which in 1919 joined the Beseda music school to become the Brno Conservatory) and instead gave composition masterclasses (in Brno) for the Prague Conservatory (1920–25). Though *Brouček* had only grudgingly been produced in Prague in 1920 (the only Janáček operatic première outside Brno), all his new operas were taken up immediately by Brno, followed by Prague (*Káťa Kabanová*: Brno 1921, Prague 1922; *The Cunning Little Vixen*: Brno 1924, Prague 1925; *The Makropulos Affair*: Brno 1926, Prague 1928). Even the early *Šárka* had been remembered and was performed in Brno in 1925. Universal Edition published each new opera as it came out; in 1924 *Jenůfa* received important premières at Berlin (under Kleiber) and at the Metropolitan, New York. *The Cunning Little Vixen* had been presented as part of the ISCM Festival in Prague in the spring of 1925; in September the chamber section of the festival took place in Venice and Janáček went there to hear his First Quartet given a very warm reception. One of the honours that marked his 70th birthday was the first honorary doctorate from Masaryk University in Brno (28 January 1925), a distinction he never ceased to cherish, signing correspondence and all his compositions 'Dr Ph. Leoš Janáček'.

With *Makropulos* out of the way Janáček took a year off from opera. In the spring of 1926 he wrote his largest purely orchestral work, the five-movement Sinfonietta JW VI/18, which was given a triumphant first performance by Václav Talich and the Czech PO in June that year. Shortly after completing the work he went to England for a week at the invitation of a committee organized by Rosa Newmarch, with whom he corresponded and who had enthusiastically taken up his cause. His visit coincided with the General Strike, but a concert, which included most of his chamber works to date, took place as planned, at the Wigmore Hall (6 May). In the second half of the year he wrote other substantial works: the *Msa glagolskaja* ('Glagolitic Mass') JW III/9; a miniature piano concerto (the Capriccio for piano left hand and chamber ensemble JW VII/12 commissioned by the pianist Otakar Hollmann, who had lost his right hand in World War I); and extended the eight movements of his *Říkadla [1]* ('Nursery Rhymes') written in 1925 (JW V/16) to 18 (*Říkadla [2]* JW V/17).

His fame continued to grow. While *Jenůfa* was performed in dozens of German opera houses, *Káťa Kabanová* began to penetrate into Germany with performances in Cologne (1922, under Klemperer) and Berlin (1926). His native Hukvaldy unveiled a plaque in July 1926, and on 10 February 1927 he was elected, together with Schoenberg and Hindemith, a member of the Prussian Academy of Arts. The Sinfonietta began to be widely known; Klemperer conducted performances in 1927 in Wiesbaden, New York and Berlin. The *Glagolitic Mass*, which received its première in Brno in December 1927, was performed in Prague in 1928. Meanwhile Janáček began work on his last opera, *Z mrtvého domu* ('From the House of the Dead') JW I/11, and Janáček's friendship with Kamila Stösslová moved on to a more intense level. At Easter 1927, having drafted Act 1 of *From the House of the Dead*, Janáček went at Zdenka's suggestion (she wanted him out of the house during redecorating) to spend a few days with the Stössels. During two walks Kamila and Janáček reached a new understanding and Janáček thereafter addressed her with the intimate form 'Ty' (she continued to use the more formal address 'Vy') and signed his letters 'Leoš' instead of his full name and title. It seemed that no physical intimacies took place (Janáček triumphantly celebrated their first kiss only the next summer). Nevertheless something had happened: Kamila now evidently accepted his love and he wrote ever more frequent letters to her (in which he fantasized about marrying her and about her bearing his child) and found excuses for frequently visiting her, to the increasing disquiet of his wife. The new state of their relationship was celebrated in his String Quartet no.2 *Listy důvěrné* ('Intimate Letters') JW VII/13 which, as he graphically put it, had been written in fire, unlike earlier works 'written only in hot ash' (letter to Stösslová, 18–19 May 1928). The quartet was composed in a few weeks (29 January–19 February 1928) as a break from *From the House of the Dead*, which he was finding increasingly oppressive, though by the time of his regular summer holiday in Luhačovice on 1 July 1928 the opera had been completed in autograph, copied out by his two trusted copyists, and Janáček had checked through the first two acts.

In 1921 Janáček had bought a cottage in Hukvaldy, to which in 1924 and 1925 he added land from the adjacent

forest. Like Luhačovice, which he visited most summers from 1903, this became a favourite holiday place, but while the visits to the fashionable Moravian spa of Luhačovice had a social dimension, Janáček retreated to Hukvaldy to do the concentrated creative work that his increasingly public life in Brno made difficult. That he had been born there made the Hukvaldy ties especially strong. In July 1928, after three weeks in Luhačovice, he went to Hukvaldy and was joined for the first time there by Kamila, her 11-year-old son Otto and, for the first few days, her husband. Janáček took with him the sketches of *The Danube*, *Schluck und Jau* JW IX/11 (incidental music for a production of Gerhart Hauptmann's play, which he had reluctantly taken on) and the fair copy of Act 3 of *From the House of the Dead*. During one of their expeditions Janáček caught a chill, which rapidly developed into pneumonia. On 10 August he was taken to the nearest large town, Moravská Ostrava, where he died at 10 a.m. on Sunday 12 August. His funeral, held in Brno on 15 August, was a large public event at which the final scene of *The Cunning Little Vixen* was played. Shortly after his death his Second String Quartet was given publicly (Janáček had been present at private performances); in April 1930 *From the House of the Dead* received its première in a much-revised version prepared by Janáček's pupils Břetislav Bakala and Osvald Chlubna. Zdenka Janáčková died ten years after her husband, in 1938; Kamila Stösslová died in 1935.

5. Sources of inspiration. Janáček is sometimes categorized as a nationalist composer. Moravian nationalism certainly formed an important part of his outlook, especially from about 1888 for ten years or so when all his creative endeavours centred on Moravian folk music. While Bohemian and western Moravian music looks west, sharing the regularities of instrumentally-based German and Austrian folk music traditions, eastern Moravian folk music (i.e. Janáček's focus of interest) shares the melodically and rhythmically richer irregularities of word-based Slovak, Hungarian and Romanian folk musics. In this sense Janáček drew on sources that brought him closer to his contemporary Bartók than to his Bohemian predecessors Dvořák and Smetana. He collected Moravian folk music, edited it, arranged it and used it as the basis for his own music. Many of Janáček's early choruses were based on Moravian folksong texts, his ballet *Rákoš Rákoczy* and his second, third and fourth operas all had Moravian settings, a couple of his works had 'Moravian' worked into their genre descriptions (*Jenůfa*) or even in their titles (*Our Father* was originally entitled *Moravian Our Father*), two of his most successful, choruses (from JW IV/28) are in Moravian dialect. The big gain for Janáček was the enrichment of his personal style and his emancipation from the mainstream straitjacket. Nevertheless it was a creative phase that he transcended, so that a knowledge of Moravian folk music is not a prerequisite for understanding his mature works. Janáček's home province of Moravia is Czech-speaking; to define Jaráček as a Moravian composer (rather than a Czech one) would be to turn a Moravian awareness into a Moravian separatism that was never part of his political agenda. Janáček always regarded the Bohemian capital Prague as his capital city, which he loved to visit. Two of his nine operas (*Brouček* and *Makropulos*) and several choruses, e.g., those to words by F.S. Procházka (JW IV/40-41, 44), were set in Prague. He would have been uncomfortable with the later separation of the Czech lands from Slovakia since Moravia shared not only a border with Slovakia, but many elements of musical folk culture; Janáček felt at home in the Slovak capital of Bratislava and took several holidays in Slovakia. Altogether he was proud of the new Czechoslovak Republic and happy to define himself as a 'Czechoslovak composer'. Like any Czech of the period he had received much of his education in German (including a year at the conservatories of Leipzig and Vienna) and, in later life, dealt very ably in German in his professional dealings. But a defining element from an early age was his anti-German, and anti-Austrian, stance. This is understandable, in a patriot eager for liberation from the Austrian Habsburg control of the Czech lands, but Janáček took an uncompromising line. He made his young bride (from a German–Czech mixed marriage) speak only Czech with him (having written his love letters to her in German), refused to speak German to her German-speaking relatives, and discouraged her contacts with her family. In his public life covert anti-Germanism was evident in his enthusiastic support for Czech-language institutions such as the Czech Readers' Circle, the Brno Beseda and the Brno Organ School, and in his Russophilism. Russia, with its well established musical and literary traditions, was by far the largest independent Slavonic nation at the time and it offered both example and potential protection to Czechs of the period (who preferred to ignore its high-handed treatment of its Polish-speaking subjects). Janáček's active Russophilism began in 1896, when he visited Russia to see his brother František. He wrote up his impressions in an extensive newspaper article (JW XV/150) and the next year he founded the Russian Club in Brno, which actively promoted a knowledge of Russian language, literature and music. He was delighted when his daughter Olga

2. Leoš Janáček outside his house in the grounds of the Brno Organ School

decided to become a Russian language teacher and encouraged her fateful trip to Russia in 1902. Russian literature inspired two early, incomplete operas and several chamber works: *Pohádka* ('Fairy Tale') JW VII/5 for cello and piano, with a programme based on Vasily Zhukovsky, and the Piano Trio and First String Quartet, both based on Tolstoy's tale of marital infidelity, *The Kreutzer Sonata*. The Russian advances at the beginning of World War I encouraged Janáček to hope that the Russians might liberate his country from the Austrians, and inspired two compositions, the Violin Sonata JW VII/7 and *Taras Bulba* JW VI/15, based on Gogol's grisly and chauvinist tale of Cossack military life (see JW XV/247).

By 1915, however, the Austrian authorities had closed down the Russian Club and although it was reconstituted after the war, it fizzled out partly because the anti-Austrian stance which it fuelled had softened in the liberated country. Furthermore Janáček's pro-Russian sympathies did not extend to the Bolshevist government that had taken over. But his love of Russia and its culture remained. Two of his later operas, *Káťa Kabanová* and his last major work *From the House of the Dead*, are based on Russian literature, the latter composed straight from the Russian original, with Janáček translating into Czech as he went along. Vocal music predominates in Janáček's output, particularly choruses (mostly for unaccompanied male voices) and operas. From *Šárka* to the end of his life there was scarcely any time in which he was not writing, revising or at least planning an opera. Writing choruses served as a preparation and as a substitute for operas, and as soon as his opera writing began in earnest after *Jenůfa's* acceptance in Prague his interest in choruses waned. Apart from a few trifles the only chorus after 1916 was *Potulný šílenec* ('The Wandering Madman') JW IV/43 (1922) with words by Tagore, whose visit to Prague in 1921 had made a great impression on Janáček. It is significant that the most vital and important choruses, the Bezruč group, were written in a period of particular frustration with his operatic career. Janáček set these choruses in a more obviously dramatic manner than he had used previously, with indirect speech turned into direct speech and solo voices to suggest individual characters, a technique he extended memorably in two later works. In *The Wandering Madman* he added a solo soprano to the male-voice chorus to sing the questions of the young boy, while in *The Diary of One who Disappeared* he turned a song cycle for solo tenor into a chamber cantata by including an offstage chorus of three solo female voices and a mezzo-soprano to represent the gypsy.

He wrote chamber and solo instrumental works reasonably frequently after 1900 (his first since his student works), mostly for local performances at venues such as the Friends of Art Club, but, like the two operas of this period (*Fate* and *Brouček*), most of them were problematic and were subjected to continual revision. He destroyed the final movement of his piano sonata JW VIII/19 (and attempted to destroy the two remaining movements), his Piano Trio was evidently destroyed, and *Fairy Tale* and the Violin Sonata were both extensively remodelled. Similarly when Janáček succeeded as an operatic composer in his final decade, the chamber works of the period (*Youth*, Concertino, Capriccio and two string quartets) were all written quickly and confidently.

Apart from a burst of orchestral arrangements of folkdances in the early 1890s as part of his efforts to promote Moravian folk music, Janáček turned to large-scale orchestral compositions only in his 60s. All were tone poems of some sort (Janáček seems to have been unable to finish the *Danube* symphony because of his lack of clarity about a piece overloaded with programmatic elements). Even the Sinfonietta is programmatic. His original title 'Military Sinfonietta' bears witness to the inspiration of the opening movement in a military band display in Písek; its remaining movements, according to a programme that Janáček described (in JW XV/298), were connected with his feelings about his adopted city Brno.

Almost all Janáček's mature works had a programmatic origin, although purely musical considerations predominated once the piece was begun. Often the programmatic beginnings may seem no more than a curiosity, as in the Concertino and the Sinfonietta: the first, a set of animal scenes; the second, glimpses of Janáček's Brno and neither essential for understanding these works. Janáček's strongest creative impulse, however, was erotic. Both his string quartets had powerful erotic origins. It is possible to see the succession of his operatic heroines as a commentary on his attitude to Kamila Stösslová: from wishful thinking in *Káťa* and *The Vixen* (the neglected wife who takes a lover; the vixen as fulfilled wife and mother) to sober reality in *Makropulos* (the fascinating but unmoved Emilia Marty, 'cold as ice'). In his last opera he turned his back on female stage characters, though he identified Kamila with Akulina, the tragically murdered wife in Šiškov's tale.

Before the advent of Kamila Stösslová, Janáček's operas were both less powerfully charged and less successful, the only exception being *Jenůfa*, where, however, he seemed to have put much of his own relationship with his daughter Olga into the central Jenůfa–Kostelnička relationship. The two operas directly after *Jenůfa* were built round men, the satirical antihero of Mr Brouček and in *Fate* the composer Živný, a portrait of himself.

Conventional religion meant little to him. As his wife recorded, he never went to church, never prayed and paid no attention to his children's religious upbringing. The liturgical pieces of his student days are some of his dullest and least individual and, as in his explanation of the programme of the *Glagolitic Mass* (see letter to Stösslová, 24–5 December 1926), the urges for this work are partly pan-Slavonic, partly pantheistic and partly erotic (a nuptial mass for himself and Kamila). Some notion of his own attitudes is evident in his choice of opera plots, concerned with death but also with renewal and forgiveness. What could superficially be taken as 'tragic' plots are skewed both by Janáček's libretto changes and by his comforting music. With a few deft additions, including the death of its main protagonist, Janáček turned Těsnohlídek's lighthearted tale of a vixen and a forester into a profound tragicomic fable which comprehends and comes to terms with death. The death of Emilia Marty (another addition) became one of Janáček's most magnificent finales, his music investing Čapek's conversation piece with monumentality and a consoling warmth.

Something of this optimism, coupled with the grit and determination that made Janáček persevere until he won recognition in his 60s, is evident in the subtitle of the Capriccio 'Vzdor' ('Defiance'), and in the nature of the piece, a concerto for piano left hand, perilously poised

[Katěrina: 'You are like a mother to me. How can you think otherwise? And Tichon loves you in the same way.'
Kabanicha: 'You ought to keep quiet! No one asked you to speak! Don't stick up for him.']

against a bizarre and ungainly ensemble of brass and flute/piccolo. Old age and fame, however, helped Janáček unbend and relax; these years saw the affectionate wind suite *Youth* and the cheerful *Nursery Rhymes*.

6. Musical style. Although Janáček was born before the last wave of Romantic composers – Mahler, Wolf, Strauss and Reger – his most characteristic music was written at the end of his life, in the 1920s, and belongs in sound and spirit with the music of the younger generation around him. This is not to deny that his musical language was grounded in the 19th century. Despite some modal tendencies from Moravian folk music and the whole-tone inflected passages which began to appear in his music after his flirtation with French music around 1900, his harmony operates functionally, and the dissonance which had grown from the characteristic major 9th formations in *Jenůfa* and *Fate* into the increasingly harsh combinations in *From the House of the Dead* reinforces rather than negates the tonal framework. Janáček's treatment of tonality was generally instinctive; the tonal plan of a piece is often more the result of his gravitating towards his favourite keys (D♭/C♯, A♭) than of long-range planning. In the mature works a piece seldom ends in the key in which it began. Although key signatures linger on in the instrumental works up to the First String Quartet (in his operas Janáček abandoned them as early as *Brouček*) their use becomes increasingly haphazard. Some of the later examples – in the *Diary* or *Taras Bulba* – are for very short passages in works basically without key signatures where the music has slipped into A♭ and, as if to show he was on home ground, Janáček signalled the fact with a temporary key signature of four flats.

Janáček's music often operates by contrasting types of harmony. In opera this procedure is particularly useful in enhancing characterization; for example, Káťa's music stands out against the Kabanicha's harsher, more dissonant idiom (ex.1). The lushness of Káťa's music, typical of Janáček's poignant 'dolce' manner, is not so much one of rife chromaticism (though chromatic alteration has a part in it) but an intensity built up through added chords and appoggiatura formations (creating a type of melody that often seems to overshoot its mark) and by the gentle tension of 6–4 chords. Other harmonic contrasts with a diatonic norm that Janáček employed are whole-tone inflected harmony, octatonic harmony and harmony built up from 4ths, a procedure that gives rise to many of his typical melodic patterns made up of 4ths, 5ths and 2nds (ex.2). The use of harmonically contrasting blocks to build up a musical structure is found equally in his non-operatic music, as with the 'normal' version (ex.3*a*) of the Adagio tune in the Second String Quartet, third movement, compared with the more dissonant and constricted version that follows it (ex.3*b*) and with the jubilant, wide-spaced major version (ex.3*c*).

Another type of contrast that Janáček's music exploits is one of conflicting elements, as for instance in the last movement of the Violin Sonata, where a tiny repetitive fragment on the violin interrupts the would-be broad-arched tune of the piano. Sometimes such 'interruption motifs' are repeated to form a disruptive ostinato, as in the overture to *Makropulos*, where a high degree of tension is generated by the precarious balance of melodic foreground and disruptive background (ex.4). The tension of these rapid ostinato figures is increased by their generally jagged outlines with awkward jumps. Janáček's mature music progresses mostly by repetition and juxtaposition; accordingly much of its formal organization consists of piling up repetitive blocks (as in the Sinfonietta) and in a variety of rondo forms. The few sonata forms he employed depend on melodic contrast rather than on tonal tension. He had little sympathy with another feature of Austro-German tradition, counterpoint, and after his

Ex.4 *The Makropulos Affair*, Prelude

student works what little counterpoint there is seems to be the result of a montage of added or staggered parts, for instance in the complex textures of the late choruses.

Janáček's handling of voice parts is idiosyncratic. Most characteristic are his mercilessly high tenor parts, both for soloists and chorus. His preference for high solo voices is clear from the *Glagolitic Mass*, where the soprano and tenor have most of the important solos, while the contralto makes her first appearance as late as the 'Svet' (Sanctus). It is typical that in *Jenůfa* the four main solo parts are given to two tenors and two sopranos. Janáček used lower female voices less to depict older women than to suggest provocative eroticism (Zefka in the *Diary*, Varvara in *Káťa*, the prostitute in *From the House of the Dead*) or for travesty roles (in *From the House of the Dead* and *The Vixen*). It is in the latter opera, with the complications of its animal world, that he specified children's voices.

In his non-operatic vocal music, the impact of Janáček's speech-melody theories is less evident than in his operas. *The Diary of One who Disappeared*, for instance, despite its embryonic dramatization in the added singer for the gypsy and instructions for lighting, preserves the metrical and rhyme schemes of its poems to such an extent that the voice parts sound more structured and conventionally melodic than those of his operas from the same period. In *Nursery Rhymes* Janáček made a feature of the obvious sing-song verse, sometimes employing it to achieve a deliberately non-realistic vocal style with two or three voices to each part. The *Glagolitic Mass* is similarly distanced from realistic word-setting by the use of an archaic text. It is not then surprising that all Janáček's choral-instrumental music often resorts to instruments at crucial moments. Most of the *Nursery Rhymes* have an instrumental rather than a vocal climax; the five-movement palindrome of *Amarus* includes largely orchestral outer movements; at the heart of the 'Věruju' (Creed) in the *Glagolitic Mass* there is a long orchestral commentary on the Incarnation and Crucifixion; the 13th piece of the *Diary*, where the young man loses his virginity, is a piano solo.

Janáček's orchestration, one of the most distinctive aspects of his style, took time to evolve. His earliest attempts, as in the *Lachian Dances*, are unexceptional, overfull with no evidence of a particularly acute ear. Janáček wrote his first two operas in piano score and then orchestrated (the scoring of the third act of *Šárka* was even undertaken by a pupil) but he wrote his third opera, *Jenůfa*, straight into full score, a procedure that bespeaks both a greater confidence and the greater importance of the orchestral sound in the initial inspiration. By the time of *Káťa* he had evolved his charateristic sound: although capable of great sweetness, there is a roughness caused by the unblended layers of orchestra and by the seemingly unidiomatic writing in individual parts (awkward figurations, especially in rapid ostinatos; use of extreme registers). In time he increasingly abandoned the middle ground for the extremes; the first sketches for *From the House of the Dead* reveal how often he thought instinctively in terms of three low trombones and three high piccolos, a sound image only partly modified in later versions.

Janáček's orchestration, like most aspects of his music, often has a programmatic origin, for example many of the uses of unusual instruments (the xylophone in *Jenůfa* and *Makropulos*, the sleigh bells in *Káťa*). Dostoyevsky's

3. *Page from the autograph score of Janáček's 'The Cunning Little Vixen', composed 1922–3 (CZ-Bm)*

From the House of the Dead provided a wealth of 'natural' sounds (chains rattling, anvil blows, saws and work tools) which found their way into the final score; several characters are associated with individual instruments. But despite the array of percussive instruments, Janáček's last opera shares with some of the late instrumental music a frequently spare texture. One reason for this is that with this opera he drew his own staves, a habit that he had adopted many years earlier in his non-operatic works. Although his instrumental writing remained taxing, he became accurate and economical with instrumental effects. The bizarre combinations in the Capriccio and the Sinfonietta are well calculated, and the colouristic devices in the Second String Quartet (e.g. the extensive use of *sul ponticello*) are all vividly effective in performance.

7. Operatic style and conventions. A distinctive feature of Janáček's post-*Jenůfa* operas is his willingness and ability to explore territory not normally cultivated by opera composers. *Káťa Kabanová*, Ostrovsky's tale of adultery on the banks of the Volga, played safe, possibly after the difficulties of *Fate* and *Brouček*, but all the others are extraordinary subjects for opera. 'Soon he'll even be setting the local column in the newspaper', Čapek is said to have declared when he heard that Janáček wished to set his play *The Makropulos Affair*, much of which is taken up with the exposition of a complicated legal case. But that was one of the more conventional. The local Brno newspaper, *Lidové noviny*, did in fact provide the basis for Janáček's previous opera, about the adventures of a clever vixen. Dostoyevsky's prison memoir, lightly disguised as reportage, was the subject of Janáček's final opera.

Janáček was his own librettist for all the play-based operas (*Jenůfa*, *Káťa* and *Makropulos*; *Šárka* was intended as an opera libretto from the outset) and made serviceable librettos chiefly by ruthlessly condensing the originals. But for *The Beginning of a Romance* (based on a short story), *Fate* (Janáček's own scenario) and partly in *Brouček* (two satirical novels), he employed librettists, though taking a steadily increasing part himself. His frustration in failing to find a satisfactory partner for *The Excursion of Mr Brouček to the Moon* resulted in his writing his own librettos for *The Vixen* and *From the House of the Dead*.

Janáček began writing operas in the familiar moulds of Czech nationalist opera. *Šárka*, a serious opera based on Czech mythic history, was inspired by Smetana's *Libuše* (1881; in terms of story *Šárka* is actually its continuation). *The Beginning of a Romance*, a comic one-act village opera, Janáček himself likened to Blodek's *In the Well* (1867). The serious village opera that Janáček attempted in *Jenůfa* is sometimes regarded as a new departure but even here there were Czech models at hand, most obviously by J.B. Foerster (e.g. his *Debora*, composed 1890–91, performed 1893). Foerster's *Eva* (composed 1895–7, performed 1899), furthermore, was based on a play by Gabriela Preissová. What set apart Janáček's *Jenůfa* and Foerster's *Eva*, begun almost simultaneously, were three factors. Though both composers attempted to evoke a Moravian atmosphere, Janáček, with his Moravian roots, his extensive fieldwork, and his absorption of the patterns of Moravian folksong at a deep level, was able to present folk music not as a colourful exoticism but as part of his distinctive style. Second, while Foerster turned Preissová's prose play into verse before he began work, Janáček left *Her Stepdaughter* in prose, and thus wrote the first Czech prose opera. This is not to deny that much of Act 1 of *Jenůfa* in particular falls into regular musical periods, with the text somewhat adapted and lines repeated to generate the equivalent of regular verse lines.

The third factor is that Janáček began to cast adrift from obvious set numbers. The remains are there, ranging from simultaneous duets and a trio, to song-based folk scenes and a full-scale slow concertato ensemble for four soloists and chorus. Ensembles persist into *Fate* and *Brouček*, but by *Káťa* and *Makropulos* there are few passages where solo voices combine for more than a bar or two. Janáček thus became more dependent on the monologue and most of his librettos from *Jenůfa* onwards provide many such confessional or narrative opportunities. Their frequency in *From the House of the Dead* is one reason why he was so attracted to this seemingly unoperatic material.

During the writing of *Jenůfa* Janáček began to formulate the ideas about 'speech melody' which were to influence his approach to the voice line and indeed his whole musical idiom for the rest of his life. He frequently stressed how important such work was to an opera composer. Speech melodies were in no sense potential thematic material for Janáček but, rather, study material to help him produce sung stylizations of the irregular patterns of everyday speech. The result was a gradual move away from regular metrical structure in the voice parts of his operas (regular phraseology generally remains in the orchestra) to a more varied and irregular approach using a greater variety of rhythms. Characteristically, the voice parts begin after the beat and end before it, the notes increasingly bunched over the phrase climax. The process is graphically demonstrated by the revisions that Janáček made in 1918 to the 1888 voice parts of his first opera, *Šárka* (ex.5).

In the play-based operas such as *Jenůfa*, *Káťa Kabanová* and *The Makropulos Affair*, Janáček could rely on a ready-made dramatic structure, though he occasionally overrode the act climaxes (*Káťa Kabanová*). But in the novel-based operas, *Brouček* and in particular *The Vixen* and *From the House of the Dead*, he was able to make tiny scenes cohere by bedding them into the orchestral continuum, a process facilitated by the increasing structural importance of the orchestra in his post-speech-melody works. He made little use of leitmotif and only sporadic use of a few reminiscence themes. Instead his approach was to build up sections – often a whole scene – on a single motif subjected to ostinato and variation techniques. The second half of Act 2 of *The Vixen* is bonded by the structural arch of the offstage chorus; the first half consists of a set of variations on the theme of the opening prelude.

In *Jenůfa* Janáček came to terms with Moravian folksong and his notion of speech melody. The next two operas, *Fate* and *The Excursions of Mr Brouček*, show a further development in their reactions to fashionable European composers such as Gustave Charpentier and Puccini. Janáček much admired *Louise*, and learnt from its urban setting and characters (and the urban waltzes that go with them). In Act 1 of *Fate* Janáček imitated Charpentier's large individualized chorus. Much longer-lasting, however, was Janáček's use of offstage symbolic chorus: the 'voice of the Volga' in *Káťa Kabanová*, the 'voice of the forest' in *The Cunning Little Vixen* or the mysterious male-voice chorus that repeats Marty's words

Ex.5 *Šárka*, Act 2

[Šárka: 'That woman is Vlasta']

at the end of *The Makropulos Affair*. All this can be traced back to the 'call of Paris' (an offstage chorus) that finally lures Louise away from her home. Puccini's influence can be detected in *Brouček* and *Káťa Kabanová*. Later, Janáček seems to have picked up something of Debussy (in *The Vixen*) and even of Berg (in *From the House of the Dead*).

The uncertainty suggested by the extensive revisions that Janáček made to *Jenůfa*, *Fate* and *The Excursions of Mr Brouček* contrasts strikingly with the confidence he showed in the last four operas, by which time he had consolidated an individual style and a set of operatic conventions. The musical language is essentially tonal, though coloured by modal inflections, and in places surprisingly dissonant. But even in the harshest works, such as the final two operas, there are sudden and intense lyrical flowerings: this tension between extremes is one of the sources of Janáček's creative energy. Janáček's melodic style was sometimes dismissed by early commentators as 'short-breathed'. Concision in all aspects is now seen to be one of his chief virtues: most of the operas are over in two hours. The dramaturgy of the later ones is engagingly direct, achieving striking effects by means of stark juxtapositions. In *From the House of the Dead*, Luka's tale of his horrific beating is followed by the return of Petrovič after similar treatment by the prison guards. The torment and release of the eagle is juxtaposed with the torturing and release of Petrovič. *From the House of the Dead*, his slackest libretto in terms of events, is fuelled by music of an intense driving force, startling even for Janáček. The means of his art often seem trivial when analysed, the dramaturgy occasionally clumsy or even amateurish, but such factors pale into insignificance in the light of the immense dramatic instincts that Janáček brought to life in his operas.

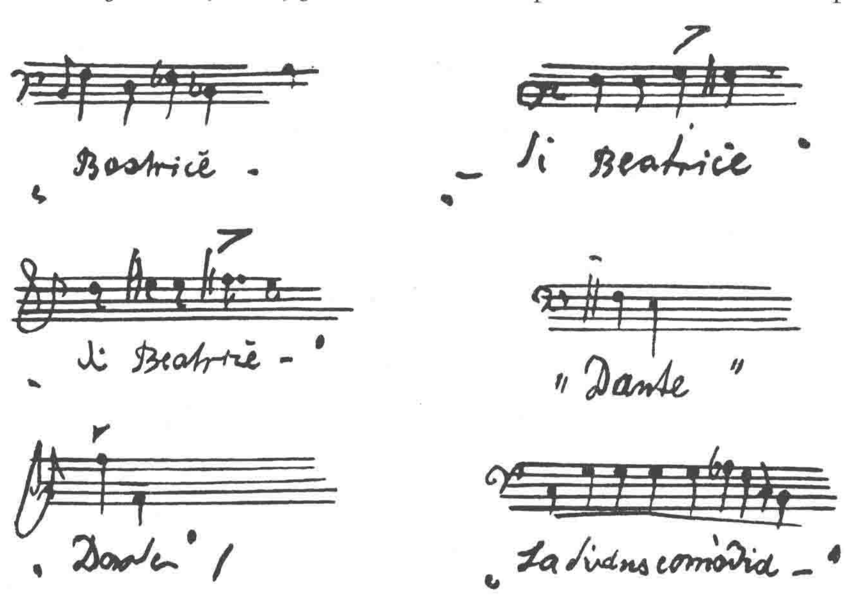
8. Writings. Janáček's achievements as a composer have overshadowed his work in other fields, yet until his 60s he was as important to the musical life of Moravia as a theorist, teacher and folk music authority. His organ school formed the basis for the Brno Conservatory and trained the next generation of music teachers and administrators in the area. His work on folksong stimulated interest and laid the foundations for a more scholarly and systematic approach. His activities in these fields are documented by the surprising quantity of writings he left. The earliest, an article on his old teacher Pavel Křížkovský (JW XV/1), dates from 1875, two years after his earliest compositions. His career as a writer, however, began in earnest eight years later when he founded the musical periodical *Hudební listy* and served as its editor and chief contributor. The periodical came out in the six winter months of each year, at first (1884–5) weekly, then (1885–7) fortnightly and in its final year (1887–8) monthly. In it Janáček reviewed the operas and operettas performed at the newly established Provisional Theatre in Brno. Many of his reviews are short and reveal less about his attitude to the works concerned than about their inadequate perfomances, but in a few cases – Gounod's *Faust* (JW XV/63) or Rozkošný's *St John's Rapids* (JW XV/73) – Janáček wrote more detailed introductions, and from time to time offered general observations on the state of opera in Brno and recommendations for its improvement.

His earliest theoretical writings were also published in *Hudební listy*. There were more substantial pieces on topics such as chordal connections, the two-note chord and the triad, and the concept of tonality, serialized over several issues. Many of the ideas expressed were later developed in Janáček's two books on music theory: *O skladbě souzvukův a jejich spojův* ('On the composition of chords and their connections') JW XV/151 and *Nauka o harmonii* ('Harmony manual') JW XV/202. Janáček's theoretical writings are little known today, and, despite his reputation as a composer and his impressive equipment as a theorist, have had no impact on Czech theoretical thought. His harmony manual, designed as a 16-month course, was limited to use at the Brno Organ School apart from two years when his pupil Osvald Chlubna tried to use it at the Brno Conservatory. Janáček's attempt to give it wider currency failed when Universal Edition declined to publish it in a German translation. Part of the reason for its neglect is that it stands outside the traditions of most harmony manuals. Its intellectual roots can be found in Janáček's wide-ranging readings in aesthetic and experimental psychology (notably Helmholtz and W.M. Wundt) with which he sought to justify some of his theoretical principles. At the time, his conclusions, for instance the free connections of any one chord to another, were considered daring. But today its philosophical basis – which traces its way back through the Czech aestheticians Josef Durdík and Robert Zimmermann to the now forgotten Herbart – seems outmoded. Another obstacle has been that it is difficult to understand because Janáček expressed himself poetically or abstractly more often than concretely, and because he employed a home-made and confusing terminology. Janáček was at his most distinctive in his approach to harmony and rhythm. In harmony the succession of sounds and the momentary confusion in the ear when one chord followed another interested him most. The overlapping combination of sounds and the montage of layers in his own compositions may be seen as practical reflections of this theoretical observation. Rhythmically he saw a piece as a hierarchy of layers, each with a distinctive rhythmic personality. Janáček also published articles in *Hudební listy* on the organization of music education in schools and on the teaching of singing, the subject of a further manual, his *Návod pro vyučování zpěvu* ('Singing-teaching manual') JW XV/162. This short work concentrates on pitch and rhythm differentiation, progressing through 100 short exercises to longer two-part pieces with piano accompaniment.

Whereas Janáček's activities as a critic were fitful, confined to three brief periods mostly in three journals – *Moravská orlice* (1875–7), his own *Hudební listy* (1884–8) and *Moravské listy* (1890–92) – he wrote regularly on folk music for over 40 years, from a review in 1886 of a folksong collection by Ludvík Kuba (JW XV/65) to the last article he published, just a few months before he died (JW XV/310). His most substantial and systematic work came in the introductions he wrote to the folksong collections published with Bartoš and his posthumous collection *Moravské písně milostné* ('Moravian Love Songs').

In 1893 Janáček wrote his first article (JW XV/143) for the new Brno daily paper, *Lidové noviny*. For the next 27 years his contributions were sporadic – there was a ten-year gap after 1896 – but from 1921 he was a regular contributor, publishing 40 articles in the eight years up to his death. Janáček's *feuilletons* are short, conceived for a large, popular readership, and deal with every topic that

4. *Design by Josef Čapek for the Sacristan in the 1926 production of Part 1 of Janáček's 'The Excursions of Mr Brouček', National Theatre, Brno*



interested him. Some are autobiographical, painting vivid scenes from childhood cut through with reflections from old age; others are pictures of Janáček's environment, both town and country, and tales from his travels; and there are some amusing and nicely observed descriptions of birds. Many pieces such as his brief account of a lecture on Dante (mostly notations of the few words that Janáček could make out from the Italian; fig.6), or his touching encounter with Smetana's elderly daughter, fallen on hard times, are whimsical evocations of tiny scenes brought to life by the inclusion of snatches of notated speech, in effect springboards for his demonstrations of speech melodies, the most constant theme of his occasional writings. Janáček's *feuilletons* have much the same spirit as his music. His prose comes in short, abrupt phrases, often too compressed and overloaded to reveal its meaning immediately, but with unmistakable energy and force.

9. POSTHUMOUS REPUTATION AND SCHOLARSHIP. Although František Neumann, who had presided over many Janáček premières in Brno, died soon after Janáček, Břetislav Bakala, Neumann's assistant and Janáček's pupil, was able to keep alive a Brno performance tradition, duly passed on to conductors such as Milan Sachs and František Jílek. Janáček's scholarly heritage meanwhile was fostered by Vladimír Helfert, professor of musicology at the Masaryk University in Brno. The university was a major beneficiary of both Janáček's and Zdenka Janáčková's wills and by the outbreak of World War II Helfert had assembled for the university a splendid collection of Janáček's manuscripts and letters (later passed to the Moravian Regional Museum) and had published the first volume of a projected four-volume biography. Activities, halted by the war and by Helfert's death, resumed a decade later with the publication of eight volumes of Janáček's correspondence, his collected writings on folk music (1955), his theoretical writings (1968–74) and his critical writings (forthcoming). Much of the research undertaken by Helfert pupils such as Bohumír Štědroň and Theodora Straková was usefully synthesized in Jaroslav Vogel's biography (1958), which in several editions and languages has remained the standard Janáček biography. In 1978 a collected edition, controversial in its notation policy, was launched and by the end of the century had made available most of Janáček's music apart from those works whose copyright was held by Universal Edition.

For the first two or three decades after Janáček's death performances of his music were mainly given by Czech performers. Although most mature Janáček operas had been performed in Germany, none apart from *Jenůfa* had become repertory works; it was not until 1956 that the legendary Felsenstein production of *The Cunning Little Vixen*, often regarded as Janáček's most accessible opera, aroused much interest abroad. Janáček's operas were first performed in Britain in 1951 but until the 1964 Edinburgh Festival (which featured Janáček) were confined to London and a small band of enthusiasts headed by the Sadler's Wells company and Charles Mackerras. The late 1970s saw the beginnings of the Welsh National/Scottish Opera cycle, which took Janáček's main operas to all the major centres in Britain, and the series of recordings under Charles Mackerras, which helped establish Janáček's operas internationally in a way that the Czech recordings

6. Some examples of speech melodies taken down by Janáček uring a lecture on Dante on 6 June 1921

of the 1950s and 60s had failed to do. By the end of the century Janáček had become one of the most performed 20th-century opera composers, particularly in Britain and Germany, and increasingly in the USA, Italy and France.

Scholarly activities ceased to be the prerogative of Czech scholars, with the founding of the Swiss Leoš Janáček-Gesellschaft (1969), a major Janáček conference in the USA (St Louis, 1988) and a new generation of German, English, American and Italian scholars who devoted university dissertations to Janáček. Universal Edition began issuing new scores of the operas, including authentic versions of *Jenůfa* (hitherto available only in Kovařovic's revision and reorchestration) and *From the House of the Dead* (previously issued in a Romanticized reorchestration). Other important events in the last years of the 20th century were the recording of all Janáček's works, including careful reconstructions of unfinished pieces such as the *Danube* symphony, the Violin Concerto and *Schluck und Jau*, and the publication of Janáček's student letters to his wife, his letters to Kamila Stösslová, the album he kept for Stösslová, Zdenka Janáčková's memoirs and a systematic Janáček catalogue.

JOHN TYRRELL

Janáček Quartet. Czech string quartet. It was formed in 1947 by Jiří Trávníček (*b* Vlaštovičky, nr Opava, 10 Dec 1925; *d* Brno, 16 June 1973) and Miroslav Matyáš (*b* Brno, 7 July 1924; *d* Brno, 25 Dec 1997), violins; Jiří Kratochvíl (*b* Ivančice, 8 Dec 1924), viola; and Karel Krafka (*b* Znojmo, 4 Jan 1921; *d* Brno, 11 July 1984), cello; they were all students in Váša Černý's class at the Brno Conservatory. Their first public concert was given in Brno on 31 October 1947. A study of Janáček's String

Quartet no.1 the next year led to a deep and lasting interest in his music, and after the quartet's successful Prague début in 1949 it adopted the name Janáček Quartet. It first toured abroad that year, to Poland. In 1952 Matyáš was succeeded by Adolf Sýkora (*b* Brno, 5 May 1931), after which the personnel remained unchanged until the death of Trávníček, whose place was taken by Bohumil Smejkal (*b* Brno, 14 Jan 1935). After a Middle East tour in 1955, a successful appearance in West Berlin in January 1956 opened the way to a wider international reputation. The quartet has since toured in all continents and has made frequent visits to countries such as Britain, where it first appeared in 1958. In 1984 Krafka was replaced by Břetislav Vybíral (*b* Přerov, 16 Jan 1955), and in 1989 Kratochvíl was replaced by Ladislav Kyselák (*b* Brno, 27 June 1956). Smejkal retired as leader in 1993 and his place was taken first by Jiří Novotný (*b* Brno, 24 Dec 1956) and in 1996 by Miloš Vacek (*b* Písek, 25 April 1961). In 1994 Vítězslav Zavadilík (*b* Uherské Hradiště, 6 Jan 1951) succeeded Sýkora as second violinist. Through its several changes the quartet maintained a remarkable consistency of style. Outstanding performances of Janáček's quartets have given many audiences their first experience of his music and, apart from Classical and Romantic works, the quartet's repertory regularly includes Bartók, Britten, Novák, Prokofiev and Shostakovich. The quartet performs invariably from memory and this, together with its virtuosity and temperament, its expressive intensity and range of colour, helps to establish a close rapport with its audiences. Several of its recordings have gained international prizes.

ALENA NĚMCOVÁ

Janárčeková, Viera (*b* Svit, 23 Sept 1941). Slovak composer. She studied the piano at the Bratislava Conservatory (1956–61) before attending the Prague Academy of Musical Arts, where she studied with Zuzana Růžičková. She also attended Rudolf Firkušný's piano masterclasses in Lucerne. From 1972 she taught and performed in Germany, settling there in the late 1970s. In 1981 she became a freelance (self-taught) composer, painter and performer. She has developed new instrumental techniques and methods of notation (such as graphic scores). Characteristics of her work include the incorporation of moments of improvisation into fixed musical systems, rhythmic build-ups and the balancing of tension. The overall form of a work tends to be streamlined while its parts are more mobile; her works also feature structured transitions between sound and noise.

Two radio plays have received awards, and her *Lieder auf der Flucht* won first prize in the women composers' competition at Unna in 1987. She also won two prizes at the Mannheim international competition for women composers in 1994, first prize at the Bratislava chamber music competition in 1996 and the Wolfgang Zippel prize in 1997.

DETLEF GOJOWY

Jancourt, (Louis Marie) Eugène (*b* Château-Thierry, Aisne, 15 Dec 1815; *d* Boulogne-sur-Seine, 29 Jan 1901). French bassoonist and teacher. After completing his studies at the Paris Conservatoire with François René Gebauer in 1836, he enjoyed a brilliant career as a bassoonist until 1869, occupying the most important orchestral positions in Paris. At the same time he made frequent appearances as a soloist, making good the lack of a suitable repertory by composing and arranging much music for his instrument. He also carried out over a period of years a number of improvements to the bassoon, in collaboration with various Paris makers. These were adopted at the Conservatoire, where he taught (1875–91), and subsequently became standardized on the French instrument. The most prolific composer of all time for the bassoon, Jancourt published 116 works, including numerous solo pieces, works for wind band, and a *Grande méthode* (Paris, 1847) containing studies and duet sonatas. These still represent a legacy of unique value. His playing was notable for its purity and for a charm of sound which, in its resemblance to the human voice, avoided all elements of the grotesque.

WILLIAM WATERHOUSE

Jander, Owen (Hughes) (*b* Mt Kisco, NY, 4 June 1930). American musicologist. He received the BA in 1951 at the University of Virginia, where he worked with Stephen D. Tuttle. At Harvard University he studied with Nino Pirrotta and took the MA in 1952 and the PhD in 1962. In 1960 he joined the faculty of the department of music at Wellesley College, where he was named Catherine Mills Davis Professor of Music; he retired from Wellesley in 1992. Jander's principal interest has been 17th-century Italian vocal music, especially the works of Alessandro

Stradella. He has guided the progress of the Wellesley Edition Cantata Index Series, a bibliographic key issued in loose-leaf format to facilitate addition and correction and whose entries may be converted to card files by those working with the wealth of cantata literature in the 17th century. Since 1965 Jander has also been general editor of the Wellesley Edition, a more general series than its bibliographic counterpart. In the 1980s he began work on the music of Beethoven, concentrating particularly on extra-musical elements in the instrumental music.

PAULA MORGAN

Jandó, Jenö (*b* Pécs, 1 Feb 1952). Hungarian pianist. He studied the piano first with his mother and later with Katalin Nemes and Pál Kadosa at the Franz Liszt Academy of Music in Budapest, returning in 1974 to work as Kadosa's assistant. His career was launched when he won first prize at the Hungarian National Piano Competition in 1973, and in 1977 he won first prize for chamber music at the Sydney International Piano Competition. He has appeared widely in concert but is best known through his numerous recordings for Naxos, which embrace the complete sonatas of Mozart, Haydn and Beethoven, the complete piano concertos of Mozart and Bartók, Bach's *Das wohltemperirte Clavier* and concertos by Grieg, Schumann, Brahms, Dvořák, Gershwin and Rachmaninoff, as well as numerous works by Liszt and much of the standard chamber repertory. His recordings are, however, notably inconsistent, and range from the rhythmically foursquare to playing of great lyricism and vitality. Despite his formidable technique, Jandó is not primarily a subtle colourist, though his outstanding recordings of Brahms's Second Piano Concerto and Schumann's *Carnaval* suggest no lack of imagination or poetry.

JEREMY SIEPMANN

Janeček, Karel (*b* Częstochowa, Poland, 20 Feb 1903; *d* Prague, 4 Jan 1974). Czech theorist and composer. He studied composition at the Prague Conservatory under Křička (1921–4) and Novák (1924–7). He then taught theory at the Plzeň music school, serving also as conductor of the Plzeň PO and as music critic. He left Plzeň to become professor of composition at Prague Conservatory (1941–6). After the liberation (1945) he helped to establish the Prague Academy (AMU), and from its inception in 1947 was successively lecturer, reader and, from 1961, professor. He also held the administrative posts of vice-dean, dean and vice-rector. In 1956 he obtained the DSc degree for his work in music theory.

During his studies he proved, in a series of piano, chamber and small orchestral pieces, to be a gifted composer, developing Novák's polyphonic style in the rational constructivism of that time. Some of these compositions, such as the Fantasy and Capriccio for Piano op.13 (1933) and the Introduction and Fugue for Piano op.22 (1942), still retain their original freshness. Larger orchestral and choral works (two symphonies, the symphonic triptych *Lenin*, Czech choral psalms), written during and mainly after World War II, show a polished compositional technique but lack the spontaneity of his short pre-war pieces. His work in music theory, which from 1946 became his main preoccupation, represents a valuable and remarkable contribution to Czech musicology. In his textbooks on melody, harmony, musical form and structure he was able to unite aspects of content and form while at the same time showing a lively awareness of the stylistic individuality of a composer's musical expression. His experience as a composer also enabled him to depict the actual process of creation during composition, describing in particular the selection of the means of expression, and demonstrating the very subtle principles involved in a composer's style. In this respect his Smetana studies are especially noteworthy.

JOSEF BEK

Janequin [Jannequin], **Clément** (*b* Châtellerault, *c*1485; *d* Paris, after 1558). French composer.

1. Life. Although it would seem reasonable to assume that Janequin received his earliest musical education in the choir school of his native town, no documents have yet been discovered to clarify the matter. The first certain notice of the composer dates from 1505 when he was a 'clerc' in Bordeaux in the service of Lancelot Du Fau, humanist, president of the court of inquests for the Parliament of Bordeaux, vicar-general of the archbishopric, canon of St André and St Seurin, and after 1515 Bishop of Luçon. Apparently Janequin worked for him until Du Fau's death in 1523.

In that year Janequin entered the service of Jean de Foix, Bishop of Bordeaux. The composer probably completed his studies leading to the priesthood about this time, for he began to receive a number of relatively minor and not very lucrative prebends (shortage of money was a recurring problem throughout his life). He was made a canon of Saint Emilion in 1525 and *procureur des âmes* (in charge of anniversary masses) there in 1526. In the same year he was made *curé* of St Michel de Rieufret and in 1530 *curé* of St Jean, Mézos, and *doyen* of Garosse. During this period in Bordeaux, he met the poet and musician Eustorg de Beaulieu, who described an evening with him at the home of a lawyer, where they sang three-part chansons until late at night.

Foix died in 1529 and the church administration declared all prebends vacant, leaving Janequin to seek a new means of livelihood. By then he enjoyed some fame as a composer: Pierre Attaingnant had published some of his chansons, probably including an undated volume devoted exclusively to his compositions. In 1530 Janequin had written the chanson *Chantons, sonnons, trompettes* to celebrate François I's entry into Bordeaux, on his way to the Spanish border to welcome his children back to France after their years of captivity as hostages. The success of this composition may have earned Janequin the title *chantre du roi* since he was almost certainly not regularly employed by the court.

In 1531 he served briefly as Master of the Choirboys at Auch Cathedral, but by the early 1530s he had moved to Angers. His brother Simon lived there and he had already had some contact with the area, for in 1526 he had been made *curé* of Brossary, and in 1527 *chapelain* of Angers Cathedral, prebends which apparently had not required his presence. In addition, in 1533 he was appointed *curé* of Avrille and from 1534 to 1537 he served as *maître de chapelle* at Angers Cathedral. For the years immediately following 1537 when Loys Henry replaced Janequin in the cathedral, there is no information concerning the composer's whereabouts. He probably stayed in Angers, for his name reappears in the archives there in 1548 when he is listed as an 'estudiant en l'université d'Angers'. Although it seems very odd that Janequin should have waited so long before attending a university, he may simply have registered to enjoy certain privileges granted to students. Or he may have needed a degree in order to hold the more lucrative prebends; during these years he was plagued by financial difficulties because of a loan from his nephew, which he was unable to repay, even though he gave over all his income from his appointment as *curé* of Unverre, near Chartres. The resulting quarrel seems to have led to a complete break with his family. In spite of these troubles, however, the years in Angers, particularly the 1530s, were Janequin's most prolific, if his growing list of publications is an accurate guide. During that decade Attaingnant published at least four volumes devoted entirely to Janequin's chansons and possibly one, now lost, of his motets. The first of Moderne's *Difficile des chansons* volumes (1540) was also given over exclusively to Janequin's music.

He may have lived in Paris temporarily during the mid-1540s, but he did not settle there permanently until 1549, when he was inscribed as a student at the university. His chanson on the siege of Metz earned him the honorary title of *chapelain* to the Duke of Guise, but it was not until the 1550s that he became *chantre ordinaire du roi* and finally, during the last years of his life, *compositeur ordinaire du roi*, a title that only Sandrin before him seems to have held. Janequin made his will in January 1558, leaving his small estate to charity, not to his family, after payment of debts to his housekeeper, who had been working for him without remuneration; he died shortly thereafter. His career was unorthodox for a great composer in that he never held an important regular position in a cathedral or a court. This may explain the fact that no laments, either poetic or musical, were written on his death. The continuing popularity of his music was his greatest monument.

2. Works. Simply on account of the large number of his chansons (he wrote over 250) Janequin has often been twinned in the musicological literature with Claudin de Sermisy (the other principal figure composing in the genre during the second quarter of the 16th century) as a master of the so-called Parisian style of chanson. Scholars have come to realize, however, that the principles governing Janequin's approach to chanson composition seem to differ markedly from those routinely favoured by Sermisy. Even discounting the often rather declamatory style and animated rhythmic fabric prompted by the narrative texts of his justly celebrated programmatic pieces, Janequin's concept of melodic organization departs considerably from the practice of Sermisy, Certon and other composers writing in the style popular at the royal court. Whereas the latter composers preferred concise melodic phrasing (with a clear caesura after the fourth syllable of a decasyllabic line of poetry and a melisma reserved principally for the penultimate syllable), Janequin often tended towards repetition of individual words and short ideas, thus breaking the melodic line into several shorter motifs. What is more, while Sermisy's chansons are extremely regular in their disposition of cadential notes within a given modal type, Janequin's chansons are often notable for the ways in which they explore unusual or irregular points of melodic repose. It is clear that Janequin regarded the chanson as his principal genre; even if a volume of motets was published by Attaingnant, his settings of vernacular texts completely overshadow his two masses and one surviving motet, and even the masses are based so literally on his own chansons that they are closer to being contrafacta than parodies.

The best known of all his chansons are those very long ones that imitate natural and man-made sounds: among them *Le chant des oiseaux*, *L'alouette*, *La chasse*, *Les cris*

de Paris and the perennial favourite of singers, lutenists, guitarists, keyboard players and other instrumentalists throughout the entire 16th century, *La bataille*, possibly written to celebrate the Battle of Marignano, which had taken place in 1515. All of these chansons are filled with onomatopoeic effects, such as fanfares, bird songs, street cries and the like, almost all based on short and simple musical formulae that make whole sections of each composition seem like mosaics of superimposed fragments. Often the music is quite static harmonically, so that the work depends entirely for its effect on rhythmic invention and witty superimpositions. (For an illustration of *Le chant des oiseaux*, *see* CHANSON fig.2.)

Many of the programmatic chansons were composed early in his career, although he occasionally produced a new one, like that celebrating the siege of Metz and other exploits of the Duke of Guise (*La guerre de Renty*, for instance), in his later years, and he sometimes revised an earlier one, as A.T. Merritt has shown. For example, his four-voice setting of *Gentilz veneurs* (*La chasse*), from a book of his descriptive chansons issued by Attaingnant in 1528, was reworked to include three additional parts, in all likelihood by the composer, for a reprinting of the volume in 1536. The composer himself was not the only person to make such arrangements. Philippe Verdelot added a fifth voice to *La guerre* when it was published by Susato (Antwerp, 1545), while *Le chant de l'alouette* (*Or sus vous dormés trop*) and *Le chant du rossignol* reappear in Claude Le Jeune's posthumous cyclic chanson print *Le printemps* (Paris, 1603), each with an added fifth voice from Le Jeune's pen and each with additional poetic stanzas drawn from *La sepmaine*, a creation cycle by Salluste Du Bartas.

The circumstances that Janequin's first chanson appeared in an Italian anthology, that his most successful composition was one celebrating an Italian battle and that, quite unusually for a composer of Parisian chansons, he set one Italian text, *Si come il chiaro*, but in a very French style (one of only two in all of Attaingnant's anthologies), have led some to speculate that he spent time in Italy; however, no solid evidence supports the hypothesis. His connections with Italy are probably explained by the wide and rapid distribution of all sorts of music throughout western Europe in the 16th century. Indeed, his *Missa super 'La bataille'* was sufficiently well known by the mid-16th century to be singled out by Tridentine performers as worthy of censure for the profanity of its model.

For his shorter chansons he set texts by Clément Marot, Mellin de Saint-Gelais, François I, Ronsard and other poets, mostly of more local significance. He had a penchant for witty narrative poems, quite often those which tell a bawdy story or those involving rustic characters. He set them with that precise and clear sort of imitation that came into the chanson at the beginning of the 16th century. This imitation often involves very square melodies, frequently rather popular in tone, that he constantly displaced metrically, fragments of dialogue thrown back and forth among the parts of the ensemble, and of course the characteristic opening rhythm, long–short–short.

Janequin set the words of his chansons carefully because so many of them are narrative. However, like many other French composers, he seems to have been more interested in fitting the music to the rhythm of the words than in reflecting the meaning of the text in the music. In harnessing rhythm in the service of good declamation, he sometimes resorted to a repetitive formula, for example, long–breve–long–breve–long, but more often the melodic lines unfold in a very flexible rhythm that ignores the bar-lines and is capable of shifting back and forth from duple to triple metre to emphasize either a single word or a whole phrase.

Janequin turned late in his career to settings of French translations of the psalms and *chanson spirituelles*. Unfortunately most of these 150 works survive in an incomplete state. Some may have used an amount of chromaticism uncharacteristic for French music of the time. If *Qui au conseil des malings n'a esté* is a typical example, their counterpoint is more sober than that of the secular chansons, and they present the traditional Calvinist tunes plainly and simply in the tenor. The fact that he composed so many suggests that he may have sympathized with the Protestant cause towards the end of his life.

WORKS

for 4 voices unless otherwise stated

Edition: *Clément Janequin: Chansons polyphoniques*, ed. A.T. Merritt and F. Lesure (Monaco, 1965–71, 2/1983) [M]

† – *incomplete but given a number in M*

MASSES

Missa super 'L'aveuglé dieu', Missae duodecim (Paris, 1554) (on his own chanson)

Missa super 'La bataille', 1532[8] (on his own chanson)

MOTETS

A volume of motets by Janequin was published by Attaingnant (Sacrae cantiones seu motectae quatuor vocum, Paris, 1533; lost), according to C.F. Becker: *Die Tonwerke des XVI. und XVII. Jahrhunderts* (Leipzig, 1855), 23.

Congregati sunt, 1538[5]; ed. in SCMot, xiv (1995)

CHANSONS

A ce joly moys, M iii, no.97; Aller m'y fault, M i, no.7; Allons, fuyons, bevons, M ii, no.45; Amour ayant de ma grand passion, M iv, no.121; Amour cruel de sa nature (M. de Saint-Gelais), M ii, no.72; †Amour cruel, mon Dieu, no.246; Amour et moy avons faict, M iv, no.133; Amour vainc tout, M vi, no.231; Assouvy suis, M i, no.8; Au despartir triste deul, M ii, no.29; Au joly jeu du pousse avant, M i, no.12; Au premier jour du joly moys, M iv, no.115; Aussi tost que je voy m'amye, M iv, no.156; Au verd boys je m'en iray, M i, no.132; Avant que partiez de ce lieu, M v, no.202; Ayé pitié du grant mal (Claude Chappuys), M ii, no.27; Baisez moy tost, M iii, no.83; Bel aubépin verdissant (P. de Ronsard), M vi, no.251; Branlez vos piques (La guerre de Renty), M vi, no.254

Ca, ces beaulx yeux, M iv, no.149; Ce disoit une jeune dame, M iv, no.168; Ce faux amour, M vi, no.245; Celle qui veit son mari, M ii, no.71; Ce may nous dit la verdure, M v, no.214; Ce moys de may, M i, no.10; Ce n'est pas moy, M vi, no.239; Ce n'est point moy mon oeil, M v, no.194; Cent baysers au despartir, M v, no.180; Cent mille foys, M v, no.175; Ce petit dieu qui vole, M v, no.213; Ce sont gallans, M ii, no.57; C'est a bon droit, M ii, no.28; C'est a moy qu'en veult, M v, no.188; C'est mon amy, M vi, no.229; Ce tendron est si doulce, M iii, no.96; Chantons, sonnons, trompettes, M i, no.17; Chasse rigueur loing de toy, M v, no.208

De céans jusques chez m'amye, M v, no.204; De labourer je suys cassé, M ii, no.19; De son amour me donne, M vi, no.225; D'estre subject, M ii, no.47; De ta bouche tant vermeille, M v, no.215; De tes doulx yeulx, M ii, no.30; De vostre amour je suys deshérité, M ii, no.36; De vray amour, M ii, no.52; †Dictes moy doncq, M vi, no.228; Dictes sans peur (François I), M ii, no.24; Dieu doint le bonjour, M iv, no.157; Di moy, ma soeur, M v, no.216; Dont vient que ce beau temps, M iv, no.170; Doulens regretz, ennuys, M vi, no.241; D'un seul soleil, M v, no.205; Dur acier et diamant, M iv, no.150

Elle craint cela, M ii, no.33; Elle mérite pour ses grâces, M iv, no.166; Elle voyant approcher, M iv, no.169; En amour y a du

plaisir, M v, no.198; En attendant son heureuse présence, M ii, no.21; En escoutant le chant mélodieulx (Le chant du rossignol; Le rossignol), M ii, no.68; En fut il onc, M iii, no.105; En la prison les ennuys, M vi, no.242; En me baisant, M v, no.177; En m'en venant de veoir, M iii, no.98; Escoutez tous gentilz (La bataille de Marignan; La guerre), 4vv, M i, no.3; Escoutez tous gentilz (La bataille de Marignan; La guerre), 5vv, M vi, no.234; Estant oisif (Le caquet des femmes), M iii, no.108; Est-il possible, o ma maistresse, M iv, no.153; Et vray Dieu qu'il m'ennuye, M iv, no.152

Faictes le moy, M i, no.16; Faisons le dire mensonger, M iv, no.164; Frapper en la roye, M ii, no.40; Frere Frappart troussé, M v, no.207; Frere Lubin revenant (L. Jamet), M iii, no.99; Frere Thibault (C. Marot), M ii, no.70; Fyez vous y si vous voulés, M ii, no.58; Fy fy cela est trop maigre, M ii, no.59; Fy fy metez les hors, M ii, no.44; Gentilz veneurs (La chasse), M i, no.4; Gros Jehan menoit, M iv, no.126; Guillot un jour, M iii, no.78

†Helas, amy, ta loyauté, M vi, no.253; Hélas mon Dieu, y a il (Saint-Gelais), M iv, no.135; Hellas, mon Dieu, ton ire (G. Guéroult), M iii, no.111; Herbes et fleurs, M vi, no.237; Ho le meschant, M v, no.182; Il estoit une fillette, M iii, no.77; Il est permis trouver, M v, no.192; Il feroit bon planter le may, M v, no.176; Il me suffit du temps passé, M ii, no.18; Il n'est plaisir ne passe temps, M ii, no.46; Il s'en va tard, M iv, no.159; †Incessament je suis, M vi, no.227

J'atens le temps, M iii, no.89; J'ay dict, j'ay faict, M iii, no.103; J'ay double dueil, M iv, no.119; J'ay d'un costé l'honneur, M v, no.206; J'ay trop soubdainement aymé, M vi, no.222; J'ay veu le temps, M ii, no.62; Je demande comme tout esbahy, M vi, no.220; Jehanneton fut l'aultre jour, M iii, no.75; Je liz au cueur de m'amye, M iv, no.158; Je me veulx tant a son vouloir, M iv, no.155; J'endure tout, c'est bien raison, M v, no.190; Je ne congnois femme, M v, no.172; Je ne fus jamais si aise, M i, no.13; Je n'eu jamais de grandz biens, M iv, no.143; Je n'ose estre content (François I), M ii, no.37; Je suis a vous, M iv, no.147; Je veulx que m'amye soit telle (Saint-Romard), M iv, no.125

La bataille de Marignan, see Escoutez tous gentilz; La bataille de Mets, see Or sus branslés; La chasse, see Gentilz veneurs; La guerre, see Escoutez tous gentilz; La guerre de Renty, see Branlez vos piques; Laissez cela, M i, no.15; La jalouzie, see Madame voulés vous scavoir; L'alouette, see Or sus, vous dormés trop; La meusniere de Vernon, M v, no.211; La, mon amy, M ii, no.48; La mort plus tost, M iv, no.136; L'amour, la mort et la vie, M iii, no.87; La plus belle de la ville, M ii, no.23; La prise de Boulongne, see Pour toy ton prince; Las on peult juger, M iii, no.107; Las, povre coeur, M i, no.6; Las que crains tu, amy, M ii, no.38; Las qu'on congneust (François I), M iii, no.86; Las, si je n'ay si hault bien, M ii, no.36bis; Las si tu as plaisir, M iv, no.145; Las, si tu veulx en aultre part, M iv, no.154; Las, viens moy secourir, M iv, no.142; L'aultre jour de bon matin, M iii, no.112; L'aveuglé dieu qui partout vole, M v, no.209; Le caquet des femmes, see Estant oisif; Le chant des oiseaux, see Réveillez vous, cueurs endormis; Le chant du rossignol, see En escoutant le chant mélodieulx; Le jeu m'ennuye, jouez m'amye, M iv, no.127; Le lendemain des nopces, M iv, no.123; L'ermaphrodite est estrange, M ii, no.34; Le rossignol, see En escoutant le chant mélodieulx; Les cris de Paris, see Voulez ouir les cris de Paris; L'espoir confus, M iii, no.76; L'espoux a la premiere nuict (Marot), M iv, no.122

HOWARD MAYER BROWN/RICHARD FREEDMAN

Janet & Cotelle. French firm of music publishers. It was founded by Pierre-Honoré Janet (*d* Orsay, Seine-et-Oise, 5 Sept 1832) and Alexandre Cotelle (*b* Montargis, 1786; *d* Paris, 5 Dec 1858). Before their partnership, Janet had worked in music and general publishing with his father, Pierre-Etienne (1746–1830) and had purchased from him the music element in 1808. In 1810 Janet and Cotelle started business at 17 rue Neuve des Petits-Champs, Paris, 'au Mont d'Or', their retail shop until about 1824. By July 1812 they had acquired publishing premises at 123 and 125 rue St Honoré, where, after Janet's death in 1832, the firm remained until bankrupted in 1836. On 14 July 1812 they absorbed the firm of Imbault, in 1821 that of Décombe, in March 1824 that of Boieldieu Jeune (whose premises at 92 rue de Richelieu were additionally retained), and at the end of 1825 that of Ozi et Cie (successors to Magasin de Musique (i)). After the death of Janet and dissolution of the partnership Cotelle carried on the business as A. Cotelle. In 1838 he had moved his main premises to 140 rue St Honoré (with various subsidiary addresses in the boulevard Montmartre); in 1844 he moved to 137 rue St Honoré and in 1855 to 3 rue Jean-Jacques Rousseau. After Cotelle's death the firm continued, first at the same address, then at 51 rue Jean-Jacques Rousseau (from about 1868), at 17 rue Orléans St-Honoré (from about 1883) and finally at 22 rue des Bons-Enfants (from about 1887); in about 1891 the major part of the assets were taken over by Enoch Frères & Costallat.

Mainly on account of their acquisition of four other firms, Janet & Cotelle were, in 1830, among the largest French music publishers. Their importance was transitory, however, for they made no serious attempt to encourage worthwhile contemporary composers, preferring to play safe by issuing new editions of established works. The opera full scores they published were, with a few exceptions, reissued from the plates of Imbault or the Magasin de Musique (i); and their vocal scores of 17 Rossini and 13 Boieldieu operas were new editions or reissues of previously published works. The only opera of lasting fame first published by the firm was Boieldieu's *La dame blanche*.

Janet & Cotelle are best remembered for their handsome editions of 93 quintets and 52 trios by Boccherini (see illustration), 12 of the quintets being previously unpublished. They also published collections of trios, quartets and quintets by Beethoven, a collection of quartets by

Title-page of Boccherini's Quintets, ii (Paris: Janet & Cotelle, 1822/3)

Haydn, a large quantity of miscellaneous instrumental and vocal music, and literary and didactic works by Fétis. But after Janet's death the firm achieved almost nothing of consequence. Up to that time the aesthetic quality of production had been high, and all their publications had been printed from engraved plates. About 2500 items had been published by 1835, with reliably chronological plate numbers.

RICHARD MACNUTT

Janetton, La. *See* BROWN, WILLIAM.

Jang, Jon (*b* Los Angeles, 11 March 1954). Chinese-American composer and jazz pianist. After only a year and a half of piano lessons, he was accepted into the Oberlin College Conservatory (BMus 1978), where he studied the piano with Wilbur Price and composition with Wendell Logan. In 1982, after attending the first Asian American Jazz Festival in San Francisco, he co-founded AsianImprov aRts and Records, an organization promoting music born out of the Asian American experience. He has lectured on Asian American music at the University of California's Berkeley (1992–5, 1997) and Irvine (1995) campuses. As a composer, pianist and artistic director, Jang has broken down barriers and expanded genre definitions. His style is characterized by a compelling mix of diverse influences and sounds: Chinese folk melodies and instruments, Philippine *kulintang*, Japanese modes and *taiko* drums are all used in a variety of contemporary

contexts. A pioneer in the integration of jazz and classical music, Jang has had his compositions performed in major concert halls and jazz festivals internationally.

WORKS
(*selective list*)

Conc., jazz ens, taiko drums, perc, 1988; SenseUs-the Rainbow Anthem, nar, fl, trbn, pf, perc, db, 1990; Tiananmen!, jazz ens, Chin. insts, 1992; Color of Reality, jazz sextet, Chin. insts, 1993; Woman Warrior (incid music), 1994; Island (Immigrant Suite no.1), nar, ens, 1995; My America ... Honk if you love Buddha (film score), 1995; Island (Immigrant Suite no.2), Cantonese op singer, str qt, 1996

Janič, Antonín. *See* JANITSCH, ANTON.

Janiczek, Józef (*b c*1740; *d* 1806). Polish organ builder. He came from Kalisz but settled in Warsaw (his memorial plaque calls him 'organifex varsoviensis'), where he built and overhauled several instruments. Active also in the vicinity of Warsaw, for example in Łowicz in 1797, he often made long journeys in Poland and abroad, building new cathedral organs in Włocławek (1800–1) and Breslau (now Wrocław; 1801). Some of his instruments, for example those in Koło (1783) and Borek (1799), both near Poznań, survived until the 20th century: that in Borek was dismantled in 1948. They were apparently well built and musically satisfying, which would account for the good reputation that he enjoyed in his time among his countrymen as well as among German builders in Silesia.

JERZY GOŁOS

Janiewicz, Feliks [Yaniewicz, Felix] (*b* Vilnius, 1762; *d* Edinburgh, 21 May 1848). Polish violinist and composer. As early as 1777 he joined the court orchestra of the last Polish king, Stanisław August Poniatowski, in which he remained for six or seven years (he had left by February 1784). He later stayed in Vienna, and on 26 February 1785 gave a concert at the Burgtheater (this was possibly his first public appearance as a soloist). There are no known records of his other concerts in Austria, but Janiewicz apparently gained a good reputation in Vienna, for he was praised by Kelly as one of the best violinists of his time. Whether he ever met Mozart or Haydn, as many authors claim, is unknown; nor is there any evidence linking Mozart's lost Andante in A major K470 to him. He is said to have been in Italy in 1786; according to some sources, he studied with Nardini in Florence. Afterwards, he travelled to France; his first public appearances in Paris (on 23 and 24 December 1787 at the Concert Spirituel) were favourably reviewed in the *Mercure de France*, and he had several violin concertos published. He was also a member of the orchestra of the Duke of Orléans.

In 1792 Janiewicz went to London, where he appeared as violinist and composer, first at private concerts and soon afterwards in public, mostly at Salomon's concerts. His next London appearances were apparently not until 1794. He also gave concerts in other English cities, in Scotland and Ireland. In 1800 he married Miss Eliza Breeze of Liverpool, where in 1801 he opened a 'Music, Musical Instrument Warehouse', which traded until 1829; he also had a music shop in London, 1810–12. His publications included some of his own works and collections of modern transcriptions. In 1813 he was one of the founders of the Philharmonic Society in London, and he was one of the leaders of the orchestra during its first season.

In 1815 Janiewicz moved to Edinburgh. He led the orchestra in the first Edinburgh Festival in the same year and in subsequent festivals (1819, 1824), and was an active teacher and organizer of musical life. In February 1829 he gave his last public concert. He died at home at 84 Great King Street, and was buried in the Warriston Cemetery in Edinburgh. He left two talented daughters, Felicia, a pianist, and Paulina, a harpist.

Janiewicz achieved his greatest successes as a virtuoso. His style of playing was said to be 'pure, warm and full of feeling', with outstanding execution in octaves. As a composer he was essentially self-taught. He did not go beyond the limits of the Classical style: fundamentally, his work does not range beyond the forms of violin music of his own day. He usually composed thinking of himself as the performer, and the value of his extant works lies chiefly in the discovery and boldness of his violinistic solutions.

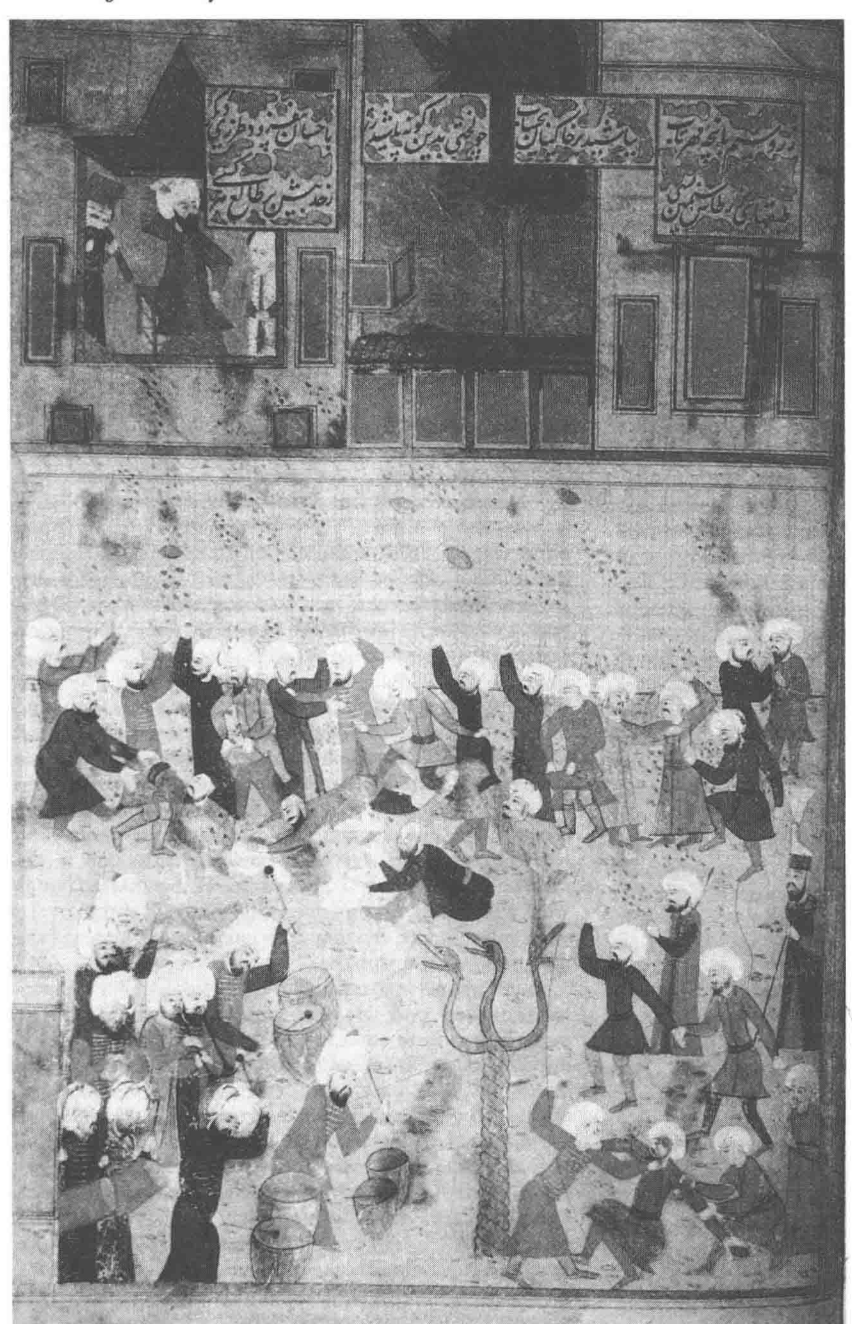
JACEK BERWALDT/MARGARET MIKULSKA

Janis [Yanks, Yankelevitch], **Byron** (*b* McKeesport, PA, 24 March 1924). American pianist. As a child he studied first with Josef and Rosina Lhévinne in New York and then for six years with Adele Marcus. In 1943 he made his orchestral début with Frank Black and the NBC SO in Rachmaninoff's Second Concerto. The following year he played the same work with the Pittsburgh SO conducted by Lorin Maazel, who was not yet 14; Horowitz was in the audience and offered to teach Janis, who worked with him for three years. After his Carnegie Hall début in 1948, Janis appeared with the world's leading orchestras and as a recitalist, making many tours, including an outstandingly successful one of the USSR in 1960. On his return to the USA he celebrated the 150th anniversary of Liszt's birth by performing both Liszt's piano concertos with Charles Münch and the Boston SO in Boston and New York. His career was interrupted by illness in the 1960s but he began to make regular appearances again in 1972. He continued to pursue his concert career with notable success despite the onset the following year of arthritis, which affected his hands and wrists. He played at the White House in 1985 and the same year was made Ambassador for the Arts of the National Arthritis Foundation. Janis was a keen advocate of Gottschalk before that composer's music became fashionable, but he remains best known in the repertory from Rachmaninoff to Prokofiev. He has also composed popular songs and ballads and since 1988 has spent more time on composition, especially for film and television. In 1967 at the Château de Thoiry, Yvelines, Janis discovered autograph manuscripts of two Chopin waltzes (G♭, op.70 no.1, of which no autograph had previously been known, and E♭, op.18), then two variant autographs of the same waltzes in the Yale University library in 1973; a film entitled *Frederic Chopin – a Voyage with Byron Janis* relates his French discoveries. Having made no recordings since the age of 30, he returned to the studio in 1996 to record a Chopin disc for EMI. He was the first American to win a Grand Prix du Disque, and he also received a Harriet Cohen Award. In 1965 the French government bestowed upon him the rank of Chevalier in the Ordre des Arts et Lettres, the first American pianist to be so honoured. He serves as chairman of the Global Forum arts and culture committee and on the board and music advisory committee for Pro Musicis, an international organization devoted to helping young artists.

MICHAEL STEINBERG/R

Janissary music [Turkish music] (from Turkish *yeni çeri*: 'new troop'; Ger. *Janitscharen Musik, türkische Musik*; It. *banda turca*). The Turkish ensemble of wind and percussion instruments known in the Ottoman Empire as *mehter*, introduced into Europe in the 17th century and later imitated there using Western instruments.

The janissaries, the élite troops of the Ottoman Empire, were initially Christian captives recruited to form a new army after their conversion to Islam. The bands of the janissaries were called *mehter*, a term used also for some Ottoman state officials and thus taken to mean not just the bands but the individual musicians as well. The music of the *mehter* (*mehter musikisi*) was not written down, and consequently most information about it concerns the instruments on which it was played. However, the information given in the secondary literature about the instrumental make-up of the *mehter* has been contradictory and unsupported by adequate proof.

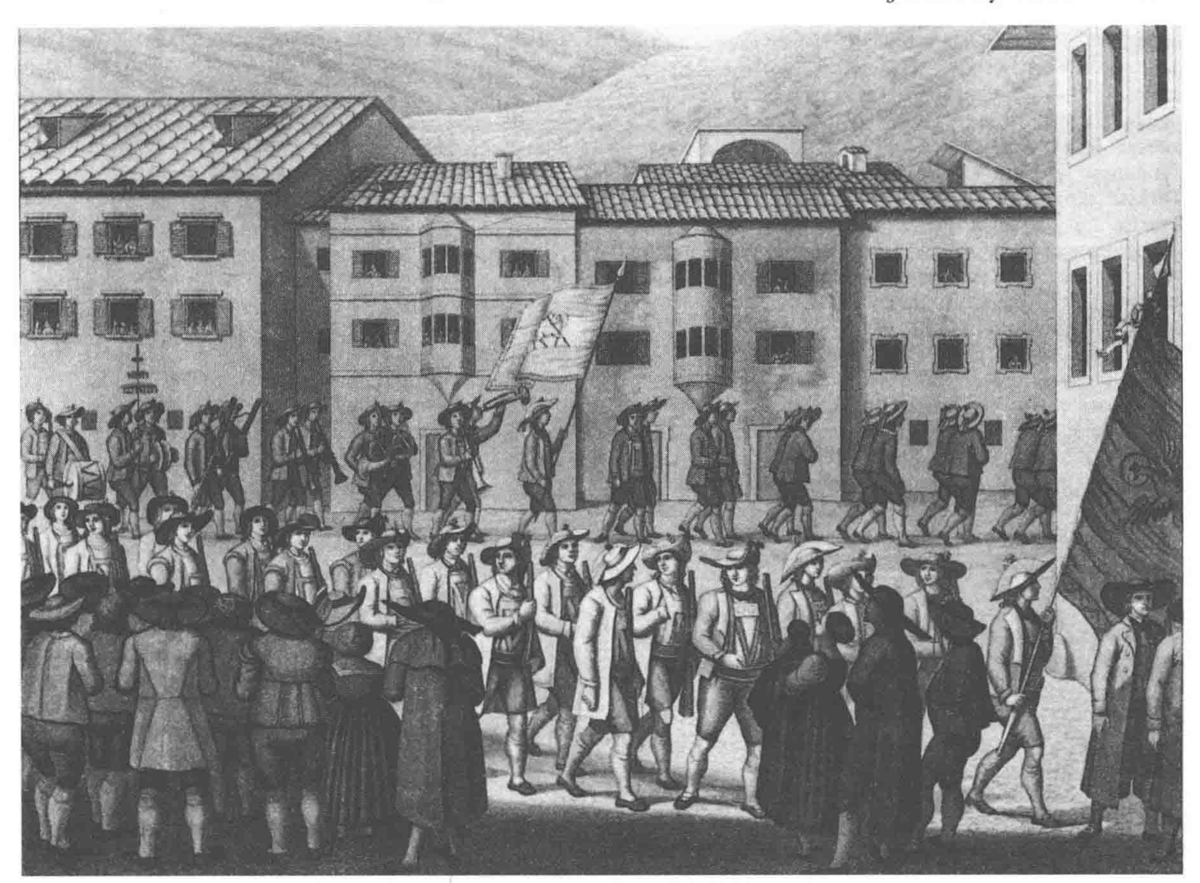


There is no definite evidence that what became known as janissary music began with the founding of the janissaries in 1329. There were other military bands in Asia before and at that time, and these served as models for the *mehter*. According to 9th-century accounts, military ensembles of trumpets, shawms, drums and gongs were used by Turco-Mongolian peoples in north China. Ibn Battuta mentioned a 14th-century Byzantine band with trumpets, shawms and drums, and a manuscript of the 14th century (*TR-Itks* A. 3472) contains a miniature showing a band consisting of trumpets, kettledrum, bass drum and cymbals.

The instrumental make-up of the *mehter* depended on its function. One function was to play on the battlefield to inspire the soldiers. The band was always to be found at the centre of the action; as soon as the music fell silent, the soldiers stopped fighting. The *mehter* also provided solemn music for state ceremonies, played on the arrival and departure of important persons, and accompanied Ottoman ambassadors to Europe. The entry of the Grand Envoy Mehmed Pasha into Vienna on 8 June 1665, for instance, was accompanied by a large *mehter*, consisting of four shawms (*zurna*), two pairs of large kettledrums, two cymbals, three cylindrical bass drums and four trumpets. The instrumental forces of such bands were already considerable in the 16th century, since numbers of individual instruments could be multiplied according to requirements. There were up to 39 musicians in the *mehter* of the 17th and 18th centuries. Such large bands were particularly impressive, with the shrill sound of the wind instruments, the mighty boom of the drums and the metallic clash of cymbals.

The standard instruments of the *mehter* were the *zurna* (*see* SURNĀY) and DAVUL (cylindrical bass drum). The penetrating, shrill sound of the *surnay* made it ideal for military music. The *davul* differed from similar European drums in being struck on one side with a curved stick and on the other with a switch of twigs. The *zurna* and *davul* are native to Anatolian folk music. Other instruments played by the *mehter* were the *boru* (trumpet), *nakkare* (small kettledrum, usually played in pairs; *see* NAQQĀRA), *kos* (large kettledrum, also frequently used in pairs) and *zil* (cymbals), adding to the basic sound of *zurna* and *davul*. The *boru* and *kos* were used exclusively in military bands, while the *zil* and *nakkare* were also played by members of religious orders.

The trumpet is an important indication of mutual cultural influences between East and West. The looped trumpet tube appeared in Eastern miniatures only after encounters with European cultures, in which S-shaped, then looped forms were developed and gained popularity in the 14th and 15th centuries. Persian and Ottoman pictorial evidence shows bands using the straight trumpet exclusively until the second half of the 15th century. Thereafter the *mehter* used the S-shaped and later the looped trumpet. The looped trumpet occurs in Eastern miniatures after the second half of the 16th century; tubes of this shape were known in Europe some 150 years earlier.



The Turkish crescent [*Schellenbaum*] may originally have derived from the *tugh*, the symbol of rank of the

1. Mehter with two zurna (shawms), two boru (trumpets), two davul (bass drums), a pair of naqqāra (small kettledrums), a pair of kos (large kettledrums) and zil (cymbals) in a performance for the Ottoman Sultan Murad III, who observes the scene from the balcony of his palace; miniature from the 'Shāhanshāhnāma' ('Book of the king of kings'), begun 1592 (TR-Itks B. 200, f.42r)

Ottoman military élite. It may have developed in the West when jingles were added as decoration to these military standards. The new instrument still acted symbolically as a standard, since it was possessed only by certain special military bands, and almost never by civilian wind bands. Impressed by the European version, the Ottomans adopted it in the 19th Century; the Turkish crescents in the Istanbul military museum are imitations of a 19th-century European tradition and no Ottoman source shows the Turkish crescent as an instrument of the *mehter*.

Turkish bands were known in Europe from the 17th century. A carousel at the Württemberg court in 1617 included *türkische Pfeiffer und Trommeln*, and the band of the Croatian regiment in Dresden had *türkische Pauklein* and *kleinen Schallmeyen* by 1650. Turkish instruments had been used occasionally in opera in the late 17th century: in 1780 N.A. Strungk used Turkish cymbals in *Esther* (Hamburg, 1680) and Domenico Freschi used cymbals and other Turkish instruments in *Berenice vendicativa*, written for Venice. Turkish bands began to gain popularity in Europe towards the end of the 17th century, during and following the war between the European powers and the Ottoman Empire. The Polish king Jan III Sobieski apparently had one in his retinue in 1673 and Augustus II (*d* 1735) also maintained one, which played in Dresden in 1697. Anna Ivanova

2. Band with cymbals, Turkish crescent and bass drum in a festive procession for a shooting contest, Brixen, 1801: etching by Josef Weger, 1827

(Empress of Russia, 1730–40) had a *mehter* sent from Constantinople in 1725 and such bands began to appear elsewhere in Europe by the 1740s: Ritter von Trenck marched into Vienna with one in May 1741 and the Prussian artillery had one when they entered Prague on 20 September 1744.

Contact with the Ottoman Empire influenced European music in several ways: some writers and composers viewed the Turks merely as an exotic and hostile people, for example in Lully and Molière's *comédie-ballet Le bourgeois gentilhomme* (1670) and Daniel Speer's *Musikalish Türckischer Eulen-Spiegel* (1688); others were influenced by Ottoman military music in the use of characteristic percussion instruments, with composers expressing Turkish subjects in their music without actually copying Turkish music itself, as in Mozart's *Die Entführung aus dem Serail.*

One of the most striking developments was the addition of Turkish instruments to the European *Feldmusik* ensembles (oboes, bassoons and horns or trumpets) used as military bands. The most important instrument in janissary music around the middle of the 18th century was the *davul*, the big bass drum. During the last quarter of the century cymbals and triangles were also added to the instrumentarium. The Turkish crescent first appeared towards the end of the century. These percussion instruments belonged to an independent ensemble which, unlike the military drums and fifes, played only on ceremonial occasions, never in battle. Under the influence of these additions, European military bands grew in the early 19th century into large wind ensembles.

A pre-condition of the fashion for 'Turkisms' and therefore Turkish music was the establishment of normal political relations between the Turks and the European states. But the Turks remained a symbol of the exotic, an idea emphasized by the use of Middle Eastern and black African musicians or musicians with blackened faces to play the percussion instruments. The signboard of a Tyrolean company of actors and musicians (Österreichisches Museum für Volkskunde, Vienna, no.19767) dating from the late 18th century or the early 19th still shows musicians with darkened faces. Turkish players were never engaged in British bands, but black musicians were enlisted to play the percussion instruments; 'blackamoors' had been employed in the British army as side drummers, kettledrummers and trumpeters for half a century. These players were dressed in the most extravagant Orientalist style and their antics in performance became a feature of military music. The present leopard-skin aprons of drummers and their elaborate drumstick flourishes are relics of this tradition.

Many compositions display the new fashion for the *alla turca* style, for example Mozart's Violin Concerto in A major K219 and Piano Sonata in A major K331, and Michael Haydn's music for Voltaire's *Zaire* (1777). Some operas were so strongly marked by the Turkish fashion as to earn the popular name 'Turkish opera'. An early example was Gluck's *Le rencontre imprévue* (1764) and the most famous, in which the fashion reached its height, was Mozart's *Die Entführung aus dem Serail* (1782). The

musical 'Turkish' effects were achieved by the use of the new percussion instruments and piccolo (the latter to create shrillness) and by characteristic methods of writing such as repeated notes, scale runs, unison writing, striking interval leaps, simple harmonies and sudden changes in dynamics. The aim was to suggest rather than to copy Turkish music. In line with political developments in Austria and the spirit of the times, *Die Entführung* is a masterpiece of humanist thinking, not only musically but in its content: it is an appeal for better understanding between peoples and a condemnation of the hostile image of other nationalities.

The accounts of the Vienna Hoftheater for 1782–3 record a payment to Kapellmeister Franz Tyron for the performance of a 'Bande von der Artillerie Music' in *Die Entführung*. This document is of particular significance, revealing that military bands played in new compositions outside their usual sphere, performing on instruments hitherto unusual in the orchestra. It also shows clearly how the influence of Ottoman military bands had moved through military music to bring changes to the instrumentarium of the orchestra. The new instruments did not always serve to imitate Turkish music, but were also employed in general to create a dramatic and 'foreign' effect. Gluck, for instance, used these possibilities in *Iphigénie en Tauride* (1779), as did Mozart in *Die Zauberflöte*. The Turkish instruments and other dramatic effects earned Haydn's Symphony no.100 the appellation 'Military'. In the course of time the new instruments became part of the orchestra, offering the composer new tone-colours: Beethoven, for instance, employed them in this way in *Die Ruinen von Athen* (1811) and the Ninth Symphony (1824).

Janissary stop [Turkish music]. A pedal found on pianos of the late 18th- and early 19th-century Vienna, that operated a drumstick which struck the underside of the soundboard, a cymban and tuned bells, in imitation of the 'Turkish' effects then fashionable.

See JANISSARY MUSIC and PEDALLING, §2.

Janitsch, Anton [Janič, Antonín] (*b* Bohemia, 1753; *d* Burgsteinfurt, 12 March 1812). German violinist and composer of Czech origin. In his early years he lived in Switzerland, where he became known as a child prodigy. He studied with Pugnani in Turin, and afterwards performed in Switzerland, Austria and southern Germany. From 1769 until 1774 he was employed as court virtuoso in the court orchestra at Koblenz. He then served in the Kapelle of Prince Kraft Ernst of Oettingen-Wallerstein until 1779, and after a period of absence on concert tours, he returned to Wallerstein, 1782–5. He often travelled with the Wallerstein cellist Josef Reicha; in January 1778 the two men visited Salzburg, playing Mozart's Divertimento for piano trio K254 with Nannerl Mozart. Janitsch later played in the orchestra of Gustav Grossmann's theatre company in Hanover (according to Gerber, he was still a member in 1796). He spent his last years as Kapellmeister at the court of the Count of Burgsteinfurt.

Janitsch gained a considerable reputation as a virtuoso: Schubart praised him as one of the best violinists of his time. He composed symphonies and chamber music, but no works were published during his lifetime, and only one symphony survives (*D-BFb*).

MARGARET MIKULSKA

Janitsch [Janitzch, Janitsh], **Johann Gottlieb** (*b* Schweidnitz [now Swidnica], 19 June 1708; *d* Berlin, *c*1763). Silesian composer and bass viol player. After attending the Dreifaltigkeitsschule at Schweidnitz, he went to Breslau to continue his musical studies under the guidance of the local court musicians. In 1729 he registered as a law student at the University of Frankfurt an der Oder. During his four-year stay there he took an active part in the city's musical life: he provided music for various royal and civic occasions and on 14 November 1729 directed a performance of one of his serenades before Friedrich Wilhelm I; two years later he gave a similar concert before Crown Prince Frederick (later Frederick the Great). In 1733 Janitsch left the university and became secretary to Franz Wilhelm von Happe, an important minister of state. In

1736 he was called to Ruppin as a member of Prince Frederick's personal orchestra. Later that year the prince's establishment moved to Rheinsberg and there Janitsch inaugurated his famous 'Friday Academies'. On Frederick's accession in 1740 Janitsch was appointed 'contraviolinist' in the reconstituted orchestra; he remained in Berlin until his death. Other duties at Frederick's court involved the direction and composition of music for the court balls (held annually from 1743) and some work with the opera chorus. The 'Friday Academies' continued to flourish at Janitsch's house in Berlin; performers included enthusiasts from the court orchestra and many other musicians, both professional and amateur. These weekly concerts had an excellent reputation and inspired many similar undertakings, notably C.F. Schale's 'Monday Assembly' and J.F. Agricola's 'Saturday Concerts'.

Janitsch was much respected by his contemporaries. At Frankfurt he had received several commissions for birthday, wedding and funeral music, and there was also demand for his compositions in Berlin. Works commissioned during the Berlin period include a *Te Deum* for the laying of the foundation stone of St Hedwig's Basilica (1748), and festive music for the coronation of King Adolf Frederik of Sweden (1751). The latter was written at the request of Princess Amalia, but was probably not performed during the actual celebrations. Janitsch was particularly renowned for his quartets (for three melody instruments and continuo), which Johann Wilhelm Hertel described as the 'best models' of their kind. Certainly they show a mastery of contrapuntal technique and an awareness of texture and timbre. The most appealing aspect is the rich variety of instrumentations, including unusual sonorities like oboe d'amore and viola pomposa. Janitsch's instrumental music is in the *galant* style. The writing is sometimes rather florid, in the manner of J.G. Graun. Three of Janitsch's quartets were published by Winter in Berlin (1760), and a few other pieces by him, including harpsichord sonatas, organ sonatas, and lieder appeared in contemporary collections. It appears likely that Janitsch autographs were in the private collection of Sara Levy, which passed to the Berlin Singakademie after her death. The recent discovery of Singakademie holdings in the Ukraine may bring the autographs to light.

PIPPA DRUMMOND, TINA DREISBACH

Jankélévitch, Vladimir (*b* Bourges, 31 Aug 1903; *d* Paris, 6 June 1985). French philosopher and musicologist of Russian origin. He studied in Paris at the School of Oriental Languages (diploma in Russian, 1925) and at the Ecole Normale Supérieure, where he took a degree in philosophy (1925) and the doctorat ès lettres in 1933. After holding posts as professor of philosophy at the Institut de Prague (1927–33) and the universities of Lille (1933–9, 1945–52) and Toulouse (1939–45), he was professor of ethics and moral philosophy at the Sorbonne (1952–78). In his works on music he wrote more as a philosopher than a musicologist. He did not discuss historical or technical problems but aimed to rediscover the basic idea of a musical work, to recreate the composer's vision; this approach has particular value for musicians interested in interpretation. He concentrated on composers of the 19th century and early 20th (Chopin, Liszt, Fauré, Debussy, Ravel, Albéniz, Falla, Bartók, Satie), treating them from a poetic point of view. Ignoring material considerations, he focussed in his philosophical work on the conflict between the eternal and the immediate. The Festschrift *Ecrit pour Vladimir Jankélévitch* (Paris, 1978) was published in his honour on the occasion of his 75th birthday.

CHRISTIANE SPIETH-WEISSENBACHER

Janko, Paul von (*b* Totis [now Tata], 2 June 1856; *d* Constantinople, 17 March 1919). Hungarian musician and engineer. A mathematician by training, he made a study of the question of temperament ('Über mehr als zwölfstufige gleichschwebende Temperaturen', *Beiträge zur Akustik und Musikwissenschaft*, iii, 1901, pp.6–12). Possibly as a result of this, in 1882 he patented a radical attempt to systematize the piano keyboard (retaining 12-note equal temperament, however). Based on the premise that the hand can barely stretch more than a 9th on the piano, and that all scales are fingered differently, Janko's new keyboard had two interlocking 'manuals', with three touch-points for each key lever, so that it appears to have six tiers of short, narrow keys (see illustration). These six tiers constitute one keyboard operating on the same set of strings; odd-numbered tiers produce a whole-tone scale from C, even-numbered ones a whole-tone scale from C♯. Accidentals are marked with a black stripe. The advantage of this system is that all major scales are fingered alike, as are all minor, and an octave span is only 13 cm instead of the standard 18·5 cm, so widely spaced chords are possible. Huge arpeggios can be negotiated with barely any arm movement, by moving the hand up or down the tiers. The system is unique in that it compensates for the unequal lengths of the fingers (*see also* KEYBOARD, §3).

Despite the keyboard touch being rather stiff, the invention met with some enthusiasm, notably from the American Alfred Dolge. A short-lived Paul von Janko Conservatory was established in New York about 1891, and a Janko Society was founded in Vienna in 1905. A number of piano makers in Austria, Germany and the USA made Janko keyboards and Paul Perzina even produced a reversible double keyboard – 'standard' on one side, 'Janko' on the other. E.K. Winkler in the *Musical Courier* (1891) blandly declared that 'On the old keyboard ... the hand is forced to defy its anatomical construction. We hear of a great many instruments and devices to train and shape the fingers and wrists in opposition to what nature has intended. ... It seems to be somewhat wiser trying to overcome the difficulties in a different way – namely, by changing the keyboard to suit the hands'. The Janko keyboard never caught on, because few were prepared to relearn their repertory on a strange keyboard with totally new fingering. It was a far more radical change for the pianist than, for example, for the clarinettist to change to the Boehm system.

MARGARET CRANMER

Janković. Serbian family of writers on folkdance. Ljubica S. Janković (*b* Aleksinac, 27 June 1894; *d* Belgrade, 3 May 1974) and her sister Danica S. Janković (*b* Lešnica, 7 May 1898; *d* Belgrade, 18 April 1960) were educated in Belgrade and began their careers as secondary school teachers; subsequently Danica Janković worked at the Belgrade University library (1931–51) and Ljubica Janković became head of the folk music department of the Belgrade Ethnographic Museum (1939–51).

The Janković sisters became internationally famous for their meticulous study of Serbian, Macedonian and Montenegrin folkdances. Influenced in part by the English folkdance revival movement, and encouraged by Serbian scholars, they did fieldwork in remote areas (from *c*1930) and developed a special dance notation having found the Laban and other systems inadequate. In all they notated some 900 dances; Danica Janković notated the music by ear. They also learnt to perform the dances themselves, taught them in Belgrade, and developed methods of teaching them. Their major work is *Narodne igre* (1934–64), one of the most important works on folkdance of any European tradition, which contains detailed descriptions of the dances, with music (as well as photographs and summaries in English in the later volumes), and essays on such subjects as psychological factors in dance, styles of women's dancing, singing and instrumental playing, dance types, choreography and staging of folkdances and traditional ways of leading dances. National recognition for their work was shown in the election of Ljubica Janković to full membership of the Serbian Academy of Sciences in March 1974. They were made corresponding members of the English Folk Dance and Song Society before World War II and of the IFMC and other dance organizations abroad after the war.

BARBARA KRADER

Jann, Georg (*b* Kalkberge, 17 Jan 1934). German organ builder. The son of an organist, he was trained by the firm of Alexander Schuke in Potsdam and at the Meisterschule in Ludwigsburg, where he passed his examinations with distinction. He worked with the firm of Karl Schuke in Berlin, with the Austrian firm of Rieger in Schwarzach and with Sandtner in Dillingen (Donau). In 1974 he took over the firm of Hirnschrodt in Regensburg, but transferred it in 1977 to Allkofen (in Lower Bavaria) under the name Georg Jann, Orgelbau Meisterbetrieb. Jann has worked according to the traditional art of organ building, using solid timber (no plastic), slider-chests and mechanical action; his speciality is the reconstruction of historic organs. He has written, with Richard Rensch, the article 'Versuche mit Zungenstimmen-Mensuren' (*ISO-Information*, ix, 1973). Among the organs built by his firm are those in Etzelwang parish church (1975); St Moritz, Augsburg (1979; choir organ); Scheyern Abbey (1979); St Quirin, Tegernsee (1980); St Joseph, Memmingen (1980); St Thomas Morus, Neusäss (1981); St Peter, Straubing (1982); Oporto Cathedral (1985); Niederaltaich Abbey (1985); Kanto Gakuin Women's College, Yokohama (1989); Waldsassen Basilika (1983–9); the Konzerthaus, Bamberg (1993); the Frauenkirche, Munich (1993–5); and Igreja de Nossa Senhora da Lapa, Oporto (1995). The firm, which has built 214 organs in 20 years, has developed into one of the most respected in Germany.

From 1995 the firm was led by Georg's son Thomas Jann (*b* Altdöbern, 12 Dec 1960), and in 1997 the firm's name was changed to Thomas Jann Orgelbau. Thomas trained with Rensch in Lauffen and Schuke in Berlin, and became a master craftsman in 1990.

HANS KLOTZ/THEODOR WOHNHAAS

Jannacconi [Janacconi, Gianacconi], **Giuseppe** (*b* Rome, 1740; *d* Rome, 16 March 1816). Italian composer. According to Fétis he studied music first with Don Soccorso Rinaldini, a papal singer, then with Gaetano Carpani, the teacher of Clementi, who was a fellow student. The formative influence on him was Pasquale Pisari, whose assistant he later became. Pisari introduced him to the strict counterpoint of the Roman school and gave him his own research notes, from which Jannacconi acquired a close familiarity with the Palestrina style. He passed on his knowledge and his notes to Giuseppe Baini, his pupil (from 1802) and friend, who made use of them in his celebrated study of Palestrina, published in 1828. In 1779 Jannacconi applied for the post of *maestro di cappella* at Milan Cathedral, but was not able to go there for the competition and Giuseppe Sarti was given the position. He became a music teacher in the orphanage at Rome; from 1811 until his death he was *maestro di cappella* at S Pietro, succeeding N.A. Zingarelli.

Jannacconi was one of the last representatives of the Roman school. Even when he employed instrumental accompaniment, his music, which may be in as many as 16 parts, adheres to the principles of the *stile osservato* or the *stile concertato*. His importance for the 18th-century 'Palestrina style' lies less in his works than in the fact that his study of the *stile antico* was based on Palestrina's actual music, thus making a substantial contribution towards a better understanding of the style. Abbé Santini, another of Jannacconi's pupils, was a keen collector of his music, and many of Jannacconi's works are now preserved in the Santini collection in Münster.

Jannson, Louis-Auguste-Joseph. French cellist and composer, brother of JEAN-BAPTISTE-AIMÉ JOSEPH JANSON.

Janotha, (Maria Cecylia) Natalia (*b* Warsaw, 8 June 1856; *d* The Hague, 9 June 1932). Polish pianist and composer. Her father, Julian Janotha, taught her in Warsaw; later she studied under Rudorff and Bargiel in Berlin, and also with Brahms, Clara Schumann, Franz Weber and Marcelina Czartoryska. She made her début at the age of 12 in Warsaw, and in 1874 played at the Leipzig Gewandhaus. She performed with great success at the Prussian and English courts, and also won the recognition of the ruling houses of Italy and Spain; in 1885 she was appointed court pianist in Berlin. For many years she lived in London, but was deported in 1916 (under suspicion of being an enemy alien) and settled in The Hague, performing only occasionally (as accompanist to the dancer Angèle Gydour).

Janotha gave concerts throughout Europe and was regarded as one of the finest pianists of her time. She was particularly known as an interpreter of Chopin. Personal contacts with Chopin's relations provided her with ready access to materials he had left: she published for the first time his Fugue in A minor (Leipzig, 1898), and supplemented and translated Polish books on Chopin, for example J. Kleczyński's *Chopin w cenniejszych swoich utworach* (translated as *Chopin's Greater Works*, London, 1896, and *Chopins grössere Werke*, Leipzig, 1898) and S. Tarnowski's *Chopin* and *Chopin i Grottger* (translated as *Chopin as Revealed by Extracts from his Diary*, London, 1905–7). Janotha wrote about 400 piano works, clearly influenced by Chopin. She was a member of several academies in England, Germany, Italy and Austria, and of the Accademia di S Cecilia in Rome.

ZOFIA CHECHLIŃSKA

Janovka, Tomáš Baltazar [Janowka, Thomas Balthasar] (*b* Kutná Hora, bap. 6 Jan 1669; *d* Prague, bur. 13 June 1741). Czech lexicographer and organist. He received a Jesuit education, first at or near Kutná Hora and then at the St Wenceslas seminary, Prague. He graduated MPhil at Charles University, Prague, on 1 August 1689, and he is also known to have attended lectures in medicine. On 27 June 1691 he became organist of the Týn Church, the principal church of the Old Town, and he remained in this post for 50 years.

Janovka's only completed work, the *Clavis ad thesaurum magnae artis musicae* (Prague, 1701/*R*1973, 2/1715/*R* as *Clavis ad musicam*), was the first musical dictionary to appear in the Baroque period; it consists of 20 preliminary pages and 224 pages of text covering some 170 terms arranged alphabetically by broad subjects. Like predecessors such as Tinctoris, and certain 17th-century theorists in the appendixes to their treatises, his purpose was to define and explain musical terms. He was primarily concerned with the meanings of Latin and Italian terms but also included a few German and French words and even two in Czech. He referred to Kircher's *Musurgia universalis* (1650), the *Ars cantandi* once ascribed to Carissimi (n.d.), and Daniel Speer's *Grund-richtiger … Unterricht* (1687, 2/1697), and he was familiar with earlier works by Rhau, Gumpelzhaimer and others. His definitions are more correct and precise than those of Kircher. He drew his musical examples from J.C.F. Fischer, Kapsberger, Kuhnau, Murschhauser, Speth and Wentzely. He placed particular emphasis on subjects related to the organ and church music but also included other instruments as well as some dances. Several of his articles are substantial; these include 'Tonus', 'Figurae musicae' and that on the organ, while 'Tactus' extends to 50 pages. Janovka apparently failed to complete a second work, which was to be called *Doctrina vocalis et instrumentalis*.

JOHN CLAPHAM, TOMISLAV VOLEK

Janowitz, Gundula (*b* Berlin, 2 Aug 1937). German soprano. She studied in Graz and made her début in 1960 as Barbarina at the Vienna Staatsoper, where she was engaged for 30 years. Early roles there included Pamina (which she recorded with Klemperer), Purcell's Dido, Mimì, Marzelline and, in 1964, the Empress (*Die Frau ohne Schatten*). At Bayreuth (1960–62) she sang a flowermaiden and Woglinde; at Aix-en-Provence (1963) Pamina; and at Glyndebourne (1964) Ilia. She made her Metropolitan début in 1967 as Sieglinde, which she also sang at the Salzburg Easter Festival (1967–8) and recorded for Karajan. At Salzburg she sang Donna Anna, Countess Almaviva, Fiordiligi (1968–72), the Marschallin and Ariadne (1978–81). In 1972 she sang a memorable Agathe with Böhm in a new production of *Der Freischütz* in Vienna, and in 1973 was Mozart's Countess at the reopening of the Paris Opéra. She appeared at Frankfurt, Hamburg, Munich, Berlin and La Scala, and made her Covent Garden début in 1976 as Donna Anna, returning as Ariadne (1987). Her other roles included Leonore (which she recorded under Bernstein), Elisabeth, Eva, Freia, Arabella, the Countess (*Capriccio*), Aida, Odabella and Amelia (*Boccanegra*).

Janowitz was also an accomplished lieder singer, outstanding in Schubert and Strauss, and a noted oratorio soloist. Her acting, once merely dignified, later became more committed. Her singing was sometimes criticized

for being a little cool; but her voice, a full-toned lyric soprano of uncommon purity, was one of the most beautiful to be heard in the 1960s and 1970s. Among her most admired recordings are Countess Almaviva, Ariadne and the Countess in *Capriccio*, Strauss's *Vier letzte Lieder* with Karajan and various choral works.

ALAN BLYTH

Janowski, Feliks. *See* HORECKI, FELIKS.

Janowski, Marek (*b* Warsaw, 18 Feb 1939). Polish conductor. He left Poland as a child with his German-born mother and was brought up in Germany, studying in Cologne with Sawallisch and later in Siena. He worked in the opera houses of Aachen, Düsseldorf and Cologne, and made his London début with the Cologne company at Sadler's Wells in 1969 in the first British performances of Henze's *Der junge Lord*. He was principal conductor at Hamburg, 1969–74, where he took over Penderecki's *The Devils of Loudun* and conducted its recording (1970, as *Die Teufel von Loudun*); he was subsequently music director at Freiburg, 1973–4, and Dortmund, 1975–80. Janowski made the first digital recording of the *Ring* with the Dresden Staatskapelle (1984), which was much praised for its sustained momentum and sense of line. Following his American début in San Francisco in 1983 and his Metropolitan début the next year in *Arabella*, he conducted further performances of Wagner, in Paris and Chicago.

Janowski's concert career has included work with the Liverpool PO, where he was guest conductor, 1980–83, and artistic adviser, 1983–6. In 1984 he was appointed chief conductor of the French Radio Nouvel Orchestre Philharmonique, and from 1986 to 1991 he was the musical director of the Gürzenich Orchestra in Cologne. In 1999 he was chosen to take over as musical director of the Orchestre Philharmonique de Monte Carlo (from 2000).

NOËL GOODWIN

Jan Polak. *See* POLONUS, JOHANNES.

Jansa, Leopold (*b* Wildenschwert [now Ústí nad Orlicí], 23 March 1795; *d* Vienna, 25 Jan 1875). Bohemian violinist and composer. His first music teachers in his home town were the schoolmaster Jan Jahoda and the organist Jan Zizius; he became known for his violin playing while still at school in Brno. In 1817 he left to study law in Vienna, where his meeting with the composer Voříšek, who introduced him to the city's musical circles and artistic society, had a decisive influence on his life. He abandoned his university studies, took composition lessons from Emanuel Alois Förster and in his violin playing soon attained the standard of the renowned Viennese violinists Mayseder and Böhm. In 1823 he entered the Count of Brunswick's service as a chamber musician and a year later returned to Vienna and became a violinist in the court chapel. He gave concerts in Prague and Pest in 1832, and in 1834 was appointed musical director and professor of violin at the University of Vienna. After Ignaz Schuppanzigh's death Jansa became first violinist of his quartet, which renewed its activity (1845) and earned the praise of Hanslick. In 1851 Jansa was a member of a jury of string instrument specialists at the International Industrial Exhibition in London. While in London he performed at a benefit concert for Hungarian emigrants (12 July 1851), which caused him to lose favour with the Austrian imperial court, and he was deprived of his rank and banished from Austria. He remained in London, taught music and occasionally gave solo and quartet concerts. By imperial decree in September 1868 he was pardoned and granted a small pension in Austria. In 1870 he returned to Vienna and appeared for the last time at a chamber concert; from 1871 he lived in retirement.

In addition to giving concert performances, for which contemporary critics praised his display of technical skill, his natural musicality and exceptional gift for chamber playing, Jansa was renowned as an excellent teacher; the most famous of his pupils were the violinists Wilma Neruda and Eduard Rappoldi and the composer Goldmark. His chamber and violin works, including concert variations, fantasies, sonatas, trios, quartets and church music (published in Paris, Vienna and Leipzig) display a certain musicality and compositional facility, but they lack clearcut originality; his duets for two violins and for violin and viola still have instructional value.

ALENA NĚMCOVÁ

Jansch, Bert [Herbert] (*b* Glasgow, 3 Nov 1943). Scottish guitarist and singer-songwriter. Jansch developed his own acoustic guitar style, mixing elements from folk, blues and jazz. His first-known recordings, made secretly by a fan, were released on the Ace label in 1999 under the title *Young Man Blues* and included covers of songs by CHARLES MINGUS and BIG BILL BROONZY as well as his own compositions. Jansch played on the folk circuit and in the mid-1960s moved to London where he had become a leader of the local folk scene.

His first album, *Bert Jansch* (1965), was a show-case for his intricate folk-baroque guitar style and own songs, including the anti-drug ballad 'Needle of Death'. Further solo albums included *Jack Orion* (1966) which showed his growing interest in British folksong.

In 1967 Jansch joined the band PENTANGLE, which also included guitarist JOHN RENBOURN, and enjoyed success on the international concert circuit; the group split up in 1972 but re-formed briefly in the early 1980s. Jansch returned to a solo career, recording a series of albums that included the country-flavoured *L.A. Turnaround* (1974) and *Santa Barbara Honeymoon* (1975). His later album *Toy Balloon* (1998) showed that he had lost none of his early skill.

ROBIN DENSELOW

Jansen [Toupin], **Jacques** (*b* Paris, 22 Nov 1913). French baritone. He studied in Paris and made his début at the Opéra-Comique in 1941 as Pelléas, which became his most famous role. He recorded it with Désormière in 1942 and sang it frequently in Europe and America,

including the Theater an der Wien, Vienna (1946), the Holland Festival, Amsterdam (1948), Covent Garden and the Metropolitan (1949). At the Opéra-Comique he also sang much operetta, to which his small but keenly projected voice was well suited; his roles there included Valérien in Hahn's *Malvina* (1945) and the title role in Pierné's *Fragonard* (1946). At the Opéra he appeared as Ali in Rameau's *Les Indes galantes* (1952), and at Aix-en-Provence he sang Cithaeron in Rameau's *Platée* (1956). He was also a notable Danilo in *Die lustige Witwe*, a role he sang over 1500 times.

ELIZABETH FORBES

Jansen, Rudolf (Cornelis Willem) (*b* Arnhem, 19 Jan 1940). Dutch pianist. At the Sweelinck Conservatory, Amsterdam, he studied the organ with Simon Jansen (his father) and the piano with Nelly Wagenaar, winning the *prix d'excéllence* for both instruments. He trained as an accompanist with Félix de Nobel and later worked with Pierre Bernac on the study of French song. His career as an accompanist dates from 1966, when he won the Concertgebouw Friends' silver medal. Singers with whom he has been closely associated include Elly Ameling, Brigitte Fassbaender, Dietrich Fischer-Dieskau and Robert Holl. With Andreas Schmidt he has recorded the Schubert cycles, Schumann's *Liederkreis* op.39 and an edition of songs by Richard Strauss, a noted feature of his playing being the balancing and clear articulation of melodic strands. Jansen is also accompanist in the first complete edition on disc of Grieg's songs. Masterclasses in Europe, the USA, Canada and Japan, and a professorship in song accompaniment at the Sweelinck Conservatory have been among his further commitments.

J.B. STEANE

Jansen [Janson, Jansson; Bartolozzi], **Therese** (*b* ?Aachen, *c*1770; *d* Calais, 1843). English pianist of German birth, mother of Lucia Elizabeth Vestris (*see* VESTRIS family, (3)). Her father, a highly regarded dancing master, brought her and her brother Louis (*b* Aachen, 1774; *d* London, before 19 November 1840) to London, where they followed in his profession. Both studied the piano with Clementi; Louis achieved some repute as a composer of piano music, but it was Therese whom Bertini named along with Cramer and Field as one of Clementi's best pupils. Therese is not known to have played in public, but her abilities were obviously considerable; the works dedicated to her include Clementi's sonatas op.33, J.L. Dussek's sonatas opp.13 and 43, her brother's sonatas op.6 and, above all, Haydn's trios HXV: 27–9 and solo sonatas HXVI: 50 and 52 (but not HXVI: 51, see Graue). Haydn, who mentions her in his London notebooks and in reminiscences of his stay there, served as a witness at her wedding on 16 May 1795 to Gaetano, son of the noted engraver Francesco Bartolozzi. Lucia Elizabeth was the first child of this marriage. Therese was again in contact with Haydn in Vienna in 1798–9, but the couple returned to London in 1800 after losing their property in the Veneto during the French invasion.

STEPHEN C. FISHER

Janson, Alfred (*b* Oslo, 10 March 1937). Norwegian pianist, accordion player and composer. He studied the piano with his mother and with Fongaard and Finn Mortensen he studied counterpoint and harmony. He made his début as a pianist in 1962, by which time he was already established as a jazz musician.

His first works were influenced by the international avant garde, with an emphasis on sound surfaces; with *Kanon* (1965) he brought jazz elements into a modernist context; *Tema* (1966) and particularly *Nocturne* of the following year introduced neo-Romantic features and in so doing launched a new accessible style in Norway. Janson is often inspired by political themes, and the vocal work *Valse triste* (1970) and the opera *Et fjelleventyr* ('A Mountain Fairy Tale', 1972) are satirical contributions to the social debate. In *Forspill* ('Prelude', 1975) for violin and orchestra he developed a complex musical form which contains modern treatment of conventional stylistic figurations. This type of writing is continued particularly in the orchestral works *Mellomspil* ('Interlude', 1985) and *Nasjonalsang* (1988).

He is regarded as the first Norwegian composer to combine effectively and in a reflective manner stylistic elements as diverse as modernism and the avant garde, Romanticism, jazz and folklore. Janson's output reflects a pronounced scepticism towards defined musical schools. Expressionist features are balanced by strict control of musical form, and alongside the blend of many different styles the music has often an unmistakable lyrical undertone.

WORKS

ERLING E. GULDBRANDSEN

Janson [Jannson], **Jean-Baptiste-Aimé Joseph** [l'aîné] (*b* Valenciennes, bap. 9 March 1742; *d* Paris, 2 Sept 1803). French cellist and composer. He studied with Berteau, a fellow Valenciennes resident and, according to Gerber, also played the viola da gamba. He travelled to Paris in

1755, making his début at the Concert Spirituel on 23 March. According to the *Mercure de France* (April 1755, p.196), his playing 'charmed the entire assembly'. In succeeding years Janson performed frequently at the Concert Spirituel until at least 1780, usually playing sonatas of his own composition or *sonates mêlées d'airs connus*, and on at least four occasions (in April 1765) performing a duet with the lutenist Josef Kohaut. From 1779 his cello concertos were performed at the Concert Spirituel by his younger brother, Louis-Auguste-Joseph (see below), and performances of his symphonies followed in 1783. Janson joined the household of the Prince of Conti in 1764, but rivalry with J.-P. Duport may account for his leaving in 1766, joining the hereditary Prince of Brunswick on travels to Italy. He was in Paris from 1767 to 1769 and toured Europe during the 1770s, visiting Denmark, Sweden and Poland. Gerber reported him to be in Hamburg in 1783 and his op.6 concertos were later published by Breitkkopf.

In Paris in 1777, Janson is listed in the *Almanach Dauphin* as a *maître de musique*. By 1788 he was *surintendant de musique de Monsieur* (brother of the king, later Louis XVIII). In 1795 he was appointed professor at the newly created Paris Conservatoire. Involved with the political intrigues which plagued the Conservatoire in its formative years, he sided with J.F. Le Sueur in a power struggle against the director, Bernard Sarrette. Janson was credited with writing the 'lettre à M. Paësiello', published in the *Journal du commerce* in 1802, which called for reorganization of the Conservatoire and Sarrette's resignation. Sarrette remained in power, but the Conservatoire was reorganized in 1802 and Janson lost his position.

Brook considers Janson's symphonies to be among the most significant written in France during the 1780s. His cello compositions are innovative and virtuoso. Characteristics include use of the complex bowings, sudden changes of dynamics and intricate thumb-position passages, inclusive of double-stops, solid octaves and high tessituras. His op.15 concertos, composed as teaching works, ascend to *f‴*.

His brother, Louis-Auguste-Joseph Janson [Jannson] [*le jeune*] (*b* Valenciennes, 8 July 1749; *d* Paris, *c*1815), was also a cellist and composer. Between 1773 and 1780 he was a well-known performer at the Concert Spirituel, where he usually played his own sonatas or his brother's concertos. He played in the Opéra orchestra from 1789 to 1815. His compositions and his performances have often been confused with those of his brother (and in some cases the question remains open), for the title-pages of their compositions and accounts of their performances usually cite only their surname. He wrote three *Trios concertants* op.1 for two violins and cello, six sonatas (also op.1) for cello and double bass, six sonatas op.2 for cello or violin, and six trios for violin, viola and cello.

WORKS

printed works published in Paris unless otherwise stated

Vocal: Motet, chorus, perf. Paris, Concert Spirituel, 24 Dec 1784; Messe solenelle d'action de grâce, Paris, Paris, 10 Aug 1789; Te Deum, Paris, 10 Aug 1789

MARY CYR/VALERIE WALDEN

Janson, Louis-Auguste-Joseph. French cellist and composer, brother of JEAN-BAPTISTE-AIMÉ JOSEPH JANSON.

Jansons, Arvīds [Arvid] (*b* Liepāja, 24 Oct 1914; *d* Manchester, 21 Nov 1984). Latvian conductor. He studied the violin at the Liepāja Conservatory (1929–35) and the violin, and composition at the Riga Latvian Conservatory (1940–44) while playing as a violinist in the Riga Opera orchestra; he also studied conducting with Leo Blech. His conducting début was in *Swan Lake* at Riga in 1944, after which he was appointed resident conductor; he won second prize in the 1946 USSR conductors' competition and from 1947 to 1952 conducted the Latvian RO. In 1952 he became conductor of the Leningrad PO, with which he toured abroad; he also conducted leading orchestras throughout the USSR, most European countries (including regular appearances with the Hallé), Australia and Japan (where he was honorary conductor of the Tokyo SO). He had a wide-ranging orchestral repertory centring on Beethoven, Brahms, Sibelius, Tchaikovsky and Shostakovich, which he conducted with intellectual power and sensitivity, and a blend of constructive clarity and inspired intensity. His performances were also notable for analytical discernment and sensitive phrasing. From 1965 he held regular conducting courses at the international music seminars in Weimar, Turku (Finland) and Arvika (Sweden). From 1972 until his death he was director of the conductors' class at the Leningrad Conservatory.

ARNOLDS KLOTIŅŠ

Jansons, Mariss (*b* Riga, 14 Jan 1943). Latvian conductor. The son of Arvīds Jansons, he began violin studies in Riga, and in 1957 entered the Leningrad Conservatory, where he also studied conducting with N.S. Rabinovich and made his conducting début before graduating with honours. From 1969 to 1972 he studied with Swarowsky in Vienna and then with Karajan in Salzburg, winning the International von Karajan Foundation Competition in Berlin in 1971. Two years later he was appointed associate conductor of the Leningrad PO, becoming associate principal conductor in 1985. In 1979 he was appointed music director of the Oslo PO, where he quickly raised the level of performance and introduced the orchestra to the international concert circuit, playing at the Salzburg Festival and the Proms, in Carnegie Hall, Suntory Hall (Tokyo) and elsewhere. Notable recordings with the orchestra include an anthology of Russian and eastern

European works for the orchestra's 75th anniversary, the complete Tchaikovsky symphonies and many orchestral works by Dvořák, Grieg, Sibelius and Honegger. Other orchestras with which he has recorded include the St Petersburg PO (the complete works of Rachmaninoff), the Concertgebouw Orchestra and the Berlin PO. His recordings, several of which have won awards, also include works by Berlioz, Mahler (a refined and luminous reading of the Second Symphony), Ravel and Wagner. He has been a guest conductor with most leading orchestras in North America and Europe, including the Chicago SO, Cleveland Orchestra, Vienna PO (with whom he made his 1994 Salzburg début), Latvian National SO and LPO (as principal guest conductor from 1992), and was appointed music director of the Pittsburgh SO in 1997.

Jansons's repertory centres on 19th- and early 20th-century composers. His interpretations show analytical depth and colour, bringing out the essence as well as subtler nuances in the music. He has featured in a number of radio and television programmes, and has received the Star of the Royal Norwegian Order of Merit for his work with the Oslo PO. In 1995 he was appointed professor of conducting at the St Petersburg Conservatory.

ARNOLDS KLOTIŅŠ

Janssen, Guus (*b* Heiloo, 13 May 1951). Dutch composer and improviser. At the Sweelinck Conservatory in Amsterdam he studied piano with Jaap Spaanderman and Ton Hartsuiker, and composition with Ton de Leeuw. From the early 1970s he showed a remarkable independence of thought, influenced, among other things, by the improvising methods he, along with his two brothers, developed in his teens. He has always been equally at home working in composed as in improvised music. Early on he played the piano in the Asko Ensemble, which gave the première of his *Octet* in 1978. The following year he introduced the first of the many improvisation ensembles of which he was to be the nucleus: groups that played a considerable part in the emergence of a characteristically Dutch style of improvisation, where fully notated and free elements are blended to such an extent that the two can hardly be distinguished.

Janssen's solo improvisations, both on the piano and on the harpsichord, show the same playfulness and formal sense that is distilled in his written music. However, his method of composing is anything but improvisatory. Many of his works involve chord tables, numerical patterns and other kinds of self-imposed rules. But these cerebral processes only serve as a mould. At the heart of his thinking lies the notion of approaching different musical traditions and phenomena with an innocent ear. His favourite example, by analogy, is the Flemish painter Roger Raveel, who views and depicts reality as though it were an abstraction. Thus anything can occur in Janssen's music, from jazz chords and Baroque trills to quarter-tones, but always estranged from their origins. The effect can be disconcerting as well as hilarious. Quirky rhythms, dissociated hints of harmony and jagged transitions give Janssen's music a Haydnesque quality, not only in its capacity to surprise, but also in its logical, clearcut construction. His *Streepjes* (1981) is a fine example of his guileful guilelessness. The fabric consists almost exclusively of harmonics, which nevertheless yield a chromatic scale, because most of the strings have been retuned. As a result, the four players must combine their notes to produce a single melody. The strange sonority, resembling a glass harmonica, is repeatedly interrupted by full, regular vibrato chords. His most successful work is the opera *Noach* (on a libretto by Friso Haverkamp), staged during the Holland Festival in 1994 with Pierre Audi as director and Karel Appel as designer. Scored for an extended version of Janssen's own ensemble, it contained a vital and moving mix of notated and improvised music.

WORKS

FRITS VAN DER WAA

Janssen, Herbert (*b* Cologne, 22 Sept 1892; *d* New York, 3 June 1965). German baritone. Having served as an officer in World War I, he studied with Oskar Daniel in Berlin and made his début there at the Staatsoper on 5 May 1922 as Herod in Schreker's *Der Schatzgräber*; he remained with the company until 1938, singing a wide variety of lyrical roles, especially in the works of Verdi and Wagner, parts that soon brought him world fame. At Covent Garden (1926–39) and at Bayreuth (1930–37) he was regarded as a notable exponent of the Dutchman, Wolfram, Kurwenal, Kothner, Gunther and Amfortas, all of which he performed with a warm and sympathetic timbre, fine legato, clear enunciation and vivid acting. He was also a remarkable Prince Igor and Orestes (*Elektra*).

Distaste for the Nazi regime having caused him to leave Germany in 1938, he sang that year in Buenos Aires and thereafter regularly at the Metropolitan, where he was a mainstay of the German wing from 1939 to 1952. After the retirement of Schorr in 1943, he was persuaded to take over the heavier roles of Wotan and Hans Sachs, to which his voice was not so happily suited. His gifts as a lieder singer were mainly shown in his recordings, notably those made for the Hugo Wolf Society. Reissued on CD, these reveal the interior nature of his interpretations. His Wagner singing is preserved in several off-the-air recordings from the Metropolitan and in the virtually complete Bayreuth *Tannhäuser* of 1930.

DESMOND SHAWE-TAYLOR/ALAN BLYTH

Janssen, Werner (*b* New York, 1 June 1899; *d* Stony Brook, NY, 19 Sept 1990). American conductor and composer. He studied with Philip G. Clapp at Dartmouth College (BMus 1921, honorary DMus 1935) and with Frederick Converse, Arthur Friedheim and Chadwick at the New England Conservatory. Subsequently he was a conducting pupil of Weingartner in Basle (1920–21) and of Scherchen in Strasbourg (1921–5). He received a fellowship from the Juilliard Foundation and the Rome Prize, which took him to the Conservatorio di Musica S Cecilia for orchestration studies with Respighi (1930–33). His international reputation was established when he conducted an all-Sibelius concert in Helsinki (1934); the composer himself declared the performances definitive, and Janssen was awarded the Order of the White Rose for his services to Finnish music. During the 1934–5 season he became the first native New Yorker to conduct the New York PO. He later held appointments as music director of the Baltimore SO (1937–9), the Janssen SO of Los Angeles, which he founded for the performance of new works (1940–52), the Utah SO (1946–7), the Portland (Oregon) SO (1947–9) and the San Diego SO (1952–4); he also conducted major orchestras throughout the world. As a composer he began by contributing numbers for the Ziegfeld Follies and other revues. His formal creative work received some impetus from the success of his *Kaleidoscope* for string quartet in Rome (1930). In general his music (which includes more than 45 film scores) incorporates descriptive effects and the idioms of jazz, which he considered as modern folk music, within traditional structures.

GUSTAVE REESE/BARBARA A. RENTON/R

Janszoon, Peter. *See* SWART, PETER JANSZOON DE.

Janua, Johannes de. *See* JOHANNES DE JANUA.

Janue, Antonius (*fl c*1460). Italian composer. His 13 works survive in the manuscript *I-Fn* 112bis, copied around 1460, with the ascription 'p. Anto. Jan.', 'A. Janue', or simply 'A.J.'. The prefix 'p.' may stand for 'pater' or 'presbyter', suggesting that he was an ordained priest: all his known works are sacred. The name 'Janue' may mean 'of Genoa': Giazotto identified him with one 'Antonius de Jan. cantor magiscolae in palacio', who was paid an annual salary of L120 according to a payment account of the Genoese ducal palace dated 1456, and he may also be the 'Antonio da Genova' recorded in a Ferrara Cathedral document of 1462 (see Lockwood, 317). If these individuals are indeed to be identified with the composer, one can assume that he was active in northern Italy around the middle of the century.

Eight Vesper hymns, two processional hymns, two *Magnificat* settings and one *laude* survive; most of these works are in three voices or in fauxbourdon. Characterized by plain polyphonic textures and clear formal structures, they constitute a rare collection of polyphonic works by an Italian composer of the mid-15th century. His musical style and compositional technique follow closely the model of Du Fay, although his music, more chordally orientated and with less use of dissonances, lacks the subtlety and complexity of the great master. He seems to favour simple, brief imitative passages, usually between cantus and tenor. His music often reveals a tendency toward irregular metrical organization, resulting in irregular barring in modern transcription.

The setting of *Iste confessor* carries the third stanza of the hymn text, preceded in the manuscript by another setting of the same hymn, by Johannes de Quadris, carrying the first stanza: evidently the two settings were intended to be used together. They appear next to one another also in *I-Mc*, this time both carrying the text of the first stanza. Janue's setting was probably composed after Johannes's, which is also preserved in three other sources.

There is a high probability that Janue was the compiler of *I-Fn* 112bis, as six of his pieces have been partly erased and recomposed in that manuscript, sometimes fairly extensively, creating the impression that the scribe was composing while copying. A reconstruction of the original versions reveals more intricate textures, suggesting that the composer revised the music for the benefit of singers of limited skill. Also, six anonymous compositions in the same source may be attributed to Janue on stylistic grounds, and two of these contain similar autograph revisions. One of the six pieces was evidently composed as a substitute verse for Du Fay's *Magnificat sexti toni.*

WORKS

all for 3 voices; all in I-Fn 112bis

** – autograph revisions in MS*

Edition: *Antonii Janue opera omnia*, ed. M. Kanazawa, CMM, lxx (1974)

Magnificat quinti toni*; Magnificat sexti toni (anon.); Magnificat septimi toni*; Magnificat octavi toni (anon.)

Christe redemptor*; Crucifixum in carne (anon.); Crucifixum in carne (anon.)*; Deus tuorum militum; Gloria, laus et honor; Hostis Herodes impie*; Iste confessor, also in *I-Mc*; Jesu corona virginum; Lucis creator optime*; O Redemptor summe, 2vv; Pange lingua gloriosi (anon.); Quem terra pontus; Sanctorum meritis (anon.); Ut queant laxis; Verbum caro factum est*

MASAKATA KANAZAWA

Januszowski, Jan Łazarzowicz. Polish printer, publisher and bookseller, son of the widow of HIERONIM WIETOR.

Jan z Głogowa [Schelling, Jan] (*b* Glogau [now Głogów], ?*c*1445; *d* Kraków, 11 Feb 1507). Polish philosopher, astronomer and music theorist. After studying at Kraków University, he was a lecturer there for 40 years. During 1497–8 he lectured in mathematics in Vienna. He was one of the leading scholars in Kraków and Copernicus was probably among his pupils. A manuscript from the Krasiński Library, Warsaw, that included two treatises associated with Jan z Głogowa (MS 47) was destroyed during World War II. The treatises taken together were most probably a commentary on Johannes de Muris's *Musica speculativa*. The manuscript, written during the period 1475–8, was owned by Jan z Głogowa and included his writings on astronomy. His commentary to Aristotle's *De anima, Quaestiones librorum de anima magistri 10 annis versaris* (Kraków, 1501), presents some of the more standard views of medieval philosophy on the place of music among the mathematical disciplines.

ELŻBIETA WITKOWSKA-ZAREMBA

Jan z Lublina [John of Lublin] (*fl c*1540). Polish organist. He may have been organist at the convent in Kraśnik, near Lublin. It is not known whether he was the Jan z Lublina who received the bachelor's degree from Kraków University. He was the owner and perhaps the main compiler of a manuscript organ tablature *Tabulatura Ioannis de Lyublin canonic: regularium de Crasnyc 1540* (*PL-Kp* 1716; facs. in MMP, ser.B, i, 1964; ed. in CEKM, vi, 1964–7). The tablature contains 520 pages and is the largest extant 16th-century organ tablature in Europe. Various dates are found in it, ranging from 1537 to 1548, and although most of it is written in the same hand three other hands may be distinguished on a comparatively small number of leaves.

The manuscript begins with a Latin treatise on the art of composition which includes many music examples; later in the manuscript, among the various pieces, are supplements to the treatise under the following headings: 'conclusiones finales super claves ad discantum'; 'conclusiones super claves ad cantum transpositum'; 'clausulae seu colores in cantum choralem interponendae'; and 'concordantiae pro cantu chorali in tenore' and 'concordantiae ad bassam' (i.e. examples of setting three parts to a cantus firmus in the tenor or bass). The manuscript concludes with instructions on organ tuning. The treatise demonstrates a practical approach to the problem of writing music on a cantus firmus: its author did not enter deeply into the mathematical speculations customary in earlier and even contemporary treatises, but discussed methods, illustrating them with music examples. The manuscript's compiler was conscious of the changes – mainly in tonality – taking place at that time in the leading musical centres, and the contents of the tablature show that he was aware of the best work in Europe: they include works by Brack, Brumel, Girolamo Cavazzoni, Costanzo and Sebastiano Festa, Heinrich Finck, Lupus Hellinck, Jacotin, Janequin, Josquin, Rotta, Sandrin, Senfl, Sermisy, Stoltzer, Verdelot, Johann Walter (i), Martin Wolff and Wuest. Polish composers include Mikołaj z Krakowa, Mikołaj z Chrzanowa, Seweryn Koń and 'N. Z'; there are also many anonymous compositions. The works were probably copied mainly from Kraków sources. The repertory is varied both in form and purpose: there are elaborations and simple intabulations of vocal works, both sacred and secular, and sacred organ works to be performed *alternatim*, as well as a large group of dances and dance-songs and over 20 praeambula. All the pieces are written in old German organ tablature.

PIOTR POŹNIAK

Japan (Jap. Nihon [Nippon]). Country in East Asia. With an area of 370,000 km² and a population of about 126·43 million (2000), it principally comprises four main islands (Honshū, Kyūshū, Hokkaidō and Shikoku) and the Ryūkyū archipelago, extending in an arc between Kyūshū and Taiwan. Early cultural influences flowed from Japan's proximity to China and Korea to the west. Although generally considered to be ethnically homogeneous, Japan is culturally diverse, with distinctive cultures especially in the far south (Ryukyuan) and the far north (Ainu culture of Hokkaidō) complementing the mainstream of Japanese culture.

I. General

1. HISTORY. The modern period of Japanese history dates from the Meiji Restoration of 1868, when a constitutional monarchy was established after nearly seven centuries of feudalism. During this period the country was opened to the outside world and its influences, so that by the mid-20th century music in Japan reflected mixtures of three basic types: Japanese traditional music,

Western music and international modern trends. In Tokyo audiences enjoy concerts of Western classical music given by Japanese and foreign performers, while on nightly television programmes young Japanese singers perform popular songs in Western or Japanese idioms. On the surface, traditional music seems neglected. But although there has been a decrease in the number of professional performers and lovers of such music, and a few genres have disappeared, the surviving traditions have been maintained at a high standard. An important factor in this is the continuing presence of a strong musicians' guild system, which has since ancient times (see §3 below) reinforced the various styles of each musical genre. Such continuing traditions are sustained not only in art music but also in the rich variety of folk music that flourishes throughout the country.

Japanese traditional music has retained most of the major genres of each historical period before modernization. For example, from the early Middle Ages (11th–15th centuries) one finds *gagaku* (ancient court music), *shōmyō* (Buddhist chant), narrative music on the *biwa* (lute) and *nō* drama, while the later Middle Ages (17th century–1868) are represented by music for the *koto* (zither), *shamisen* (lute) and *shakuhachi* (end-blown flute) and by much folk music. Another regular feature of Japanese music is its sensitive combination of drama and dance, this synthesis perhaps being best represented by the *nō* and *kabuki* dramas.

The history of Japanese music can be divided into five stages of stylistic development, corresponding to stages in the country's socio-political and economic history (see Table 1).

(i) Indigenous music. Features of the music of the early ancient period are only vaguely known through archaeological materials (see §II, 2 below) and historical sources of the 8th century; the latter describe musical instruments such as the *koto* (zither), *fue* (flute), *tsuzumi* (drum) and *suzu* (bell-tree). These instruments have native names and are thought to be indigenous, whereas most of those that appeared later originated in China. The performing arts were a reflection of the way of life in Japan's Neolithic and early Bronze periods. During this time the ancient clan system was developing into an imperial state. The basic shamanism of early antiquity became systematized into a state religion called Shintō ('The Way of the Gods'), which helped to strengthen the political power of the imperial court. The music and dance of Shintō ceremonies had already become the main body of court music by the end of this period when, in the 5th and 6th centuries, mainland Asian styles began to stream into Japan.

(ii) Continental Asian music. The introduction of continental East Asian music and dance, first from Korea and then from China, greatly changed the character of Japanese music. The introduction of Buddhism through Korea in the 6th century also had considerable influence. The first Chinese performing art to reach Japan at this time was *gigaku* (masked dances and pageants), which was imported by Koreans during the Asuka period (*c*552–645 CE); the Hōryūji, which is the world's oldest surviving wooden building, was constructed during this period. *Gigaku* was followed by *gagaku*, which consisted of various kinds of Korean and Chinese court music and dance. These were organized, together with indigenous music, under a government music department called the Gagaku-ryō. During this period an important governmental musical event took place as part of the celebration in 749 of the completion of a colossal bronze statue of the Buddha for the Tōdaiji monastery in Nara, then the capital. The Shōsōin, the imperial treasury of the Emperor Shōmu (*d* 756) in Nara, contains 75 musical instruments of 18 kinds that were used in these ceremonies. They are excellent and rare evidence of the international origins of *gagaku*, for although some instruments came from Tang dynasty China or Korea, others originated in India, Persia or Central Asia. However, the international features of *gagaku* were modified to Japanese taste and style when the aristocracy replaced the government as the major sponsor of such music early in the Heian period (794–1185 CE). Buddhist chant (*shōmyō*), which had its origins in India and was introduced into Japan via China, was another major imported genre of the period.

(iii) National music. In the later Heian period feudal warriors (samurai) began to exert influence on the cultural and political activities of Japan. The Minamoto [Genji] family established the first feudal government (shogunate) in the Kamakura period (1192–1333) and was followed in the Muromachi period (1338–1573) by the Ashikaga family. The names of the periods are derived from these clans' respective capitals, Kamakura being a city about 50 km south-west of Tokyo and Muromachi being the name of an area in the city of Kyoto. Cultural activities in the first half of the Middle Ages were centred on such samurai clans and Buddhist priests.

Besides the modified courtly and Buddhist music of this period there were two important new genres that seem quite national in character. One was *heike-biwa*, a unique style of vocal narrative music accompanied on the *biwa* lute. Originating during the Kamakura period, *heike-biwa* would later give rise to the *satsuma-biwa* and *chikuzen-biwa* traditions and to some genres of *shamisen*

TABLE 1

		Music	*Political period*	*Society and economy*
(i)	Early ancient	period of indigenous music	6th century and earlier	clan system, slave labour
(ii)	Late ancient	period of international music	Asuka, 552–645 Nara, 710–84 Early Heian, 794–897	clan system organized under governmental control
(iii)	Early Middle Ages	1st period of national music	Late Heian, 897–1185 Kamakura, 1192–1333 Muromachi, 1338–1573	feudal society
(iv)	Late Middle Ages	2nd period of national music	Momoyama, 1573–1603 Edo, 1603–1868	feudal society dominated by shogunate
(v)	Modern	period of international music	Meiji, 1868–1912, and after	industrial capitalism

music, particularly *gidayū*, the highly developed narrative music of *bunraku* (puppet theatre) (see §II, 3 and 6 below).

The second major genre that developed in the Muromachi period is a theatrical form called *nō* (see §VI, 1 below). Representing the highest expression of Japanese aesthetic theory, it is a perfect marriage of drama, theatre, music, dance and costume. The beauty of *nō* music lies in its refined symbolism and its combination of simplicity with sophistication and of stereotypes with flexibility. The style and spirit of *nō* have been regarded as the outstanding achievement in Japan's indigenous performing arts.

Whereas support for music in the early Middle Ages came primarily from the upper classes (samurai and Buddhist priests), the three new major genres of the Momoyama (1573–1603) and Edo (1603–1868) periods arose among the merchants and artisans of the cities. The Tokugawa family shogunate dominated the nation throughout the Edo period, but it could not suppress the new culture that developed naturally from the increasing rise of the merchant class and, in fact, affected all classes. Women from both the samurai and merchant classes, for example, enjoyed performing songs accompanied by the 13-string *koto* (long zither), a style that had been first established by blind musicians. The most popular forms of lyrical and narrative vocal music of the period are found in genres accompanied by the three-string *shamisen* plucked lute. Though the instrument developed from the Chinese *sanxian*, its structure became quite different, and its music was derived primarily from Japanese *kabuki* and puppet theatre traditions. *Kabuki* in particular provided a context for numerous genres of *shamisen* music to meet and develop. Another popular instrument was the *shakuhachi*, an end-blown bamboo flute. Used at first by itinerant priests of the Fuke sect of Zen Buddhism, it became popular among people of every class, and soon a cadre of professional secular players developed, many of whom became associated with *koto*-based chamber music in the 19th century.

Although these three new genres of music (defined here by their respective main instruments, *koto*, *shamisen* and *shakuhachi*) were held in great esteem, the older musical styles such as *gagaku* and *nō* also retained a respected position as the art music of the upper classes. By this time, however, *gagaku* and *nō* had already lost their original function as entertainment and became formalized into a kind of cultural ritual for the court, shrine, temple or élite samurai society.

(iv) Western influences. The period of national music ended with the modernization of Japan when the country was opened to the outside world in 1868. Since then Japan has developed under liberalism and capitalism and has delved enthusiastically into all kinds of Western classical and popular music. Traditional music has gradually lost some of its importance, and many efforts have been made to combine traditional Japanese and Western idioms in both art and popular music. It is evident also that Japan has, with its remarkable energy and talent, contributed to the creation of new styles in international contemporary music.

Since the 1970s Japan has also become more involved with other non-Western musics: thus one might encounter young Japanese performing Balinese *kecak* among the skyscrapers of Tokyo. The growth of ethnomusicology, ease of travel, the 'World Music' phenomenon and increased media access to diverse cultural products have all had an impact on music activity in Japan.

2. AESTHETICS. The aesthetics of Japanese traditional music, like its theory and style, must be understood in the context of Japan's historical periods. The Japanese emphasis on monophonic or non-harmonized music has produced other specific characteristics: the delicate use of microtones, the importance of timbre and the refinement of free rhythm. Musical aesthetics have varied from period to period, although in later times the aesthetics of earlier periods lingered and often mingled with one another. If representative ideas are chosen from each period, they may be summarized as follows: purity (*kiyosa*) from early antiquity; refined and courtly taste (*miyabi*) from late antiquity; symbolism and sober poverty (*wabi*, *sabi*, *yūgen*, *hana*) from the early Middle Ages; and smartness and elegance (*iki* and *sui*) from the later Middle Ages. The philosophies of Shintō and Buddhism, especially Zen Buddhism, provide the aesthetic bases of the Japanese approach to most arts and, together with Confucianism, form the moral framework within which the different arts exist. Multiplicity, rather than symmetry and unity, might be regarded as the basic feature of the style and form of Japanese music. Japan has a rich variety of seasons and climates; its people have thought that human beings must be in harmony with nature, rather than resistant to it. Such thinking has been reflected in Japanese music throughout the ages.

3. TRANSMISSION. The nature of Japanese music is in close symbiosis with its modes of transmission. For many genres, the right to perform was severely restricted. For example, court performers' roles were hereditary, with transmission from father to son; moreover, each instrument or skill was passed on in a separate lineage. Professional (i.e. profit-making) performance of certain traditions, such as *biwa* (see §II, 3(iii) below), *koto* and *jiuta shamisen* (see §II, 6(ii) below), was for several centuries legally restricted to blind performers' guilds, principally the *Tōdō-za* or *Tōdō shoku-yashiki*. *Shakuhachi* performance was also legally restricted to members of the Fuke sect of Zen for two centuries. Such restrictions were often violated, but in any case they were lifted in 1871 as part of modernization. Women were also excluded from various genres; even now, most Japanese consider it inappropriate for a woman to perform, say, *shakuhachi* or 'official' forms of the theatre genres *nō* and *kabuki*.

Modernization did not, however, lead to total liberalization. Most genres of traditional classical music and dance and, recently, even folksong are now taught within the *iemoto* ('househead') system, via hierarchically structured 'schools' or 'lineages' (*ryū*(-*ha*)) with an autocratic *iemoto* at the head, who makes decisions about repertory, performance style, licensing of teachers and so forth. Such institutional transmission is much debated. On the one hand, it tends to restrict creativity and access and can be economically exploitative. On the other, it is considered responsible for the survival of many traditions that might otherwise have died or altered beyond recognition (alteration over the centuries, extreme in the case of *gagaku* and *nō*, is often denied or downplayed by performers). Many aspects of teaching methods can be related to such restrictive transmission. Thus musical notation (see §III below) is often comparatively vague, partly as a way to

limit access. The emphasis is on exact imitation of one's teacher; deviation can best be achieved by starting one's own 'school'.

Westernization brought threats to the survival of traditional genres. The national education system, created along Western lines in the 1870s, has tended until recently to overlook traditional music. One 20th-century response was the emergence of Preservation Societies (*hozonkai*), especially in the folk world, where the *iemoto* system was absent. A *hozonkai* is usually an organization under local control devoted to 'preserving' (but also usually developing and propagating) a local song or dance, often a single item. *Hozonkai* have the same virtues and drawbacks as the *iemoto* system.

Beginning in the mid-20th century, the survival of certain traditions has been helped by government intervention. To encourage young performers of the music theatre genres, there are now government training schools based in national theatres. More important is the Ministry of Education's elaborate system of National Cultural Properties, which designates particular traditions as 'important intangible cultural properties' (*jūyō mukei bunkazai*) and certain artists as 'living National Treasures' (*ningen kokuhō*) and provides some financial support.

4. SCALES AND MODES. Discussion of modal theory for individual genres will be found in some sections below (*see also* MODE, §V, 5(ii)). There is great diversity among these genres; despite or because of this, researchers have been keen to establish a modal theory that could encompass many or all types of traditional Japanese music. Prior to the late 19th century the only extensive modal theory was that for *gagaku* (court music); early theorizing did not extend to detailed analysis of tonal function or melodic patterns, and the focus was mainly on scales (tonal material), tunings and modal classification of pieces. It was recognized, however, that court music modes fell into two groups, *ritsu* and *ryo*, each with an anhemitonic pentatonic core with two 'exchange tones' (*hennon*, from Chinese *bianyin*) that could replace two of the core degrees (in ascending melodic passages in the case of *ritsu*, in descent for *ryo*). The modal terminology of *gagaku* was sometimes applied to other genres but rarely provided insight.

The first significant Japanese attempt at an overview, important to all subsequent work, was Uehara's *Zokugaku senritsu kō* (1895). Focussing on folk and popular musics, he distinguished two basic Japanese pentatonic 'modes' (*senpō*, as opposed to *onkai* or 'scale'; this terminological distinction is often ignored). These he called *in* and *yō* (similar to Chinese *yin* and *yang*), or *miyako-bushi* ('urban melody') and *inaka-bushi* ('rural melody') respectively. If C is used as a 'tonic' (*kyū*; a court-music concept of Chinese origin), then Uehara's 'urban melody' *in* mode is C D♭ F G A♭ C, but with A♭ replaced by B♭ (and sometimes D♭ by E♭) in ascending passages. The *yō* mode (identical in this thinking with the *ritsu* category of court modes) differed from this only in using D♮ and A♮ instead of D♭ and A♭ (outside court music absolute pitch is of little significance; all pitches in this section are relative).

Koizumi, in his 1958 book, created the model that is now generally followed by Japanese researchers. He expanded Uehara's scheme to four ideal-typical modes that he felt accounted for the vast majority of Japanese musics, abandoning Uehara's octave-based theory and focussing instead on the tetrachord as the basic modal structure. In this he acknowledged Lachmann (1929) as his inspiration. However, other Western researchers had also proposed similar approaches (Knott, Abraham and Hornbostel, Peri). Knott identified trichords and was followed by Peri, while the Germans persisted with the tetrachord. The successful application of this ancient Greek approach to Japanese music is doubtless the major contribution of early Western researchers to Japanese music studies. Koizumi's tetrachord consists of two stable 'nuclear tones' (German: *Kernton*; Japanese: *kakuon*) a 4th apart plus a single infix, the position of which determines the species of tetrachord. He calls for four types: the *in* or *miyako-bushi* (C, D♭, F), *ritsu* (C, D, F), *yō* or *min'yō* ('folksong') (C, E♭, F) and *ryūkyū* (C, E, F). These combine to form various octave species characteristic of particular types of music. An important difference from Uehara is that Koizumi abandoned the Chinese-derived tendency to think in terms of a single 'tonic' and recognized that the various nuclear tones may compete as tonal centres, leading to various types of modulation (for an English summary of his model, see Koizumi, 1976–7).

M. Shibata (1978) proposed another general model, indebted to Koizumi's yet differing significantly. Whereas Koizumi focussed on the frame created by the 4ths, Shibata shifted attention to their upper and lower neighbours. For example, in a melody basically using the *in* scale, a passage such as f–d♭–c–B♭ might occur, where B♭ substitutes for the expected A♭, especially when serving as a lower neighbour between two occurrences of the c. Koizumi's approach requires positing a change of the lower tetrachord from *in* to *yō*, whereas for Shibata it is just a matter of yielding to the centripetal force of the nuclear tone c (a process recognized also by Koizumi). Among the few adherents to Shibata's approach, Tokumaru has applied it to *shamisen* music (e.g. 1981) and Sawada to Buddhist chant (in *Nihon no onkai*, 1982). Matsumoto (1965) seems to have had no influence.

Koizumi's and Shibata's models work well for most genres, if applied flexibly. Japanese 4ths and 5ths are near-perfect, but the 'infixes' of Koizumi's theory are often quite variable in intonation. For example, the semitones of the *in* mode are often 90 cents or less, although Western influence (plus electronic tuning devices for *koto* etc) are moving this towards 100.

Western influence has also led to the adoption of the 'pentatonic major' (*yona-nuki chōonkai*: C, D, E, G, A) and 'pentatonic minor' (*yona-nuki tan'onkai*: C, D, E♭, G, A♭). These are, in effect, versions of the *yō* and *in* scales with their tonics re-located to suit Western-style harmonization, and they occur particularly in 'new folk songs', school songs and the *enka* popular song style (see §§VII and IX, 3 below), all genres in which a flavour of traditional pentatonicism is desired.

II. Instruments and instrumental genres

1. INTRODUCTION. Japan possesses a rich variety of traditional musical instruments: there are over 200 distinct types and subtypes. Despite this abundance, only four instruments have played a particularly prominent role in traditional music and merit individual discussion – *biwa*, *koto*, *shakuhachi* and *shamisen* (see §§ 3–6 below). Many other instruments are of importance in one genre or (like the *shō* and *hichiriki* of *gagaku*) occur in only a single genre; they are discussed in the relevant sections below. Still others, such as bamboo transverse flutes and various stick drums, are widespread in a variety of musics.

Although most genres of Japanese music involve singing, there exist several important examples of pure instrumental music: solo pieces (*honkyoku*) for *shakuhachi*; improvisatory solos for *tsugaru-jamisen*; *matsuri-bayashi* festival music of the Tokyo area; *gagaku*; and the *danmono* subtype of popular *koto* music. There are also long instrumental solos (*tegoto*, *ai-no-te* etc.) in many predominantly vocal pieces, and long instrumental dance pieces in the *nō* theatre. Even when instruments are sounded with vocals, their importance is sometimes reflected in the traditional folk and modern scholarly names for the genres: *heike-biwa* for the battle narratives accompanied by *biwa* lute; *sōkyoku* ('*koto* music') for the entire secular *koto* repertory; *uta-sanshin* for Okinawan 'song-[plus]-*sanshin*'.

Virtually all Japanese instruments have close relatives in China, and it is likely that they originated there before being modified significantly to suit local needs. Most major instrumental types occur (or have occurred) in Japan, but some are rare. Thus the one traditional bowed lute, the KOKYŪ, is of limited use; the *kugo* harp of court music fell into disuse over a millennium ago; and trumpets are now represented primarily by the *hora* conch of Buddhism.

The 20th century saw considerable experimentation with instrumental construction and composition, mostly under Western influence. Few recent innovations (e.g. the nine-hole *shakuhachi*, the bass *shamisen*, the 30-string *koto*) have caught on, but some will doubtless stand the test of time, as has the 17-string *koto*. A general trend towards pure instrumental composition and ensemble music is clearly due to Western impact. The phenomenon of large stick-drum (*taiko*) ensembles, which is gaining worldwide fame, is of recent vintage (*see* KUMI-DAIKO).

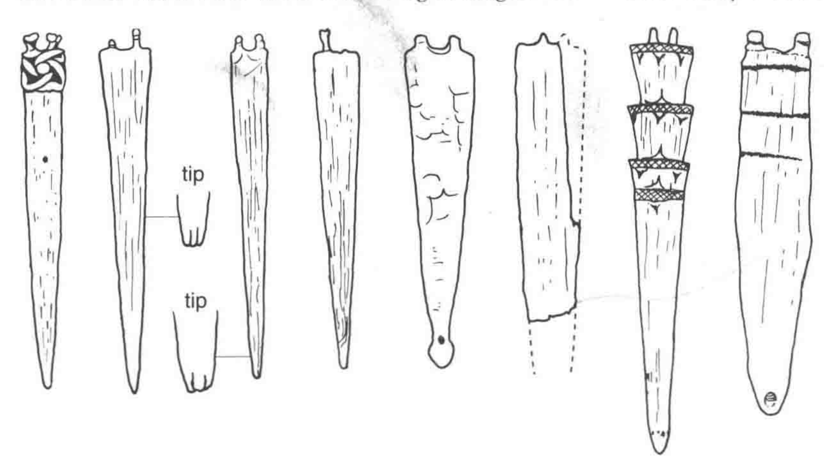
2. ARCHAEOLOGY. Dozens of court musical instruments of the 8th and 9th century are excellently preserved in the Shōsōin imperial storehouse in Nara. Most were gifts from the Chinese court, reflecting the major importation of élite Chinese culture at that time. Since Japan's historical era begins in the 8th century with the first

written sources, knowledge of musical life before that time must depend largely on archaeology (see Hughes, 1988).

The people of the Jōmon period (*c*10,000–300 BCE) lived largely by hunting, fishing and foraging and had developed the art of pottery. Lacking written or iconographic evidence, we are often at a loss to know whether particular artefacts were intended as sound-producers. For example, dozens of pots with small holes around their rims have been suggested as possible drum bodies, the holes being used to affix a membrane with pegs or cord; however, numerous types of evidence eliminate this possibility, at least for most of the pots. More intriguing are the flattish hollow clay objects found from 2500 BCE onwards, mostly 8 to 15 cm long and often in stylized animal or human shapes. These often have a single hole on each surface but at opposite ends, suggesting orifices of the body. It is possible to blow into these, but it is not clear if they were intended as aerophones.

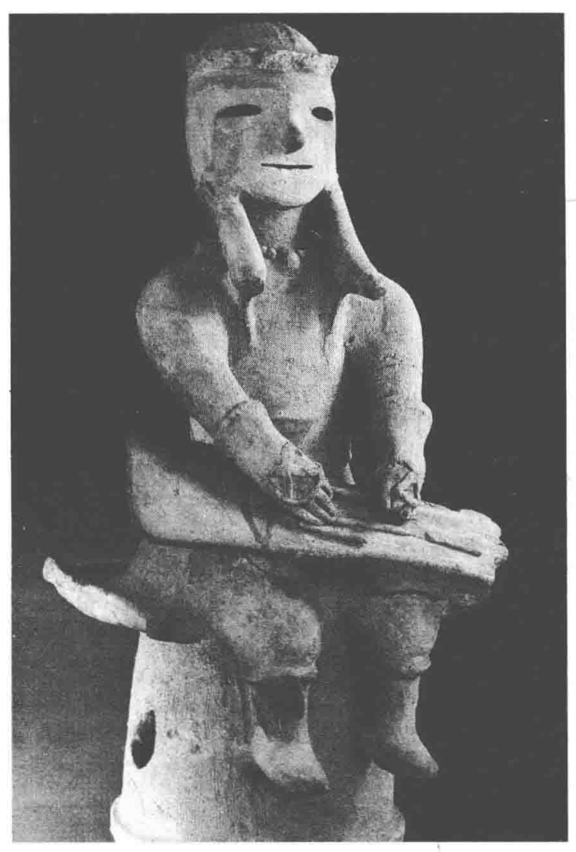
More convincing still are the objects in fig.1, which are taken to be two-string zithers and date from the first five centuries BCE. Strings would have been tied to the tooth-like projections, but no strings or bridges survive. Most are 35 to 55 cm long. The overall shape of these zithers recalls the Ainu *tonkori* (see §VIII, 2 below) of historical times, the antecedents of which are unknown.

The ensuing Yayoi period (*c*300 BCE–300 CE) saw the beginning of metal-working. Only three instruments will be discussed in this article, all of which have Chinese antecedents but differ from them in ways that suggest native artisans struggling to imitate instruments they did not possess. All three are extremely varied in Japan, lacking standardization.



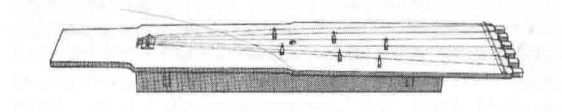
Dozens of egg-shaped ocarinas (*tsuchibue*, 'earthen flutes') clearly derive from the Chinese XUN but differ in having their more pointed end at the bottom, opposite the extremely wide blow-hole; they have four finger-holes on the front and two thumb-holes on the back, as opposed to more diverse arrangements in China. No safe conclusions about tuning can be drawn: a 15th-century Korean source notes that one must simply make a large number of ocarinas (*hun*) and then throw out the ones that are out of tune, so whether we have recovered the good ones or the bad remains uncertain. After this period, ocarinas disappear.

The Yayoi period has also yielded several hundred cast bronze bells known as *dōtaku*. These range in height from 20 to over 100 cm and can exceed 25 kg in weight. The cross-section is elliptical with pointed ends. There is no precise Chinese model for these. Early *dōtaku* seem suited for playing, but later ones were so fragile and decorous that they must have been intended only as art works or perhaps signs of political power, as they were often cached on remote hilltops near power centres. Several caches of a dozen or more bells have been found, but given the diversity of form and tuning within each cache, these were clearly not intended for actual playing as bell-chimes like the Chinese *bianzhong*. Oddly, *dōtaku* also disappear after this period.



The third Yayoi-period instrument of relevance, the WAGON, appears in mid-Yayoi and continues to the present. Now a six-string zither with movable tuning bridges, used to accompany indigenous court vocal music (*mi-kagura*; see §V, 2 below), it originally had either five or six strings. Prior to standardization as an elaborate, highly decorated instrument by the 9th century, several dozen diverse examples of actual instruments have been found, as well as clay funerary sculptures (*haniwa*) showing the instrument being played (see figs.2 and 3). In the earliest written sources, the word *koto* indicated this instrument; *wagon* is a later term, derived from two Chinese characters meaning 'Japanese zither'. Indeed, native scholars claim it as Japan's only indigenous string instrument. While its relationship to Chinese zithers with movable bridges is undeniable, each string is attached to a 'tooth', very much like those on the Jōmon two-string zithers but unlike any continental string attachment method. The following Kofun period (*c*300–710 CE) has yielded no important new instruments, but the *haniwa* funerary sculptures that date from this period at least confirm that the *wagon* was held on the lap, recalling somewhat the Korean *kayagŭm* rather than any current Japanese zither.

Drums and transverse flutes, which dominate folk ritual music today, are virtually absent prior to the 8th century, but drums are known from *haniwa* depictions, and both are known from poems presumed to be of Kofun-period date. All other major Japanese instruments were imported in or after the 8th century and subsequently indigenized.



3. 'BIWA'. The several forms of *biwa* introduced from the Asian continent by at least the 8th century are thought to have been of Central and South Asian origin. The Sino-Japanese characters for *biwa* are equivalent to the characters for the Chinese *pipa*, for whose etymology *see* PIPA. Many forms of *biwa* have existed, but common to

1. Two-string zithers from the 1st millennium BCE

2. *Wagon player; funerary sculpture, from Gunma Prefecture, late 5th or early 6th century* CE *(Aikawa Archaeology Museum, Isezaki, Gunma)*

3. *Reconstruction of wagon found at Tsujibatake, Fukuoka Prefecture, ? 1st–2nd century* CE*; only the soundboard survives*

the structure of all types are fretted necks, four or five strings, the use of variously shaped large plectra and relatively shallow soundboxes cut from the same piece of wood as the neck. Discussed here are the history of the instrument and schools; for construction and tunings *see* BIWA.

The *biwa* is important in the histories of both music and literature, for apart from its use in various repertories of *gagaku* and in new instrumental compositions, it has been played primarily in the context of musical recitation, that is, as accompaniment to oral narrative. As such the *biwa* was a vehicle for the development of a primary stream of narrative music (*katarimono*) in the Kamakura and Muromachi periods (roughly 13th–16th centuries), and gave impetus to the early forms of *jōruri*, the principal *katarimono* of the *bunraku* and *kabuki* theatres. The prominence of *biwa* narrative in the music culture of central Japan waned after the introduction of the *shamisen* in the late 16th century. During the early decades of the 20th century, however, the *satsuma-biwa* and *chikuzen-biwa* styles enjoyed nationwide popularity.

(i) Gaku-biwa and gogen-biwa. Since the late Heian period, the only lute that has been played in Japanese court music ensembles is the *gaku-biwa*, an instrument brought to Japan in the Nara period with the continental repertory of *gagaku* (fig.4). The *gaku-biwa* is a large, four-string form of *pipa* first referred to in Chinese sources of the Han dynasty (206 BCE–220 CE). A second *biwa* introduced at that time was the *gogen-biwa* (Chin. *wuxian pipa*), a five-string, straight-necked lute probably of Indian origin, first recorded as being played in China during the 6th century. A superb example of the *gogen-biwa* exists in the Shōsōin treasury at Nara. Although the *gogen-biwa* performance tradition did not continue beyond the 9th century, an 11th-century copy of a single scroll of notation for the *gogen-biwa* has survived (Nelson, 1986).

In Heian period élite society, both the *gaku-biwa* and the *gakusō* zither were instruments especially favoured by nobles and courtiers of both genders, and accounts of outstanding performers are given in literary works of the 10th to 14th centuries. During the Heian, Kamakura and Muromachi periods, the *gaku-biwa* was played not only in the standard *gagaku* ensemble, but also solo, in consort with one or more instruments, and in accompaniment to *saibara* songs. A corpus of stories about individually named instruments brought from Tang China and a tradition of secret techniques and compositions attest to the contemporary prestige of the courtly *biwa* repertory and its complex performing practice.

The principal modern contexts for *gaku-biwa* performance are as one of two string instruments in the *kangen* ensemble, and as one of a group of string, wind and percussion instruments that accompanies *saibara*. In these contexts the *gaku-biwa* is played so as to produce a sparse, slow-moving series of staggered cross-string strokes and isolated tones whose relation to the melodic wind parts of modern practice has a percussive aspect that belies its actual heterophony. The work of the Cambridge Tang music research group has shown, however, that the Heian and Kamakura forms of *tōgaku* melodies are represented most closely in the modern *gaku-biwa* and *shō* parts (see §V below).

(ii) Heike-biwa. One of the principal genres of Japanese music of the Kamakura and Muromachi eras is the narrative performance tradition now called *heikyoku* or *heike-biwa*. *Heikyoku* entails performance with *biwa* of

4. *Gaku-biwa (lute)*

individual stories or episodes from a corpus referred to as *Heike monogatari* ('Tale of the Heike'), an account of the late 12th-century Genpei wars that is regarded as the paragon of Japanese medieval literature of the *katarimono* (narrative derived from an oral performance tradition) genre. The earliest stories appear to have been orally composed and circulated by blind, itinerant *biwa* players called *biwa hōshi*, who engaged in both secular and ritual performances of various kinds, including rites of appeasement (*chinkonsai*) for the spirits of warriors killed in battle. *Heike katari* (Heike recitation) may first have been performed to give solace to deceased Heike clan courtiers and samurai.

Although *Heike katari* remained a popular form of narrative performance until at least the late 16th century, by the early 14th century there existed multiple text versions associated variously with authors, scribes and *biwa* players. The significance of such texts for oral performance by blind professionals has yet to be sufficiently assessed, but the literary and performance traditions must be considered as complementary and mutually influential. A 'performance-text' (*kataribon*) of 1371 created under the supervision of the *biwa hōshi* Akashi no Kakuichi was treated as the source for printed, reading texts during the Edo period (1603–1868) and has long been acknowledged as the definitive, standard form of the *Heike monogatari*. It remains unclear whether performing practice continued to involve oral compositional skills, as *kataribon* texts came to be circulated widely among performers.

The authority of the *shoku-yashiki* or Tōdō-za guild of blind professional musicians is an important consideration for any assessment of the performance tradition during the Muromachi and Edo periods. Established in the 14th century, the Tōdō-za secured patronage from the highest levels of feudal society. Among six principal schools recognized by the guild, only the Ichikata-ryū continued beyond the end of the Muromachi period. Governed by a *heike-biwa* player appointed with the approval of the Shogunate, the Tōdō-za guild acted as an administrative body that sought to regulate the activities of all blind musicians until 1871, when it was dissolved by the Meiji government.

By the early Edo period, *Heike katari* performance had ceased to be a popular art; it had become an élite tradition associated primarily with the upper strata of society, practised under direct patronage of the Shogunate, high-ranking samurai and Buddhist priests. Blind performers began to teach amateur enthusiasts, for whom they provided numerous fixed 'text-scores' (*fuhon*) such as the *Heike mabushi* of 1776, now acknowledged as an authoritative source by both blind and sighted practitioners. It was at this time that *Heike katari* came to be referred to as *heikyoku* ('Heike music'). This terminology reflects changes in both the reception of the music and its relative textual and performative fluidity; what had been enjoyed as a unified narrative series presented over several hours came to be viewed as a sequence of discrete repertory items in which text and music were fixed and memorized.

The characteristics of modern *heikyoku* practice suggest its multiple layers of historical formation; each narrative episode (*ku*) is a patchwork of named vocal and instrumental pattern segments (*kyokusetsu* or *senritsu-kei*), each of which comprises a series of distinctive formulaic phrases interspersed with short introductory and intermediary *biwa* figures, suggesting an original oral compositional practice. Both the names and melodic character of many patterns suggest the influence of Kamakura-period *shōmyō* of the Tendai sect. While not aurally verifiable, some instrumental patterns may have been modelled on elements of the *gaku-biwa* solo repertory. The influence of Edo-period *koto* and *shamisen* musics is immediately audible in *miyako-bushi* tetrachordal formations (1–2♭–4) that are prevalent in many *kyokusetsu* segments.

In recent practice *heikyoku* has been maintained by two performance traditions based in Sendai and Nagoya. The Sendai tradition is referred to as the Tsugaru school, deriving from the practice of sighted amateurs who were vassals of the Tsugaru *daimyō*. It is now represented by Tokyo-based students of Tateyama Kōgo (1894–1989). Through use of the *Heike mabushi* text-score, Tsugaru school performers have had access to a repertory of all of the tale's nearly 200 episodes. Performers of the Nagoya tradition have been blind professional musicians active as practitioners of both *heike-biwa* and Ikuta-ryū *koto*, *shamisen* and sometimes *kokyū*. They have maintained a repertory of eight *heikyoku* episodes. In the late 1990s, only one Nagoya school musician, Imai Tsutomu (*b* 1958), remained active as a performer.

Since the mid-1980s, some attempts have been made to refurbish the *heike-biwa* performing tradition and to build new audiences, both through modifications and arrangements of repertory items transmitted in the Tsugaru line and reconstructions of items no longer transmitted in the Nagoya line.

(iii) Mōsō-biwa and zatō-biwa. Several *biwa* performance traditions have been practised by blind males in south-western Japan. The most commonly used collective term for these practices is *mōsō-biwa* ('blind priest *biwa*'), for the majority of *biwa* players in the region have been active in rites of local religious practice, and many have been certified as Buddhist priests. The term *zatō-biwa* has gained currency in the 1990s, however, as a means of historical distinction between those blind *biwa* players who were certified priests and men who had no such formal affiliation (*zatō*).

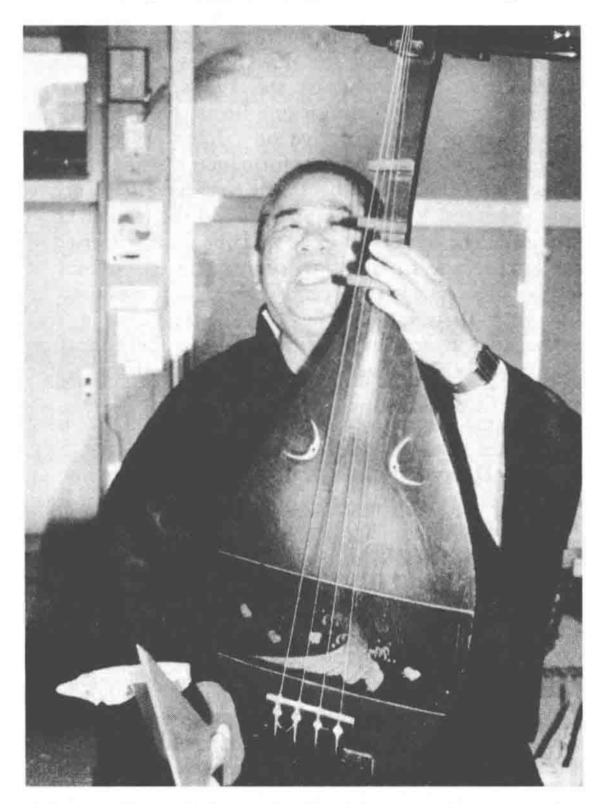
Affiliation among blind priests is a common institution within East Asian Buddhism. Korean sources include evidence of organizations of blind priests and *sūtra* texts nearly identical to forms transmitted in *mōsō* practice, but no substantial evidence for transmission to Japan of either texts or the practice of chanting *sūtra*s to the sound of *biwa* has yet been found. Reliable documentary histories held by the Japanese *mōsō* sects are all of Edo-period origin, but they record the following traditional accounts. *Jijinkyō*, *sūtra*s in praise of the earth deity Jijin, were first taught by Shaka (Sakyamuni, the historical Buddha) to a blind follower, then transmitted through China and Korea to Japan in the reign of Emperor Kinmei (539–71 CE). The efficacy of the *Jijinkyō* was such that groups of *mōsō* from diverse regions of Kyūshū were summoned to perform the *sūtra* in purification rites during the construction of the Tendai sect's head temple, Enryakuji, in 785. Thereafter, *mōsō* temples with Tendai affiliation were established in all regions of Kyūshū, and *mōsō* groups were active at temples in the Kyoto and Nara regions during the Heian and Kamakura periods.

The regional styles of *mōsō-biwa* in Kyūshū have been administered by two Buddhist organizations, based in the northern and southern regions known until the Meiji period as Chikuzen and Satsuma. The Gensei Hōryū is based at the Jōjuin temple in Hakata and has authority over branch temples in Fukuoka, Yamaguchi, Ōita, Saga, Nagasaki and northern Miyazaki prefectures, while the Jōrakuin-Hōryū has been based at and administers temples in Kagoshima and southern Miyazaki prefectures. The former group claims as its founder Gensei (766–823 CE), a priest given the name Jōjuin after helping to build the Enryakuji. The founder of the Jōrakuin-Hōryū is said to have been Hōzan Kengyō, 19th head of the Kyoto *mōsō* tradition, who left Kyoto in 1196 to accompany Shimazu Tadahisa to his post as the first *daimyō* of Satsuma. Knowledge of the historical performance activities of both *mōsō* sects is scant, but in recent practice the primary rituals of both groups have been group ceremonies within the controlling temples and on seasonal household rites (*kaidan hōyō*) centred on exorcism of deities central to local belief, the earth spirit Jijin (the *Jijinbarai*) and various manifestations of Kōjin, the spirit of the hearth or oven (*Kōjinbarai* or *kamadobarai*). In formal group ceremonies of the Jōjuin and Jōrakuin groups, the *mōsō* play *biwa* and chant sutras in ensemble, sometimes with the addition of flutes, drums and conch shells.

Many *mōsō* once performed secular *biwa* narratives to supplement their incomes and entertain people in the localities where household rites were conducted. Performance of secular narratives, called *kuzure* or *biwa gundan*, continued to be common among *mōsō* in northern Kyūshū until the early 20th century but was discouraged by the Gensei Hōryū organization. In remnant forms of that repertory, as also in the ritual repertory, the *biwa* is often played concurrently with the vocal chant, rather than in a punctuating role.

For *zatō*, lowly blind musicians who were unaffiliated with the *mōsō* sects, secular repertory has been a mainstay of livelihood (fig.5). Despite their lack of Buddhist certification, *zatō* also learnt ritual texts for use in the

5. Sasa-biwa played by Murakami Mansaku ('Manshan') a blind zatō of Tamana region, Kumamoto Prefecture, 1950s



kamadobarai and other exorcism rites, such as those for wells (*suijinbarai*) and for new houses and buildings (*watamashi*). Since at least the 1930s, however, the primary income of *zatō* came from engagement as performers of oral narrative on celebratory occasions (*zashiki-biwa*) and from performance on an itinerant basis (*kadobiki*). Since the 1950s *zatō* have been active only in central Kyūshū, in and around the former Higo province. The term *higo-biwa* was apparently devised in the last decade of the 19th century by enthusiasts of secular *biwa* narrative in central Kyūshū; it was used by few *biwa* players until the 1960s, whereafter it was propagated in academic writings and in the Education Ministry's 1973 designation of *higo-biwa* as an Intangible Cultural Property.

Most research on *zatō-biwa* has focussed on extensive tales called *danmono* (or in the case of some battle tales, *kuzure*). *Danmono* are narratives performed as one or more discrete sections (*dan*), each usually lasting at least 30 minutes. The *danmono* repertory includes chronicles of Kyūshū history, tales from the Heike narrative complex, and versions of legendary and historical stories that are the subjects of *sekkyō* recitations, *kōwaka*, *ningyō jōruri* and *kabuki* plays. Other *zatō-biwa* repertory includes relatively short pieces referred to as *hauta* and comic pieces known as *charimono*, *kerenmono* or *kokkeimono*.

(iv) Chikuzen-biwa and satsuma-biwa. These two styles of *biwa* narrative have been most widely practised throughout Japan since the late Meiji era (1868–1912); they bear the names of their respective regions of origin in northern and southern Kyūshū. In both styles, instrumental playing has been developed to a level of complexity beyond that found in the modern practice of other *biwa* styles. Since the 1960s a small repertory of new, purely instrumental compositions has been produced for five-string *chikuzen* and *satsuma* instruments (*see* BIWA and fig.6).

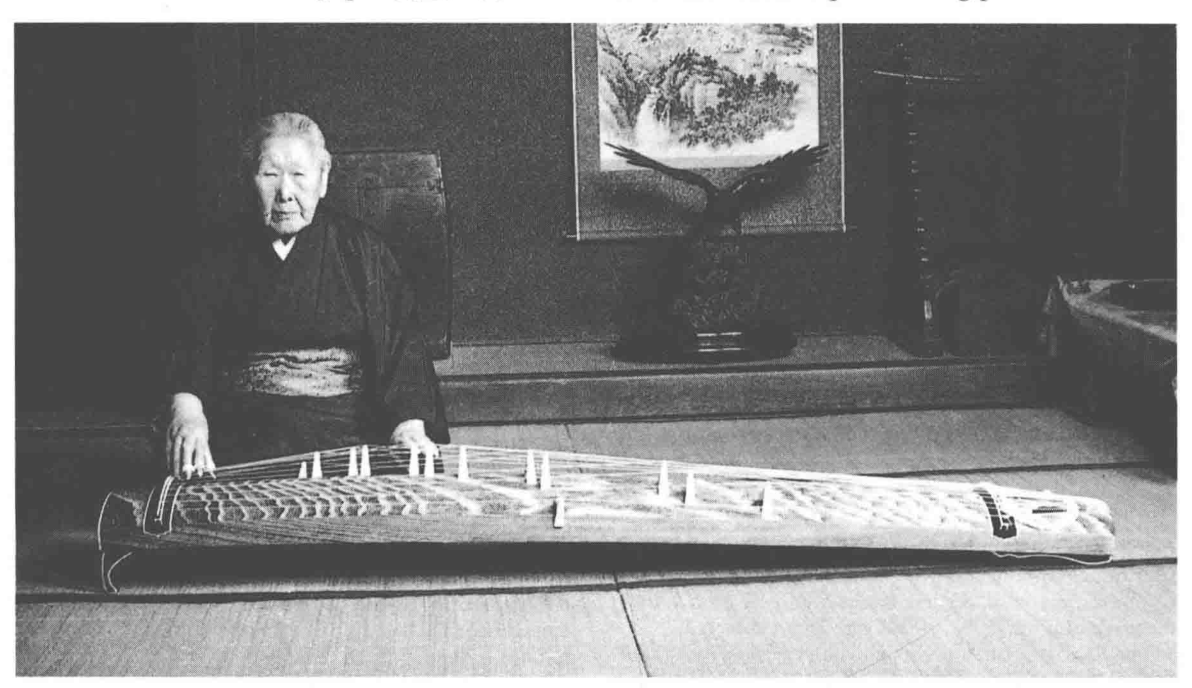
Muromachi and early Edo period references suggest the presence of *heikyoku* performers in the Satsuma region, but the primary forms of *biwa* music were those of *mōsō* and *zatō* unaffiliated with the Tōdō-za. In the mid-16th century, the priest and philosopher Nisshinsai (Shimazu Tadayoshi, 1492–1568) composed poems on themes of morality, which are said to have first been performed by senior *mōsō* priests of the Jōrakuin temple. Traditional accounts also credit Nisshinsai and the 31st patriarch of the *mōsō* sect, Fuchiwaki Juchōin, with remodelling the *mōsō* instrument to make possible a style suiting the tastes of the Satsuma lord.

Edo-period sources distinguish the *shifū* style of samurai and high-ranking Satsuma *mōsō* (who were themselves of samurai families), the *zatō* style of blind professional musicians, and the *machifū* style of merchant-class *biwa* players who took up *biwa* performance as a pastime from the early 19th century. A style drawing on all three elements of Satsuma tradition was made known in Tokyo by prominent practitioners such as Nishi Kōkichi (1859–1931) and Yoshimizu Kinnō (1844–1910). From the 1890s, both newly composed and traditional narrative poetry for *biwa* gave voice to a nationalist fervour that glorified the martial code of the samurai. Attempts were soon made to modify *biwa* singing by incorporating elements of Edo *shamisen* song styles. Nagata Kinshin (1885–1927), who gained fame as a performer and recording artist in a new style, founded the Kinshin-ryū

6. Satsuma-biwa and plectrum held by Fukijima Junkai, a mōsō of Hishikarichō, Kagoshima Prefecture, 1991

school in 1915. The older style of *satsuma-biwa* soon began to be distinguished from the Kinshin style by the term *seiha*, or 'orthodox school', and by the elaborate instrumental patterns that had been developed by Satsuma players. Suitō Kinjō (1911–73) supplemented aspects of Kinshin-ryū technique with her own innovations in founding the *nishiki-biwa* school in 1927, developing a five-string instrument with this name. Between 1910 and 1930, *satsuma-biwa* was widely enjoyed by young men and a smaller number of women, and its reception was as an art of the populace, rather than a classical tradition.

Although *satsuma-biwa* suffered neglect after World War II due to its prior associations with militarist ideology, some performers trained during the music's heyday remained active as teachers and performers, including the *Seiha* performers Yoshimura Gakujō (1888–1953) and Fumon Yoshinori (*b* 1912), the Kinshin-ryū musician Enomoto Shisui (1892–1978), as well as Suitō Kinjō and Tsuruta Kinshi (1912–94). Tsuruta slightly remodelled the *nishiki-biwa* and gained international fame from the late 1960s through her collaborations with the composer Takemitsu in compositions such as *November Steps* and *Eclipse*.



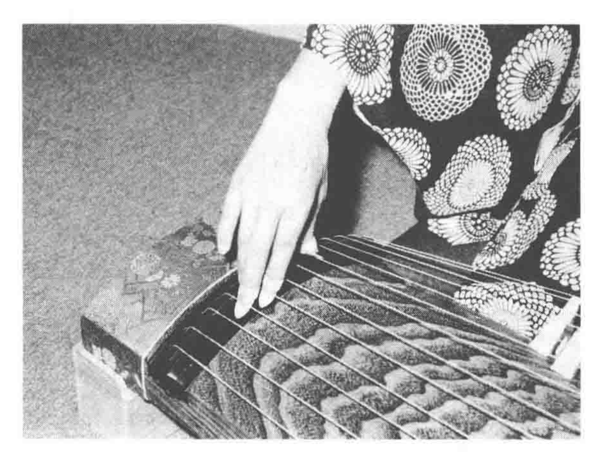
The origins of *chikuzen-biwa* are in the practice of *mōsō-biwa* in the Chikuzen region. As part of the Meiji government's attempts to bolster state Shintō at the expense of Buddhism, *mōsō* sects were banned during the 1870s. The man considered to have been the founder of the *chikuzen-biwa* tradition, Tachibana Chijō (1848–1919), was the sighted grandson of a senior *mōsō* in Hakata (Fukuoka), who had previously not been allowed to learn *biwa* because it had been considered an instrument solely for the blind. After making a study of *satsuma-biwa* instrumental techniques, he sought to develop a new narrative style that would appeal to a contemporary urban audience. During the late 1880s he worked to this end in collaboration with the geisha Yoshida Takeko and with Tsurusaki Kenjō, another sighted performer from a *mōsō* family. They devised new vocal melodies and sets of preludes and interludes for a remodelled version of a four-string *biwa* played by *mōsō*. The result was narrative music that could be performed as entertainment and that bore an elegance and subdued sensuality familiar to audiences of Edo *shamisen* music. The new style was introduced to Tokyo in the mid-1890s as *tsukushi-biwa*, but was called *chikuzen-biwa* from 1902.

Like *satsuma-biwa*, *chikuzen-biwa* was received as a popular narrative form. Considered more genteel than *shamisen* song styles associated with the geisha world, but more lyrical in both poetic and vocal style than *satsuma-biwa*, it attracted both female and male students. A differently tuned, five-string form of the instrument was developed so as to provide a much greater technical range, though the original four-string instrument continued to be common until the 1940s. The original Asahi-kai school, founded in 1909, divided in 1920 when the founder's son-in-law, Tachibana Kyokusō, left to found the Tachibana-kai. Many of the style's finest players joined Kyokusō, and the Tachibana-kai has since held the reputation of maintaining the genre's highest artistic standards. The foremost *chikuzen-biwa* performer of the post-war period is Yamazaki Kyokusui (*b* 1906), a student of Kyokusō, who as a performer, teacher and composer has been a central figure in shaping the nature of modern practice. In 1995 she became the first *biwa* player to be named a 'Living National Treasure' by the Ministry of Education.

The compositional activities of leading Asahi-kai musicians since 1945 have also broadened the expressive range of *chikuzen-biwa*. Of particular importance are the works of Tachibana Kyokuō III (1902–71) on themes from *nō* drama, which incorporate elements of *utai* singing. A modified style of *chikuzen-biwa* has been popularized since 1980 by Uehara Mari, daughter of the prominent Asahi-kai player Shibata Kyokudō. Uehara has attracted a substantial audience that is largely independent of that for more traditional styles of *biwa* music.

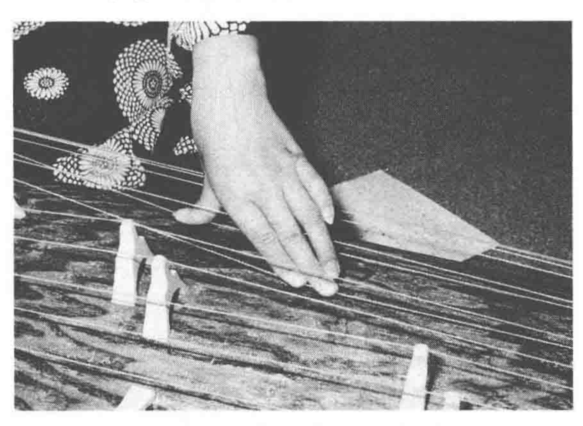
4. 'KOTO'. The KOTO (fig.7) is the Japanese member of the family of long zithers with movable bridges found in several East Asian countries. The best-known members of the family are the ZHENG and the *se* in China, the *kayagŭm* and the KŎMUN'GO in Korea, the ĐÀN TRANH in Vietnam and the WAGON and the *koto* in Japan. All these instruments probably originated in China with the possible exception of the *wagon*, which has been claimed to be indigenously Japanese. The exact date of the introduction of the *koto* into Japan is unknown but is generally assumed to have been at the beginning of the Nara period (710–84) or shortly before.

During the Nara and Heian (794–1185) periods the word 'koto', the original meaning of which is obscure, was applied to several types of string instruments, like the Sanskrit word 'vīṇā' in India. Examples were the *kin-no-koto* (the *shichigen-kin*, *kin* or Chinese *qin*); the *sō-no-koto* (the *sō* or *koto*); the *shitsu-no-koto* (the *shitsu*, or Chinese *se*); the *biwa-no-koto* (or *biwa*); the *yamato-goto* (or *wagon*); the *kudara-goto* (the harp, *kugo*); and the



7. Koto (zither)

shiragi-goto (the Korean *kayagŭm*). Later the term came to be applied exclusively to the *sō-no-koto*. The *shitsu-no-koto*, *kudara-goto* and *shiragi-goto* are no longer used in Japan, while the names of two of the other instruments lost the suffix *-no-koto* to become simply *kin* and *biwa*, and the *yamato-goto* became *wagon*.



(i) Construction and performing practice. Although the *koto* has not undergone any essential changes since its introduction into Japan, several types can now be distinguished, depending on the musical genre or school in which they are used. The various types may be classified into four groups: *gakusō*, used in *gagaku* (court music); *tsukushisō*, the instruments of *tsukushi-goto* (the older tradition of *koto* music); *zokusō*, used in *zokusō* (the later tradition of *koto* music); and *shinsō*, the group of new *koto* types, many of which were invented by Miyagi Michio (1894–1956) and which are used in specially composed music. *Shinsō* include the *jūshichigen* (17-string bass *koto*) and the *tangoto* or 'neo-*koto*' (a small *koto* with strings tightened by pegs; the performer places it on a table or stand and plays it sitting in a chair rather than kneeling on the floor).

The *koto* has a long (about 180–90 cm), slender (about 24 cm at the midpoint), rectangular body of *kiri* wood (Paulownia imperialis) with a slight convex longitudinal curve and larger lateral curve. There are 13 silk strings of equal length and thickness, stretched under equal tension over fixed bridges placed about 10 cm from the right end (as viewed by the player) and about 20 cm from the left end; nowadays stronger materials such as nylon and tetron are also used. The length of the vibrating part of the strings is determined by the placement of movable bridges (*ji*), each string having one bridge (for illustration of a *koto* bridge, *see* BRIDGE, fig.1*e*). The *ji* are made of wood or ivory (plastic is used on cheap modern instruments). Different placements of the *ji* produce different tunings. Depending on the player's school, the strings are plucked with bamboo, bone or ivory plectra (*tsume*) of varying shape.

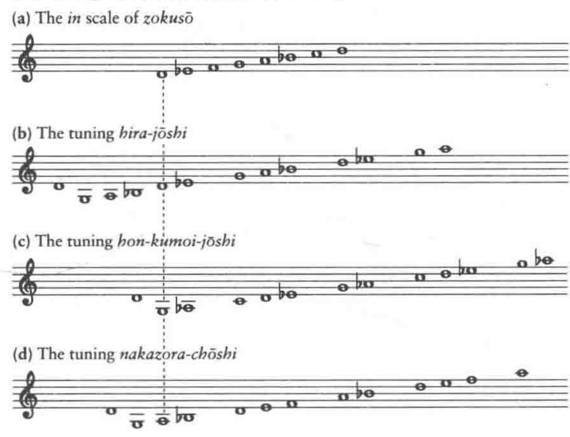
In all schools the player is behind the instrument, its right end slightly to his right. The player sits on the floor, cross-legged (in *gagaku* and Kyōgoku; see §(iv) below), kneeling (Ikuta and Yamada schools; see §(iii) below), or with one knee raised (traditionally in *tsukushi-goto*, although female players have now changed this 'unfeminine' position to a kneeling one). The Ikuta player kneels at an oblique angle, facing slightly to the left; in all other schools the player is positioned at a right angle to the instrument. The *tsume* are worn on thumb, index finger and middle finger of the right hand, and pluck towards the palmar side of the hand. The main playing digit is the thumb, which plucks the strings in a movement directed away from the player (fig.8). The main function of the left hand is to provide pitches not available on the open strings by pressing down on a string to the left of the

8. Basic stroke of koto playing, using the right-hand thumb

9. Kō (or oshide) technique of koto playing, in which the string is depressed with the left hand to raise its pitch

movable bridge, raising the tension of the string and thereby the pitch (fig.9). The left hand is additionally used to produce ornamental pitch inflections. Direct plucking of the strings with the left hand, although used today, occurred only rarely before the late 19th century.

The tuning of the *koto* depends on the scale system of the musical genre or composition for which the instrument is used. All traditional tunings consist of five pitches to an octave, representing the five most important notes of the mode. Additional pitches may be obtained by left-hand pressure to the left of the movable bridges. The tunings of the *koto* in *gagaku* and *tsukushi-goto* approximate to the requirements of the Pythagorean system; in *zokusō* this is true for the first, fourth and fifth degrees; the second and sixth degrees are somewhat lower. The exact 'lowness' of these latter pitches is not standardized: the 'minor 2nds' in the tuning produced by the more traditional musician vary, averaging about 75 cents, whereas more modern musicians tend to equate this interval with the Western tempered semitone of 100 cents. The relation between scale and tuning in *gagaku* and *tsukushi-goto* is shown in ex.1; *zokusō* is represented by its typical scale (the *in* scale) and its three most common tunings (ex.2). The location of the first degree of the scale is shown in the tuning patterns, which shows that the *zokusō* tunings are transpositions of the same scale, not (as is often thought) different modes.



(ii) Repertory and social context. Although modern *sōkyoku* ('*koto* music', i.e. music in which the *koto* has a solo role) has developed in an unbroken line from *gagaku*-based traditions in the Heian period, the existing non-court repertory can be traced back no further than the last decades of the 16th century. Throughout the Edo period (1603–1868) *sōkyoku* was one of the most common genres, and it was only during the last years of the 19th century that increasing Westernization began gradually to transform the tradition. Two main subdivisions may be distinguished: *tsukushi-goto*, the older tradition, once the privilege of high social classes, with characteristics still close to those of older forms of 'elegant music'; and the more recent *zokusō* ('popular *koto* music'), limited to low-class professional musicians and the bourgeoisie. *Tsukushi-goto* is almost extinct, so *sōkyoku*, for all practical purposes, may be identified with *zokusō*.

The development of *zokusō* through several schools, as a typical product of the Edo period, reflects the social situation of the time, which, because of the country's almost complete seclusion from the outside world, is considered to be one of the most specifically 'Japanese'. The feudal system with its four-class structure is reflected in the direction of *sōkyoku* towards one specific social group, the bourgeoisie (mainly belonging to the merchant class, officially the lowest of the four classes); in the organization of *koto* and certain groups of *shamisen* players into a guild of professional blind musicians, the *shoku-yashiki*, which had a strictly organized system of professional ranks; and in the teacher–student relationship, which mirrored that of the lord–vassal. The combination of these factors resulted in an authoritarian system characterized by strong reciprocal obligations, which discouraged the development of individual initiative in younger musicians. This suppression of initiative, combined with the exclusion of potentially available talent by the practical limitation of professional *koto* musicians to blind men, is undoubtedly largely responsible for the striking homogeneity of the repertory of the various schools; to a lesser degree aesthetic considerations have also been responsible. Homogeneity eventually led to stagnation, which could be broken only by the emergence of a musician of exceptional talent who might initiate a new style of composition and thereby a new school. This inevitable sequence (creation of a school–stagnation–eventual revolt and creation of a new school) was repeated several times during the Edo period. Disregarding sub-schools, three main *ryū* (schools) of *zokusō* were created and maintained in the Edo period: the Yatsuhashi-ryū, the Ikuta-ryū and the Yamada-ryū. Beginning in the Meiji period (1868–1912), gradual Westernization of *sōkyoku* led to innovations within the

Ex.1 Relationship between scale and tuning, transcr. W. Adriaansz

Ex.2 Tunings in *zokusō*, transcr. W. Adriaansz

Ikuta- and Yamada-ryū, as well as to the formation of new schools.

The limitation of *sōkyoku* to the lower social strata was responsible for the almost total absence of contemporary scholarly writing on this subject. Because scholarly pursuit during the Edo period was primarily the concern of the higher classes (especially samurai), *zokusō* was rarely considered worthy of the attention of scholars. Contemporary publication in the field of *sōkyoku* was limited almost entirely to collections of song texts and, rather exceptionally, collections of tablatures. Among the latter, the most outstanding is the *Sōkyoku taiishō* (1799) by Yamada Shōkoku: this collection of *kumiuta* and *danmono* of the Ikuta school is preceded by the most scholarly introduction to the subject in the Edo period.

(iii) Schools.

(a) Tsukushi-goto. During the last decades of the 16th century *tsukushi-goto* (named after a province in north-western Kyūshū) was created by a Buddhist priest, Kenjun (?1534–?1623), who established a new tradition, partly by selecting and arranging existing music and partly by composing new songs with *koto* accompaniment. Solo *koto* music of aristocratic origin had been played in northern Kyūshū since the end of the Heian period, and the growing political insecurity in Kyoto during the Kamakura (1192–1333) and Muromachi (1338–1573) periods led to increased cultural intercourse between the capital and south-western Honshū and northern Kyūshū, which were relatively safe. A popular pastime of the nobility during these periods was the improvisation of *imayō* ('contemporary songs'). Such 'noble *imayō*' (distinct from 'common *imayō*'; popular religious songs sung by the common people) often used the melody *Etenraku* as a vehicle for their poetry. Then, as now, *Etenraku* was one of the most popular compositions of *gagaku*. Such *etenraku-imayō* are the prototypes of the song cycles with *koto* accompaniment (*kumiuta*) of *tsukushi-goto*. *Fuki*, the oldest and most influential *kumiuta*, has been shown to be a direct descendant of such poetic improvisation on a section of the music of *Etenraku*. Besides aristocratic traditions, *zokkyoku* ('popular music') is said to be another source from which Kenjun drew. Its influence, however, was considerably less, and in the new arrangements the original character was lost. A third influence on *tsukushi-goto*, that of Chinese *qin* music, is often mentioned; so far, however, research has not established any relationship between them.

The most important part of the *tsukushi-goto* repertory consists of ten *kumiuta* by Kenjun. Normally the texts of these cycles were taken from old sources of high literary quality. It is typical of *kumiuta* that the poems of the individual songs (*uta*) were not related to one another. The musical structure of each *uta* tends to be strictly quadratic: eight phrases, each containing four bars in duple metre, already found in *tsukushi-goto*, later became standard in *zokusō kumiuta*.

Throughout the Edo period *tsukushi-goto* remained primarily the privilege of Buddhist priests and Confucian scholars, who respectfully preserved the aristocratic, ceremonial character of the music as originally established by Kenjun. Especially after the time of Genjo (*d* 1649), the second head of the school, restrictions were severe. Blind men – the professional musicians – and women were banned from instruction. Stylistic development within the school was minimal, and this, combined with the general aloofness of *tsukushi-goto*, caused stagnation. A serious decline began in the late 19th century with the rapid modernization of Japan. Today the school is almost extinct, and it is no longer possible to acquire sufficiently reliable information for scholarly research because the scores are incomplete and no performers of professional standard are still alive.

(b) Yatsuhashi-ryū. Towards the middle of the 17th century Hōsui, a musician of *tsukushi-goto*, settled in Edo where he taught a blind *shamisen* virtuoso, Jōhide (1614–85). Later known as Yatsuhashi and given the title Kengyō, this blind musician became the founder of *zokusō*, a step considered of such importance that he is commonly regarded as the father of modern *koto* music. Yatsuhashi Kengyō was responsible for the formation of a small repertory of 13 *kumiuta* and, possibly, two *danmono* or *shirabemono* (compositions for solo *koto*, consisting of several *dan* – sections – each of which contains 104 beats). The *kumiuta* and the *danmono* are in part arrangements of compositions of *tsukushi-goto* and in part newly composed. Yatsuhashi made a revolutionary innovation by using the popular *in* scale rather than the scales of *tsukushi-goto*. This modal change was of great importance: with it the music began to move away from older aristocratic traditions, including *tsukushi-goto*, towards more modern, popular idioms represented, for example, by *shamisen* music. This again caused a shift in social milieu and, beginning with the activities of Yatsuhashi Kengyō, *koto* music became the concern of professional musicians and of a bourgeoisie well-educated in artistic matters. The use of the rather unflattering term *zokusō* is justified by this shift in social milieu and to a lesser degree by a shift in function from spiritually inclined ceremony to secular entertainment; it is not justified by the quality of the music, which, though it was adapted to professional technical standards, did not lose its restrained aristocratic character.

The repertory of the Yatsuhashi-ryū contains 13 *kumiuta* traditionally ascribed to Yatsuhashi Kengyō, one *kumiuta* by Yatsuhashi's student Kitajima Kengyō (*d* 1690) and prototypes of two *danmono*. Ten of Yatsuhashi's *kumiuta* and the one by Kitajima follow the standard form in the construction of the individual *uta*: eight phrases of four bars in duple metre. The remaining three (the most venerated ones, collectively called *Yatsuhashi no sankyoku*, 'Yatsuhashi's three pieces') show freer construction. The two *danmono*, *Kudan* and *Rinzetsu*, are prototypes of compositions that, in slightly altered form, later became two of the most famous pieces of *koto* music: *Rokudan* and *Midare*.

The first song of the most typical *kumiuta*, *Fuki*, demonstrates the characteristic features of *kumiuta* (ex.3). Form and content are directly related to the first part of the *gagaku* composition *Etenraku*. In this *uta* the beginning of each four-bar phrase is marked by an ornamented octave pattern (the octave is on the third beat of the first and the first beat of the second bar of each phrase); in addition, equally standardized figures occur at the conclusion of several phrases (bars 4, 8, 12 and 16). The third and fourth phrases are slightly varied repetitions of the first and second. The eight phrases of the first 32 bars can be divided into three groups: phrases 1–4 (bars 1–16: ex.3), phrases 5 and 6 (bars 17–24) and phrases 7 and 8 (bars 25–32). The first group is characterized by

Ex.3 First *dan* of *Fuki*, Yatsuhashi-ryū; transcr. W. Adriaansz (Adriaansz, 1973)

the use of a high register and great stability (all phrases end on E, the first degree of the mode); the second group moves in a middle register and is less stable (phrases end on fifth and first degrees); the third group uses the lowest register and is relaxed in quality, reaching a conclusion on the first degree in bar 31. The last bar and a half of the *koto* part, ending on the fifth, is a characteristic short interlude between *uta*; it never occurs at the conclusion of the final *uta*, which normally ends on the first degree in both voice and *koto* parts.

The three parts reflect the *jo-ha-kyū* concept. A rough translation of these three terms might be 'prelude' or 'introduction' (*jo*), 'breaking away' (*ha*) and 'rapid' or 'hurried' (*kyū*). They always appear in this order, although some compostions may use only two of the three kinds of movement. The basic concept in this type of organization is to place slow-moving pieces before pieces that have more movement, and to end with pieces that are called 'rapid'. This regular quadratic structure, the grouping of the phrases into three groups following the *jo-ha-kyū* order and the descending tendency throughout the *uta* can be seen throughout the *kumiuta* repertory. Because voice and *koto* simultaneously realize an individual, idiomatic version of the same underlying melody, their parts are closely related; occasional dissonances are the result of melodic activity and have no harmonic function. The temporal relationship between voice and *koto* is rather complex: whereas the *koto* tends to play on the beats, the voice frequently falls between the beats, often resulting in a characteristic lagging effect. The tempo of the first *uta* of a *kumiuta* is always slow (M.M. crotchet = *c*42). Virtuosity has no place in this form.

As with *tsukushi-goto*, the repertory of the Yatsuhashi-ryū remained stagnant. The school flourished throughout the Edo period, after which it gradually declined. Through the activities of Sanada Shin (1883–1975), for a time the sole carrier of the tradition, there was a minor renaissance in the 1960s. The tradition has been preserved in a sufficiently reliable state to make responsible scholarly study possible.

(c) Koto music in Ryūkyū. Supplementing its role as an accompanying instrument in Ryukyuan classical and folk music, in which it plays a role subsidiary to the *sanshin*, the Ryukyuan *koto* possesses a small but distinctive solo repertory of its own, consisting of instrumental pieces and songs, all with Japanese associations. The instrumental repertory consists of five *sugagaki* pieces (*Takiotoshi sugagaki*, *Ji sugagaki*, *Edo sugagaki*, *Hyōshi sugagaki*, *San'ya sugagaki*) and two *danmono* (*Rokudan*, *Shichidan*). The vocal repertory comprises three songs (*Genji-bushi*, *Tsushima-bushi*, *Sentō-bushi*).

The *koto* is thought to have been introduced into Ryūkyū in 1702 by Inamine Seijun, who had studied Yatsuhashi-ryū in Satsuma. The *sugagaki* items he introduced on his return to Ryūkyū are short pieces for unaccompanied *koto* no longer extant in Japan. However, the titles of several appear in materials such as the Japanese *koto* primer *Ōnusa* (1699) and are thus known once to have been performed in Japan. *Rokudan* ('six sections') and *Shichidan* ('seven sections') are similar to the Japanese versions of these two *danmono*, the main difference lying in the use of the anhemitonic pentatonic scale in the Ryukyuan version and the hemitonic pentatonic scale in the Japanese versions. Since Inamine Seijun studied the Yatsuhashi-ryū and not the Tsukushi-ryū, with which the anhemitonic pentatonic scale is associated in *zokusō* styles, and since composition of the *danmono* is attributed to Yatsuhashi Kengyō, the Ryukyuan versions are thought to reflect an early stage of development of the *danmono* within the Yatsuhashi-ryū, prior to their adaptation to the later anhemitonic pentatonic scale.

The three *koto* songs employ variants of Japanese texts contained in anthologies of *ofunauta*, songs to pray for safety at sea. Their titles and musical style also suggest a Japanese provenance, although no pieces with these names are known to have existed in Japanese music. They may, however, be the sole surviving remnants of the *ofunauta* musical tradition, which is thought to stretch back to the Heian period.

The earliest notation for the Ryukyuan *koto* is contained in the two-volume *Koto kuroronshī* compiled by Tedokon Junkan in 1895. This contains the ten items of the solo repertory together with the accompanying *koto* parts of a further 42 pieces from the *sanshin* repertory. The three-volume edition currently in use was compiled in 1940 and consists of 193 pieces.

(d) Ikuta-ryū. The music of the Yatsuhashi-ryū and of *tsukushi-goto* was so firmly rooted in aristocratic musical traditions that it soon lost contact with the developing bourgeois culture of the 17th century. By the

Genroku period (1688–1704), when the new culture was fully developed, *kumiuta* offered little more than historical interest. In contrast to the somewhat formal *koto*, with its highly respected tradition acting as a brake on stylistic development, the more popular *shamisen*, unburdened by such venerable traditions, had succeeded in keeping abreast of the changing times. In 1695 Ikuta Kengyō (1656–1715) founded a new school in Kyoto that established close collaboration between the *koto* and the *shamisen* in the performance of *jiuta*. In doing so, he opened the door to new developments in *koto* music. In this context the term *jiuta* ('regional songs', i.e. songs from the Kyoto–Osaka area) refers to predominantly lyrical songs composed to contemporary texts in a flexible musical form. *Jiuta* were originally sung with *shamisen* accompaniment. In the Ikuta-ryū the *shamisen* could be replaced by the *koto*, although the combination of *koto* and *shamisen* was more common. It is typical of the Ikuta-ryū that in such ensembles the leading musician plays the *shamisen*, not the *koto*.

Jiuta composers were greatly interested in instrumental techniques. This interest eventually led to new forms as the musical interludes (*ai-no-te*) were gradually extended until they were frequently longer than the sung parts. These long *ai-no-te* were called *tegoto*, and the form in which they occurred was *tegotomono*. This development assumed its definitive shape in Osaka around the Kansei period (1789–1801) in the works of Minezaki Kōtō. Basically the *tegotomono form*, which occurs in many variants, consists of three parts: *mae-uta* ('fore-song'), *tegoto* and *ato-uta* ('after-song').

The relationship between the *shamisen* and the *koto* gradually changed from the almost complete dependence of the *koto* on the *shamisen* in the earlier *jiuta* to an increasing independence of the two instruments. When *koto* and *shamisen* play equally important, although interdependent parts, one speaks of *kaete-shiki sōkyoku*. *Kaete* refers to an ornamental version, added to the original part, called *honte*. This development, although begun in Osaka during the Bunka period (1804–18) in the compositions of Ichiura Kengyō, reached the peak of its development in Kyoto, especially in the works of Yaezaki Kengyō (*d* 1848), where such compositions were called *kyōmono*. Yaezaki's strength lay in his virtuoso arrangements as *kaete-shiki sōkyoku* of *shamisen* compositions by other composers, especially Matsuura Kengyō (*d* 1822) and Kikuoka Kengyō (1792–1847). The development of instrumental virtuosity can be seen in the beginning of the fifth *dan* of *Godan ginuta* (ex.4), a composition for two *koto* by Mitsuzaki Kengyō (*d* 1853). As in most traditional Japanese music, its two parts are closely related. A characteristic feature of 19th-century combinations of a *koto* pair (or *koto* and *shamisen*) is the occasional rapid alternation of short motifs between the two instruments, as in the fourth bar.

In the middle of the 19th century a reaction against the strongly *shamisen*-dominated *sōkyoku* resulted in a neoclassical movement that attempted to revive pure *koto* music. Inspiration was sought in the old *kumiuta*. The most important composers in this movement were Mitsuzaki Kengyō in Kyoto, best known in this connection for *Akikaze no kyoku* (a *danmono* followed by a *kumiuta*, both conforming strictly to the old forms); and Yoshizawa Kengyō (*d* 1872) in Nagoya, the composer of the

Ex.4 Beginning of the fifth *dan*, *Godan ginuta* by Mitsuzaki Kengyō; transcr. W. Adriaansz

Kokingumi, in which *kumiuta* have been used as stylistic examples without their structures being followed.

The repertory of the Ikuta-ryū was not limited to new types of composition but also incorporated the *kumiuta* and *danmono* from the Yatsuhashi-ryū. For this purpose *kumiuta* and *danmono* were subjected to a final polishing process, in the course of which all compositions were made to adhere to strict structural schemes. As the structure of three of Yatsuhashi's *kumiuta* deviated too markedly from the norm, they were replaced by new compositions but retained the old texts. They continued to be referred to as *Yatsuhashi no sankyoku*, however, and remained the object of the same veneration as the original compositions. The musician responsible for this final adaptation was Kitajima Kengyō. Later *kumiuta* composed within the Ikuta-ryū, mainly by Mitsuhashi Kengyō (*d* 1760), usually follow the standard form.

(e) Yamada-ryū. The Ikuta-ryū remained chiefly confined to the Kansai (Kyoto–Osaka) area. Attempts during the 18th century to export the school to Edo met with little success, partly because the repertory of the city still consisted largely of the, by then, thoroughly old-fashioned *kumiuta* and partly because the modern *jiuta* were so typical of the Kansai area that they did not appeal to the taste of Edo. Only at the end of the 18th century did Edo acquire its own school of *koto* music, the Yamada-ryū, named after its creator, Yamada Kengyō (1757–1817). A remarkable parallel between the creation of the Ikuta-ryū in Kyoto in the late 17th century and the Yamada-ryū in Edo a century later is that both schools adopted modern styles by absorbing features of certain *shamisen* styles. A significant difference, however, is that in this process the Ikuta-ryū sought inspiration in lyrical, the Yamada-ryū in narrative and dramatic *shamisen* (and other) styles (*katō-bushi*, *itchū-bushi*, *tomimoto-bushi* among the *shamisen* styles; *yōkyoku* of the *nō* theatre; and *heikyoku*, epic poetry with *biwa* accompaniment). Another typical difference between the two schools is the

relative importance of the performing instruments. In the Ikuta-ryū the *shamisen* is the main instrument, played by the leading musician of the group; in the Yamada-ryū, which also combines the *koto* and the *shamisen*, the main function is assigned to the *koto*, the *shamisen* having no more than an obbligato part.

The Yamada-ryū repertory contains a selection of *kumiuta* and *danmono*; *saku-uta*, including Yamada Kengyō's own compositions; *shin saku-uta*, with all works other than *kumiuta*, *saku-uta*, *tegotomono* and *shin sōkyoku* ('new *koto* music'); *tegotomono*, a small group with a few compositions adapted from the Ikuta-ryū, as well as some composed within the Yamada-ryū; and *jōrurimono*, arrangements from narrative *shamisen* literature, such as *katō-bushi* and *tomimoto-bushi*.

The beginning of the section *gaku* from *Kogō no kyoku* by Yamada Kengyō (ex.5) illustrates the combination of tradition and original elements, a typical technique of this composer. *Gaku* refers to reminiscences of *gagaku*, which are prompted by the text. Because such allusions are not made by mere imitation, the result is an interesting combination of *gagaku* and *zokusō* styles. The *gagaku* element is strongest in the second *koto* part, which consistently plays four-bar phrases consisting of *gagaku*-based octave patterns (e.g. bars 504–5) and single notes (e.g. bar 506). This may be compared with similar *gagaku*-inspired phrases in *kumiuta* (see ex.3 above). In spite of the four-bar phrases in the second *koto* part, however, the actual structure of the *gaku* section does not produce the effect of a similarly predictable, regular quadratic structure. The *gagaku* element in the second *koto* part requires a tuning providing major 2nds and minor 3rds. Thus the notes used in bars 503–26 are *e'*, *f♯'*, *a'*, *b'* and *d''*; after the instrument is retuned in bar 527 (retuning never occurs during a true *gagaku* composition), these become *e'*, *g'*, *a'*, *b'* and *d''*. The voice is ambiguous in its allegiances: it joins the second *koto* in using anhemitonic pentatonic material; structurally, however, it aligns itself with the first *koto* and the *shamisen*, which remain completely in the *zokusō* sphere, as shown by the frequent occurrence of minor 2nds and major 3rds. The simultaneous use of *gagaku* and *zokusō* elements results in different key signatures, which here indicate the simultaneous use of two different modes, built on the same tonic, E.

The Yamada-ryū is as typical of the Kantō area (Edo and surroundings) as the Ikuta-ryū is of Kansai. The most significant composers in the Yamada-ryū were Yamada Kengyō and three of his pupils: Yamato Kengyō, Yamaki Kengyō and Yamase Kengyō.

(iv) Innovations since the Meiji era (1868–1912). In the last decade of the 19th century *sankyoku* ('music for three') became especially popular: this was a performing practice in which a third instrument was added to the usual ensemble of *koto* and *shamisen*. Earlier this third instrument had often been the *kokyū* (spike fiddle), but it was gradually replaced by the *shakuhachi* (end-blown flute); it plays another variant of the existing melody. Since then the Yamada and Ikuta schools have continued to flourish, transmitting their traditional repertories.

At the same time, the *koto* proved to be a favoured instrument for experimentation with combinations of traditional Japanese and Western music. Within *sōkyoku* the initial changes were slight and involved modest experimentation with different modes and an increased use of left-hand plucking, which created harmony-like effects. Contrasting with this *Meiji shinkyoku* ('new music of the Meiji era'), which flourished mainly in Osaka, was the response to Western music of Suzuki Koson (1875–1931) in Kyoto around 1900; he attempted in his works to combine modern poetry and romantic feeling with classic practices of the Heian period. His school, called Kyōgoku, commanded attention for a short time

Ex.5 Beginning of the *gaku* section of *Kogō no kyoku* by Yamada Kengyō, transcr. W. Adriaansz

but declined rapidly. More drastic Westernization was accomplished by the *koto* musician Miyagi Michio: this included the composition of chamber music for Japanese instruments, the orchestral use of Japanese instruments, the combination of Japanese and Western instruments and the invention of new instruments, notably the 17-string bass *koto* (*jūshichigen*). Miyagi's influence and historical importance were, and continue to be, very strong.

More recent initiatives have sprung particularly from Japanese trained in or influenced by Western music (see IX, 1 below). Miyagi's 17-string *koto*, aside from also becoming a solo instrument in recent decades, has been followed by others with extra strings (called by scholars *tagensō*, 'many-string *koto*'). The '20-string *koto*' (*nijū-gen(-sō)*), devised by the performer Nosaka Keiko and the composer Miki Minoru in 1969, added a 21st string almost immediately and in 1991 spawned a variant with 25 strings as compositional demands expanded. The '30-string *koto*' (*sanjūgen(-sō)*) has been championed mainly by the performer and composer Miyashita Susumu. Composers for these instruments experiment with various tunings but generally use the extra strings to 'fill the gaps' in the traditional pentatonic tunings.

Unlike traditional works for the *koto*, most works written for these new *koto* are by specialist composers rather than *koto* players and may demand a virtuosity that exceeds the grasp of all but the most skilled performers. New compositions for the standard 13-string instrument also flourish. All kinds of *koto* are now combined with a wide range of other instruments, Japanese or otherwise.

The 'neo-*koto*', dating from 1995, is basically a traditional *koto* made more convenient by shortening the body by a third, adding guitar-like tuning pegs and colouring certain strings for orientation.

(v) One- and two-string koto. Unlike the 13- and 17-string *koto* (*sō*), the smaller one- and two-string *koto* (*ichigen-kin*, *nigen-kin*) do not have movable bridges (*ji*), and thus belong to the same class of instruments as the Chinese *qin*.

The single-string *ichigen-kin* (also called *suma-goto* or *hankin*) seems to have been invented (or, according to some, introduced from China) in the late 17th century and appears to have been modelled on the *qin*. As the name *hankin* ('board zither') suggests, the original type has a body consisting of a single board, with two slight 'waists' as on the *qin*, although recently instruments have come to be made with a hollowed-out body and a flat backboard. The instrument is approximately 110 cm long and 10 cm wide and is set on a stand approximately 25 cm from the ground. The silk string passes over a bridge at the player's right and is attached directly to the vertical tuning peg at the left. Twelve position markers, covering a compass of two octaves, are set into the face of the instrument. The player obtains different pitches by touching the string lightly with a diagonally truncated bamboo or ivory cylinder worn on the left middle finger, and plucks the string with a similar but shorter cylinder worn on the index finger of the right hand. Frequent use is made of the delicate portamento technique made possible by the left-hand cylinder.

An early revival of the *ichigen-kin* was brought about by the Buddhist priest Kakuhō (1729–1815), but the music of the *ichigen-kin* as it is now performed is largely the result of the activities of Manabe Toyohira (1809–99). Of the so-called *kokyoku* ('old songs'), only two have survived, and many of the songs in the present-day repertory are Toyohira's own compositions. The *ichigen-kin* is typically played by a solo performer who both sings and plays. Opportunities for hearing this music today are rare, but traditions of *ichigen-kin* performance, all tracing their origins to Toyohira, are to be found in Kōchi, Kyoto, Tokyo and Suma.

There are two types of two-string zither in Japan, together known as *nigen-kin*: the *yakumo-goto* and the *azuma-ryū nigen-kin*. The *yakumo-goto* is said to have been invented in 1820 at Izumo shrine by Nakayama Kotonushi (1803–80), but it seems that the *koto* and *shamisen* player Kuzuhara Kōtō (1812–82) also played a part in its development. Kotonushi, it is said, made the first instrument from a half-tube of bamboo, and although later instruments are made of paulownia wood, three grooves are carved into the surface to represent the nodes of the original bamboo instrument. Approximately the same size as the *ichigen-kin*, the *yakumo-goto* has a convex upper board and a flat backboard that extends beyond the upper board to the player's left and holds the two tuning pegs. The *yakumo-goto* does not have the two waists that characterize both the *ichigen-kin* and the *qin*. The strings pass through separate holes to the surface and over two bridges before passing down through a common hole at the left-hand end to the tuning pegs. Either 30 or 31 position markers cover a compass of three octaves. The player stops the strings with a cylinder worn on the left middle finger and plucks them with a plectrum worn on the right index finger; these are similar to those used by the *ichigen-kin* player. The instrument rests on a stand approximately 20 cm above the floor. Tassels decorate both instrument and stand. The strings are tuned in unison, and the playing technique is similar to that of the *ichigen-kin*. A characteristic of *yakumo-goto* performance is that the left-hand cylinder is not released from the strings except to play the lowest (open-string) note, and therefore a light portamento effect is heard throughout.

As with the single-string instrument, the *yakumo-goto* is typically played by a solo performer. A number of songs do, however, contain extended instrumental passages (*tegoto*), for which there exist ornamental parts (*kaete*) for a second *yakumo-goto*. For a time the *yakumo-goto* enjoyed considerable popularity in western Japan, for both sacred and secular use, but today it is little heard outside a few religious establishments, notably the 'new religion' Ōmoto (see §IV, 5), where it has provided liturgical music since 1909.

The *azuma-ryū nigen-kin* ('eastern school two-string zither') was developed from the *yakumo-goto* in Tokyo around 1870 by the *kabuki* drummer Tōsha Rosen (1830–89), and rapidly overtook the *yakumo-goto* in popularity in that city. The main difference between the *yakumo-goto* and the *azuma-ryū nigen-kin* is the absence in the latter of the flat backboard of the *yakumo-goto*. Rosen published a book of his own compositions for *azuma-ryū nigen-kin* in 1885. Free of the religious interdictions laid down by Kotonushi for the *yakumo-goto*, the *azuma-ryū nigen-kin* has been used as a solo instrument, in offstage *kabuki* music and in ensemble with other instruments.

5. 'SHAKUHACHI'. The modern standard version of this end-blown NOTCHED FLUTE of Japan has four finger-holes and one thumb-hole. Originally imported from China by the early 8th century, it reappeared around the 15th century in a Japanized form and has since come to

10. Shakuhachi (notched flute) made of stone, 8th century (Shōsōin repository, Nara)

be used in several quite diverse types of music: meditative solos, small ensemble pieces, folksong and modern works by both native and foreign composers. The impressive range of the *shakuhachi*'s sound potential has been well described by Malm (1959): 'From a whispering, reedy *piano*, the sound swells to a ringing metallic *forte* only to sink back into a cotton-wrapped softness, ending with an almost inaudible grace note, seemingly an afterthought'.

The fundamental pitches of the standard-size instrument (54·5 cm) are approximately *d'–f'–g'–a'–c"*; a skilful player can cover about three octaves, although traditional pieces rarely exceed two octaves and a fourth. Pitches in between the basic ones are produced by a combination of part-holing and embouchure. The *shakuhachi* is manufactured in a graduated series of sizes a semitone apart; the size used depends on the genre, the other performers (if any) and the personal preference of the player (see §(v) below). Women have rarely played the *shakuhachi* in recent centuries, although they commonly played its ancestor in China. There are sociological, symbolic and musical reasons for this virtual taboo, all of which are being overcome in modern Japan.

(i) Early history. The direct ancestor of the modern *shakuhachi* is the so-called *fuke-shakuhachi*, the instrument of the Fuke sect of Zen Buddhism. By the early 18th century at the latest it was clearly distinguishable from previous *shakuhachi* types, and it has continued to evolve up to the present. The history of the *shakuhachi* begins, however, much earlier. The Chinese end-blown flute *chiba* (*see* XIAO) was imported to Japan by the early 8th century as part of the orchestra for *gagaku* (court music); *shakuhachi* is the Japanese pronunciation of the ideograms for *chiba*. The name was derived from the length of the basic instrument: 1 *chi*/*shaku* and eight-tenths (*ba*/*hachi*) of another, i.e. 1·8 *shaku*. This term soon came to designate all sizes of the instrument.

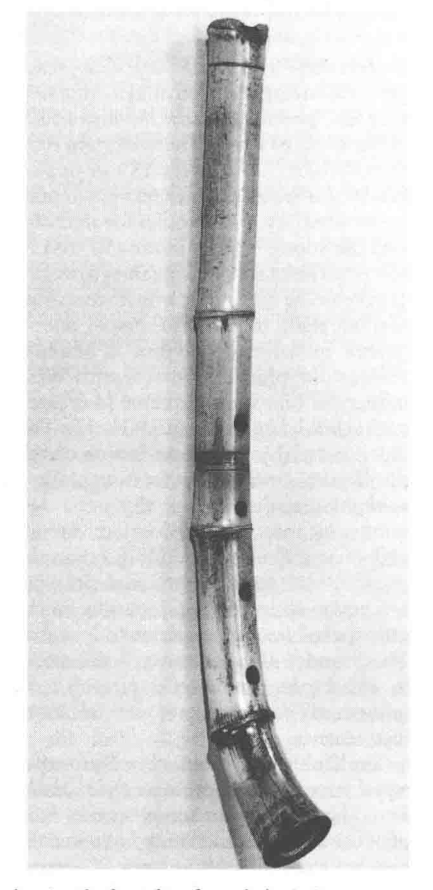
Japanese scholars call this earliest version the 'archaic' (*kodai*) *shakuhachi*. Eight of these instruments are preserved in the Shōsōin, the 8th-century imperial repository in Nara, Japan (fig.10). They range in length from about 44 cm with a lowest pitch near *f'* to 34 cm with a lowest pitch near *a'*. The former would have been the standard 8th-century instrument, since 1·8 *shaku* at that time was about 44 cm; today, however, 1 *shaku* is 30·3 cm, so 1·8 *shaku* is 54·5 cm – the length of the modern standard *d'-shakuhachi*. The Shōsōin instruments are quite uniform in shape and scale (although among them are specimens made from bamboo, jade, stone and ivory). They differ most importantly from later *shakuhachi* in having five rather than four front finger-holes. When the six holes (counting also the thumb-hole) are opened in succession the result is a close approximation of a major scale – in keeping with Chinese modal practice but quite unlike the modern instrument's anhemitonic pentatonic tuning. The feature linking these specimens most closely with later *shakuhachi* is the bevelled mouthpiece. It is cut diagonally towards the outside of the instrument, so that the blowing-edge is on the inner rather than the outer surface of the bamboo cylinder – the opposite of the structure of modern Chinese end-blown flutes. (This distinction should be of help in evaluating the claim that the modern *shakuhachi* derives from a Chinese end-blown flute imported during the 14th or 15th century.) The 'notch' itself is wide and shallow as on modern instruments; it lacks, however, the thin inlay of horn or ivory that gives a sharp blowing-edge to the modern instrument – a feature apparently invented no earlier than the 17th century.

Other traits distinguishing these eight specimens from the *fuke-shakuhachi* include the absence of external flaring at the bottom and the relatively thinner walls. Both outside and inside diameters are considerably narrower than for the *fuke-shakuhachi*: typical outside diameters would be 2·4 cm for a Shōsōin specimen and 3·5 cm flaring to 5 cm for a similarly pitched modern instrument. Three bamboo nodes are visible on the surface (although of course they have been drilled through internally); even the stone and ivory models preserve this feature. Modern *shakuhachi* have three nodes in approximately corresponding locations, but they have additional nodes at either extremity (see §(iii) below).

By the 10th century the *shakuhachi* had been dropped from the court orchestra, and for several centuries there is virtually no trace of the instrument. No notation survives for the archaic *shakuhachi*, and there exist no manuscripts or specimens to help the scholar bridge the gap to the next stage. When references to the *shakuhachi* reappear in the 15th and 16th centuries, we seem to be dealing with the *hitoyogiri(-shakuhachi)*, which like all subsequent instruments has only four front finger-holes (fig.11).

The *hitoyogiri* was shorter, straighter and rounder than the modern *shakuhachi*. There was only one bamboo node in the length of the instrument, hence its name: 'one-node cutting'. Musically it had a smaller range (about an 11th) and was less susceptible to altering pitches by embouchure or half-holing. The earliest *shakuhachi* notation, from 1664, was for *hitoyogiri*.

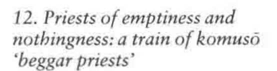
Some of the medieval references connect the instrument with Buddhist priests of both high and low status. It seems that in addition to its use in the accompaniment of popular songs, the *hitoyogiri* was played by wandering beggar-priests called *komosō* ('rush-mat priests'). This was an early step on the path to the *fuke-shakuhachi*'s later exclusive role as a Zen instrument. On the other hand, the tale of the importation of the *shakuhachi* from China in the 15th century via a Zen priest seems to be no more than a 'justification myth' fabricated by the nascent Fuke sect in the 18th century to obtain monopoly concessions from the government.



The *hitoyogiri* and the Fuke instrument seem to be close relatives, but the greater range, richness and flexibility of the latter were surely major factors in the decline of the *hitoyogiri* during the late 18th century. Another related instrument, the *tenpuku* (lit. 'blow heaven'), is of uncertain origin but seems unlikely to be a direct ancestor of the modern *shakuhachi*. First appearing among warriors of Satsuma, southern Japan, during the late 16th century, it had faded out by the late 19th century, leaving a repertory of seven short solo pieces. Extant examples vary in construction, averaging a mere 30 cm in length though all with 4+1 holes like the modern *shakuhachi*. The mouthpieces, however, were of both the *shakuhachi* type (slanting outward) and the Chinese type (slanting inward), the latter being more common. There were usually three bamboo nodes, the bottom one only partially open, and the instrument had a slight reverse conical bore. The range was about an 11th, as for the *hitoyogiri*.

(ii) Emergence of the modern shakuhachi. The standard *shakuhachi* of today, a slightly evolved version of the *fuke-shakuhachi*, took shape during the 17th and 18th centuries. It is much thicker than previous types, and the lower end is flared. These features are often claimed to have developed in response to the instrument's use as a defensive weapon by the priests of the Fuke sect. This sect was formed by ex-samurai who, finding themselves unemployed in the late 17th century, used the cover of religious asceticism to gain a government-approved monopoly on the use of the *shakuhachi* in begging for alms, in exchange, apparently, for serving as government spies. Under cover of the basket-like *tengai* hats that hid their faces, these *komusō* ('priests of nothingness') wandered the country freely at a time when travel was restricted (fig.12). It is at least equally probable, however, that the thicker, flared *fuke-shakuhachi* was influenced in its development by the similarly proportioned south Chinese *dongxiao*, which could have entered Japan with the flood of Chinese immigrants during the 17th century.

At any rate, during the 18th century, as the *hitoyogiri* continued to be used for vocal accompaniment and in the *sankyoku* (chamber music) ensemble, the Fuke instrument developed a solo repertory for use in meditation and by lone wandering mendicants. At one time there were about 40 *komusō* temples around the country, many of which developed their own repertories. In the mid-century the master Kurosawa Kinko (1710–71) visited many such temples in search of local pieces; he eventually 'arranged' or 'composed' over 30 tunes, which today form the bulk of the repertory of *honkyoku* ('basic pieces') for the Kinko school (Kinko-ryū) of *shakuhachi*. Kinko also seems to have pioneered the teaching of *fuke-shakuhachi* to laymen, thus contributing to the demise of the *hitoyogiri*.



In 1871–2, during the wave of 'modernization' that swept Japan, the Fuke sect was banned and the playing of the *shakuhachi* for religious purposes outlawed. To

12. *Priests of emptiness and nothingness: a train of* komusō *'beggar priests'*

protect their livelihood the leading teachers concentrated on secularizing the instrument. It was during this period that the *fuke-shakuhachi* became a fully fledged member of the *sankyoku* trio. The *sankyoku* repertory was known as *gaikyoku* ('outside pieces') in opposition to the basic *honkyoku*. Various teachers vied in making new arrangements of *sankyoku* melodies for *shakuhachi*. Among these was the young Nakao Tozan (1876–1956), who founded his own Tozan school (Tozan-ryū) in 1896. Concentrating at first on the *gaikyoku*, which were much more metrically regular than the rubato *honkyoku*, he pioneered the precise notation of rhythm in *shakuhachi* music. This orientation, plus his contacts with Western music, surely influenced him when he came to create *honkyoku* for his own school, beginning in 1904. The Tozan *honkyoku* are much more rhythmical and more clearly structured than the Kinko ones; they tend to follow the pitches of *sankyoku* scales rather than the less precise Kinko *honkyoku* intonation. Most are intended as duets, trios and quartets, often including homophonic chordal sections rich in parallel 4ths and 5ths, a feature which is unknown elsewhere in Japanese music and clearly an attempt to blend Japanese melody and Western harmony. The founder also encouraged the use of the *shakuhachi* in *shinkyoku* ('new-style pieces'), primarily Western-influenced compositions for *shakuhachi* with other instruments.

The Kinko and Tozan schools are now of approximately equal strength and dominate the *shakuhachi* world today. Several other smaller schools exist; most are outgrowths of local Fuke temples that have kept alive part of their original repertories. The term Meian or Myōan school is often applied to these non-Kinko Fuke traditions as a whole, although in fact there is no organizational unity among them. Most of these 'sub-schools' do not include any *gaikyoku* in their repertories. It should also be mentioned that, except in the Meian schools, the *shakuhachi* is not commonly considered by its performers to be primarily a religious instrument (*hōki* or *zengu*) any more, but first and foremost a musical instrument (*gakki*). This is not to deny a spiritual element in *shakuhachi* music and performance, but simply to correct a common misconception among non-Japanese. Some players, however, still believe in the concept of *ichion-jōbutsu* ('Buddha-hood in a single note'), a reminder to listen in *honkyoku* for individual musical moments, the elaboration of long-sustained pitches, more than for flowing melodies. Often a pitch is sustained for over 20 seconds with only subtle bending, ornamentation and timbral changes.

The *shakuhachi* has proved attractive to modern Western-style composers both in Japan and abroad (see §IX, 4 below). Takemitsu's *November Steps* (1967) brought it to worldwide attention (along with the BIWA), keeping closely to traditional *honkyoku* technique and mood. The instrument has also been used in jazz (for example, by John Kaizan Neptune) and occasionally in other non-traditional genres.

(iii) Construction. The bamboo selected for *shakuhachi* construction is of the type called *madake* (*Phyllostachys reticulata*). It is typified by large joints that are more widely spaced than those of other types of bamboo. The portion of bamboo stalk used in making the instrument incorporates the root, although much of this is cut away for the sake of appearance. The typical instrument incorporates seven nodes (seven being a mystical number in Japan): three positioned approximately as on the ancient *shakuhachi* and *tenpuku*; one at the upper

extremity; and three closely spaced at the root end. Positioning the blowing-edge on the uppermost node gives it a harder consistency than would obtain on the softer internodal section.

The older instrument, constructed in one piece, has largely been replaced since the late 19th century by a two-piece (*nakatsugi*) instrument that is easier to carry. After a period of heating and drying to remove oils and moisture, the bamboo is shaped first by heating it and then by applying pressure to straighten out any irregularities in the material. During this process the bell is given a slight upward curve to enhance the instrument's appearance. The bamboo is then stored for six months to allow further evaporation.

The bamboo is then cut to approximately its final length and hollowed out. The bore is somewhat reverse-conical, narrowing from about 2 cm in the upper part to about 1·5 cm at the lower end on a standard instrument. This follows the structure of the bamboo itself, the internal diameter of which narrows even as its external size swells near the root. The bore is slightly elliptical, and the external cross-section even more so – slightly wider than it is deep.

The bamboo is then cut into two sections. The bore of each one is enlarged by a gouge to accommodate a tube joining the lower and upper sections. This process allows fine adjustment of the spacing of the nodes in relation to the finger-holes to produce a pleasing symmetry, but it also eases the remaining stages of production and aids portability.

Next, the finger-holes are drilled or burnt out. Since each piece of bamboo differs, the precise position, size and angle of the holes must be adjusted during manufacture by testing the sound: the maker must therefore also be a skilled player. Until recently the front four holes were often spaced equidistantly, separated most typically by a tenth of the instrument's total length; but this rendered the *f'* and *a'* holes slightly flat and sharp respectively, which might not concern a solo player but caused difficulties when playing in ensemble with other instruments. Intonation was then corrected either through angling the holes (usually toward the top of the instrument) or through embouchure. This problem is now eliminated by variable spacing of holes. Exact size and shape of the holes may also be varied to suit a particular performer, but the standard diameter is around 1 cm.

The Japanese sense of temperament has always been relatively flexible, but Western influence has led to the adoption of A = 440 as the standard, with intervals increasingly approaching Western-tempered ones. *Shakuhachi* makers have generally followed suit, although both climate and individual playing style affect the final result.

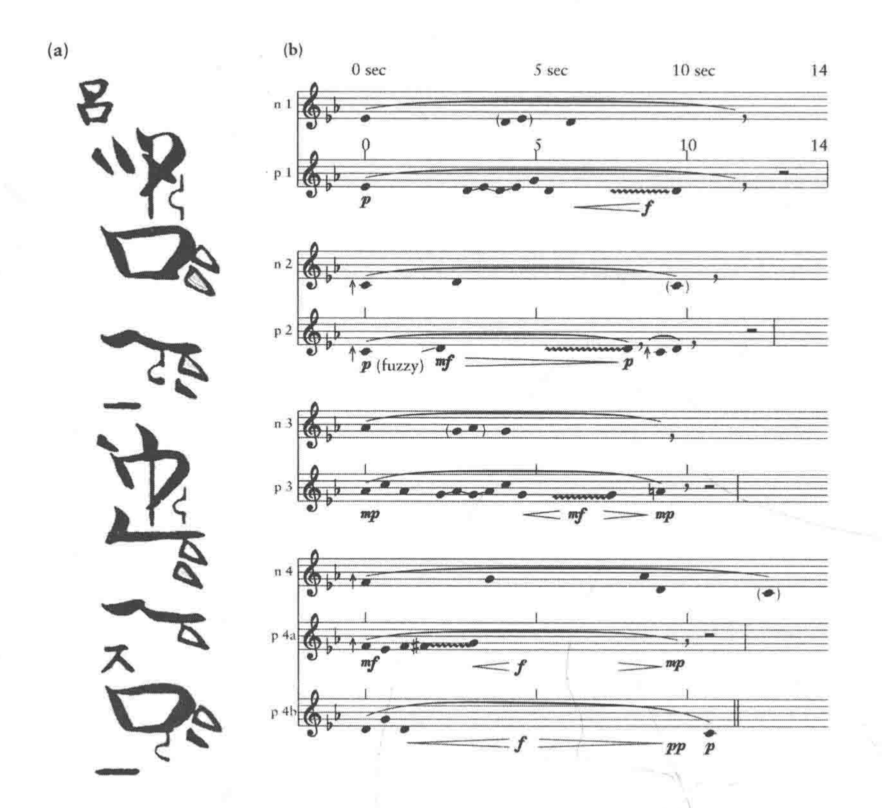
The mouthpiece is fashioned by sawing inwards towards the top of the instrument at an angle of about 30°. A small insert of water-buffalo horn or ivory is then inlaid into the blowing-edge and glued into position. This insert is trapezoidal in the Kinko-ryū instrument and crescent-shaped in the Tozan-ryū.

Finally comes *jinuri*, painting the bore and the inner surface of the finger-holes with up to five coats of a mixture of black or red lacquer, water and an extremely fine polishing powder (*tonoko*). This requires great skill, as the thickness of the coat at each point affects not only timbre but also pitch.

Mass-produced *shakuhachi* of lathe-turned wood or moulded plastic have become popular since the 1970s. These have the advantages of being cheap and resistant to splitting, but they are considered inferior both aurally and visually.

Shakuhachi may range in size from about 1·1 *shaku* (pitched a 5th above the standard instrument) to well over three *shaku*. For *sankyoku* ensembles only two or three sizes are necessary, since singers are expected to conform to the standard tessitura. For modern folksong accompaniment, a professional player may carry up to 12 *shakuhachi* (from 1·3 to 2·4) to adjust to all possible singers. In modern compositions as well as *honkyoku*, almost any size may be used depending on the mood of the composer or performer or on other factors.

Western influence in the 20th century led some to feel that more finger-holes were needed to play 'modern' melodies or even the *meri* pitches of traditional pieces. The seven-hole and nine-hole *shakuhachi* were invented around 1930 and 1950 respectively, but they are quite unsuitable for *honkyoku* and are now rarely used except in modern music. Another short-lived experiment was the *ōkurauro*: invented in the late 1920s, it married a *shakuhachi*-style mouthpiece with a Boehm-system vertical metal flute body.



(iv) Notation. The notation for the first end-blown flute used in the Japanese court music ensemble is not known. However, in 1664 a book entitled *Shichiku shoshin-shū* gave a system of *hitoyogiri* notation of 13 syllable-characters, each representing a different fingering. This system was successively altered by the Meian, Kinko and Tozan schools. The pitch-determining characters in *shakuhachi* notation are stylized versions of *katakana*, one of the Japanese syllabaries. They are written in customary Japanese fashion, in vertical columns from right to left. High and low registers and rhythmic indications are also included in the notation, as is the text in the case of songs.

Rhythmic detail remains largely minimal in notations for the free-rhythm *honkyoku* of the Kinko school, but the more metrical style of most Tozan *honkyoku* led to a much more precise rhythmic notation. *Gaikyoku* of all schools are notated comparatively precisely, with vertical lines corresponding to the horizontal ones of the Galin-Paris-Chevé system (see §VI, 3, and fig.24 below).

(v) Playing technique and performing practice. The *shakuhachi* is held at a downward angle of about 45°. The lower edge of the upper end rests in the hollow of the chin below the lip. Through a narrow embouchure a sharp stream of air is directed at the blowing-edge. (For beginners it is generally difficult to elicit a sound at all.) The strength of the air-stream is varied for dynamic purposes, and occasionally an audible pitchless burst of air is emitted for effect – a technique known as *muraiki*. Through changes in the angle of embouchure alone (*kari-meri*) a single fingering can yield pitches over a range of at least a major 2nd. Lowering the head (*meri*) lowers the pitch and raising the head (*kari*) raises it. Sideways movement of the head also produces a pitch alteration and is used particularly for an ornamental vibrato.

Fingering involves several types of ornamentation. A finger may be slid or rolled slowly off a covered hole. Repeated notes are generally articulated with a rapid finger-flap. (Tonguing is never used for such articulation, although certain types of flutter-tonguing are common.)

Ex.6 Opening of *Hifumi hachigaeshi*
(a) Traditional notation
(b) Transcription of traditional notation: staves (n)1–4, and as performed by Yokoyama Katsuya: staves (p)1–4. The latter is placed proportionally to the time-line in seconds at top and bottom (applies only to the performed version, since exact duration and tempo are unspecified in notation). Bracketed notes in (n) are those shown by small vertical lines with arcs in (a), which are absent in older notations. Wavy lines in (p) mark a slow trill with the note below, produced by shaking the head. Stave (n)4 expands into two phrases (p)4(a) and (b). Transcr. D. Hughes

A two-finger trill onomatopoeically named *korokoro*, and *karakara*, its one-finger version, are common. The difficulty in learning to control all such techniques is encapsulated in the saying *kubifuri sannen koro hachinen* ('head-shaking, three years [to learn], *koro[-koro]* eight years').

Embouchure and fingering, alone or in combination, can produce any pitch within the range of the *shakuhachi*. Kinko *honkyoku* constantly use various sorts of portamento and microtonal ornamentation; the Tozan *honkyoku*, on the other hand, are closer to *gaikyoku* in intonation and ornamentation. In *gaikyoku* it is necessary to match the pitch to the *koto, shamisen* and/or singer.

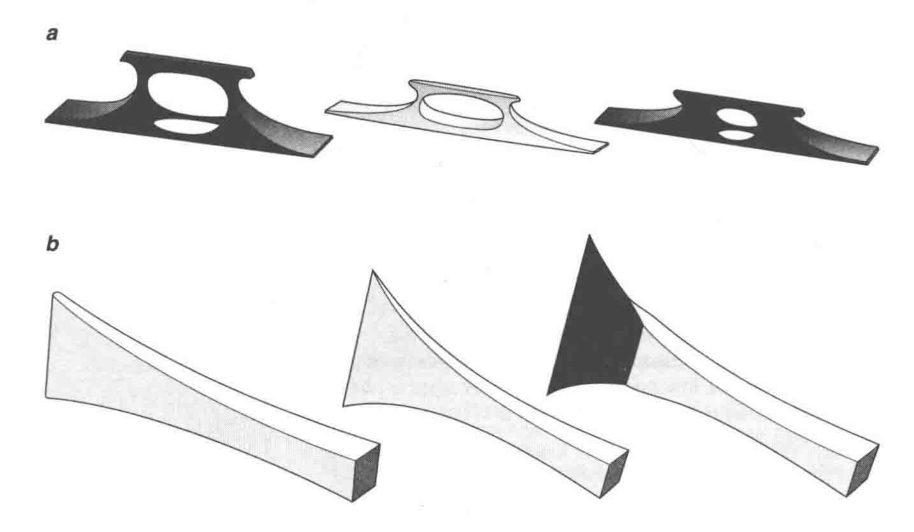
Notes sounded by changing the angle of the head or by partial holing tend to be quieter and somewhat less sharply focussed than normal. In *honkyoku* this fact has become a virtue, and the dynamic and colouristic differences between basic and other pitches are an important part of the aesthetic. In *sankyoku* the need to be heard among the other instruments renders this a less positive factor, and to composers and performers influenced by a Western aesthetic it is often perceived as a shortcoming. It was for such reasons that the seven-hole and nine-hole *shakuhachi* were devised (see §(iii) above); but they are scorned by almost all players of *honkyoku* and *sankyoku*. The importance attached to timbral variation can also be inferred from the use of alternative fingerings for some pitches – not because they are easier in certain contexts, but because the resulting tone colour differs.

Ex.6 shows the opening of the Kinko *honkyoku* 'Hifumi hachigaeshi' in traditional and staff notations. The first three main symbols of the Japanese notation translate into a subtly complex variation around the note *d′*, lasting 24 seconds (p1–2). The first symbol represents *e♭′*, the next *d′*, and the third is a *nayashi*, a slow slide up to the preceding pitch from perhaps a three-quarter tone below. All other ornaments shown in the staff version are open to variation or even omission according to player, mood and context. The Japanese notation shown here adds graphic symbols to indicate four specific ornaments, but a good performer will always add more detail, not only of pitch but of dynamics (unspecified in notation) and duration (only loosely notated). The *honkyoku* tradition (aside from the Tozan school) allows much more individual flexibility than is found in most genres of Japanese 'classical' music. As in most genres, however, such freedom is permitted principally to the top-level players.

6. 'SHAMISEN'. A Japanese three-string fretless plucked lute (fig.13), this instrument is called *samisen* in the Kansai area of Kyoto and Osaka and as part of *koto*

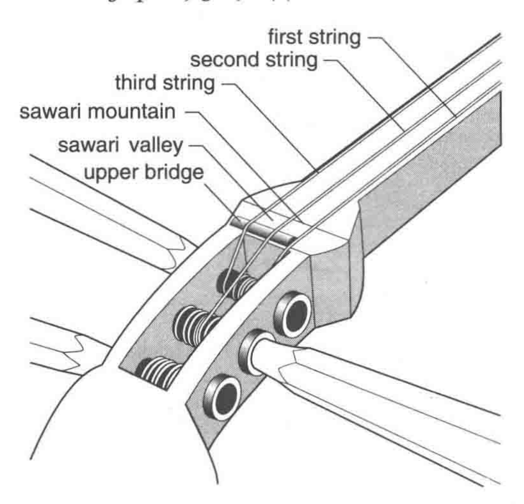
13. Shamisen player

chamber music it is often known as *sangen*. Since the mid-17th century it has been a popular contributor to the music of many levels of society, from folk and theatrical forms to classical and avant-garde compositions.



A *shamisen* player usually accompanies a singer; purely instrumental music occurs primarily during interludes. This has implications for construction: instrument must suit voice, and both must suit their context. Appreciation of *shamisen* music, as of any music, requires an understanding of the context of each genre: physical, historical, aesthetic-philosophical, musical etc.

(i) Construction and performing practice. There are a number of different *shamisen* types, varying in size (though all are about 97 cm long), membrane thickness and material, bridge height and weight (fig.14*a*), string gauge and type of plectrum (fig.14*b*). A general distinction is made by the comparative thickness of the flat-topped fingerboard: thick (*futozao*), medium (*chūzao*) and thin (*hosozao*). The neck (*sao*) and pegbox (*itokura*) are now constructed in three sections so that the instrument can easily be taken apart and transported. The preferred woods for the neck and body are red sandalwood, mulberry and quince. The pegs (*itomaki*) are made of ivory, ebony or plastic; the strings are of twisted silk, though the stronger synthetic material tetron is now often preferred to the fragile silk, especially for the treble string.



The upper bridge (*kamikoma*) of the neck is of special interest (fig.15): the two higher-pitched strings pass over a metal or ivory ridge at the pegbox, but the lowest string is set in a niche in the wooden edge of the box. Immediately below the upper bridge there is a slight cavity carved in the neck (the '*sawari* valley'): the bass string will buzz against the edge of this trough (the '*sawari* mountain') when plucked or when resonating with notes a fifth or octave above it, producing a sound called *sawari*, which is of special value in *shamisen* music. Its invention in the 17th or 18th century may relate to the fact that early *shamisen* players previously used a larger lute, the *biwa*, which has a similar tonal characteristic, although it is differently constructed. In the 1890s a different method was devised, called *azuma-zawari*: a screw inserted from the back of the neck could be turned to adjust the degree of buzzing of the bass string against a tiny metal plate. *Sawari* is not found on the *shamisen*'s Chinese and Okinawan precursors. (Note that the term for the similar resonance on many Indian plucked instruments is *jiwari*.)

A tailpiece (*neo*) of silk rope holds the strings across the rectangular body, which is made of four convex pieces of wood covered at the front and rear by cat- or dogskin. Synthetic membranes are now common, partly for durability. Patterns (*ayasugi*) carved inside the body of expensive instruments affect the tone of the instrument, as does the quality of the skin. The skins are held by glue and shrinkage, without pegs or lashing. An extra semicircle of skin (*bachikawa*) is added at the top centre of the front head to protect it from the blows of the plectrum.

Good plectra (*bachi*) are of ivory or ivory-tipped wood except in certain chamber music (*jiuta* or *sankyoku*) and folk genres, for which tortoise-shell or buffalo-horn tips

14. (a) Shamisen bridges for (left to right) gidayū, nagauta, jiuta; (b) shamisen plectra for (left to right) gidayū, nagauta, jiuta

15. Creation of sawari on the shamisen

are used. Practice plectra may be made of plastic or wood. In some lighter forms of *shamisen* music, such as *kouta*, the side of the fingertip is used instead. For the style called *shinnai-nagashi*, one of two shamisen players plays a high obbligato using a capo (*kase*) and a tiny version of the standard plectrum. In most genres the wide edge and triangular tips of the plectrum are as thin as possible, but for *gidayū* they may be 2–4 mm thick. The sorts of difference shown in fig.14*b* affect timbre greatly.

The removable bridges (*koma*) are equally varied. They may be of ivory, tortoise-shell, buffalo-horn, plastic or wood. In *jiuta* the bridge may have small lead weights to help dampen the vibrations. A *gidayū* player may have a large graduated set of lead-weighted bridges to adjust to pitch, humidity etc; these can weigh over 20 g, while a *nagauta* bridge is under 4 g. For quiet practice a very wide 'stealth bridge' (*shinobi-goma*) reduces volume.

A small device (*yubikake*, *yubisuri*) of wool knitted over rubberized thread stretches weblike between the thumb and first finger of the left hand for ease of movement. *Gidayū* players often powder their left hand instead. Left-hand pizzicato (*hajiki*), slides (*koki*, *suri*) and 'hammering-on' (*uchi*) appear in most genres; right-hand up-plucks (*sukui*) and tremolo are also common. In some genres intended for large theatres or the open air (*nagauta*, *gidayū*, *tsugaru-jamisen*) the plectrum frequently strikes the membrane sharply, producing a percussive accompaniment to the plucked string; in other genres more suited to intimate settings (*kouta*, *jiuta*) this is minimized.

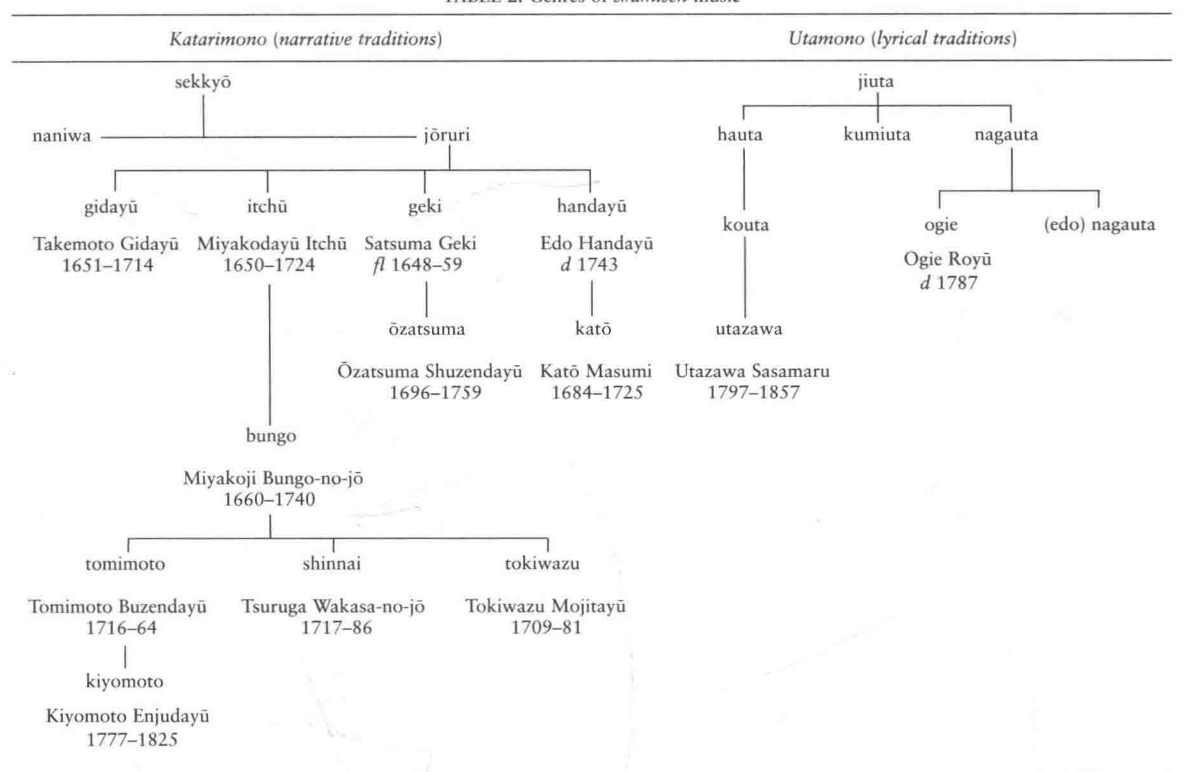
The basic pitch of a *shamisen* depends on the range of the singer, which may vary greatly. The three standard tunings shown in ex.7 may thus be several steps higher or

Ex.7 The three standard *shamisen* tunings

lower. During long compositions the tunings may change frequently, and a few special tunings may appear. Most *shamisen* music is based on the *yō-in* scale system and its modes (see §I, 4).

(ii) History and genres. The *shamisen* is believed to have been imported from Ryūkyū in the mid-16th century in a form called the *sanshin* (see §VIII, 1 below). This instrument has a more oval body, is plucked with a talon-like pick and is covered by snakeskin. An instrument of this type originated in China as the *sanxian* and had reached Ryūkyū probably by the 15th century. In Japan the new lute was first used in folk and party music or by narrators who previously performed the *biwa*. Under these influences (and in the absence of large snakes) the construction of the instrument changed greatly. The Chinese, Ryukyuan and one of the Japanese names for the instrument (*sanxian*, *sanshin*, *sangen*) all mean 'three strings'; the Japanese names *shamisen* and *samisen* are variants thereof.

Historically the *shamisen* is found in many forms of folk and popular music (see §VII, 3 below). Other genres created for the theatres and tea-houses can be divided into two categories, the narrative (*katarimono*) and the lyrical (*uta(i)mono*). A genealogy of these types is given in Table 2, with their founders' names when known. Many genre names can be suffixed with *-bushi*, 'tune, melody'.



Several *shamisen* genres are referred to elsewhere in this article, showing the diversity of this instrument type: *jiuta* (§5 above); *gidayū* (§VI, 2 below); *nagauta*, *tokiwazu*, *kiyomoto* (§VI, 3 below); folk *shamisen* (§VII, 3 below); *sanshin* (§VIII, 1 below). Further proof of its importance is that over two-thirds of the 74 LPs in the 1980 series '1000 Years of Japanese Classical Music' involved *shamisen*.

All the variables of construction and technique coalesce to produce each style of *shamisen* music. Superficially similar instruments may nonetheless vary crucially. Thus the thick-neck, heavy-bodied *gidayū shamisen* differs from the similar folk *tsugaru-jamisen* in its plectrum shape, string gauge pattern, *sawari* and other details, not to mention modal sense and playing technique. Technique and timbre match context: the heavy *sawari* of the *gidayū* instrument matches closely the timbre of the voice of the puppet theatre chanter; the finger-plucked *kouta shamisen* similarly matches the small voice of the singer.

As in many genres of Japanese music, named, stereotyped melodic patterns are common in *shamisen* music; even when names are lacking, much of any repertory can be analysed into short, recurring motifs (Yakō and Araki, 1998). The relation between voice and *shamisen* is also similar in most genres: the *shamisen*, with its sharp attack, keeps the metre clear, while the voice plays against the beat, with syllables often articulated on an off-beat.

The lyrical forms will be discussed first. The term *jiuta* originally meant 'local songs' and was so used until the mid-18th century, after which it represented chamber music with the *koto* (see §II, 4 above). Tradition credits one of two *biwa* musicians, Sawazumi Kengyō and Ishimura Kengyō, with the first *shamisen* music around 1610 in the form of *kumiuta* (song suites; not related to the *koto* genre of the same name). Their music was called *ryūkyū kumiuta*, and six of the original 30 pieces survive from later sources. The earliest collection containing poems of *shamisen* music and some notation is in the 1664 *Shichiku shoshin-shū*, and the earliest notation of *shamisen kumiuta* is found in the *Ōnusa* volume of the 1685 *Shichiku taizen*. The 1703 collection of texts, *Matsu no ha*, begins with *ryūkyū kumiuta*, which are followed by *jiuta no nagauta* and then *hauta*.

TABLE 2: Genres of *shamisen* music

The terms *hauta* ('beginning/short songs') and *kouta* ('short songs') were generally applied to popular songs of the period. Distinctions were sometimes made between *kamigata* songs from the Kansai area and Edo songs from that city. The terms *nagauta* ('long songs') and *kouta* were used in earlier periods for a variety of poetic forms but eventually became specific genre names. Both terms were connected with early forms of *shamisen* music in the new *kabuki* theatre, *edo nagauta* eventually becoming its predominant genre. *Ogie-bushi* first appeared in 1766 as part of *kabuki* music and was combined with music of the Yoshiwara pleasure quarters, becoming a separate form. In *utazawa-bushi*, by contrast, an attempt was made to create short songs devoid of erotic connotations.

Among the narrative forms *sekkyō-bushi*, a Buddhist genre of musical story-telling already in existence before the advent of the *shamisen*, adopted the new instrument when it first appeared. *Jōruri* has a similar secular background (see §IV, 3 below) and eventually became a generic term for many different kinds of narrative music. Some of the earliest *biwa* folk narrators came from the Osaka district, then called Naniwa. They introduced the genre known as *naniwa-bushi*, in effect a narrative soap opera set in the past, which became tremendously popular in the early days of the recording and broadcasting industries. The many other forms of narrative music developed in the theatre, *gidayū-bushi* being best known for its origin in *bunraku* puppet drama. *Tokiwazu* and *kiyomoto* and rarely *katō* and *shinnai* are still used in *kabuki*. The other genres survive primarily in concerts of old *jōruri* (*ko-jōruri*) or 'classic' (*koten*) performances.

(iii) Modern traditions. The tradition of purely concert (*ozashiki*) *shamisen* music began with performances of narratives outside the theatre, in which context *onna jōruri* (female performers) appeared. In the 19th century new *nagauta* compositions were created that had no theatrical connections, and the role of the composer became stronger. By the mid-20th century the amateur study of *shamisen* music became 'respectable', this change having healthy cultural and technical results. 18th- and 19th-century notations, which used syllables or symbols to represent finger positions, were replaced by new notations based on the French Chevé system, with Arabic numbers and Western rhythm and bar systems. Student recitals, concert pieces, specialist journals and recordings by star performers flourished. Since the mid-20th century it has been possible to buy recordings or notations of the basic repertory of the major genres and to attend concerts of all forms or hear contemporary compositions for ensembles of traditional instruments. The traditional guild system, under which students work towards obtaining a professional name (*natori*), remains strong. Many students, however, now receive lessons in the Western manner, and it is also possible to specialize in *shamisen* at the Tokyo National University of Fine Arts and Music.

There have been sporadic attempts at introducing a bass version, but otherwise the *shamisen*, like the *shakuhachi*, survived the 20th century essentially unchanged. Each type of *shamisen* seems to have become ideally suited to its particular niche, and no new niches have emerged as yet to demand further developments.

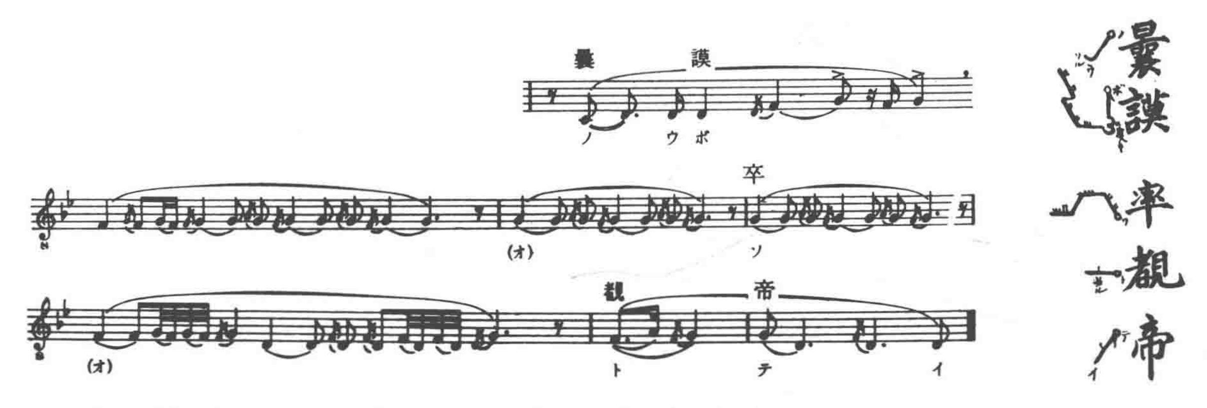
III. Notation systems

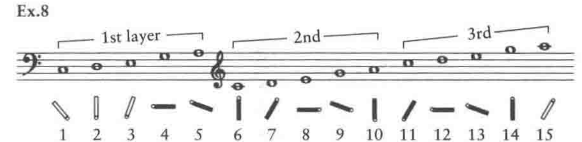
1. Introduction. 2. Vocal music. 3. Instrumental music. 4. Oral mnemonics.



1. Introduction. In order to understand the functional and cultural logic of unfamiliar notation systems it is important first to recognize that notation is not in itself music, but rather an adjunct to the recollection or evocation of sonic events for performing purposes and, in some music cultures, for study or compositional use. A second important point is that the music and all its accessories (such as notation) usually reflect the aesthetics and world views of the peoples in whose culture they were created. Thus, what is important to one music culture may be of much less concern in another: in this context it must be noted that Japanese traditional musicians seldom felt a strong need for detailed notations such as those used by most Western musicians. For the Japanese, notation was merely a memory aid; indeed, the structure of Japanese pieces, the relations between their parts and the subtle nuances of their performing practices did not lend themselves to effective representation in either vertical or horizontal linear graphics. This does not imply an interest in improvisation, which hardly exists in Japanese music. Rather, it reflects a concern in both lessons and performance for a concentration on aural and technical skills with as few visual distractions or inhibitions as possible. Nevertheless, because there has always been a strong guild system (see §I, 3 above) and a tradition of 'secret' pieces (*hikyoku*) in Japanese music, notation systems were fostered that would preserve compositions for future generations in an outline form that only the initiated could translate into sound. It was not until Western musical pragmatism asserted its influence that detailed notation became significant. Thus a discussion of Japanese notation up to the late 19th century must deal with numerous different systems that were used not only for each genre or musical instrument but also for various guilds of performers within each tradition. Here no attempt is made to cover all these variations; rather, the basic principles used in major styles of Japanese notation are demonstrated, with selected examples where necessary for clarity.

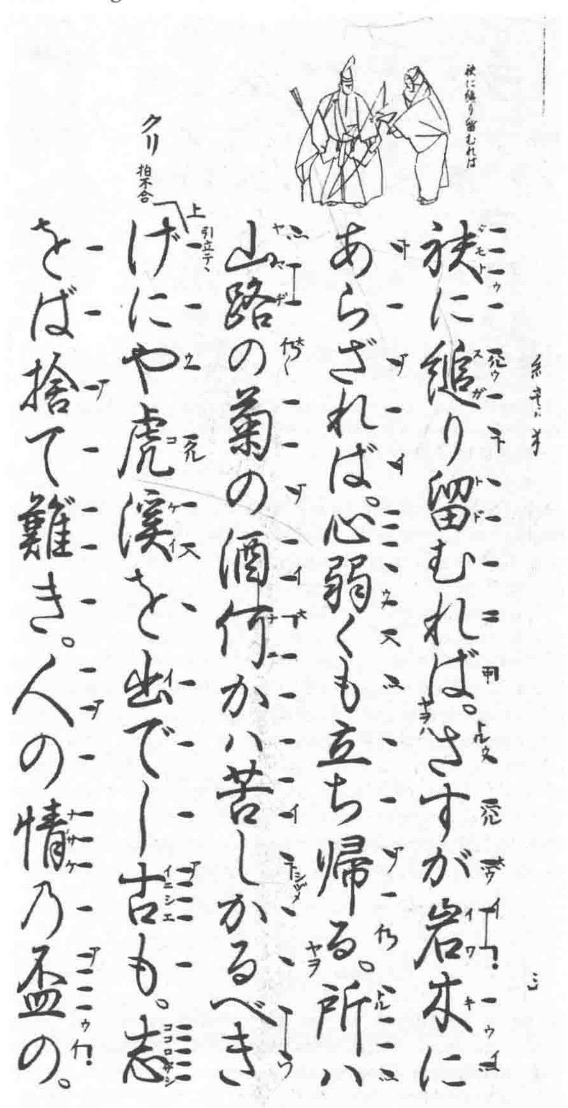
The term 'notation' as used above refers to written notation; a broader usage of the term embraces 'oral notation' as well. Many Japanese instruments have long been taught using oral mnemonics (see §III, 4 below), which often later became part of written notation.

Traditional transmission, then, might involve any of three approaches: direct imitation of another performer (in formal lessons or simply by assiduous overhearing as often in folk contexts); singing of oral mnemonics prior to attempting to play a piece; or reliance on written notation. Despite the startling range of notations shown below, it was only in the 20th century that notation assumed importance in teaching many genres. This trend results not only from modernization but also from the fact that few pupils feel they have time to learn by the traditional, time-intensive methods. For the same reason, a fourth method of transmission is becoming common (as elsewhere): use of recordings, either commercial or made during lessons.

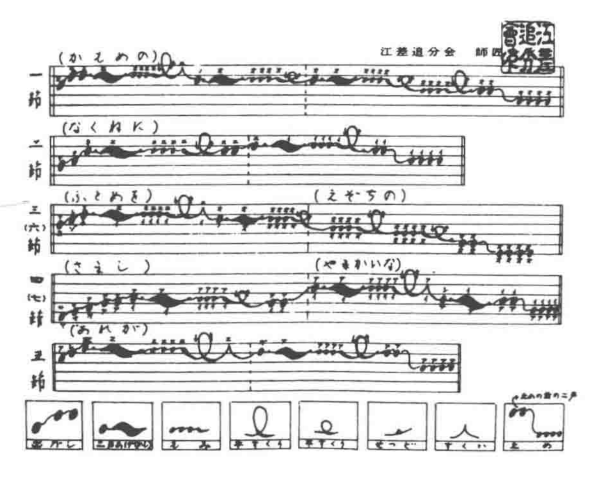


2. Vocal music. Chinese sources mention singing in Japan as early as the 3rd century CE, and Japan's first literary works of the 8th century include the texts of many songs; but actual vocal notation in Japan developed first primarily in the context of Buddhist music (see §IV, 3 below). This tradition came to Japan from China and Korea in the period between 553 and 784, and expanded greatly in the subsequent Heian (794–1185) and Kamakura (1192–1333) periods. Surviving theoretical materials show a continuous Chinese influence.

In terms of notation the most important early system is the *goin-hakase* ('the five-toned sage'). It is attributed to the Japanese priest Kakui (*b* 1236) of the Shingon sect, although it may have been influenced by the ritual *mudrā* (hand gesture) and oracle stick arrangements of ancient India. The Japanese system divides the 15 notes of three octaves of the anhemitonic pentatonic scale into three layers of five notes each; thus the system is sometimes called the *goin-sanjū* ('the five tones and three layers'). Individual pitches are represented by short lines placed at an angle like the hour hand of a clock. If started on *c*, the notes of the pentatonic scale would be represented as in ex.8. As shown in fig.16 (an excerpt from a modern Shingon sect notation with its transcription), the direction of these line symbols does not represent graphically the pitch of a note, as is common in most Western notations. Since Sino-Japanese texts are normally written in columns starting from the right-hand side of a page, the music notations of this system generally appear to the left of the



16. Modern Buddhist shōmyō notation with its transcription of a zensan chant, from the Shingon sect



Ex.8

text. The names of specific vocal patterns or styles are included with the pitches. Thus, as seen in fig.16, the notation of the vocal rendition of one syllable may vary considerably. Various Buddhist sects in Japan developed their own notation systems and approaches to the performance of named vocal patterns. In keeping with the rote teaching method and the 'secret piece' tradition of Japan, many of the later, seemingly simplified notation systems, such as *karifu* and *meyasu*, became more abstract and less easily read without guidance than the *goin-hakase* itself. Many of these systems are still in use, not only in Buddhist music but also in surviving imperial vocal traditions that adopted variants of such notations centuries ago.

17. *Vocal notation from the 16th-century nō drama 'Momiji-gari' in the 20th-century Kanze school version*

18. *Notation for the folksong 'Esashi Oiwake' as used by the Esashi Oiwake Association*

Another vocal notation system of greater importance in later Japanese music was the *gomafu*, in which teardrop-shaped lines were placed beside characters as neumes and indications of longer vocal patterns. The 12th-century secular epic tradition of 'The tale of the Heike' (*heikyoku*, see II, 3 above) adopted this system in a form called *sumifu*, and the major classical drama form called *nō* that began to evolve in the 13th century also used such a notation system (often called *gomaten*), as shown in fig.17. The *nō* system includes more references to pitch areas as well as to vocal patterns. Each major school of *nō* now uses such a system, and there are detailed textbooks in each school for learning the meaning of each symbol. The correct interpretation of such notations, however, remains in the vocal lessons and in a student's eventual acceptance into a guild, although the advent of records and teaching tapes has rendered the secret tradition somewhat more ritualistic than practical.

Later secular vocal traditions of narratives accompanied by *biwa* or *shamisen* seldom made more than occasional graphic references to the vocal lines, although some aspects of the instrumental interjections or interludes normally appear in red between each line of the text. During the later Edo period (1603–1868) music accompanied by *shamisen* or *koto* also tended not to depend on notation for vocal lines except in the form of instrumentally derived pitch notations. Therefore the rest of vocal notation is best described in the context of instrumental forms.

A unique example is shown in fig.18. Japanese folksong has generally been orally transmitted, but one song, *Esashi Oiwake*, has been notated since the early 20th century with a variety of related systems devised specifically for use in teaching. The version shown (from the 1960s) reveals Western influence in its staff (albeit of 6 lines) and left-to-right orientation. However, as each of the 5 phrases is to be sung in one breath, the vocal part of each phrase is shown logically as a continuous line whose peaks, loops and dots express specific ornaments quite precisely. The ornaments are identified in the eight boxes at the bottom. Some influence from Buddhist notation is evident. (For a Western notation of part of this song, see §VII, 3, ex.18 below.)

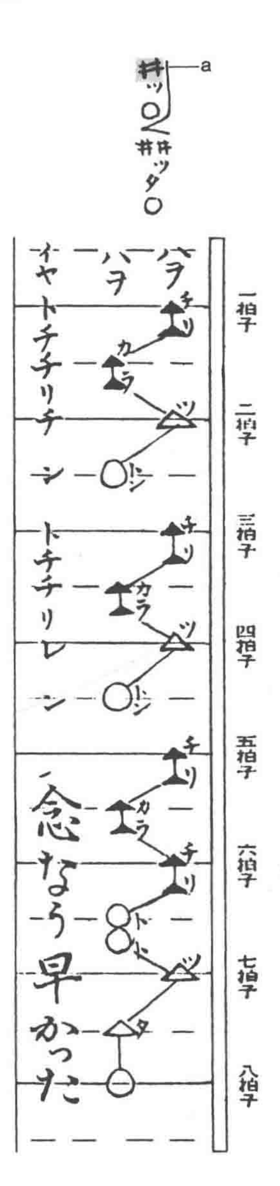
3. Instrumental music. The first instrumental notation in Japan came directly from the Chinese court traditions of the Tang dynasty (618–907). The earliest surviving example is a *biwa* notation dated 768. It is followed by various wind instrument parts dating from the 10th century to the 13th, after which instrument partbooks are fairly plentiful. Most of these partbooks were intended for use in the music of the court *gagaku* ensembles. Scores for such music did not exist before the 20th century. A complete partbook contains the basic repertory organized in sets of pieces that are in the same mode. Notations for string instruments (the *biwa* or *koto* or *wagon*) consist primarily of the names of stereotyped melodic patterns or of one pitch that would appear at the start of a time unit; the *shō* (mouth organ) notation also shows only the name of one pitch, or perhaps of one pipe, since this is tablature notation.

Extensive research by Picken and his students has demonstrated that these simple string notations for *tōgaku*, taken at face value, show a closely heterophonic ensemble, with each instrument ornamenting a single clear melody in different ways; the earliest notations for *ryūteki* flute reveal this same melodic outline (see §V below, and Marett 1985). They conclude that early *tōgaku* was played at a much faster tempo suiting these melodies. Today, however, these original tunes are largely hidden from the listener by stereotyped chords on the *shō* and arpeggios on the *biwa* and *koto*, each executed at a stately tempo – even though the notations for these three instruments are little changed from a millennium ago. Each is still a tablature, indicating which single pipe on the *shō* plays the lowest note of the chord, and which *biwa* fret or pair of *koto* strings is the basis for the arpeggios.

Today the *ryūteki* flute and *hichiriki* oboe are perceived as the melodic instruments of *tōgaku*, but their melodies have become more elaborate over the centuries, moving away from the original tune that they shared with other instruments, and in this case their notations have also grown more complex. There are two notation systems in use today. As seen in the *hichiriki* notation of fig.19, the fundamental column consists of the mnemonics (*shōga*) with which the line is sung when it is learnt, along with symbols for the instrument's finger-holes in smaller characters to the left. The nuances and ornamentations of the line are not marked, as they are part of the oral guild tradition, learnt through singing the *shōga*. The short lines along the right-hand side of the column indicate the basic beats, with a large dot representing the accented beat of the hanging drum (*tsuridaiko*). Percussion parts in *gagaku* consist of similar dots, with the names of stereotyped rhythmic patterns appropriate to the given music.

The names of patterns or pitches are all there is to the instrumental parts of *biwa*-accompanied narrative songs notated before the period of modernization. The notatation system for the four instruments of the *nō* drama, however, is much more complex. As for court music notation, more than one system is combined in modern written notations. Fig.20 is a rare example of a full instrumental score (partbooks being traditional). The flute notation normally consists of a sequence of mnemonics (*shōga*) set on graphlike paper whose columns of squares represent the traditional eight-beat frame of reference in which much *nō* music is set. Such a flute part can be seen in the left-hand column of fig.20, interlaced

19. Gagaku notation for the hichiriki (oboe) part of 'Etenraku', in the banshiki mode; the title is given in the right-hand column (1), the notation in the other columns (2)



with 16 beats of the *taiko* (stick drum) part. The drum parts of *nō* consist of named stereotyped patterns, so that one often finds in their notations only the names of the patterns, set alongside texts in vocal accompaniments or in sequence for purely instrumental sections. As shown in fig.20, modern lesson books may contain various dots and triangles that represent sounds of the drums placed in columns of squares (like separate flute parts). This system shows specific rhythmic patterns in some detail. For instance, in fig.20, column 2 contains the *kotsuzumi* (shoulder drum) part and shows that two different kinds of sound are produced on the drum and that three different drummer's calls (*kakegoe*) occur. The rhythm of the pattern is implied (the opening mnemonics would be *ta*, *ta*, rest, *pon*, *pon*: see ex.9), and the names of two

Ex.9 Rhythm of opening mnemonic of fig.20, *kotsuzumi* part

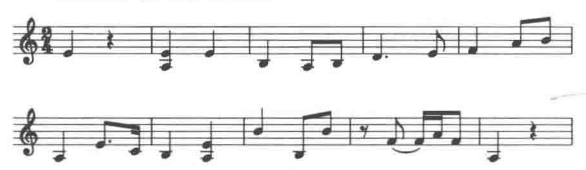
ta ta pon pon

patterns are listed at the right-hand corner of each notation (they are *uchi-oroshi* and *musubi futatsu odori*). The middle column provides similar information for the *ōtsuzumi* drum. Column 4, the *nō taiko* stick drum notation, is the most complex, involving four elements and much redundancy. This is another example of the merging of oral and written transmission systems. At its

20. *Hayashi (drums and flute) notation from the nō dance 'Jo no mai'; column 1 contains the kotsuzumi pattern names, column 2 the kotsuzumi and drum call notation, column 3 the ōtsuzumi pattern names and notation with drum call notation (with the taiko patterns on the left), column 4 the taiko notation and flute mnemonics; the numbers down the left-hand side indicate the beats*

21. *Modern kabuki percussion notation for the nagauta dance piece 'Suehiro-gari', as used by the Mochizuki school*

simplest level it consists of the names of the two patterns that make up this phrase, *sandanme* and *makuri*; these appear just to the right of the line separating columns 3 and 4. A veteran player needs no more information, since such patterns have been learnt by rote. However, here the dots in zigzag pattern represent the left- and right-stick strokes, with the strength of the stroke shown by the size of the dot. In the second half of the phrase, these dots are accompanied by their mnemonics (*tsuku tsuku tsuku ten tere tsuku tere tsuku*); these alone would have indicated the correct rhythm and stickwork. Finally, three drum calls are shown in small syllables just to the right of the flute mnemonics, between beats 6 and 7, 8 and 1, and 4 and 5. (The flute mnemonics are added in the middle of this column because flute and stick drum are closely synchronized, their patterns beginning on beat 2, while the other drums start on beat 1.) A veteran player could

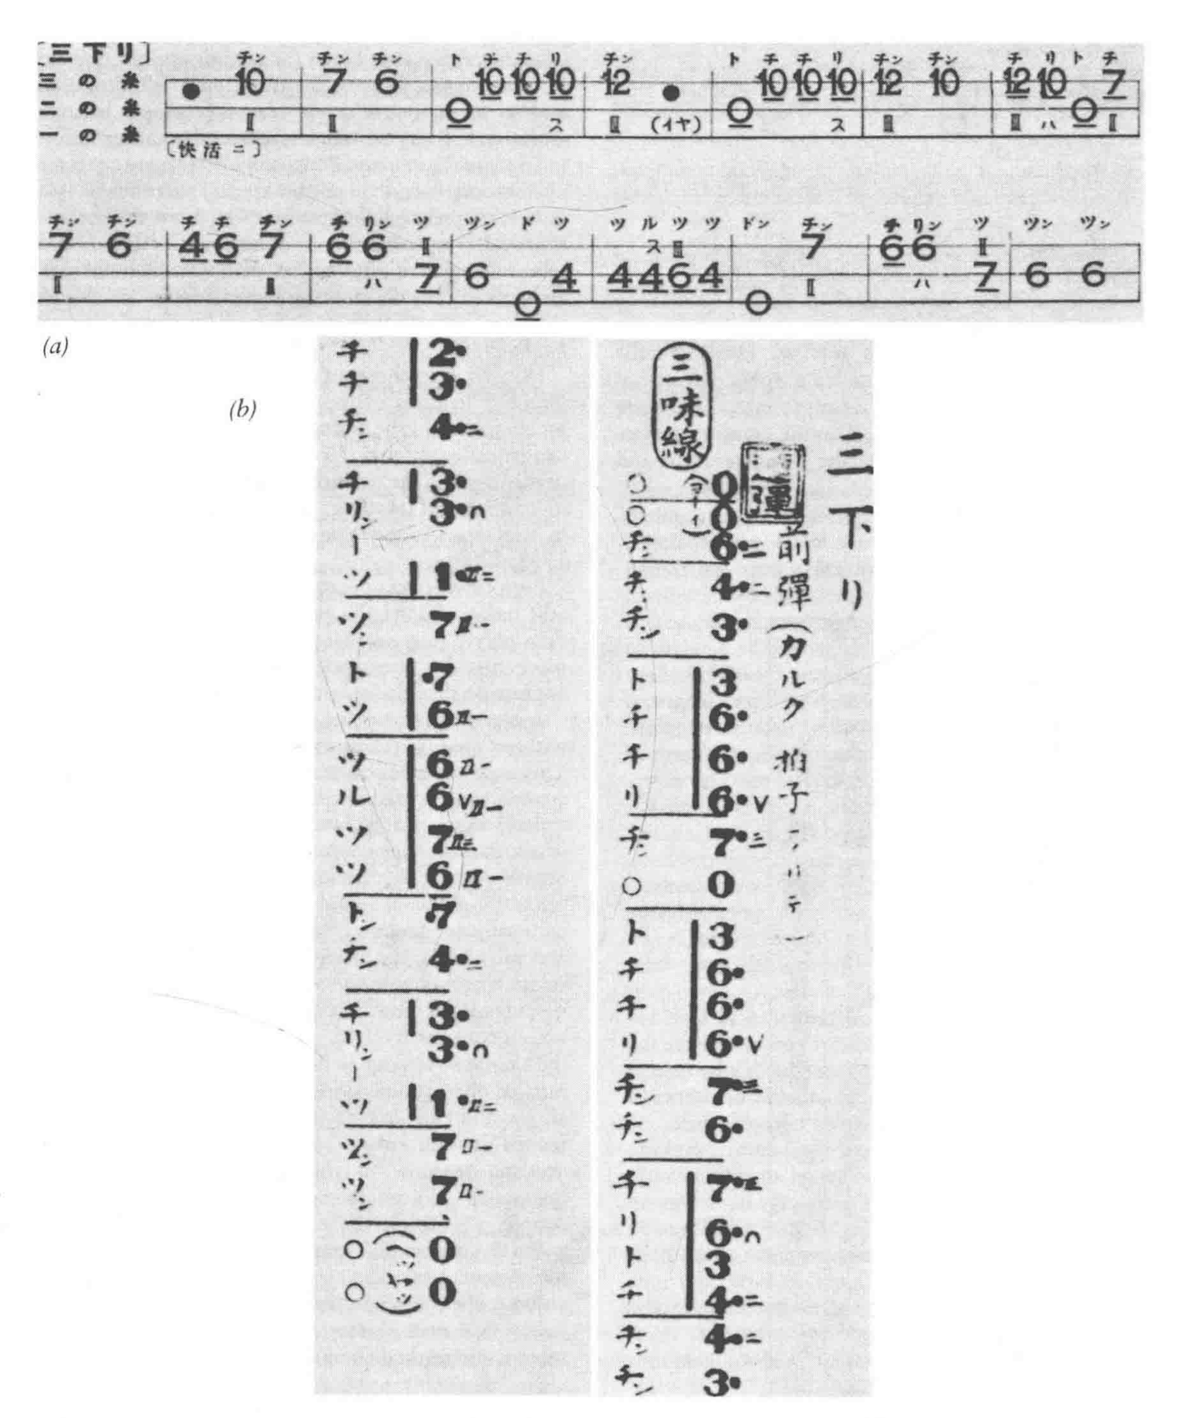


in theory sight-read the drum parts (although this would never be done), but the flute part does not indicate precise pitches and thus can be learnt only from a teacher.

Similar graphlike rhythmic notations can be found for drum music in the later *kabuki* theatre, particularly in 19th- and 20th-century sources, although most traditional drum music is still maintained through a basically oral learning system. Some *kabuki* plays contain a cue sheet (*tsukechō*), which indicates by traditional names which type of percussion or special off-stage (*geza*) music is to appear at a specific moment in the play; the music is seldom entrusted to notation, however. An exception is shown in fig.21, which notates a passage for the *ōtsuzumi* hip drum and *kotsuzumi* shoulder drum. In this particular style, called '*chirikara* rhythm' after its mnemonics, the two drums play interlocking patterns. The one here is learnt by singing *chirikara tsuton chirikara tsuton chirikara chiritoto tsuta pon*. *Chi*, *ri* and *tsu* are strokes on the hip drum, *ka*, *ra*, *to(n)* and *pon* on the shoulder drum. The small single column of symbols at the top of fig.21 is the traditional drummers' shorthand. The # symbol (a) represents *chirikara*; the next small symbol is *tsu*, then the circle is *ton*; the line to the right of and below this passage indicates that it is repeated; and so forth. Below this is a more complex modern notation. The rightmost column numbers the 8 beats (marked by solid horizontal lines). The leftmost column shows mnemonics for the *shamisen*, replaced by the song lyrics once the vocalist enters. The central section shows the hip drum to the right and the shoulder drum to the left: shape and colour indicates the type of drum stroke, but the mnemonics are written beside each stroke as well; the topmost symbol in each column is the drum call *hao*.

The most detailed notations of Japanese music are found in the tablatures of the *koto* and *shamisen* as each developed in the Edo period and in the 20th century. The earliest notations were in the *Shichiku shoshin-shū* of 1664, but indigenous systems designed specifically for such instruments appeared first with the *Ongyoku chikaragusa* of 1762 for the *shamisen* and the *Sōkyoku taiishō* of 1799 for the *koto*. The *shamisen* notation used dots with various internal designs that represented positions on the fingerboard of the instrument, while the *koto* notation used the numbers of its 13 strings with circles that indicated rhythms and performing methods. The pitches of the strings were determined by the name of the tuning in which a piece was played. A so-called *iroha-fu* system also appears in some *shamisen* music, which indicates finger positions by a solfège based on the traditional order of syllables in Japanese language lessons.

The forms of notation used in the 20th century by the two major *koto* schools are shown in fig.22*a* and *b*. Pitches are still shown by string numbers (and hence vary with the tuning), but bars and rhythmic symbols are



Ex.10 Opening of *Hachidan no shirabe*, *koto* piece; transcr. from *koto* notation, fig.22, by W. Malm

adopted from Western notation, as can be seen in the transcription (ex.10). Fig.23*a* and *b* show common modern methods of *shamisen* notation that also reflect

(a) (b)

22. *Koto notation from the piece 'Hachidan no shirabe': (a) Yamada school version (read horizontally from left to right); (b) Ikuta school version*

23. *Shamisen notation from the nagauta piece 'Echigojishi': (a) bunka-fu form; (b) kosaburō-fu form, read from the right*

Western rhythmic symbols. In the so-called *kosaburō-fu* the Arabic numbers represent pitches in a scale, and in the *bunka-fu* they stand for finger positions on the strings, as seen by comparison with the Western transcription (ex.11).

Similar precision under Western influence is seen in the notation in fig.24 for the modern Tozan school of *shakuhachi* (see §II, 5 above). Duration is again shown by lines adjacent to the fingering symbols; small symbols represent grace notes; occasional curlicues to the right indicate specific ornaments; and a Western 4/4 time signature is given at the top. Such notational precision is found only when the *shakuhachi*, as here, plays with other instruments: its solo repertory is largely in free rhythm and highly ornamented, and notation tends to leave much more to oral transmission (see §II, 5, ex.6 above).

Today it is possible to purchase notations of traditional *koto* or *shamisen* music in systems that can be read

Ex.11 Opening of *Echigojishi, nagauta* piece; transcr. from *shamisen* notation, fig.23, by W. Malm

without direct reference to a teacher. However, the general Western fixation on detailed graphic representations of basically sonic events has yet to inhibit the more direct and musical tradition of aural comprehension, which is the characteristic of earlier Japanese music and its notational methods.

譜例49 都山流尺八譜
「六段調」

六段調（八橋検校作曲）三絃一二三（本調子）箏一二三（平調子）

24. Tozan-school shakuhachi notation for sankyoku piece 'Rokudan no shirabe'

4. Oral mnemonics. Oral transmission has persisted over the centuries in Japan for various reasons: the desire for control and secrecy, the tradition of blind musicians and so forth. But a major reason is simply because it works well. Every written instrumental notation discussed in §3 above has an oral dimension. In learning or recalling an instrumental part, a performer may sing either syllables indicating precise finger positions or drum strokes (as for *shakuhachi* or *shō*), or a set of mnemonics that primarily represent relative pitch rather than specific fingerings or absolute pitches (as for the *nō* flute or *hichiriki*). The most common general term for all such systems is *shōga* or *kuchi-shōga*.

In many cases there is a direct link between the acoustic-phonetic features of the vowels and consonants of the mnemonics and the sounds they represent. Such systems can be called acoustic-iconic. It is this acoustic similarity or identity that makes such syllables particularly powerful in learning and recalling music. Similar systems are in use in numerous cultures around the world (see Hughes, 1991, 2000).

Performers stress the importance of learning via *shōga*. Still today, despite the existence of written notations, a flute player in a *gagaku* or *nō* ensemble will learn each piece first by singing it, thus acquiring subtleties of expression that elude writing.

It is perhaps surprising that such systems seem to work without their users being aware of the logic behind them. This is possible because of the innate nature of the sound symbolism involved. Ex.12 shows a passage of *shōga* for *ryūteki* flute and *hichiriki* oboe in court music. Note firstly that the consonants mark articulation: [t] starts a breath phrase, [h] marks a re-articulation of the same pitch, [r] shows a liquid shift to another pitch. Cross-culturally, we find that 'stop' consonants such as [p, t, k] generally mark the sharp attack of a plucked string or struck membranophone or idiophone. The deeper and/or more resonant pitches are more commonly marked by the voiced consonants [b, d, g]. Thus the open bass string of the *shamisen* is sung as [don] vs. the [ton] of the higher-pitched open middle string; and the alternation of normal stroke and rim-shot on folk *taiko* stick drums may be recited as [don kaka]. There are convincing if complex acoustic reasons for this, but the connection seems instinctive and unconscious for the vast majority of people.

Final consonants may express decay. Since wind instruments generally sustain a note without change of volume, the main vowel can simply be prolonged. But a longer note on a plucked string or a struck instrument is often distinguished from a shorter one by adding a nasal

TABLE 3: Vowel pitch succession in *ryūteki* solfège in a sample of 4 *tōgaku* pieces

2nd vowel	i	a	o	u
1st vowel				
i	+ 6	+ 0	+ 2	+ 0
	− 1	−30	−16	− 3
a	+ 8	+ 5	+ 1	+ 0
	− 1	−10	−26	−16
o	+11	+30	+15	+ 0
	− 0	− 0	− 9	−19
u	+27	+ 5	+13	+ 0
	− 0	− 0	− 0	− 0

Ex.12 Opening of *Etenraku (hyōjō)* showing *shōga* for *ryūteki* and *hichiriki*

consonant [n], reflecting the changes in amplitude and perhaps timbre over time.

Vowels work independently of the consonants, and their role is more interesting. In the flute *shōga* of ex.10, four vowels occur: [i a o u]. It turns out that these indicate relative pitch of successive melody notes with great accuracy. In Table 3, when a note sung with the vowel [a] is followed by a higher one sung to [i], one point was entered after the + sign in row a, column i; and so forth. This revealed that when a *shoga* vowel sequence places [i] adjacent to any other vowel, the pitch sung to [i] is higher in 97 out of 100 cases; [a] is similarly 'higher' than [o] in 56 out of 57 cases, and [u] is lower than its neighbour in all 83 of its occurrences. Overall, given the *shōga*, one can predict melodic direction with 98% accuracy. Yet this pattern is not taught as such: rather, one simply learns the *shōga* for each piece without explanation. The system is almost entirely unconscious.

A similar pattern is found for *hichiriki* (with an additional vowel) and *nō* flute. For *shamisen*, the system is somewhat different: [o] represents the open 1st (bass) string, and also the open 2nd string in certain contexts; [u] is any fingered note on the 1st or 2nd string; [e] is the open 3rd (treble) string, and the open 2nd string in certain contexts; [i] is the fingered 3rd string; and [a] is a double stop. Thus the vowels represent fingering positions primarily and relative pitch secondarily.

In general and in many cultures, the ordering [i e a o u] represents relative pitch from high to low. This corresponds to what acousticians call the 'second formant (F2) frequency' order of these vowels, which is basically the vibratory frequency of the oral cavity when held in the correct shape for each vowel. This is an area of overtone activity, fixed for each vowel and largely independent of the fundamental pitch at which one speaks or sings that vowel, and it is therefore often called a vowel's Intrinsic Pitch. For Spanish, typical F2 values for [i e a o u] are 2300, 1900, 1300, 900 and 800 Hz respectively. Humans have subliminal access to this ordering in many ways, the simplest of which is whispering; others include whistling, playing a jew's harp or musical bow, or listening to the sound of a bottle being filled with liquid. Thus in vowel-pitch mnemonic systems, vowels are used overwhelmingly in accordance with F2 ordering, and a musician gains an additional tool for recording melodic contour.

Competing with Intrinsic Pitch are the phenomena of Intrinsic Duration and Intrinsic Intensity. It is found (again for convincing reasons) that in the majority of languages the vowels closest to [i] and [u], those spoken with the mouth relatively closed, will take less time to articulate and register a lower volume on a vU meter than will more open vowels; by contrast, the 'longest' and 'loudest' vowel is [a], followed by [o] and [e]. This is why [i] and [u] are often favoured for short or quiet notes or those in weak metric positions in oral mnemonic systems, while [a] tends towards the opposite. Thus [a] is used to represent double-stops on a *shamisen* regardless of pitch. Many exceptions to vowel-pitch ordering are ascribable to these competing factors.

Acoustic-iconic systems are less precise than, say, TONIC SOL-FA. The latter is perfectly consistent in indicating interval size, but its constituent syllables are the result of an arbitrary historical development and thus carry no intrinsic force outside the specific cultural system. The vowel-pitch systems of Japan and Korea, by contrast, are less reliable: they do not indicate precise interval size or pitch, and their prediction of melodic direction is less than perfect, often clashing with rhythmic considerations; yet the innate symbolism of their sounds gives them an advantage for oral transmission. This is surely a major reason why most Japanese written notations, even those than can indicate precise pitch, duration, fingering, timbre etc., still include *shōga*. Japanese music students raised on 'do re mi' often find the traditional *shōga* distracting and therefore try to ignore it, but their teachers continue to persevere. In villages in Iwate, northern Japan, a student of the 'Devil Sword Dance' (*oni kenbai*) still memorizes each dance while singing *densuko denden densuko den* etc.: the syllables represent drum and cymbal strokes, whereas the melody to which they are sung is that of the flute. Thus by use of *shōga* one can learn simultaneously the dance, three instruments and their co-ordination.

IV. Religious music

1. Introduction. 2. Shintō: (i) Music of the imperial cult (ii) Other Shintō music. 3. Buddhist: (i) Chant (ii) Other Buddhist music. 4. 16th- and 17th-century Christian music. 5. New religions.

1. INTRODUCTION. Religious doctrines, beliefs and practices are generally not regarded as mutually exclusive in Japan; an immense variety of religions, sub-schools and sects co-exists and overlaps. Accordingly, there are many distinctive genres of religious music, and some performance traditions are of great antiquity and complexity. Only the most important kinds can be mentioned here.

Before the Meiji Restoration of 1868, the main religions were the indigenous cults of Shintō and various sinified forms of Buddhism. Confucianism, which became a religion in China, was a major intellectual and social force in Japan, influencing Japanese musical thought and practice, but it never took root as a distinct religion. At a folk level, ideas from Daoism greatly influenced Japanese religious belief, but it too was not a distinct religion in Japan.

Shintō ('the way of the *kami*') comprises a huge number of animistic or nature cults, in which purification and fertility ceremonies play a major part, along with shamanistic rituals of divination, faith healing etc. In the central group of myths the leading deity is the Sun Goddess, Amaterasu, enshrined at Ise; these myths provide the basis for the cult and rituals associated with the emperor. Shrines to several others of the countless *kami* (literally, 'superiors') are found nationwide. Shintō thinking has been much affected by Buddhism, with which it existed in a partly symbiotic relationship until the Meiji Restoration; by Confucianism and Daoist *yin-yang* philosophy; and by Japanese nationalism. However, Shintō cults and rituals are mostly local, while sharing many features. The later 19th century saw the official separation of Shintō and Buddhism and the creation of 'State Shintō' (*kokka* Shintō) at designated shrines. The term 'Shrine Shintō' (*jinja* Shintō) came to describe traditional, public shrines at all levels, as opposed to 'Sect Shintō' (*kyōha* Shintō), which referred to new and often syncretic denominations, such as Konkōkyō, Tenrikyō and Ōmoto. Shrine Shintō has lost the privileged position it held before and during World War II, but it continues to flourish and redefine itself, and important kinds of ceremonial and festival music are actively maintained.

Buddhism was officially introduced from the Korean kingdom of Paekche in 538 CE (a correction of the traditional date 552) but was probably known earlier. It has always been understood in Japan as a Chinese rather than an Indian religion: the Buddhist canon used in Japan is in Chinese, and the main branches of Japanese Buddhism (Tendai, Shingon, Pure Land and Zen) were based on Chinese models. Nevertheless, Japanese Buddhism developed a highly distinctive character, each school or sub-school having its own doctrines and often elaborate liturgy, as well as its own types of music. In the Nara period (710–84), six schools, known collectively as the Nanto Rokushū, flourished in the capital: Sanron, Jōjitsu, Hossō, Kusha, Kegon and Ritsu. The Heian period (794–1185) saw the introduction of the Tendai and Shingon schools, emphasizing esoteric teachings of the *caryā* and *yoga* forms of Tantric Buddhism, though Tendai is formally grounded in the teachings of the *Lotus Sūtra* (the *Nichiren-shū*). At the same time, the teachings of Pure Land Buddhism, focussed on the celestial Buddha Amitābha (Jap. *Amida-butsu*), began to spread more widely. During the Kamakura period (1192–1333) two schools of Zen Buddhism (Rinzai and Sōtō) were introduced, and new schools based on Pure Land faith or on the *Lotus Sūtra* became popular. In succeeding centuries further developments included Ōbaku, a major new school of Zen. Buddhism suffered after 1868 but revived strongly in the later 20th century. Since World War II Japanese Buddhism (especially Zen) has also been spreading outside Japan.

Christianity has had much less influence than Shintō or Buddhism. Introduced by Jesuit missionaries soon after the first arrival of Europeans from Portugal in 1542 or 1543, it flourished for a while in the later 16th century, particularly in southern Japan, but was progressively banned in the early 17th century (the definitive exclusion came in 1639). However, along with elements of its music it continued to be practised secretly, more as a folk religion, by small groups in Kyūshū. It was reintroduced after the Meiji Restoration by Protestant as well as Catholic organizations and has had some impact on education as well as the new religions. The history of Christianity and Christian music in Japan thus falls into three distinct periods, of which only the first is discussed here.

2. SHINTŌ.

(i) Music of the imperial cult. All Shintō music traces its origins to the myth of an erotic dance performed by the goddess Ame no Uzume no Mikoto before the Rock Door of Heaven to entice out the Sun Goddess, who was hiding her light from the world and causing crops to fail. *Kagura*, written with Chinese characters meaning 'music (and dance) for the gods', was regarded as a branch of *wagaku*, music of Japanese origin, as opposed to various kinds of foreign music being introduced at the court; by 773 CE, as Shintō came to be formalized, we hear of *kagura* musicians at the imperial court. The palace *kagura*,

known as *mi-kagura*, seems to have originated as an all-night sacred banquet, with songs and a modicum of dance. This took place in the Seishodō (from 859), or the Naishidokoro (from 1002 to the mid-19th century), halls of the imperial palace. From the period 1074–6 it became an annual event, and a reduced version is still performed in mid-December (now in the Kashikodokoro). A slightly different version is performed for the *shinjōsai* (or *niinamesai*) festival in November, when the emperor commends new grain to the gods of Heaven and Earth. *Mi-kagura* songs have long been used also for functions at certain major shrines.

The cycle of songs (*kagura-uta*) was re-edited in the second quarter of the 17th century, after a hiatus caused by the civil wars of the 16th century. The complete repertory contains over 40 songs, but today only 12 are performed, in five groups, preceded by a short instrumental piece. Even so, a full performance occupies seven hours. The two songs of the second group, *Torimono no bu*, constitute the ritual core of the cycle, the later songs being regarded as lighter in character, relics of the old banquet tradition. Two (sometimes three) of the pieces have a separate section appended for a solo dancer (the *ninjō*). The text of each song falls into two parts, the *moto-uta* and the *sue-uta*; in each part the first verse is sung solo and the later verses in unison chorus. Instrumental accompaniment is provided by a WAGON (six-string zither), *kagura-bue* (transverse flute) and *hichiriki* (short cylindrical oboe). There are 20 singers in two groups, one for the *moto-uta*, one for the *sue-uta*. The lead singer in each group controls the pace of the performance with *shakubyōshi* (wooden clappers). The *kagura-uta* are in mostly free rhythm. The wind instruments play in unison, the *wagon* mostly playing simple arpeggio figures on open strings. The *kagura-uta* have a simple melodic structure, subtle in interpretation; only a single mode is used, based on the tone *ichikotsu*. In comparison to other Japanese singing, voice production is straight-toned and open. The notation is a system of neumes known as *hakase*, dating from the later 12th century. That used since the Meiji period is a reconstruction of this, the *sumifu*.

In addition to *mi-kagura*, music of the imperial cult includes other ancient song-types: *Azuma asobi*, *Ōnaobi-no-uta*, *Yamato-uta*, *Kume-uta*, *Ta-uta* and *Gosechi-no-mai*. In origin these are mostly secular court dances, though as dances some have fallen out of use. They may also be performed at major shrines, and *Gosechi-no-mai*, *Kume-uta* and *Ta-uta* have been used in enthronement ceremonies for the emperor.

(ii) Other Shintō music. The *kagura-uta* described above were used from ancient times for the *Chinkonsai*, a festival to honour and pacify dead souls. The word *kagura* probably derives from *kami-kura* (or *kamu-kura*), 'seat for the gods' (*kamiza*), and a central feature in Shintō festivals is the preparation of such a tabernacle, to which the *kami* may be invited with appropriate rituals of purification and supplication. Around the 14th century, followers of *Shugendō*, the orders of mountain ascetics (*yamabushi*), started to adapt formal *kagura* by the addition of dance and other theatrical elements related to the medieval *sarugaku-nō*. As a result, diverse but basically similar regional forms of *kagura* have developed, often referred to collectively as *sato-kagura* ('village *kagura*').

There are six main divisions of *sato-kagura*. *Miko-kagura* are widely distributed *kagura* performed by a purified woman, the *miko*, who herself was originally the *kamiza* and danced with ritual implements, such as a branch of sacred cleyera (*sakaki*), a Shintō wand (*gohei*), a fan or a bell tree (*suzu*). *Izumo-ryū kagura* are found especially in the Izumo region of western Japan; these involve a series of dances with ritual implements, followed by a masked *nō* play, in which gods appear on stage. *Ise-ryū kagura* is found especially around Kyoto but also in parts of northern Japan and elsewhere; it incorporates a lustral ceremony called *yudate*, in which hot water from a cauldron is sprinkled about and offered to the *kami*. Various dances follow. At the great shrines at Ise from the mid-17th century onwards, pilgrims who made a suitably large donation were given a command performance, the *daidai kagura*; this custom was followed elsewhere. As Edo grew as a major urban centre, new kinds of *kagura* developed from the early 18th century at shrines in the area, incorporating elements of *yudate* and *miko* rituals, *daidai kagura*, *kyōgen* farce and juggling; these are called *Edo-kagura*. *Shishi-kagura* are found in many forms throughout Japan; they involve a dance with a lion's head as *kamiza*, or incorporate the lion dance into a *kabuki*-like performance. *Yamabushi-kagura* are types of *kagura* developed by *yamabushi*, preserved in north-east Japan in the region of Mt Hayachine (Iwate Prefecture); they were originally performed at the end of the year by wandering troupes. The varied repertory includes lion and other dances, and *kyōgen*.

The music of *sato-kagura* typically uses shrill transverse flutes, stick drums and other percussion (small metal idiophones, clappers etc.); rhythms are strong and lively. Originally it would be performed on open ground in or near Shintō shrines, but many shrines now have a special dance-hall (*kagura-dono*) with open sides. One of the oldest, at the Kasuga Shrine in Nara, was converted from a prayer hall in 1143.

Somewhat distinct from *sato-kagura* are *dengaku* and *matsuri-bayashi*. *Dengaku* ('field music'), refers to ritual performances, originally by peasants, to promote a good harvest. By the Heian period, it was being done at shrines and monasteries by professionals with shaven heads and religious garb, but by the end of the period in Kyoto it had turned into a large street parade with flutes and percussion, contributing to the development of *nō* drama. Many local varieties of *dengaku* have been preserved. *Matsuri-bayashi*, the music for local shrine festivals (*matsuri*), seems to have developed into something like its present form from the 16th century onwards. Generally there is a colourful street procession with heavy floats, wheeled (*dashi*) or shoulder-borne (*mikoshi*); the music uses transverse flutes, drums and gongs. The most famous kinds are for the Gion (Kyoto), Tenjin (Osaka) and Kanda (Edo/Tokyo) festivals, that for the Gion being a source for many others. An overlapping term, *furyū*, is often applied to several kinds of Shintō festival.

3. BUDDHIST. The traditional music of Japanese Buddhism comprises primarily chant (and its instrumental accompaniment) for the various liturgies (*hōe*; alternatively, *hōyō*). However, one should also include music for dances or dance-dramas on Buddhist themes; songs or ballads with Buddhist content; solo music for end-blown flute; as well as works on Buddhist themes by modern composers. Japanese Buddhist chant has distinctive tonal

structures that were greatly influenced by court music (*gagaku*) but in turn influenced later secular music, especially for the theatre. It also has distinctive and ancient notation systems (see §III above). An immense wealth of source material has come to light in monastery and other archives; scholarly assimilation of this continues, especially in Japan. A need remains for more detailed historical and analytical comparison with the music of other Buddhist traditions and of other major religions.

(i) Chant. Following the introduction of Buddhism to Japan, the first detailed reference to its music is an edict of 720 CE, which sought to regulate text chanting according to that of the Tang monk Daorong. In China, new forms of Buddhist chant had developed, as Buddhist texts in Sanskrit were translated into Chinese; further modifications arose with their rendition in Japanese pronunciation. The Japanese term *shōmyō* renders Chinese *shengming*, which translates Sanskrit *śabda-vidyā*, referring to Brahmin priests' study of vocal sound with regard to the chanting of Vedic texts. By the early 13th century, however, *shōmyō* had become the customary general term in Japan for Buddhist chant (replacing the older term *bonbai*). Another name, frequently seen in the titles of *shōmyō* collections, is *gyosan*.

In 752, at the Eye-Opening Ceremony for the Great Buddha at the Kegon monastery of Tōdaiji in Nara, some 10,000 monks from the various Nara schools participated; but after the removal of the capital to Heian (Kyoto) in 794, the old Nara chant was gradually superseded by those of the Tendai and Shingon schools. In particular, the third head of Tendai, Ennin (794–864), brought back from China much knowledge of Chinese practice, especially in Tantric ritual, and introduced these at the Tendai headquarters on Hieizan. After him Enchin (814–91), nephew of Kūkai (774–835), the founder of Shingon, introduced new teachings and a new style of *shōmyō*, the Jimon-ryū, at the nearby Tendai monastery of Onjōji. Meanwhile Tōji, the main Shingon monastery in Kyoto, was already a separate ritual centre, and influence on Shingon *shōmyō* practice and theory was exerted by Kanchō (938–98), grandson of Emperor Uda. Interchange with the Nara schools cannot be documented after 980, and after that Tendai and Shingon increasingly followed their own paths. After the rebuilding of Tōdaiji (destroyed in the civil wars of the 12th century) Shingon and Tendai *shōmyō* were the basis for new Nara styles. These are preserved most distinctively in the lengthy *Shuni-e* or *o-mizutori* ceremony at Tōdaiji, with its vigorous chanting to sweep away defilements of the old year and usher in peace for the new one.

The 13th and 14th centuries saw many changes to *shōmyō*, as the centre of government moved to Kamakura in eastern Japan. The new Nara styles found favour there, and at Shōmyōji in Kanazawa, Kenna (1261–1338) won support for a combination of Shin-ryū and Myōnon'in-ryū, the two leading schools of Shingon and Tendai respectively. Meanwhile, Zen Buddhism was being introduced at Kamakura, and Pure Land schools such as Jōdo-shū and Jōdo shinshū, as well as Nichiren-shū, were developing individual styles. There was also renewed influence from court song and from various kinds of popular music. These cross-currents both affected the chant and led to new musical forms.

In western Japan, a major conclave at Ninnaji, Kyoto, in about 1145 is said to have recognized four distinct schools of Shingon *shōmyō*; earlier, Ryōnin (1073–1132) unified the various lineages of Tendai *shōmyō* from his ritual centre at Raigō-in, Ōhara, north of Kyoto, in 1109. Further reforms of Tendai *shōmyō* were due to Fujiwara no Moronaga (1138–92), the founder of Myōnon'in-ryū and an expert on *gagaku*; and to Tanchi (1163–?1237), who founded Shin-ryū ('New School') in opposition to the Ko-ryū ('Old School') of Jōshin (*fl* late 12th–early 13th centuries). (The name Shin-ryū of Shingon is written with a different first character.) Tanchi introduced a precise musical theory based on that for *gagaku*, with rules for modulation, rhythm and pitch, as well as a new five-tone notation system (*goin-bakase*), which made it possible to perform *shōmyō* and *gagaku* together. This last inspired later *goin-bakase* systems in both Tendai and Shingon, though the simpler *meyasu-bakase* has continued in use. Tanchi's Shin-ryū completely superseded Ko-ryū in the Ōhara tradition, and from the 14th century there were no major developments. However, the practice and transmission of Tendai *shōmyō* were gravely affected by recurrent armed confrontations between Onjōji and Enryakuji (the main monastery on Hieizan) and by the destruction of Enryakuji and other Tendai establishments in 1571 by the warlord Oda Nobunaga (1534–82).

Shingon was spared this extreme fate. The Ninnaji conclave, converted by Kakushō (1129–69), had recognized Honsōō-in-ryū, Shinsōō-in-ryū, Daigo-ryū and Shin-ryū, of which the two former, practised at Ninnaji, derived their lineage from Kanchō; Daigo-ryū, practised at Daigoji, derived from Kanchō's fellow-pupil Genkō (911–95), with contributions also from Ninkai (955–1046), while Shin-ryū was credited to Shūkan (Daishin Shōnin, 12th century) by his pupil Kanken (mid-12th century). Shūkan himself had studied both the Ninnaji and Daigoji lines, and his style was supposedly introduced to Kōyasan (the spiritual centre of Shingon) between 1232 and 1237 by Shōshin (dates unknown). Another theory links the transcription of Kōyasan *shōmyō* to Ryūnen (*b* 1258) and the Nara monastery Saidaiji (by then affiliated with Shingon). Whatever the truth of the matter, in the 16th century the Daigoji and Saidaiji lineages disappeared, and in succeeding centuries the Ninnaji tradition also died out, so that, despite losses in the 17th century, the Shin-ryū of Kōyasan, usually known as Nanzan Shin-ryū, came to be dominant. Such older Shingon types, especially Shin-ryū, came to be labelled Kogi Shingon-ryū, while newer types, especially Buzan-ha (at Hasedera, outside Osaka) and Chizan-ha (at Chishaku-in, Kyoto), are called Shingi Shingon-ryū.

The less rigid rituals of the Pure Land schools also changed in later centuries and adopted elements of Ōhara school chant, alongside more popular types of religious song, while in the 17th century Ōbaku Zen introduced its own distinctive style, accompanied by loud percussion (fig.25). Buddhism and its music suffered greatly after 1868, but a revival and reconstruction of Tendai chant was led by Yoshida Tsunezō (1872–1957) and Taki Dōnin (1890–1949). In Shingon the leaders were Yuga Kyōnyo (1847–1928) and Iwahara Taishin (1883–1965). Today, through public performances, recordings and studies the future of *shōmyō* seems assured.

Shōmyō pieces may be classified according to the doctrinal affiliation and rituals they represent; the nature (and language) of the text; modal and tonal structure; and rhythmic type. Thus, particular types of chant serve to

25. Zen Buddhist ceremony accompanied by (left to right) daikin (bell with hammer), two inkin (plate metallophones) and mokugyo (slit-drum)

expound the teaching (e.g. *kōshiki*), for praise and lamentation (*sandan*), intercession (*kigan* and *ekō*), confession (*sange*), offertory (*kuyō*), catechism (*rongi*) etc. There are also hymns, in Sanskrit (*bonsan*), Chinese (*kansan*) or Japanese (*wasan*). The invention of *wasan* is credited to Ennin, and of *kōshiki* to Genshin (Eshin Sōzu, 942–1017), who himself composed many *wasan*. Both types remained important across several schools of Japanese Buddhism. Older treatises on *shōmyō* devote much attention to temperament (*onritsu*) in relation to Chinese theory (especially the *ritsu-ryo* scale classification), one influential text being *Shittanzō* by the Tendai master Annen (841–84). Actual practice has tended to be less fixed, and more important in the tonal structures of *shōmyō*, and indeed of all traditional Japanese music, are the *senritsukei*, short melodic units that are strung together in chains and are identified with individual names. Rhythmically, most *shōmyō* pieces are in free time (*jokyoku*), but a few have fixed metre (*teikyoku*) or combine both (*gukyoku*).

(ii) Other Buddhist music. Music for Buddhist dances and dance-dramas embraces an immense variety of forms, including the extinct *gigaku* (introduced from Korea in the early 7th century), certain court dances (*bugaku*) and *nō* plays, as well as festivals, processions and other entertainments (*shōryō-e*, *ennen*, *gyōdō* etc.). Many entail the use of masks. Among non-liturgical Buddhist ballads and songs, *mōsō-biwa* is a recitation by blind monks accompanying themselves on the short lute. Introduced to Japan in the 7th century, it developed above all within Tendai and inspired later *biwa* narrative ballad genres, notably *heikyoku*, but many details of its history remain unclear. Other types of Buddhist song include kinds of chant and dance incorporating the *nenbutsu*, the Pure Land formula of invocation to Amida-butsu; *go-eika*, pilgrims' songs; *sōga* (or *enkyoku*), feast songs of the 14th–15th centuries, with metrical texts modelled on *kōshiki*; *sekkyō* (or *uta-sekkyō*), expositions of Buddhist teaching, sung by professional performers in a *kabuki*-influenced style and even setting, especially in the late 17th and earlier 18th centuries; and *saimon* (or *uta-saimon*), a somewhat similar form, at its height during the same period but inspired by Shingon and Shugendō and performed either as street music or as part of puppet plays. The solo repertory (*honkyoku*) for end-blown flute (*shakuhachi*), popular from the 17th century, is above all on Buddhist themes and was disseminated by mendicant friars of the Fuke-shū, a Zen-inspired sect (see §II, 5 above). Lastly, modern Japanese composers who have written on Buddhist themes include Mayuzumi Toshirō (1929–97) and Fukushima Kazuo (*b* 1930).

4. 16TH- AND 17TH-CENTURY CHRISTIAN MUSIC. Francis Xavier landed in Kagoshima, Kyūshū, in 1549, with gifts that included a musical instrument (a clavichord?), and established at Yamaguchi the first of a series of Christian churches in Japan. As the number of converts increased, provision was made to render the liturgy in Japanese and to train the Japanese in Western music, including both singing and instrumental playing; dramatized versions of Bible stories were also performed. By 1580 there were some 200 churches in western Japan, as well as two

seminários and a *colégio*, founded by Alessandro Valignano (1539–1606). In 1579 Valignano brought a pair of organs from Goa, and these, as well as other keyboard and string instruments, were used in services and at the seminaries.

The highlight of the Jesuit mission was an embassy to Rome, planned by Valignano. Four samurai boys from Kyūshū, with escorts, left Nagasaki in February 1582, reached Lisbon in August 1584 and gradually made their way to Rome, attending masses and giving musical performances along the route. They were received by Felipe II of Spain, had an audience with Gregory XIII (Pope, 1572–85) and attended the installation of his successor, Sixtus V (Pope, 1585–90). They attracted attention everywhere, even having their portraits painted by Jacopo Tintoretto (1518–94). They finally returned to Japan in 1590, and the following year they were received by Toyotomi Hideyoshi (1536–98), whom they impressed with their ability in Western music. Over the next 20 years Christian missions in Japan were at their height, one achievement being the publication in Nagasaki of *Manuale ad sacramenta ecclesiae ministrandum* (1605), printed in red and black with many pages of musical notation. However, both Hideyoshi and his successor Tokugawa Ieyasu (1542–1616) became suspicious, particularly after the arrival of Dominican (1592) and Franciscan (1593) missionaries from Manila. After a series of persecutions, a general order in 1614 banned all missionary activity, and new, more intense persecutions followed in the 1620s and 30s. A definitive order of 1639 brought to an end this first period of Christianity and its music in Japan, all remaining missionaries and their converts being evacuated to Macao, Manila or elsewhere.

5. New religions. *Shin shūkyō* ('new religions') is a term applied to a number of independent religions founded in Japan from the early 19th century, with sources in such traditions as mountain cults, popular moral cultivation movements and the activities of lay believers of Nichiren Buddhism. Several of these religions maintain their own distinctive musical traditions.

Kurozumikyō (founded 1814) has from 1879 used *kibigaku*, a new music created by *gagaku* musician Kishimoto Yoshihide (1821–90). *Kibigaku* features the instruments of the *tōgaku* genre of *gagaku* but without the four-string lute *biwa*. In *kibigaku* (unlike *gagaku*) the most important part is given to the thirteen-string *koto*.

In 1888 *kibigaku* was introduced into the religion Konkōkyō (founded 1859) by Kishimoto's pupil Obara Otondo (1873–1941). In 1914 Obara, who was also a student of *gagaku*, created a unique ritual music for Konkōkyō, to which he gave the name *chūseigaku*. Like *kibigaku*, *chūseigaku* gives the *koto* a more prominent part than does *gagaku*. Unlike *kibigaku*, however, *chūseigaku* uses the *biwa* in its instrumental pieces, while in the vocal compositions the instruments of court *kagura* are used.

Tenrikyō (founded 1838) features a cycle of songs, called the *mikagura-uta*, said to have been revealed to the founder Nakayama Miki (1798–1887) beginning in 1867. The combination of instruments used in accompanying the songs is unique: 13-string *koto*, three-string *shamisen* lute, bowed *kokyū* lute (these three played by women), bamboo *fue* flute, hourglass-shaped *kotsuzumi* hand drum, *surigane* gong, *chanpon* cymbals, *hyōshigi* wooden clappers and large *taiko* drum (these played by men).

Ōmoto (founded 1892) has from 1909 used the two-string *yakumo-goto* zither to accompany its liturgies. This instrument, which enjoyed some popularity in western Japan in the late 19th and early 20th centuries, is now rare outside Ōmoto.

V. Court music

Gagaku, the ancient traditional music of the Japanese court, today comprises the following repertories: *tōgaku*, *komagaku*, *saibara*, *rōei* and Shintō ritual music and dance. The two Chinese characters used to write *gagaku* (literally 'elegant music') were originally used in China to signify Confucian ritual music.

1. History. 2. Repertory. 3. Instruments. 4. Performing practice and historical change.

1. HISTORY. In Japanese usage, the term *gagaku* may be traced back to the establishment in 701 CE of a government bureau, the Gagaku-ryō (also known as Utamai-no-tsukasa or Uta-ryō) to regulate the performance and teaching of music and dance at the Japanese court. Although the Chinese term *yayue* (of which *gagaku* is the Japanese reading) referred originally to the music of the Confucian ritual (*see* CHINA, §§I, 3(i) and II, 2), by the time the Japanese came in contact with it, the term had changed its meaning. A 'new *yayue*', comprising popular Chinese music and foreign entertainment music (including music from India, from the Central Asian states of Kuqa, Samarkand, Kashgar, Bukhara and Turfan, and from Korea), held sway at the Chinese court. The Japanese use of the term *gagaku* to describe this body of music was thus very much in keeping with contemporary Chinese usage.

The principal repertories regulated by the Gagaku-ryō were *wagaku* (Japanese music), *sankangaku* (music and dance of the three Korean kingdoms of Koguryŏ, Paekche and Silla), *tōgaku* (music and dance from Tang China) and a number of smaller repertories of imported music and dance such as *toragaku*, *gigaku*, and *rin'yūgaku*. Of these, the *sankangaku* and *gigaku* repertories were the oldest, dating from the Asuka period (552–645) or earlier. Although introduced via the Korean peninsula, it is likely that these genres strongly reflected Chinese practice predating the period of direct contact with China during the Nara (710–84) and early Heian (794–898) periods. By the mid-8th century, the *tōgaku* repertory was the dominant division, as it is within present-day *gagaku*.

Sources for the study of the early history of *gagaku* are particularly rich. A body of musical scores in tablature dating from the 8th century onwards sheds light both on the history of the *gagaku* tradition in Japan and on the music of China during the Tang period (618–907). While only one surviving Chinese score, the 10th-century lute-score *Dunhuang pipa pu*, records any of this repertory in notation, in Japan numerous musical scores that record the Chinese and other repertories played at the Japanese court survive from as early as the mid-8th century. These include the *Tempyō biwa-fu* (747) for four-string lute; the *Biwa shochōshi-bon*, an early 10th-century score containing notation originally written by the Chinese lute master Lian Chengwu for his Japanese pupil Fujiwara no Sadatoshi in Suzhou in 834; the *Gogen biwa-fu*, notations for five-string lute of approximately 11th-century date based on materials of the 8th to the 9th century; and the *Hakuga no fue-fu*, notations for flute edited in 966, parts of which date back to the early 9th century. The Shōsōin,

a repository built in 756 to house items originally belonging to the Emperor Shōmu, includes instruments used in the elaborate ceremony performed for the consecration of the Great Buddha of Tōdaiji in 752.

It was during the 9th century that the distinction between *tōgaku* and *komagaku* current in present-day *gagaku* was created. *Tōgaku*, which was designated 'Music of the Left' (*sahō*), included the ancient repertories of *tōgaku* (Chinese music) and *rin'yūgaku* (music from South-east Asia). *Komagaku*, the 'Music of the Right' (*uhō*), included *sankangaku* (Korean music) and *bokkaigaku* (music and dance from Bohai, a country in the area of Manchuria). Many anomalies remained, however: some *tōgaku* items were included in the *komagaku* repertory, and both repertories included pieces that appear to have been composed by Japanese musicians and dancers in the early centuries of the tradition on Japanese soil.

By the late 9th century, Japanese contact with China had virtually ceased. Although some modification of the music occurred, including a reduction in the number of instruments and modes, evidence from early scores suggests that even until the mid-10th century the shape of the melodies imported from China remained relatively unchanged. Tang-period Chinese musical practice appears, moreover, to have been sustained, albeit with further modification, until at least the end of the 12th century.

During the Heian period (794–1185), *gagaku* flourished under court patronage as part of a rich calendar of ceremonies and festivals. Performances were by both high-ranking noblemen and the professional musicians who staffed the Gakusho (Gakuso), the new government department established in the early to mid-10th century to regulate the performance of music and dance at court. The Heian period also saw the creation of a number of new genres, including two that survive to the present: *saibara* (originally Japanese folk-texts set to the melodies of *tōgaku* and *komagaku*) and *rōei* (a tradition of singing Chinese poetry).

Following the transfer of political power from the court to the shogunate at the beginning of the Kamakura period (1192–1333), *gagaku* continued to flourish, though the loss of imperial power led to a corresponding reduction in the scale of the ceremonies sponsored by the court. There is evidence that by the early 14th century *tōgaku* was beginning to evolve in the direction of present-day practice, as the melodies for the two key melodic instruments, the *ryūteki* and *hichiriki*, began to be transformed into the new formula-based melodies that dominate modern performances, and the original melodies began to fade into the overall texture (see below).

From the mid-15th century, a series of wars led to the virtual destruction of the culture of the imperial court. The song genres *saibara* and *rōei* were lost, and the *tōgaku* and *komagaku* traditions were severely damaged. With the return of peace at the beginning of the 17th century, movements were made to re-establish *gagaku* at the court. Reconstruction of the *saibara* tradition began in 1626 and continued through the 18th and 19th centuries. The early years of the 19th century saw the resurrection of many of the long-extinct genres of vocal ceremonial music associated with imperial ritual, including *azuma asobi* (1813), *kume-uta* (1818) and *yamato-uta* (1848). Refurbishment of the *rōei* repertory occurred in the latter decades of the 19th century.

With the Meiji Restoration in 1868, the emperor was restored as head of state and the capital moved to Tokyo. In 1870, musicians from Kyoto, Nara and Osaka were brought there and ordered to reconcile differences in order to standardize the *gagaku* tradition. The versions of pieces chosen from the repertories of each group of musicians at that time, together with any reconstructed pieces, were recorded in the standardized part-scores completed in 1876 and 1888. Today, these form the basis of the current *gagaku* repertories. During the period of standardization, an ideology that claimed that the *gagaku* tradition remained unchanged since ancient times was invented and promulgated. Even after the discrediting of this nationalist propaganda after World War II, the image of *gagaku* as a static, unchanging symbol of the imperial house remains strong.

At present, the staff of the music department of the Imperial Palace in Tokyo includes about 20 male musicians, whose duties comprise both ceremonial and non-ceremonial performances (fig.26). Ceremonial performances accompany various Shintō festivals at court, the most important of which feature only the ritual repertories, such as *kagura*, *azuma asobi*, *yamato-uta* and *kume-uta*. Many lesser ceremonies, such as the regular public dance performances at the Meiji shrine, also use compositions from the *tōgaku* and *komagaku* repertories. Exceptional events in the imperial family such as births, weddings or deaths also require special *gagaku* performances, as do some state occasions. Non-ceremonial performances include those for public radio and television, and the spring and autumn concerts given annually at the Music Building in the Imperial Palace.

There are also several professional, semi-professional or amateur groups, including those attached to the imperial shrine at Ise and the Shitennōji temple in Osaka. The Tōkyō Gakuso, a professional ensemble the core of which is made up of members or former members of the imperial household, has in recent years done much to increase the profile of *gagaku* through public concerts both in Japan and overseas and through commercial recordings.

For most Japanese, however, *gagaku* remains a remote and arcane music. In the post-war period, it was not subject to the same resurgence of interest as other traditional forms of Japanese music, dance and theatre, and without the support of the state might well have declined to the point of virtual extinction. However, partly because of the appeal of its dissonant texture to modernist sensibilities, during the second half of the 20th century it became a source of inspiration for Western composers such as Messiaen and Stockhausen, as well as for many Japanese composers.

2. Repertory. The *tōgaku* repertory is classified into *kangen* (concert music) or *bugaku* (music for dance). *Bugaku* comprises not only pieces from the *tōgaku* repertory but also those of *komagaku*: danced *tōgaku* pieces continue to be classified as 'Dances of the Left' (*sahō*, *samai*), danced *komagaku* pieces as 'Dances of the Right' (*uhō*, *umai*). The current repertory of *tōgaku* comprises some 80 *kangen* pieces (including transposed pieces that occur in more than one mode) and some 30 *bugaku* items. While some *tōgaku* pieces are performed in both *kangen* and *bugaku* versions, others belong exclusively to one or other division.

26. Full gagaku (kangen) ensemble of the Imperial Palace: (front row, left to right) shōko (gong), tsuridaiko (drum) and kakko (barrel drum); (middle rows) two gakusō (zithers) and two biwa (lutes); (back rows, left to right) three ryūteki (flutes), three hichiriki (reed-pipes) and three shō (mouth organs)

The *kangen* ensemble comprises: wind instruments, *ryūteki*, *hichiriki* and *shō*; string instruments, *biwa* and *gakusō*; and percussion instruments, *kakko*, *shōko* and *taiko* (see §3 below for details of instruments). String instruments are nowadays omitted in the performance of *bugaku*.

Tōgaku pieces are performed in six melodic modes: *ichikotsuchō*, *hyōjō*, *sōjō*, *ōshikichō*, *banshikichō* and *taishikichō*, which are grouped into two modal-types, *ryo* and *ritsu* (*see under* MODE, §V, 5).

Pieces are classified according to size as *taikyoku* (large pieces), *chūkyoku* (middle-sized pieces) or *shōkyoku* (small pieces). *Taikyoku*, which are suites in several movements, are no longer included in the *kangen* style and are now rarely performed in their entirety as *bugaku*.

Tōgaku is also divided into *kogaku* (old music) and *shingaku* (new music), an ancient distinction based on the date at which pieces entered the Tang Chinese repertory. The *ikko*, a drum formerly used for *kogaku*, has fallen out of use; there is now little to distinguish these categories in modern performance practice.

All *komagaku* items in the current repertory of 28 pieces accompany dance. The ensemble comprises only winds (*komabue*, *hichiriki*) and percussion (*san-no-tsuzumi*, *shōko* and *taiko*). In the past, string instruments were included in the ensemble, and concert performances (*kangen*) of *komagaku* were given. *Komagaku* pieces are performed in three modes: *koma-ichikotsuchō*, *koma-hyōjō*, and *koma-sōjō*.

The vocal repertories of *gagaku* comprise *saibara*, *rōei* and Shintō ritual music. The current *saibara* repertory is made up of six pieces that are performed by a chorus accompanied by an ensemble made up of *ryūteki*, *hichiriki*, *shō*, *biwa*, *gakusō* and *shakubyōshi*. *Saibara* pieces may be in either *ryo* (4 pieces) or *ritsu* (2 pieces) modes. The *rōei* repertory comprises 14 items. As in *saibara*, there is a solo vocal incipit accompanied only by *shakubyōshi*, at the end of which the chorus enters, closely doubled by *ryūteki*, *hichiriki* and *shō*. The vocal melodies are said to resemble those of Buddhist chant, *shōmyō*. The music for Shintō ceremonies performed at court includes the following repertories: *kagura*, *azuma asobi*, *yamato-uta* and *kume-uta*. Each comprises songs performed by a chorus accompanied by an instrumental ensemble, instrumental interludes and dances. For *kagura*, *yamato-uta* and *kume-uta*, the instrumental ensemble is made up of *kagurabue*, *hichiriki*, *wagon* and *shakubyōshi*. In *azuma asobi*, the *kagurabue* is replaced by a *komabue*.

3. INSTRUMENTS. Three flutes, all of similar construction, are used in the performance of *gagaku* (fig.27). The

27. Some instruments of gagaku: (upper left) ryūteki (transverse flute), (upper right) hichiriki (reed-pipe), (lower left) shō (mouth organ), (lower right) kakko (barrel drum)

ryūteki, a transverse bamboo flute about 40 cm in length, with seven finger-holes, is used in *tōgaku* (both *kangen* and *bugaku*), *saibara* and *rōei*. In *tōgaku*, the *ryūteki*, together with the *hichiriki*, dominates the ensemble. Its melodies are characterized by intricate melodic formulae and frequent octave leaps, the performance of which is facilitated by the instrument's large bore and finger-holes. In both *saibara* and *rōei*, the flute closely follows the vocal melody, but in the former, the line is embellished with formulae gleaned from *tōgaku* practice. The *komabue* is a transverse bamboo flute with six finger-holes used in *komagaku* and *azuma asobi*. Shorter (about 36 cm) and narrower in bore than the *ryūteki*, it sounds a tone higher in pitch. Like the *ryūteki*, the *komabue* performs a highly formulaic melody, in heterophony with the *hichiriki*. The *kagurabue* is a transverse bamboo flute with six finger-holes used in the ritual repertories *kagura*, *yamato-uta* and *kume-uta*. It is longer (45 cm) and slimmer than the *ryūteki*.

The HICHIRIKI, a small, almost cylindrical, double-reed pipe with nine finger-holes, seven in the front and two at the back, is used in all *gagaku* repertories. Together with the flute, it is the principal melodic instrument. The relative largeness of the reed in comparison with the air column permits the player to bend pitches in order to meet the melodic and modal requirements of the melodies characteristic of each genre.

The SHŌ, a small free-reed mouth-organ with 17 bamboo pipes (two of which are mute) set into a wind chamber, is used in *tōgaku*, *saibara* and *rōei*. When the player closes the holes on any of the 15 sounding pipes and blows and sucks air into the chamber, free reeds near the base of the pipe are sounded. In performing *tōgaku*, the *shō* produces five or six-note harmonic clusters (*aitake*) based on the circle of 5ths. Only one pitch is notated, in general the lowest note of each cluster. While in modern practice the *shō* is regarded as a harmonic rather than a melodic instrument and provides a richly dissonant texture against which the *ryūteki* and *hichiriki* perform their melodies, it is this instrument, together with the *biwa*, that in its notated pitches most accurately preserves the original melodies imported from Tang China. In *saibara* and *rōei*, the *shō* does not use *aitake* but rather follows the sung melody, doubling it in octaves or occasionally 5ths.

The three string instruments used in *gagaku* are the *biwa*, *gakusō* and *wagon*. The BIWA is a four-string lute played with a large plectrum (see also §II, 3 above). Like the *shō*, its part in *tōgaku* is based on the original Tang melodies. This ancient melody is carried as the highest note of an arpeggio created by the player sweeping the plectrum across the strings of the instrument from lowest to highest, sounding all open strings below that on which the notated pitch occurs. The effect of these strong arpeggios is, in modern practice, more rhythmic than melodic.

The *gakusō* (also known as *sō*, *sō-no-koto*, or simply KOTO) is a long zither with 13 silk strings of equal thickness and 13 movable bridges (see also §II, 4 above). Owing to a deterioration of the tradition, the *gakusō* plays only in pentatonic modes executed on open-string tunings. For the most part the *gakusō* plays one of two formulaic patterns, *shizugaki* or *hayagaki*, alternating with single notes. The player wears plectra on the fingers of the right hand. In the Heian period, left-hand pressure was applied to the left of the bridges to alter the pitch of strings and produce ornaments, but this practice has long fallen into disuse.

The WAGON is a six-string zither, believed to be indigenous to Japan, used in the music of the various Shintō rituals (see §IV, 2 above). The player holds a plectrum in the right hand and plays rapid arpeggios across the strings. With the left hand, single strings are plucked individually or in formulaic patterns.

In both *tōgaku* and *komagaku*, three percussion instruments articulate the many rhythmic patterns that form the basis of a variety of rhythmic modes. The trio of *kakko*, *shōko* and *taiko* used in *tōgaku* is modified in *komagaku* by the replacement of the *kakko* with the *san-no-tsuzumi*. The *kakko* is a small barrel-drum placed on a stand; its two heads of deer skin are secured to either end of the body by laces. Small drumsticks held in both of the player's hands are used to produce three different kinds of stroke; a single stroke with the right stick (*sei*), a slow accelerating roll played with the left stick alone (*katarai*) and a slow roll executed by the alternation of both sticks (*mororai*). The *shōko* is a small gong, set in a laquered stand. Two long sticks are used to produce three kinds of stroke. The *taiko* is a large suspended drum that comes in three varieties, *dadaiko*, *ninaidaiko* and *tsuri-daiko*. Two heads of ox hide are tacked onto a frame. Padded sticks are used to produce two strokes, a weaker 'female' stroke performed with the left hand (*mebachi*) and a stronger 'male' stroke produced by the right (*obachi*). The *san-no-tsuzumi* is an hourglass-shaped drum played with a single stick. The only other percussion instrument used in *gagaku* is the *shakubyōshi*, a pair of wooden clappers played by the lead singer in the performance of *saibara* and the music for Shintō rituals.

4. PERFORMING PRACTICE AND HISTORICAL CHANGE. Viewed from the perspective of historical development, the key to understanding the structure of *tōgaku* today is the part played by *shō* and *biwa*, the two instruments that most accurately preserve the melodies originally imported from Tang China. Performed extremely slowly, and obscured by unwritten accretions, these ancient melodies have come to assume a structural rather than a melodic role; this role has been likened to that of the *cantus firmus* of 15th century European plainchant masses. They are not, as has sometimes been stated, an 'abstraction' of the melodies carried by *ryūteki* and *hichiriki*, but the historical bedrock out of which these newer melodies evolved.

The melodies carried by the *ryūteki* and *hichiriki* dominate modern *tōgaku*. It is not surprising, therefore, that they are often taken as the key to understanding its structure. These melodies are not, however, part of the legacy from China, having come into being after the end of the Heian period at a period when the *tōgaku* tradition was already in decline. The first signs of this transformation can be seen as early as the 14th century. These new melodies bear no audible resemblance to the original Tang melodies and, unlike the parts carried by *shō* and *biwa*, depart in marked ways from the modal practice of Tang China.

Ex.13*a* shows the earliest surviving version of *Seigaiha*, a piece first mentioned by the Tang Chinese poet Li Bai (Li Po) and performed to this day in the *tōgaku* repertory. This form of the melody, preserved in the 10th-century source *Hakuga no fue-fu*, is probably little changed from that of Tang China. Ex.13*b* shows the form of the melody

Ex.13 The *tōgaku* piece *Seigaiha* as it occurs in historical sources and modern performance
(a) *Hakuga no fue-fu* (966), bars 1–2
(b) *Sango yōroku* (late 12th century), bars 1–2
(c) modern *biwa*, bars 1–16
(d) *Shinsen shōteki-fu* (early 14th century), bars 1–2
(e) modern *shō*, bars 1–16

played by the *biwa* in the late 12th century and ex.13*d* the form played by the *shō* in the early 14th century. While both these later versions exhibit increased amounts of decoration, ornamental practice is circumscribed and supports Chinese modal practice.

In modern performing practice, these melodies are transformed into structural rather than melodic elements. Exx.13*c* and 13*e* show what has become of the melody in the modern practice of *biwa* and *shō* respectively. The first aspect that is transformed is tempo; present-day tempos of *tōgaku* items are about four times slower than they would have been in the 12th century (this is reflected in quadrupling of note values in exx.13*c* and 13*e*). As a result, all but the initial notes of the mordent and suspension figurations executed under a single stroke of the plectrum by the *biwa* (marked by a slur in ex.13*c*) are rendered inaudible in modern ensemble performances; the string has stopped vibrating before the later fingerings are executed. The second transformation involves the addition of unwritten accretions to the original melodic line: the *shō* (ex.13*e*) adds five notes above the original melody note (the original pitches are circled in ex.13*e*) to make six-note cluster chords (*aitake*); the *biwa* (ex.13*c*) adds a drone comprising the pitches of all open strings below that on which the melody is played. The change in tempo, together with the obscuring of the original melodic line through unwritten accretions, contribute to the loss of any aural perception of the original melody from China as it becomes buried within the texture of modern *tōgaku*.

Any doubts that the lines carried today in the *shō* and *biwa* parts were melodies in the 12th century and earlier (rather than structural elements as they are today) were laid to rest by the work of Markham on early *saibara* sources. Early sources frequently claimed that *saibara* melodies were the same as those of certain named *tōgaku* and *komagaku* pieces. Viewed from the perspective of modern performing practice, such claims make little sense, since the melodies of the present-day versions of the *tōgaku*/*komagaku* pieces are clearly different from their *saibara* pairs. Comparison of their forms in Heian period sources, however, clearly reveals their identity.

Just as the evolution of *tōgaku* can be traced from the Heian period to the present, so too can the development of *saibara*. The late Heian forms of *saibara* melodies underwent development through the incorporation into the vocal line of formulae, perhaps related to those of Buddhist chant, in much the same ways as the melodies of *tōgaku* underwent change by the incorporation of new melodic formulae. No analysis of the development of *rōei* or *komagaku* has been undertaken to date. Analysis of *rōei* is hampered by a current lack of research on early notations, and analysis of *komagaku* by the fact that the present-day performing practice of *komagaku* includes neither of the instruments *shō* or *biwa* that might (on the basis of what is known of *tōgaku*) be expected to preserve the original melodies. The absence of these ancient melodies, from which the formulaic melodies of *komabue* and *hichiriki* presumably evolved, effectively cuts modern

komagaku off from its historical roots. Restoration of our understanding of the historical dimensions of *komagaku* can now only be made by reference to textual sources.

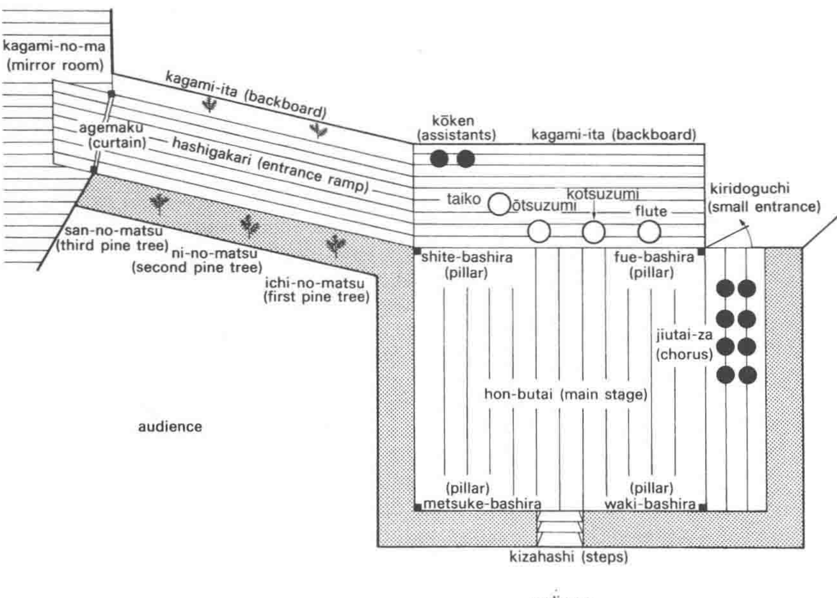
VI. Theatre music

1. *Nō*: (i) History (ii) Performing practice (iii) Chant (iv) Instruments (v) Rhythms (vi) *Kyōgen*. 2. *Bunraku*: (i) History (ii) Performing practice (iii) Musical styles (iv) Tonal system (v) Form. 3. *Kabuki*: (i) History (ii) Performing practice (iii) Functions of the music (iv) Form (v) Musical structure.

1. 'NŌ'. This performance form combines elements of dance, drama, music and poetry into a highly structured stage art. Mainly based in the cities of Tokyo, Osaka, Kyoto and Nagoya, it is performed throughout the country by professional artists (almost entirely men), many of whom are carriers of the tradition as passed down through family lines for numerous generations. There is also a wide following of both male and female amateur performers throughout the country who practise and perform one or several aspects of the form. An art that developed in Japan's medieval period, it has in turn been a major influence on later performance arts, most notably *kabuki* theatre and the music of the *koto*.



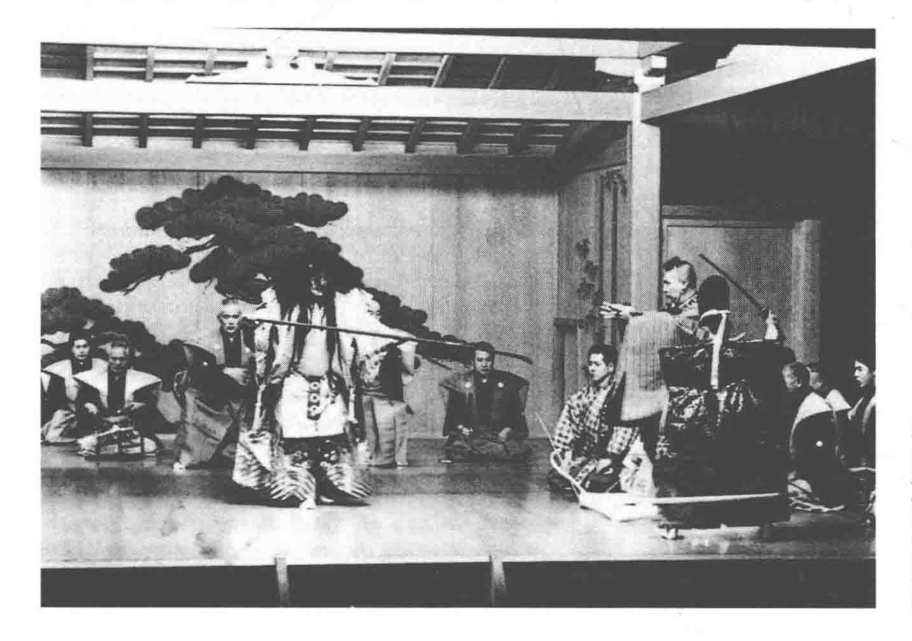
(i) History. *Nō* developed into its present form during the 14th and 15th centuries under the leadership of the distinguished performer-playwrights Kan'ami (1333–84) and his son Zeami (?1363–?1443). Zeami in particular wrote many plays that are still performed in today's classical repertory of some 250 pieces.

Known formerly as *sarugaku*, *nō* began to flourish in the late 14th century when the military shogun Ashikaga Yoshimitsu became the major patron of Zeami and his troupe. Subsequent shoguns also patronized different performers and troupes. In the Edo period (1603–1868), *nō* became the official performance art (*shikigaku*) of the military government. Feudal military lords throughout the country supported their own troupes, and many studied and performed the art themselves.

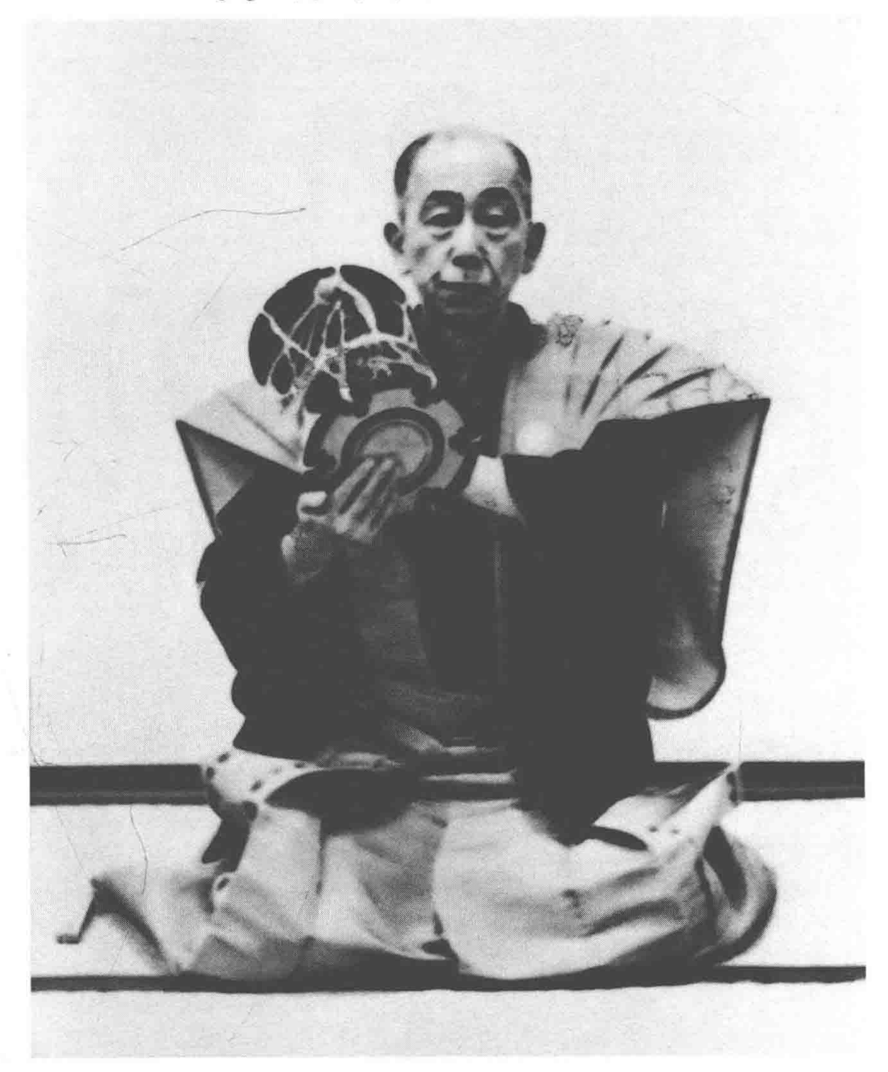
With the societal reforms of the Meiji period (1868–1912), *nō* lost its governmental patronage and was left to fend for itself. However, enough performers regrouped, found private sponsors and began teaching amateurs, that it flourished again. During and immediately after World War II, *nō* once more faced a crisis period in which its continuation was in doubt. Again, however, enough private patrons and amateur students supported professional performers, and the art has since continued to flourish.

There are approximately 1500 professional performers who currently make their living through performing and teaching *nō*. Tokyo boasts six major *nō* theatres, including the National Nō Theatre, which opened in 1983. Most major cities have *nō* theatres or, at least, theatres that can be easily rearranged to accommodate performances. The continuing popularity of summer outdoor torchlight *nō* performances, often with audiences of several thousand people, further attests to the wide respect in which *nō* is held.

(ii) Performing practice. The *nō* stage is square with a ramp leading to it from backstage, over which the characters make their entrances and exits. There is only one curtain, which hangs at the end of the ramp. Stages were formerly outside and covered with a long sloping roof; in the late 19th century, however, most *nō* stages were moved inside a dedicated theatre building (*nōgakudō*), still maintaining the roof above the stage under the roof of the theatre itself and with the stage remaining open on two sides (figs.28 and 29).



28. Stage plan of a nō theatre



The main character of a *nō* play is called the *shite*, who sometimes appears with companion characters called *tsure*. The secondary actor (*waki*) is often a travelling priest whose questioning of the main character is important in developing the story line (fig.29). He also appears with a companion (*waki-tsure*). An interlude actor called *ai* or *ai-kyōgen* also often appears as a local person who gives further background to the *waki* (and thus to the audience) in order to understand the situation of the *shite*. In addition, a chorus (*jiutai*), usually of eight people, kneels at the side of the stage and narrates the background and the story itself, sometimes describing a character's thoughts or emotions or even singing lines for a character. Four instrumentalists (known collectively as *hayashi*) sit at the back of the stage, playing a transverse flute (*nōkan*), an hourglass-shaped drum held at the shoulder (*kotsuzumi*; fig.30), a slightly larger hourglass-shaped drum placed on the lap (*ōtsuzumi*), and a barrel-shaped drum placed on a small floor stand and played with two sticks (*taiko*; fig.31).

There are five categories of play: god plays, warrior plays, plays featuring young beautiful women, miscellaneous plays, notably featuring contemporary characters, including mad-women, and plays featuring supernatural beings, animals or other typical ending plays. During the Edo period, a full day's programme consisted of the initial ritual piece, *Okina*, followed by one play from each category, in the above order. One comic *kyōgen* play would be presented between each *nō*. Though currently quite rare, such a programme would take 10 to 12 hours to complete.

More common are weekend afternoon programmes consisting of two or three *nō* plays interspersed with one or two *kyōgen* plays, or evening weekday programmes

29. Nō performance with shite (principal actor) and waki (second principal actor) in the foreground, and instrumental ensemble behind, including (left to right) taiko (barrel drum), ōtsuzumi and kotsuzumi (hourglass drums), and nōkan (flute), with the jiutai (chorus) to the right

30. Kotsuzumi (hourglass drum)

consisting of one or two *nō* plays preceded or interspersed with one *kyōgen* play.

Plays are either of one act (*ba*) or two, depending on the number of times the *shite* makes an appearance. These acts are in turn divided into scenes (*dan*). In the most formal structure, an act is divided into five scenes: *waki* entrance, *shite* entrance, *waki-shite* exchange, action of the *shite* and the departure of the *shite*; however, this exact structure of scenes is rare. Scenes in turn are broken into the most important building blocks, known as *shōdan*. Each *shōdan* has a name designating poetic, musical and sometimes kinetic forms. For example, *ageuta* generally features six to ten poetic lines of 7+5 syllables each, and has a standard, matching musical rhythm (*hiranori*) sung mainly in the high register. *Kuse*, on the other hand, usually features poetic lines that are occasionally of 7+5 syllables but will often break from that structure and become more complicated (see §(v) below). Kinetically, many *kuse* follow typical floor patterns that create triangles, zigzags and circles, all with numerous variations particular to the play.

(iii) Chant. *Nō* chant (*utai*) can be divided into three types: melodic (*yowagin* or *wagin*), dynamic (*tsuyogin* or *gōgin*) and stylized speech (*kotoba*). Melodic chant is the style closest to the concept of song. It is based on three pitch areas (high, medium and low) in which the central pitches of each are, in principle, a 4th apart. Also featured is an embellishment pattern with a pitch approximately a minor 3rd above the high pitch. The melodies created follow typical structures within a segment. Melodic movement between the medium and low pitches is direct, although moving from the medium to the high generally requires passing through an auxiliary pitch between the two, while moving from the high back to the low involves rising to an auxiliary pitch above the high pitch.

Dynamic chant is a forceful style that involves different breath control to melodic singing and results in strong vocal oscillations along with indefinite pitches, which roughly follow a set manner of rise and fall. In general, a sense of tonality is difficult to perceive in dynamic singing, though in some schools of chant it can be described as two central pitches a minor 3rd apart, with several auxiliary pitches above and below. Dynamic chant tends to be used by forceful characters or in dramatically dynamic or intense situations.

Stylized speech follows a typical model that spans an entire phrase of text. The underlying model begins low, gradually rises in pitch over several syllables, then drops

31. Taiko (barrel drum)

again while approaching the end of the phrase. This rise and fall follows free microtonal increments; it is more marked for strong characters or characters expressing heightened emotion, and gentler for female or old male characters.

(iv) Instruments. The two hourglass hand drums (*tsuzumi*), the larger *ōtsuzumi* (also *ōkawa*) and the smaller *kotsuzumi* are the most prominent instrumental accompaniment. The bodies are made of wood, usually cherry, which is carefully lacquered. Each has two horsehide heads that are stretched over hoops and then lashed to each other. Before each performance the *ōtsuzumi* drumheads must be heated and dried before being lashed tightly against the drum body, thus creating its characteristic high, hard crack when struck. The *ōtsuzumi* player often has a newly-heated drum brought to him midway through a play in order to maintain the sound. The *kotsuzumi* drumheads, on the other hand, are more loosely lashed against the drum body and require moisture to create their fuller, reverberating sound; this is maintained by sticking pieces of traditional paper on the back drumhead, which the player dabs with saliva and blows on throughout the performance.

When played, the *ōtsuzumi* is held on the left lap and struck horizontally with the right hand, while the *kotsuzumi* is held at the right shoulder and struck from below with the right hand. Their drumstrokes are combined with drum-calls (*kakegoe*) to form a variety of patterns that may accompany the chanted text or instrumental sections featuring a flute melody. The drum-calls serve as signals between the drummers and the singers (or the flute) to keep everyone together; they can also signal changes in tempo or dynamic. With a few rare exceptions, the hand drums perform together in all metred rhythmic ones and many unmetred segments (see §(v), below). The *ōtsuzumi* tends to be the leader of the two, since its drum-calls and its strokes are more forceful.

The *nōkan* (or *fue*) flute is the sole melodic instrument. Made of bamboo, it has a narrow pipe (*nodo*, literally 'throat') inserted between the blowhole and the first finger-hole. This upsets the normal acoustic properties of the flute pipe and is responsible for its 'other-worldly' sound quality. It is used in both metred and non-metred rhythmic styles in instrumental entrance music and instrumental dance segments. It is also played in free rhythm (*ashirai*) along with the chanted text to heighten

or expand emotion. When played in unmetred segments, the flute plays set patterns improvisatorially. The melody of the flute has no specific pitch relationship with the melody of the singing, although there are some similarities in the general melodic contours of the two.

The *taiko* barrel drum (*see* KUMI-DAIKO) is the final and fourth instrument of the *nō* ensemble, struck from above with two thick cylindrical sticks. It is used in just over half of the plays in the traditional repertory, and then mainly in the latter half of the performance. Plays that use *taiko* tend to feature non-human characters such as gods, heavenly beings, demons and beasts. As with the two hand drums, the *taiko* player employs drum-calls which intermesh with the drum-calls of the hand drums. These also serve as signals among the drummers and to the singers or dancers.

(v) Rhythms. *Nō* clearly distinguishes between metred rhythmic chant or flute melody (*hyōshi-au*), and non-metred or 'free' rhythmic chant or flute melody (*hyōshi-awazu*). These rhythms are 'matched' in the sense that the rhythm of the chant or flute matches that of the drums, or 'non-matched', where there is no exact correspondence between them, whether or not the rhythm of the chant or flute is tied loosely to the drums.

There are three kinds of 'matched' rhythmic chant, all of which are based on an eight-beat system (*yatsu-byōshi*). The first, *ōnori* ('large rhythm'), is based on a system of one syllable of text per beat, where the beats are basically of equal time value (with a degree of acceleration or retardation as required by the drama). Variation of this eight syllables to eight beats is common and follows set rules. *Ōnori* is full and expansive and is often used at the end of a piece to establish a sense of closure. The use of *taiko* during this section is also quite common.

The second type of 'matched' rhythmic chant is *chūnori* ('medium rhythm'), which is based on two text syllables per beat, though again variation exists. Another name for this kind of rhythm is *shura-nori* ('warrior rhythm'), and it is most commonly used in passages describing battles. This kind of chanted rhythm is accompanied by the hand drums only.

The third and most unique type of 'matched' rhythm in *nō* is *hiranori* ('standard rhythm'), also called *konori* ('small rhythm'). It is the most frequently used 'matched' rhythm and also the most complex. The text in *hiranori* is based on poetic phrases of 7+5 syllables (*shichi-go chō*). These 12 syllables are distributed in a set manner over the eight beats of the musical phrase. This distribution takes two forms, depending on the patterns that the drums play. In the *mitsuji* ('three ground') form, the chanted syllables are sung without elongation as the hand drums play sparse patterns in tandem.

The second form of syllabic distribution in *hiranori* is the *tsuzuke* ('continuous') form, in which three of the chanted syllables are doubled in length and a rest added. The result is the equivalent of 16 syllables that are evenly divided over eight beats. The drums play interlocking patterns. The straight, even-pulsed quality of this rhythm makes it easier for the listener to count the eight beats. The use of one or the other of these two forms of *hiranori* depends on the patterns of the drums: if the drums play the sparse patterns of *mitsuji*, the chant will naturally be in *mitsuji* as well, and likewise for *tsuzuke*. Greater complexity occurs due to the many variations of the poetic metre: syllable lines of 7+4, 6+5, 4+6 etc. demand changes in the embellishment and/or elongation of syllables.

There are two types of 'non-matched' rhythm, which are defined by the drumming style that accompanies the chant. In *nori-byōshi* ('riding rhythm'), the drum rhythms have a clear and relatively even pulse. In *sashi-nori* ('inserted rhythm') the rhythmic pulse of the drums is purposely made uneven or blurred. In both cases, the drums maintain a clear correspondence among themselves.

(vi) Kyōgen. This classical comedy theatre balances the more serious themes of *nō*. While *nō* is mainly music-based in nature, *kyōgen* is largely dialogue-based, though a number of songs and dances exist which tend to mimic the chant and dance style of *nō*. The two are traditionally performed alternately in the same programme, and they share a common heritage; in general, *kyōgen* is also inferred when speaking about the world of *nō*. In addition to their own *kyōgen* repertory of comic plays, *kyōgen* actors always appear in the interlude (*ai*) roles in *nō* plays, which are usually not comic in nature. Similarly, *nō* instrumentalists also sometimes appear in *kyōgen* plays, though their participation is not nearly as complex as it is for *nō*. The vocal and movement training methods of the two forms are very similar.

2. 'BUNRAKU'. A general term applied to all major forms of traditional Japanese puppet theatre, and the source of many of Japan's most famous plays and most powerful narrative music.

(i) History. The term *bunraku* is derived from the stage name (Uemura Bunrakuken or Bunrakken) of Masai Kahei (1737–1810), who brought a puppet tradition from Awaji Island to Osaka. In 1811 his successor, Bunrakken II, set up a theatre at the Inari shrine in Osaka; in 1872 the same company built a theatre called the Bunraku in the city's Dōtonbori entertainment district, where there had been other puppet theatres since 1684. In the 20th century *bunraku* became the general term for such theatres. Under other names, puppetry in Japan can be traced back to the 12th century, its earliest forms possibly reflecting Asian continental influences and shamanism as well as indigenous religious functions. The major musical genre relating to *bunraku* is *jōruri*, which originated in the narration of the 15th-century *Jōruri jūnidan sōshi* ('Tale of Princess Jōruri in 12 episodes'). As this story and other musical narrations developed, they came to be known generically as *jōruri*. When such stories were accompanied, the first instrument generally used was the pear-shaped lute, *biwa* (see §II, 3 above). In the 16th century this instrument was replaced by the three-string plucked lute, *shamisen* or *samisen* (see §II, 6 above). In the early 17th century narrator and *shamisen* accompaniments were combined with puppet plays, first in Kyoto and then in Edo (now Tokyo).

After the great fire of 1657 in Edo, the tradition moved to Osaka. There the most famous musical puppet drama tradition began in 1684 at the Takemoto theatre with *Yotsugi Soga* ('The Soga heir'), a historical play (*jidai-mono*) by Chikamatsu Monzaemon (1653–1725) set to music by TAKEMOTO GIDAYŪ. A rival theatre was opened by Toyotake Wakadayū in 1703, the year in which Chikamatsu and Takemoto presented their first *sewa-mono* ('modern' play), *Sonezaki shinjū* ('The double suicide at Sonezaki'), which dealt with a young merchant

and a courtesan instead of historical or magical figures. The music of Takemoto was called *gidayū-bushi* to differentiate it from the many other *jōruri* genres (see §II, 6(ii) above).

In puppet theatres of the early Edo period (1603–1868) the musicians were placed backstage or behind a bamboo curtain forward of stage-left. The puppets were operated by one man from below. In 1705 both the operator and the musicians were brought into view of the audience, and in 1734 the three-man puppets of today were brought into use, one man handling foot movements, another the left arm and the third controlling the head and right arm. Through the use of internal strings and manipulative skills, extremely subtle dramatic actions are possible with such puppets.

Subsequent decades reflect continual innovations by puppeteers, playwrights and musicians as well as cycles of decay and restoration. *Gidayū* music was a popular amateur tradition outside the puppet theatre, and concerts of female performers (*onna gidayū* or *musume gidayū*) flourished from the 19th to the mid-20th centuries. It later revived as part of the post-World War II feminist movement in Japan. Since the mid-20th century *bunraku* has been supported primarily by government subsidy and by devotees; the National Bunraku Theatre is located in Osaka. All major texts are in print, and many amateur and professional performances can be seen. Recordings of many famous performers also exist.

(ii) Performing practice. *Gidayū* music is performed in four ways: as accompaniment for *bunraku*, in *kabuki* theatre, in concerts or recitals, and as dance accompaniment. A normal performance is given by a singer (*tayū*) and one *shamisen* accompanist (fig.32), although large groups may appear in dance sections. The singer kneels before a sturdy music stand (*mirudai* or *kendai*) on which the text is placed. Books of complete play texts are known as *shōhon*, *inbon* or, more commonly, *maruhon*. The latter term means 'round book' because of its florid 18th-century script. The music stand usually holds a *yukahon* ('use book') that contains only the text of the particular scene being performed. There also are *keikobon* ('lesson books') that are used for practice or for amateur lessons. Except in beginners' books, melodic notation is not found, although occasional rubrics appear alongside the text that are either singing symbols derived from *nō* drama or names of patterns, style or pitch levels (see below). The *shamisen* or, in Osaka dialect, *samisen* player is to the left of the singer. The *gidayū shamisen* is the largest of the traditional forms, with a thick neck (*futozao*), weighted bridges and a thick ivory plectrum. In theatrical performances the musicians are often placed off-stage-left on a revolving dais that turns to enable a new set of performers to replace the first two halfway through a scene: the performance is very tiring for the *tayū*, as he speaks all the roles of the play as well as singing all the music. Only men perform in the *bunraku* theatre.

Ex.14 Part of the inn scene from the play *Shōutsushi Asagao banashi*; transcr. W. Malm

Translation:
One year, when I was firefly viewing on the Uji River, I fell in love with a man. Even time to talk was short on that summer night so we made vows and parted reluctantly. I didn't even have time to get his address. Alas.

(iii) Musical styles. The four basic styles of *gidayū* music are instrumental (*ai*), declamatory (*kotoba*), lyrical (*ji*, *jiai* or *fushi*) and parlando (*iro*, *ji iro* or *kakari*). These four styles interlock continually, as shown in ex.14, a transcription of an excerpt from the inn scene (*Yadoya no dan*) of the play *Shōutsushi Asagao banashi* ('The tale of Asagao the lookalike'). Instrumental sections vary from short units (e.g. bar 19) to longer solos, the latter often classed as *ai-no-te*, as in other *shamisen* and *koto* genres. Many instrumental passages have names and are used for specific musical or dramatic purposes. For example, there are *naki* patterns for various kinds of crying, and varieties of *iri* often precede high vocal cadenzas. The instrumental preludes and postludes to scenes can be equally informative. Theoretically, a type of *shamisen* music called *okuri*, played at the end of one scene in a play or, in a different form, at the start of another, indicates that the two scenes are set in the same place, while the use of *sanjū* patterns means that the second scene is in a new location. The nature of the character on stage or about to enter may also be conveyed by *shamisen* music.

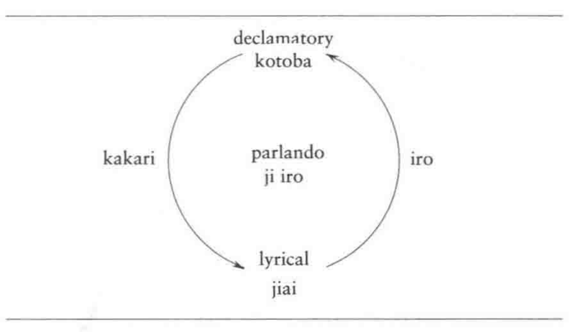


Table 4 is an abstraction of the general movement and levels of the three styles of vocal music. The general design

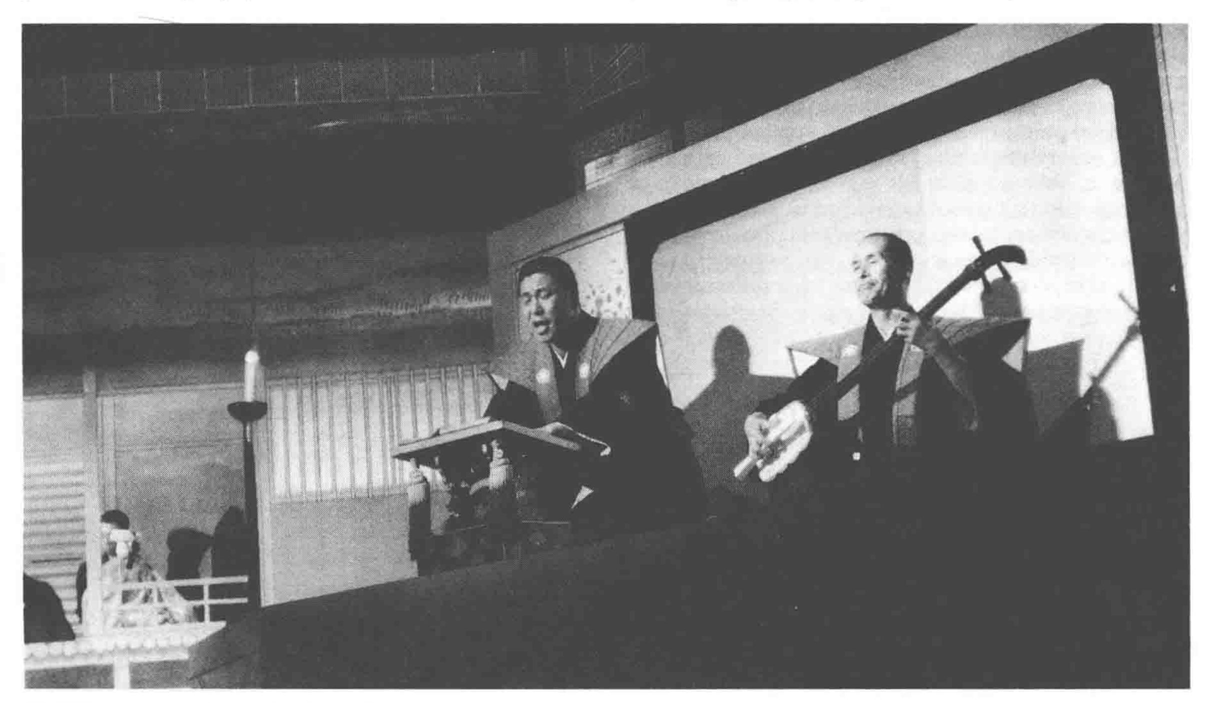
for a major musical section (*sawari*) of a play is *A* – lyric or parlando units, *B* – a speech section returning to lyric and parlando passages, and *C* – a full cadence. Ex.14 illustrates an *A* section.

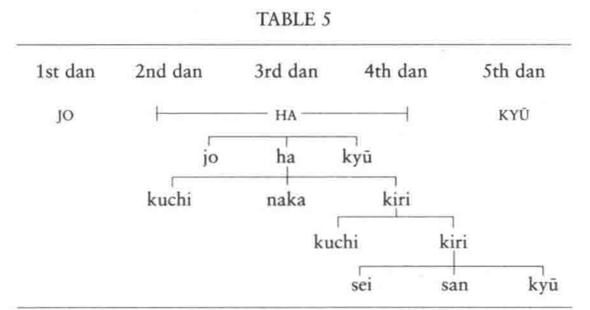
The opening three bars are the end of a monologue, spoken by the *tayū* in the voice style of a former court lady who, having cried herself blind over the loss of her lover, is now reduced to a life of performing music for inn guests. In this scene she is telling the story of her sad life to a guest who, unknown to her, is her former lover. The interpretative challenges in such declamatory passages are both dramatic and musical, for one essential point is the silent interval (*ma*) between phrases and the timing of the words. Thus the hardest moment is the rendition in bars 2 and 3 leading into the word *koibito* ('lover'). The passage in bars 4–7 is marked in most textbooks as *kakari* ('connection'), for it leads from declamation (*kotoba*) into lyricism (*jiai*) as seen on Table 4 and in ex.14. As noted, additional performance instructions can be found beside the text, though not specific melodic notations in the Western sense. For example, the next passage (bars 8–10) is sometimes marked *ji naka*, implying that the line is becoming lyrical at a lower pitch range. The term *haru* may be found at the start of the next passage (bar 11), which may imply not only a higher pitch level but also a more taut voice quality. The meaning of such terms is only learnt by lessons with a master. The final *shamisen* passage (bar 19) does not resolve to the pitch centre E, thus leading the music back to speech in a fluid *iro* manner and the beginning of section *B*. If it had cadenced fully it would have been called a *tome* (ending). From this short excerpt one can sense the combination of conventions and specific interpretations that make full *bunraku* performances or *sawari* recitals as dramatic as Western opera, though the idiom is quite different.

(iv) Tonal system. The *yō* and *in* scales (*see* §I, 5) predominate in *gidayū*, as in most *shamisen* music. The



flow between tonalities is determined by changes of one pitch within a 4th (ex.15). Melodic tension is created by

Ex.15 The *gidayū* tone system



using pitches above or below tonal centres (see the uses of F♯, D, C♯, C and A in ex.14). The basic pitch of a given performance is determined by the singer. Using the B of ex.14 as an arbitrary tonal centre, the basic sonic vocabulary of *gidayū* and words attached to pitches in it are shown in ex.15. Only *gin* and *kowari* are pitch specific. Terminology in *gidayū* is as fluid as its structure.

Performers often refer to 'Eastern-style' (*higashi-fū*) passages that favour F and C and 'Western-style' (*nishi-fū*) ones that favour F♯ and C♯. The terms originally referred to the Toyotake and Takemoto theatre styles respectively, but today both may occur within a given piece. In actual practice, however, the intonation of these auxilliaries is quite flexible as compared with other *shamisen* genres, and portamenti may further obscure

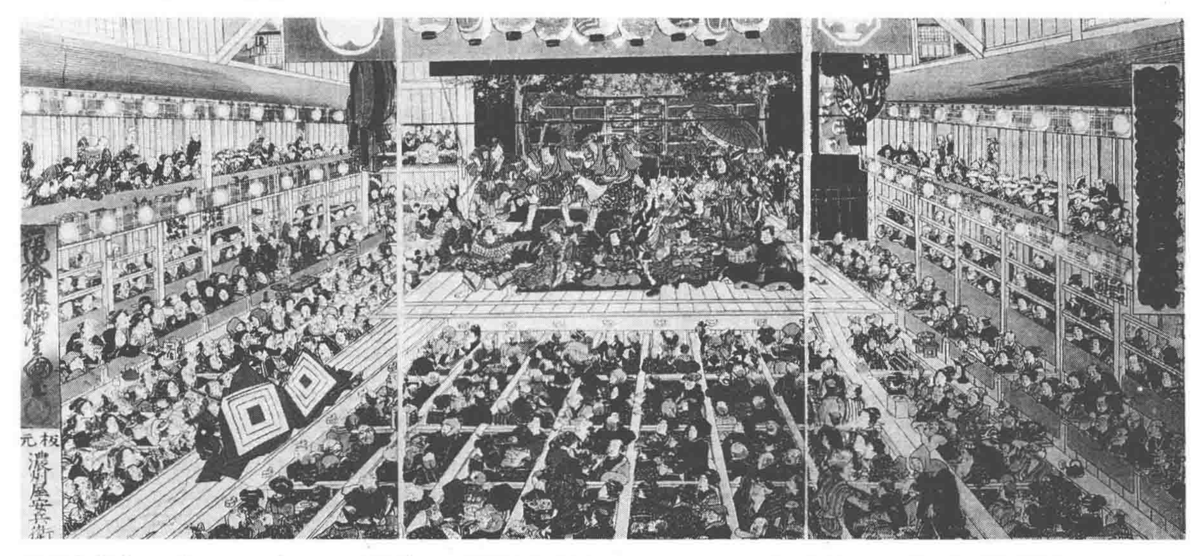
32. Gidayū music, with tayū (singer) and shamisen, performed as accompaniment to bunraku puppet theatre

TABLE 5

modal analysis while adding colour to the performance. Such pitch variability may reflect both a chanter's (or his teacher's) preference and sometimes the mood of the passage. Often a sadder passage will tend towards the *in* mode, with F and C replacing their sharped variants.

(v) Form. Period plays (*jidaimono*) traditionally have five sections (*dan*), and genre plays (*sewamono*) have three acts (*maki*). Three-part divisions of entire plays or sections are common. The terms, *jo*, *ha* and *kyū* ('introduction', 'breaking away', 'hurried') are frequently used for these (see §II, 4(iii)(b) above), although *jōruri* nomenclature has added *sei*, *san* and *kyū* ('peaceful', 'mountainous', 'rushing'), and *kuchi*, *naka* and *kiri* ('opening', 'middle', 'cut'). The first two sets of words are general aesthetic terms, whereas the third refers to subdivisions of a given scene. For example, the traditional divisions of a period play might be as shown in Table 5: each *dan* may be subdivided into various combinations of the three types of term, as shown in the third *dan*. The third *dan* is chosen, as it is considered to be the climax of a play. The *kiri* is the climax of a scene or *sawari*. In the above outline the *kiri* (which may be an hour long) is further subdivided into a *kuchi* and a *kiri*, and that sub-*kiri* comes to a dramatic ending in a *kyū*. Under this system the most important moment in the play would thus be the *kyū* of the *kiri* of the *kiri* of the *ha* of the *ha* of the third *dan*! Such distinctions are seldom the concern of the musicians or the audience, although the term *kiri* is well known to them all. The term *dan* is applied generally to whatever portion is performed and so cannot be viewed in such an architectonic manner when used as a title. Moreover, although it is felt that the pitch centres of various *dan* and subsections should occur in a given order, complete plays are rarely performed, and thus such tonal and formal points are lost. One now normally sees a potpourri of sections or subsections from different plays in one programme. Although the original theatrical design is gone, there remains a rich repertory of artistic dramatic excerpts performed in a unique solo narrative form.

3. 'KABUKI'. Japanese theatrical form popular since the Edo period (1603–1868) and the source of many major musical genres.



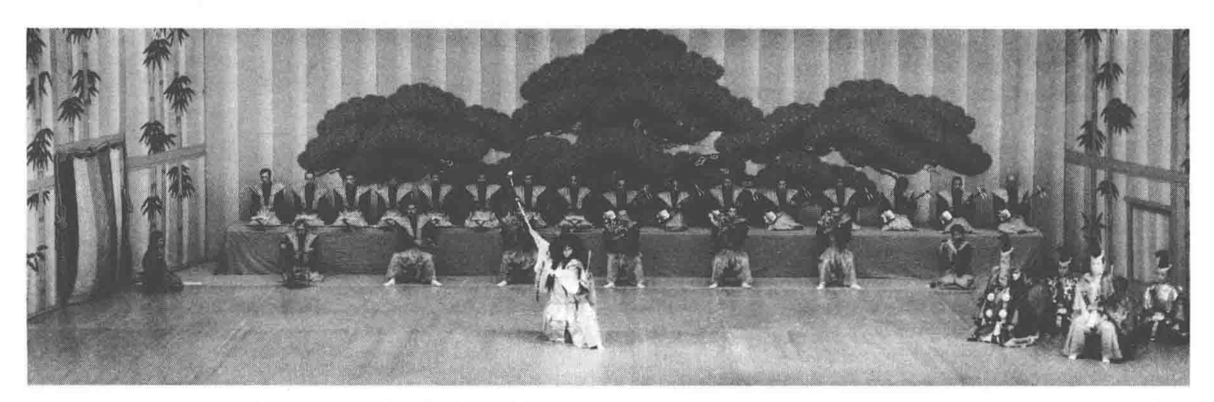
(i) History. In the late 17th century the term *kabuki* was used to refer to something unconventional, such as clothing or social behaviour. The word was first connected with the theatre in a source of 1603 that mentions an unusual dance (*kabuki odori*) supposedly performed in 1596 by Okuni, a female dancer from the Izumo Shintō shrine. Using a *nō*-style stage set on the Kamo river-bed in Kyoto, she performed a lively version of a Buddhist festival dance, the *nenbutsu odori*, to the accompaniment of the drums and flute of the *nō* and a small Buddhist gong that she played herself. The popularity of the entertainment was enhanced by additional folkdances and pantomimes. Such performances subsequently spread through the country as female (*onna kabuki*) or prostitute (*yūjo kabuki*) 'modern' theatre. In 1629 the government banned them, although the rival genre, the *wakashū kabuki* ('young-boy show'), continued. These forms of popular theatre had developed rapidly, the major musical change being the addition of the three-string plucked *shamisen*, as the chief melodic instrument (see §II, 6 above).

The banning of the 'young-boy' *kabuki* in 1642 led to the use of the term '*yarō*' ('male-adult') *kabuki* and to pantomime comedy (*momomane kyōgen zukushi*). However, audiences preferred the term *kabuki*, and as the drama matured, the Chinese ideographs representing music, dance and acting were chosen to write it.

Traditional *kabuki* has remained a genre performed entirely by males, the role of *onnagata* (female impersonator) being highly respected. It was cultivated and popularized by itinerant and local companies as well as in the permanent theatres of big cities such as Osaka, Kyoto and Edo (now Tokyo), and by the 19th century there was an established repertory of 18 great plays and a tradition of famous playwrights, 'hit' shows and star actors (fig.33). Much of the tradition survived into the 20th century, continuing alongside regional variants and new styles (some of which include actresses and new music). Most major *kabuki* companies are owned by film corporations, but in 1965 a government-subsidized national theatre was established, which regularly shows *kabuki* (among other traditional genres) and includes a training school for *kabuki* performers.

There are two main kinds of *kabuki* play: *jidaimono*, or pseudo-historical period pieces, and *sewamono*, stories dealing with plebeian life of the Edo period. There are also modern plays. Traditional plays are seldom performed complete, as they may last for a day or more. Normally the Kabuki-za in Tokyo stages two programmes a day, each consisting of single acts from plays and often dances from other acts. Some scenes have no music at all, but only the content of the *kabuki* dramas with music is discussed here.

(ii) Performing practice. *Kabuki* music is played by onstage (*debayashi*) or offstage (*geza*) groups. Both use percussion and flutes and perform different genres of *shamisen* music, the most commonly used being *gidayū*, *nagauta*, *kiyomoto* and *tokiwazu* (see §II, 6(ii) above). Players of each genre belong to different guilds and maintain separate rooms backstage. In plays derived from the puppet theatre (*bunraku*), the *gidayū* singer and *shamisen* player, known collectively as the *chobo*, kneel on a dais stage-left or behind a bamboo-curtained alcove above the stage-left entrance. In pieces of pure dance using *nagauta* or in works derived from *nō* plays, the onstage ensemble traditionally consists of a row of singers and *shamisen* (up to eight of each) on a red dais at the back of the stage, with the drums and flute of the *nō* (known collectively as the *hayashi*) on the floor in front of them (fig.34). Up to four *kotsuzumi* (hourglass drums held at the shoulder) and two *taiko* (drums played with a stick) may be used, although only one *ōtsuzumi* (side-held hourglass drum) and one flute are usual. The flautist uses both the *nō* flute (*fue* or *nōkan*) and a bamboo flute of folk origin (*takebue* or *shinobue*). If more than one type



33. Kabuki theatre during a performance of 'Shibaraku' (1714) by Ichikawa Danjūrō II: woodcut by Utagawa Toyokuni I, c1800

of *shamisen* music is used on stage, the arrangement of the musicians is determined by the layout of the set. In such mixed performances (*kakeai*) the genre of the performers can be identified not only by their style but also by the colour and shape of the singers' music stands.

The offstage or *geza* ensemble is normally positioned in a room at the stage-right corner, from which its members can see, through a bamboo curtain (*kuromisu*), the stage or the *hanamichi* (entrance ramp) that runs from the back of the auditorium to the stage. The *geza* ensemble may use the instruments and singers from the *nagauta* ensemble mentioned above, as well as many other percussion combinations. The *ōdaiko*, a large barrel drum with two tacked heads, and a temple bell (*kane*) are frequently used, as are instruments of folk or festival origin such as the hand gong (*atarigane*), the *okedō* and the festival *taiko* stick drums. Horse bells (*orugōru*), cymbals (*chappa*) and a xylophone (*mokkin*) may also add appropriate dramatic effect to traditional *kabuki*.

More modern variants of *kabuki* include the genre called Super Kabuki, created by the actor Ichikawa Ennosuke in 1986. This uses a fast-paced staging and adds to the traditional musical elements a wide range of other instruments (*koto*, *shakuhachi*, *biwa* and even some Western instruments) playing new compostitions.

(iii) Functions of the music. Offstage music, like film music, may give sound effects, set the mood, support stage actions or imply unspoken thoughts. Examples of sound effects are the use of Buddhist bells and perhaps a sung prayer to indicate that a scene is set near a big temple, or the use in a seashore scene of a pattern on the *ōdaiko* drum representing the sound of waves rolling in. Mood and location can be specified further by an offstage song, often sung before the curtain is pulled aside, which tells the audience that the scene is set in a geisha house, in a palace or on the Tōkaidō road between Kyoto and Edo. Certain *shamisen* interludes (*aikata*), when combined with the appropriate *ōdaiko* drumbeats, can imply such contexts as cold weather, rain or a dark summer night. A correctly beaten drum indicates approaching danger as 'naturally' as the tremolo diminished chord does in traditional Western drama. Dialogues and soliloquies may be underpinned by *meriyasu* (*shamisen* patterns), which are chosen for their correspondence to the text or the character. Unspoken thoughts can be expressed by *meriyasu* songs sung offstage while the actor broods, writes a farewell letter, or otherwise moves without speaking. More active stage events, such as fights (*tachimawari*) and formalized slow-motion fight dances, have specific instrumental accompaniment (*dontappo*).

34. Kabuki performance with onstage ensemble: (back row, left to right) eight singers and eight shamisen (lute) players; (front row, left to right) taiko (barrel drum), ōtsuzumi (hourglass drum), four kotsuzumi (hourglass drums) and fue (flute)

There are over 150 *geza* songs and an equal number of *shamisen* interludes and percussion patterns. The musicians know which devices to use for each situation, and the names of such devices are found in performance books (*tsukechō*) provided for each production by the chief *geza* musician. The audience, like its Western counterpart, normally cannot name or describe the structure of a given signal but through familiarity with the genre can feel the sense of such musical events in relation to the drama.

Onstage music is generally direct narrative commentary or dance accompaniment. The narrative style (*katarimono*) is related to that of *bunraku* (see §II, 4(iii)(b) above), except that dialogue is spoken by the actors, not the narrator. The dance accompaniment is adapted to the choreographic needs of the performer and often requires special offstage effects to enhance the mood.

(iv) Form. *Kabuki* plays and dances, like Western operas and ballets, have an endless variety of structures dependent on plots and actions. The most typical form of dance generally maintains the tradition of a tripartite division (*jo*, *ha* and *kyū*; see §III above), although with different nomenclature.

The *deha* ('coming out') contains an introduction (*oki*) and a travelling (*michiyuki*) section. The nature of the character, the setting and the means of entrance (trapdoor, ramp, stage entrance) influence the musical style of both these sections. The *chūha* (middle section) often has a highly lyrical, romantic passage called the *kudoki* and occasionally some story-telling (*monogatari*). The major dance section (*odori ji*) is essential. The exit section (*iriha*) involves greater musical and choreographic action (*chirashi*) and a standard finale (*dangire*). Such a dance piece may be 15 to 40 minutes long, and there are great variations in the forms of specific pieces.

(v) Musical structure. The instrumentation of a *kabuki* dance piece varies according to the needs of the form and the dance. The singer and the *shamisen* perform the melodies; the use of the drums and flutes is more complex. Lyrical sections are often supported by the bamboo flute. The *nō* flute is used to play patterns totally unrelated to the *shamisen* melody: it sets the mood or, with the *taiko* stick drum, performs parts of patterns derived from *nō*. The *taiko* itself is used to play either named, stereotyped patterns originating in the *nō* tradition or units created for *kabuki*. The latter tend to reinforce the rhythm of the *shamisen* music, while the former sound 'out of synchronization' with it, although they match the melody of the *nō* flute if it is also being played. Such deliberate disjunction helps to create the necessary sense of forward motion and progression. The two *tsuzumi* drums are similarly used; often they directly support the *shamisen* rhythm in a style called *chirikara*, named after the mnemonics by which the music is learnt. When the drummers play patterns derived from *nō*, they, too, sound out of step with the main melody. Sometimes, therefore, the *tsuzumi* and *shamisen* are in one rhythmic conjunction, while the *taiko* and *nō* flute are tonally, melodically and rhythmically in a different cycle. This can be called a 'sliding door' effect, for the units each have a fixed internal structure but do not necessarily begin and end together. The effect is analogous to that of the harmonic settings of Western traditional music, although the sound is very different. As in Western harmonic progressions, the tensions are released at main cadence points.

VII. Folk music

Until a new phrase, *'minzoku ongaku'*, translated from English and German, came into use in the mid-20th century, there had been no exact word in Japanese for 'folk music'. There are two meanings of *minzoku ongaku*, each written differently in Chinese characters but pronounced alike: music of various nations and folk music of a particular nation. The connotations of these two words correspond exactly to the German terms for studies of human traditions, 'Völkerkunde' and 'Volkskunde'. *Minzoku ongaku* in the latter sense is now fairly well understood to denote the kind of music that is played in villages and towns by non-professional musicians.

Japanese folk music can be seen as having three major divisions: *warabe-uta* (traditional children's game songs); *min'yō* (folksongs); and music for *minzoku geinō* (folk performing arts).

1. History. 2. *Warabe-uta*. 3. *Min'yō*. 4. *Minzoku geinō*.

1. History. One of the customs of the common people in the early 8th century CE was the singing of *utagaki*, or *kagai*, courting songs between men and women sung during spring and autumn festivals. This was documented by the writers of the *Fudoki* (compiled in 713), the official documents containing cultural and topographical descriptions of the various regions of Japan. Similar folk traditions, usually combined with agricultural rites, were observed until the mid-20th century by villagers in various places in Japan.

The two oldest chronicles, *Kojiki* ('Record of ancient matters', 712) and *Nihon shoki* ('Chronicles of Japan', 720), contain the texts of early folksongs called *hinaburi* ('rural manner'), *sakahogai no uta* ('songs of the drinking rite') and *wazauta* (divination songs and songs of political events). Twenty-one songs from the two chronicles are also found in the *Fudoki*, where seven more songs are recorded. Although the texts have various metrical forms, the form with 5+7+5+7+7 syllables is most common among these songs: when the first comprehensive anthology of songs, the *Man'yōshū* (20 volumes), was edited in the latter half of the 8th century, this metrical form was found to be almost exclusively the basis for about 4500 songs dating from the 4th century to the mid-8th century. Among these were many songs of everyday tasks such as cloth-bleaching, rice-pounding, corn-grinding and sake-brewing. The song texts with 5+7+5+7+7 syllables are usually considered the most typical of Japanese poems and hence are called *waka* ('Japanese song'). These were actually sung in early days, but by the Heian period (794–1185), they had become purely written poems occasionally chanted or recited in a stylized manner. These still survive and are performed every year at the imperial New Year poetry party.

The musicians of the imperial palace also preserve and often perform the *kagura* and *saibara* repertories, which are related to the folksongs of the Heian period. The former includes the ceremonial rites, specifically called *mi-kagura* (see §V, 1 above), performed by court musicians for the Shintō deities. Although it has been highly stylized, with *gagaku* influence, and respectfully arranged as an imperial rite, *kagura* reveals many elements of folksong style, such as leader-chorus (responsorial) singing and the alternate singing of two groups. *Saibara* has an even more direct relationship with the folksongs of the period. There are several theories concerning its origin, including that of Kawaguchi Ekai (1866–1945), who insisted that *saibara* originated in the Tibetan love-song called *saibar*. It is, however, generally believed that *saibara* consisted of a group of folksongs from central and western Japan that were chosen by the aristocracy for singing and arranged for performance to the accompaniment of *gagaku* instruments. This tradition had been almost forgotten by the middle of the Kamakura period (1192–1333) but was partly reconstructed (in greatly modified form) in the 17th century and more so in the 19th and 20th centuries. Within the aristocracy there was yet another group of folksongs, called *fuzoku*, from eastern Japan; these remained in complete obscurity after the Middle Ages. However, an imperial court musician, Yamanoi Motokiyo, has deciphered notation from an old scroll dated 1186 containing 14 *fuzoku*, which reveal the interesting fact that most of the songs are based on the scale structure that underlies modern folksongs, the *min'yō onkai* (see §3 below).

During the Middle Ages, that is the Kamakura and Muromachi (1338–1573) periods, many kinds of folk performing arts came into vogue. Some, such as *dengaku*, *sarugaku* and *kusemai*, were later performed by the specialized professionals who were the first in Japanese history to create a new artistic form, the *nō* theatre (see §VI, 1 above). Many others, such as *bon-odori* (folkdances for the late summer ancestral festival) and *hayashida*

(rice-transplanting ritual performance), have remained folk performing arts even in the 20th and 21st centuries. In addition, many folksongs were recorded in a few anthologies of *kouta*, short songs of the time. Some of them can still be found among the texts of 20th-century folksongs.

Most modern folksongs date back to the Edo period (1603–1868), however. Although the townspeople were more consciously creative than the villagers in their musical art forms, the rural populance was also very productive during that period. In the early 17th century a genre of Japanese theatre, *kabuki*, was created by Okuni, a shrine maiden, who later organized a group of entertainers and dancers, both men and women, to perform *furyū* dances on stage. Like the *nō* theatre, *kabuki* was in its early days deeply rooted in folk tradition (see §VI, 3 above).

The *shamisen* and a short version of the *shakuhachi* (flute) known as the *hitoyogiri* came into vogue among the people in the latter half of the 17th century. In 1664 Nakamura Sōzan, a blind musician, wrote a book entitled *Shichiku shoshin-shū* ('Collection for beginners on silk and bamboo'); its three volumes were intended for beginners on the *hitoyogiri*, *koto* and *shamisen*, one volume for each. He used the popular songs and folksongs of his time as studies for the instruments; among them are many *bon-odori* songs, some of which still survive.

There have also been several anthologies of folksongs; the most informative on work songs of eastern and central Japan, including Hokkaidō, is *Hina no hitofushi*, edited in 1809 by Sugae Masumi (1754–1829). Towards the end of the Edo period and during the Meiji era (1868–1912) many popular songs appeared, depicting the life of the people in that changing society as well as the succession of social events. Most of these songs were soon forgotten despite their popularity; some, however, remained for longer and became folksongs, most of which are now sung as *ozashiki-uta* (songs for geisha and other parties).

As urbanization affected the whole country, some of the folksongs and traditional performing arts became more popular in a wider region through the mass media; many are now performed by amateurs and professionals, while others are gradually being forgotten by the people, who no longer work and live as before. But in the 1960s and 1970s an increasing number of folksong enthusiasts among young people and artists began to use traditional folk materials for their music.

Japanese folk music had never been studied scientifically before Machida Kashō (1888–1981) began his private gramophone archive of Japanese folksongs in 1934; this was later transferred to NHK (Japan Broadcasting Corporation), where Machida continued his work editing the voluminous anthology *Nihon min'yō taikan*. His study was followed by those of many musicologists, including Takeda Chūichirō, who edited *Tōhoku min'yō-shū*, Hattori Ryūtarō, Koizumi Fumio and Takeuchi Tsutomu.

2. 'WARABE-UTA'. There are three kinds of Japanese song for children: (*shōgaku-*)*shōka* (songs for primary school use); *dōyō* (songs for children composed by professional musicians); and *warabe-uta* (traditional game songs). The last type is different from the other two mainly in that its form is simpler and it is always combined with some kind of game. Significantly, *warabe-uta* predominantly use traditional pentatonic scales and modes: they are 'traditional' products and are generally passed from child to child.

By contrast, *shōka* and *dōyō* are products of adult composers and lyricists, dating from the 1870s, after the introduction of Western music. Although tending to be taught in schools, often with the aid of printed notation and lyrics, many have entered the oral tradition; still, it is difficult to deem them 'folksongs'. More so than *warabe-uta*, they are sung also by adults, who find them nostalgic. They are based on Western major and minor modes, on the hybridized 'pentatonic major and minor' modes (see §I, 4 above), and only very rarely on traditional modes. They also sometimes employ 3/4 metre, which is never found in traditional music or in *warabe-uta*. Given such Western elements, it is not surprising that *shōka* and *dōyō* are often performed in harmonized settings.

Many *warabe-uta* are still sung by children, regardless of where they live throughout the country. These can be classified into ten groups according to the kind of game for which they are sung: *tonae-uta*, play songs without gestures, including *kazoe-uta* (counting songs), *warukuchi-uta* (abusing or teasing songs) and *kae-uta* (parody songs); *ekaki-uta* (picture-drawing songs), which are common among Japanese and Korean children; *ohajiki-* and *ishikeri-uta* (play songs using marbles and rocks); *otedama-uta* (play songs with bean bags); *maritsuki-uta* (ball-bouncing songs); *nawatobi-uta* (skipping-rope songs); *janken-uta* (rock-scissors-paper game songs); *oteawase-uta* (hand-clapping songs); *karadaasobi-uta* (a newly coined word for game songs with body movements, such as finger games, face games and foot games); and *oniasobi-uta* (play songs for large groups to decide who will be 'it').

Warabe-uta melodies, simple in structure, are usually within the range of a 6th or an octave, and in many cases they are based on one or two tetrachords. Following the tetrachordal model of Koizumi (see §I, 4 above), *yō* or *min'yō* tetrachords or scales are the most frequent in traditional *warabe-uta*, as in traditional folksong; the *in* or *miyako-bushi* tetrachord or scale is also common. A few *warabe-uta* mix more than one type. A good example is the well-known *Tōryanse* (ex.16*a*), which begins with a *yō* tetrachord then moves to two conjunct *in* tetrachords, both of which adds a lower-neighbour tone that strictly speaking belongs to a *yō* tetrachord. This is a relatively complex melody for traditional children's songs; a simpler one is shown in ex.16*b*.

Text setting of *warabe-uta* is almost wholly syllabic. The metrical forms, however, depend largely on the form of the particular game. Skipping-rope songs usually have a slow duple metre, whereas ball-bouncing songs show more variety in rhythm, depending on how the players bounce the balls.

3. 'MIN'YŌ'. A relatively unified conceptual category of 'folksong' has only come into existence in Japan since the 1890s, with the gradual spread and acceptance of the term *min'yō*. This was a direct translation of the German word *Volkslied*, and the concept, like the term itself, owed much to European influence as Japan rapidly Westernized. This term gradually replaced other words such as *kuniburi*, *hinauta* and *riyō*, all meaning 'rural song'. The 'folk' themselves tended until recently to call their own songs merely *uta*, which is the general term for all

Ex.16 Two *warabe-uta*

song, but adding appropriate modifiers when necessary (e.g. *taue-uta*, 'rice-transplanting song').

The content of the category of *min'yō* is not fixed, with debate and disagreement among scholars as well as among listeners and practitioners. It includes, of course, all kinds of songs that are traditionally inherited mainly through oral transmission by non-professional singers; many of these were unaccompanied work songs. Additionally, it embraces arrangements and performances of such songs by professional 'folk singers' (*min'yō kashu*) accompanied on traditional instruments; these are now often called 'stage folksongs' (*sutēji min'yō*). Finally, the category may include so-called 'new folksongs' (*shin-min'yō*) composed during the 20th century by known composers, generally professionals, and often commissioned by rural communities or companies to serve as publicity songs; these are rarely sung but instead are broadcast over loudspeakers at train stations, community dances etc.

Unlike their counterparts in the West, virtually every *min'yō* has a 'hometown' (*furusato*, lit. 'old village'), hence the saying *min'yō wa kokoro no furusato* 'folksong is the heart's hometown'. The title's first word is itself probably the name of a town or pre-modern province, usually followed by a word such as *uta*, *bushi*, *ondo* or *jinku*, all basically meaning 'song'; thus *Yagi bushi*, 'Song from [the town of] Yagi' (ex.17), or *Tsugaru aiya bushi*, 'Song [extensively using the vocable] *aiya* from [the pre-modern province of] Tsugaru'. Commercial recordings generally list the prefecture of origin immediately after the title.

A song's title had no need to mention the place of origin until the song had migrated. An early example is *Ise ondo*, an entertainment song from the great Shintō shrine town of Ise, which now exists in variants throughout Japan, having been brought back by pilgrims. Most songs, however, only acquired place names after the late 19th century, as rapid urbanization and improved transport carried songs with their singers far from home. Sometimes a migrating song keeps its original place name alongside its new one: *Esashi Oiwake* is Esashi town's version of a song that was carried by travellers from the distant post-town of Oiwake. Given the link to rural homes, it is not surprising that folksongs are often mentioned in the popular songs of the genre *enka*, many of which express urban migrants' nostalgia for home.

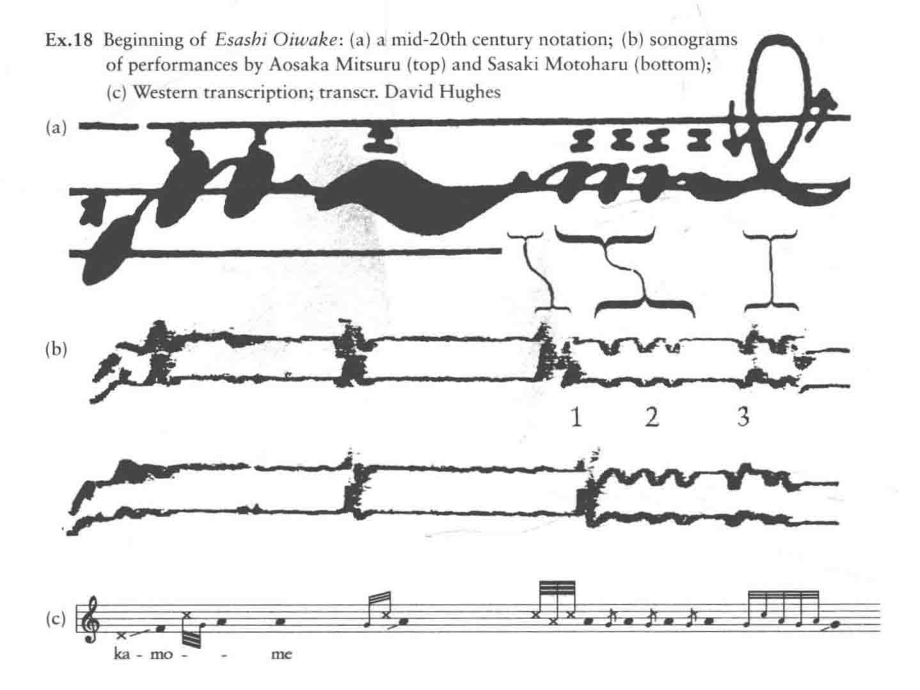
Scholars have classified traditional *min'yō* variously, but often into *shigoto-uta* (work songs), *sakamori-uta* (drinking-party songs) *bon-odori-uta* (dance songs for the *(o)-bon* ancestral festival), and *ozashiki-uta* (songs for geisha parties or similar occasions); some would include a category for songs sung as part of various *minzoku geinō* (see §4 below). The largest and most varied category by far is work songs. When Yanagita Kunio first classified Japanese folksongs in 1936, he listed six subtypes of work song: *ta-uta* (paddy-field songs), *niwa-uta* ('garden songs', for work at home, indoors and outdoors), *yama-uta* ('mountain songs', including lumberjack songs etc.), *umi-uta* (sea songs), *waza-uta* ('skilled craft' songs pertaining to various professions) and *michi-uta* ('road songs', for transport etc.). But many finer classifications have been offered. In some cases there are specific songs for various stages of a task such as *sake*-making. Some 'work songs' help to coordinate the rhythm of a work group and thus need to have a clear metre; others may be solo songs for distraction during or between work tasks, and these may be in free rhythm. Modernization has eliminated the contexts for most work songs, though dance and party songs have survived better in their original homes, since parties and the ancestral festival are still important.

The musical features of *min'yō* are diverse but may be summarized as follows. The overwhelming majority of songs are pentatonic, most often in the *yō* mode (hence its alternative name, the *min'yō onkai*, 'folksong scale')

Ex.17 *Yagi bushi*

but frequently also in the *in* (*miyako-bushi*) or *ritsu* modes. 'New folksongs' of the 1970s and later, however, tend to use the 'pentatonic major' or in rare cases the 'pentatonic minor' (see §I, 4 above) as these are easier to harmonize in Western style. A loud, sharp voice is preferred except in intimate situations; a high tessitura is also generally favoured, especially among professionals. The relationship between the voice and any melodic accompaniment is heterophonic, although some older songs feature short repeated motifs on flutes or *shamisen*.

Songs can be metred or non-metred (in 'free rhythm'). Metre is virtually always duple, either simple (2/4) or compound (6/8), with a bar of 6/8 mostly realized as the sequence crotchet–quaver–crotchet–quaver. Skill at various types of vocal ornamentation (*kobushi*, 'little melodies') is one mark of a good singer and flourishes especially in free-rhythm songs such as *Esashi Oiwake*. Ex.18*a* shows the first few seconds of a notation devised for this song in the mid-20th century (no other folksong has ever had such a notation), with ornaments expressed by various special symbols. Sonograms of two singers (ex.18*b*, first two partials) are eerily similar to the notation. The linked braces show correspondences between the notation and the sonograms. Ex.18*c* is a Western transcription, spaced to match the sonograms.



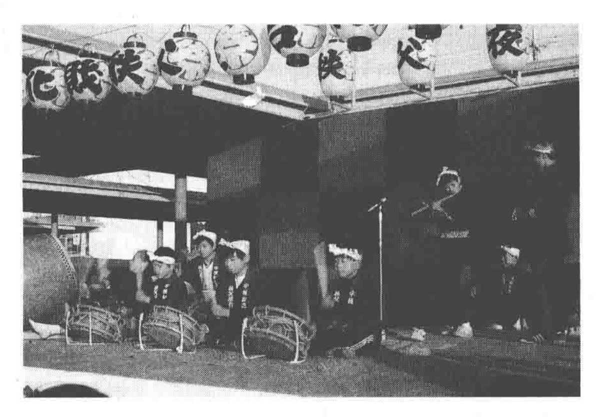
Many songs of all types are now sung by professionals in 'stage' arrangements, accompanied by a standard ensemble: namely *shakuhachi* alone for free-rhythm songs; *shamisen* (depending on the nature of the song), *taiko* (usually a laced *shime-daiko* and a flattish tacked-head *hira-daiko*), *kane* hand-gong and either *shakuhachi* or *shinobue* transverse flute for metered songs (*shamisen* and *shakuhachi* were uncommon in most traditional villages). Unlike village song, all professional folksong features a solo vocalist, often backed by two or three singers to provide a refrain (*hayashi*). Even these 'stage' versions retain their ability to trigger nostalgia, and links with traditional village life are often recalled (fig.35).

35. Urban professional folksingers in formal dress, posed incongruously in front of a barn for television; instruments (left to right): shimedaiko, shakuhachi, shamisen

As a counterbalance to the professionalization and urbanization of *min'yō*, many regional songs are now transmitted in their traditional mode by local 'preservation societies' (*hozonkai*). For work songs, members may even reproduce the movements of the original task of, for instance, fishnet hauling or barley threshing as they sing.

As recently as the 1970s, nearly half of the Japanese population identified themselves as fans of *min'yō*, far exceeding any other genre aside from 'pop' music. The figure was much lower at the end of the 20th century; however, there are still frequent concerts by professionals, recitals by their students, occasional televised *min'yō* shows (especially from local stations) etc. 'Folksong bars' (*min'yō sakaba*) in various major cities allow customers to sing accompanied by the house band (fig.36). In August, ancestral festival dances in every town and village feature *min'yō*, although these are often recordings of 'new folksongs' with Western instrumental accompaniment rather than live traditional tunes. There are also numerous

Ex.18 Beginning of *Esashi Oiwake*: (a) a mid-20th century notation; (b) sonograms of performances by Aosaka Mitsuru (top) and Sasaki Motoharu (bottom); (c) Western transcription; transcr. David Hughes



36. Customers at folksong bar 'Hideko' sing while being videotaped, Tokyo, 1984, accompanied by shakuhachi and shamisen

min'yō contests, some national, some focussed on a single song from a single community; the latter strengthen the long-standing links between local song and tourism. The largest of several umbrella *min'yō* organisations, the Japan Folk Song Association (Nihon Min'yō Kyōkai), has had as many as 50,000 members, most of whom teach or study via formal lessons on the model of the *iemoto* system of the classical arts (see §I, 3 above).

The most popular genre of *min'yō* among the general populace, particularly the young, is surely *tsugaru-jamisen*, a solo tradition of dynamic, partly improvised *shamisen* music, which has separated from Tsugaru-region folksong accompaniment. It provided a livelihood for blind itinerants in the early part of the 20th century. The traditional-style folk singer Itō Takio has also attracted a wider audience (if reducing his former one) through performing *min'yō* accompanied by jazz ensemble, synthesizer or various other mixes of non-traditional instruments, or by enhanced traditional ensembles, while keeping his standard *min'yō* vocal style and at the same time adding striking dynamic and tempo changes.

Min'yō, oddly, has rarely interacted with the world of Western-style 'folksong' accompanied by guitars and other instruments. But it is having some small impact on non-mainstream pop musicians such as Hosono Haruomi and Soul Flower Union. Such artists, however, currently tend to prefer Okinawan to other styles of Japanese folksong.

37. Youths performing local Shintō festival music (usually played on ritual floats) on stage near a railway station to welcome tourists to the Chichibu Night Festival, Saitama Prefecture, December 1978; instruments: ōdaiko, shimedaiko, three shinobue, kane

4. 'MINZOKU GEINŌ'. Most *minzoku geinō*, also called *kyōdo geinō*, are performed by local villagers at the festivals of Shintō shrines and Buddhist temples (fig.37). The most commonly used scholarly classification of *minzoku geinō* is that of Honda Yasuji (see Thornbury, 1997; Hoff, 1978). While far from watertight, it does capture most folk performing arts within four major categories, of which the last is a catch-all: *kagura* (more specifically *sato-kagura*, as distinct from the *mi-kagura* of the imperial palace), which is performed by Shintō priests as well as villagers and townsfolk with a variety of entertainments, including a dance-drama based on Shintō mythology for the consolation of ancestors' spirits and the long life of the people; *dengaku*, performed by farmers wishing for a good harvest and associated with a variety of dances and mimes; *furyū*, group dances with various origins, including exorcist and Buddhist invocations; and miscellaneous theatrical forms, dance-dramas and pageants that originated in the arts of the upper class of earlier society, such as *gagaku*, *bugaku* and *sangaku*, but which are now arranged into local styles and performed by local people.

The music of these folk performances may be either instrumental or vocal and accompanied by various folk instruments. The most commonly used idiophones are: *dōbyōshi* (a pair of cymbals), *kane* (gong), *sōban* (a pair of gongs), *suri-zasara* (scraper), *bin-zasara* (set of concussion plaques strung together) and *yotsudake* (bamboo castanets). Membranophones include the *okedō* (cylindrical drum), two sizes of *tsuzumi* (hourglass drum), *shimedaiko* (barrel drum with two laced heads), *ōdaiko* (nailed barrel drum) and *uchiwa-daiko* (frame drum). String instruments used are the *shamisen* and *kokyū* (fiddle), while aerophones include the *shinobue* (transverse flute), *nōkan* (transverse flute used in *nō* theatre and some folk ritual music), *shakuhachi* (end-blown flute) and *horagai* (conch-shell trumpet). The *shinobue* is by far the most common melodic instrument, indeed the only one in most *minzoku geinō*, partly due to its ease of manufacture. Many of these instruments have several names.

Melodies of most *minzoku geinō* use the *ritsu* or *yō* modes, with the *in* being rarer except near urban centres (hence the *in* mode's alternative name: *miyako-bushi*, 'urban tune'). However, the tunings of locally made *shinobue* are highly diverse in pitch and intervallic pattern.

Minzoku geinō, like *min'yō*, have often moved from traditional contexts to the concert stage, hotel lobbies and so forth. Various folkloric festivals are now held throughout Japan, featuring groups from several regions. Preservationism is encouraged by national and local government systems of designating certain traditions as Important Intangible Folk Cultural Properties or the like; outside the original context, however, significant innovation may occur. A major new phenomenon is the popularity of large ensembles centred on stick-drums, creating since the 1960s a new tradition called KUMI-DAIKO or *wadaiko*. Communities throughout Japan are forming such ensembles, competing for members with traditional *minzoku geinō*. The international popularity of groups such as Kodō risks misleading non-Japanese as to the nature of village performing arts.

VIII. Regional traditions

1. Ryūkyū: (i) Folk music (ii) Art music (iii) History (iv) Instruments, performance and aesthetics (v) Notation and structure. 2. Ainu: (i) Music and incantation (ii) Communal songs and dances (iii) Individual music (iv) Structure and instruments (v) Late 20th-century developments.

1. RYŪKYŪ. The Ryūkyū archipelago stretches in an arc between Kyūshū and Taiwan at the south-western tip of Japan. 'Ryūkyū' denotes the area within this archipelago occupied by the kingdom of Ryūkyū at the time of its invasion by the Satsuma fief of southern Kyūshū in 1609. It consists of four island groups in the southern part of the archipelago: Amami, Okinawa, Miyako and Yaeyama (from north to south). These share important cultural and linguistic traits of sufficient distinctiveness to merit consideration of Ryūkyū either as a cultural entity in its own right or as one of the two principal cultural spheres of Japan. The Ryukyuan sphere covers the area of modern Okinawa Prefecture and the Amami islands at the far south of Kagoshima Prefecture. The music of each island group possesses its own distinctive character: the earliest strata of music are found in the Miyako islands; the Okinawa islands (in particular the main island, where the capital of the kingdom was located) saw the development of a sophisticated tradition of art music; the music of the Yaeyama islands includes developed folk and art traditions; and the music of Amami evolved, for historical reasons, largely apart from the mainstream of developments in other parts of Ryūkyū.

Music can be divided into two main categories: folk music, which plays an important part in festivals and religious ceremonies on all the islands, and art music, which developed among the nobility at the royal court in the capital, Shuri. These two categories have, however, maintained a symbiotic relationship over the centuries. During the pre-modern period, the indigenous tradition of art music was supplemented at the Shuri court by the practice of certain Chinese and Japanese art music genres, which exerted an influence on the development of the Ryukyuan art music tradition. The practice of these additional genres came to an end with the dissolution of the kingdom and the establishment of Okinawa Prefecture in 1879. The indigenous tradition then flourished. This was a consequence of practitioners of art music and the court performance arts among the disbanded nobility being obliged through economic necessity to transmit their accomplishments to the former class of commoners, or a result of their having moved to the provinces, where these arts soon took hold.

As in other parts of Japan, Western music is prevalent in modern Okinawa, although it has not dislodged indigenous mediums from their position as the focus of musical expression. The category of modern folk music, comprising songs performed in local dialects of Japanese and employing indigenous musical elements, continues to be the main vehicle for musical creativity, while the art music tradition currently has more practitioners than ever before. Genres such as Western rock music are popular among young people, although when practised by Okinawans they often incorporate elements from the indigenous tradition. Okinawan popular music in such syncretic styles has become popular both inside and outside Japan.

(i) Folk music. A generic feature of Japanese music is the predominance of the voice; nowhere is this feature more evident than in Okinawa. Folk music is exclusively vocal and closely connected with ancient traditions of oral literature. Since literary traditions are primarily oral and expressed through the medium of music, a classification

of the genres of folk music is similar to that of folk literature.

(a) Sacred songs (kamiuta). Although Buddhism was introduced into Ryūkyū following the establishment of the kingdom in 1392, it never displaced native shamanistic and animistic religious traditions. As in Japan before the introduction of Buddhism, religious ceremonies have been the preserve of a female sacerdotal hierarchy. Priestesses known as *noro* or *tsukasa* sing poetical texts intended to invoke the beneficence of the gods, especially in connection with provision of a plentiful harvest, or to serve as the vehicles for divine oracles.

The songs may be similar to heightened speech or may have a simple strophic melodic structure extending over a narrow pitch range. They are generally unaccompanied, although a simple rhythmic accompaniment is sometimes provided by a drum (*chijin*). The ceremonies at which the texts are sung take place in simple outdoor shrines known in Okinawa as *utaki* and in Yaeyama as *on*. The principle genres are *omori* in Amami; *miseseru*, *otakabe*, *umui* and *kwēna* in Okinawa; *pyāshi*, *tābi*, *fusa* and *nīri* in Miyako; and *kanfutsu* and *ayō* in Yaeyama. Other songs of similar type are performed to cure disease, to call for rain and to pray for safe sea voyages.

(b) Work-songs. Many songs with titles indicating links with communal physical labour are extant, although few are still performed in their original contexts. Among the tasks accompanied by such songs were rice-hulling, millet-grinding, earth-pounding and rowing. The largest number come from Yaeyama, where they belong to the genres known as *yunta* and *jiraba*.

(c) Music of festivals and the popular performing arts. The two major events in the Ryukyuan calendar are the Bon Festival of the Dead in the seventh month of the lunar calendar, and the harvest festival (*hōnen-sai*), which occurs during the week before the night of the harvest moon (15th day of the eighth month).

A feature of the Bon festival in Okinawa is the performance style known as *eisā*, which is traditionally presented on the night of the 15th day of the seventh month, after the spirits of departed ancestors have returned to their places of rest. Following a round dance at the village shrine, a group of young people visits each house in the village singing and dancing, often to the accompaniment of *sanshin* and drums, in a style based on the *esa omoro* genre of indigenous group dance and incorporating elements from the *nenbutsu odori* style of Japanese popular Buddhist dance.

Harvest festival entertainments consist largely of musical, dance and theatrical items incorporated from the classical art repertory. Other festivities in which folk music plays an intrinsic part include the *unjami* festival of the sea gods, the *shinugu* post-harvest celebration and the women's round dance *ushidēku*. These forms flourish especially in the northern part of Okinawa Island, although regional variants exist throughout Ryūkyū.

(d) Recreational songs. The custom of singing for recreation in Japanese music can be traced back to *utagaki* courting songs. Although such songs have long disappeared from elsewhere in Japan, they survive in certain parts of Ryūkyū, especially in the *hachigatsu odori* genre of Amami. As performed today, the style features an exchange of sung verses between separate groups of men and women. A performance may continue for several hours, with the content of the songs often becoming increasingly ribald as the performance progresses.

The category of recreational songs comprises a large proportion of the repertory of folksong accompanied by the *sanshin*. Among the most popular examples are those in which a skeletal melody is used as the vehicle for a wide variety of lyrical or narrative poetic texts. Such songs include *Nākuni* and *Kuduchi* in Okinawa, *Tōgani* and *Ayagu* in Miyako, and *Tubarāma* in Yaeyama. A distinctive and complex style of *sanshin*-accompanied singing has evolved in Amami, employing Okinawan texts but largely independent of Okinawan musical influence. Performed by musicians known as *utasha*, the style is characterized by use of an intricate *sanshin* technique and a male falsetto voice unique in Japanese music.

(e) New folksongs. The category of new folksongs (*shin minyō*) comprises songs rooted in indigenous styles from the early Shōwa era (1926–89) onwards. The textual content of such songs is often concerned with matters of social and historical import such as emigration, the sufferings of war and social change. While generally showing little evidence of Western influence, the musical language of these songs has gradually developed away from traditional styles. Although many songs in this genre have the ephemerality of much popular music, some have acquired a status as standard items in the folk music repertory, in particular those composed by Fukuhara Chōki (1903–81), one of the founders of this genre.

(ii) Art music. This denotes the music created and performed by the nobility during the age of the Ryukyuan kingdom primarily in the capital, Shuri, and the neighbouring city of Naha. Several of these genres are extinct, although efforts are being made to revive them.

(a) Extraneous genres. Chinese music entered Ryūkyū with the arrival in 1392 of immigrants from Fujian province after the establishment of diplomatic relations between Ming China and Ryūkyū. The earliest mention of the performance of music for ensembles of Chinese instruments, a genre known in Ryūkyū as *ozagaku*, dates from 1534. *Ozagaku* was performed before visiting Chinese embassies, on visits to the Japanese shogunal court at Edo after 1653 and at functions at the royal court in Shuri. Vocal music of the Ming and Qing dynasties was also performed on these occasions. Due to its association with diplomatic and court functions, however, *ozagaku* ceased to be performed after the dissolution of the kingdom of Ryūkyū in 1879.

Chinese processional music (Chin. *lubuyue*) was introduced in 1522 to enhance the majesty of royal processions. Known in Ryūkyū as *rojigaku*, this music featured three types of wind instrument (*sōna* double-reed pipe, *rappa* and *dōkaku* trumpets) and three types of percussion instrument (*ko* drum, *ryōhan* clappers and *dora* cymbals) and was an essential ingredient of royal and state processions until the dissolution of the kingdom. *Rojigaku* is now performed at the annual Shuri Festival, while the music of the *sōna* (*gakubura*) is performed at annual festivals in several villages in northern Okinawa Island. Confucian ceremonial music (*seibyōgaku*) and Chinese *qin* and flute pieces were also performed but are no longer extant.

The sole genre of Japanese art music to take root in Ryūkyū was the music of the *nō* theatre (see §VI, 1 above), both vocal (*yōkyoku*) and instrumental (*hayashi*).

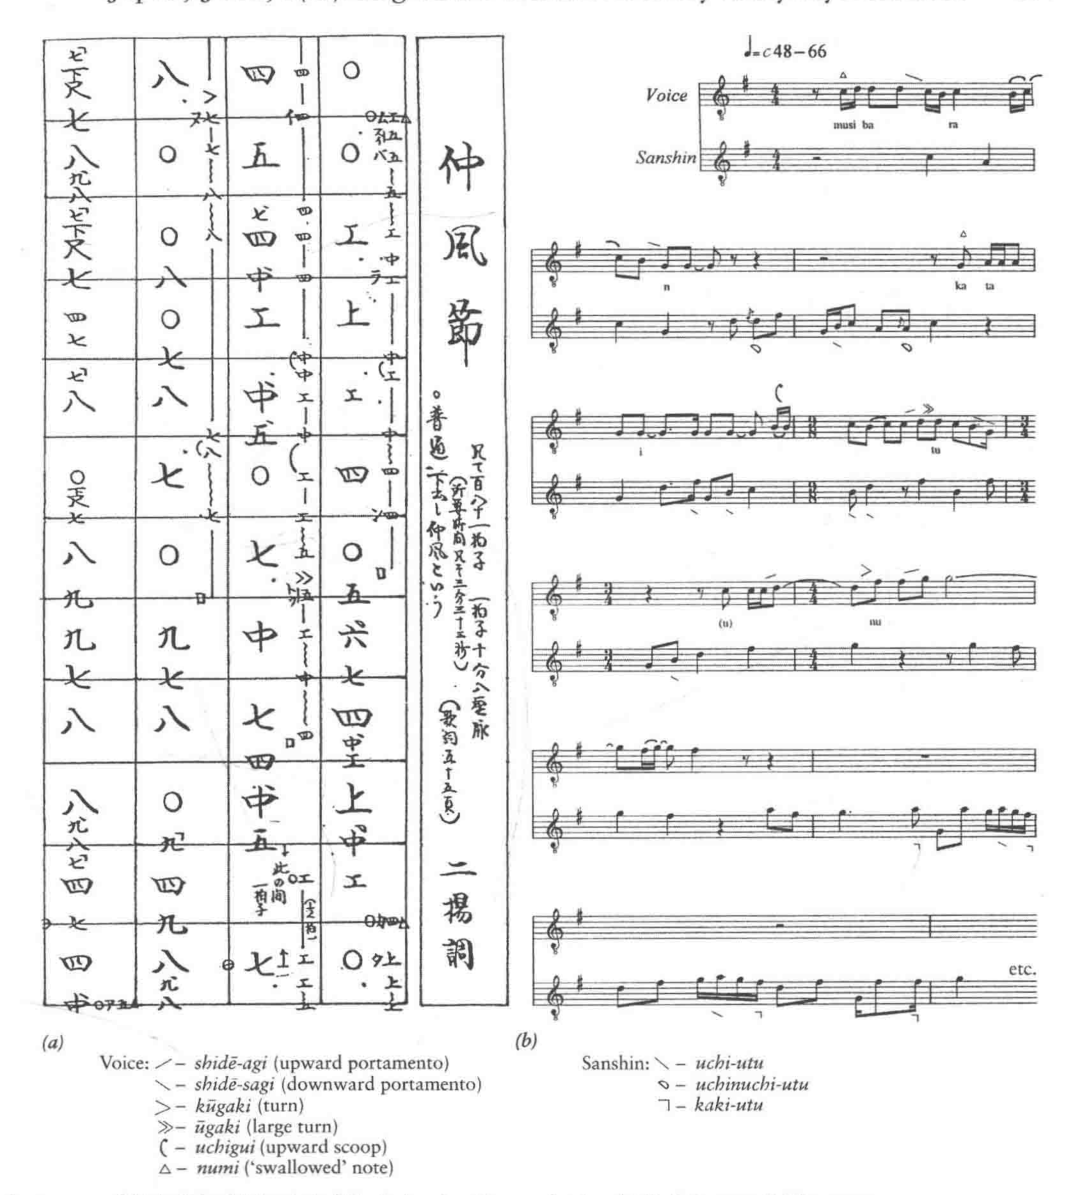
The practice of *nō* was popular even before the Satsuma invasion of 1609. Many of the leading figures in the indigenous art music tradition had backgrounds as *nō* performers. The Japanese 13-string long zither *koto* was introduced into Ryūkyū during the 18th century, together with several solo instrumental *danmono* pieces (a set of five short pieces beginning with *Takiotoshi sugagaki*, and versions of *Rokudan* and *Shichidan*) as performed in the Yatsuhashi school and three *koto* songs (*Sentō-bushi, Tsushima-bushi, Genji-bushi*) of uncertain Japanese provenance. However, the role of the *koto* in Okinawa has primarily been to provide an accompaniment to *sanshin* songs in the indigenous art tradition.

(b) The indigenous tradition. The earliest documented genre of indigenous Ryukyuan art music comprises the songs known as *omoro*, the texts of which appear in the major classic of Ryukyuan literature, the *Omorosōshi*, which was compiled in three stages in 1531, 1613 and 1623. The songs are thought to date from between the 12th and 17th centuries and were performed by an individual (or perhaps a guild of court musicians) known as Aka Inko or Omoro Neyagari, who has acquired legendary status as the founder of Okinawan music. Performances were given at court ceremonies by a male choir. Only 47 of the total of 1248 songs contained in the *Omorosōshi* appear to have been sung. This number had dwindled to a mere five by the late 19th century, and the tradition is now extinct. There was no formal notation for this style of singing; the only glimpse available of the tradition can be gained from the scores in Western notation of the five *omoro* produced by the Okinawan researcher Yamanouchi Seihin in 1912, after a meeting with the last representative of the tradition.

The classical tradition of Ryukyuan art music consists primarily of a corpus of songs (*fushi*) accompanied by the *sanshin*, which are contained in anthologies known as the *kunkunshī*, a term referring to both the anthologies and the system of musical notation. Almost all the songs employ poetic texts in the indigenous *ryūka* form consisting of a single four-line verse of 8–8–8–6 syllables. A variant of the *ryūka* form is the syncretic *nakafū* form, which combines the 7–5 syllable structure of Japanese *waka* with the *ryūka*, resulting in texts with the syllabic structure 7 (or 5)–5–8–6. The texts are sung in the Okinawan literary language based on Shuri dialect, the language of the Ryukyuan nobility.

The earliest extant *kunkunshī* is a single-volume work compiled by Yakabi Chōki in the mid-18th century. It contains the notation of the *sanshin* parts and *ryūka* texts of 117 songs that have remained the central items in the repertory. The *kunkunshī* used today in the largest school of performance, the Nomura-ryū, was compiled by Nomura Anchō and Matsumura Shinshin in 1869. Consisting of three main volumes and an appendix, the *Nomura kunkunshī* contains *sanshin* notation and texts of over 200 songs. The tradition of *sanshin*-accompanied song is now synonymous with Ryukyuan classical music and is maintained in three schools: Tansui, Nomura and Afuso.

The ordering of the songs in the *Nomura kunkunshī* accords approximately with the customary generic classification of the song repertory into *ha-bushi*, *nkashi-bushi*, pieces for solo rather than unison singing and regional folk songs.



The first volume, with 37 pieces, consists primarily of *ha-bushi*, relatively short and structurally simple songs originating within the art tradition. They are described in the aesthetic treatise *Gensei no maki* (1789) as being 'imbued with the impermanent spirit of the floating world'. The volume begins with four songs (*Kajadifū-bushi, Unna-bushi, Nakagusuku hantamē-bushi, Kuti-bushi*) from a set of five that was originally performed on occasions when the king of Ryukyu was in attendance. This set, known as *Gujinfū gokyoku* ('five pieces in the honourable presence'), continues to be the most frequently performed 'suite' (*chukusai*) in the repertory, sung at concerts and many celebratory occasions.

The second volume, comprising 29 pieces, consists primarily of *nkashi-bushi* ('ancient songs'), a genre subdivided into *jun nkashi-bushi* ('semi-ancient songs'), *nkashi-bushi* and *ufu nkashi-bushi* ('great ancient songs'). *Nkashi-bushi* are described in *Gensei no maki* as 'singing of the glory of past ages, when the world enjoyed such peace that not even the branches of trees were disturbed'. The ten pieces at the head of the second volume are the central items in the repertory. The first five (*Chikuten-bushi, Janna-bushi, Shui-bushi, Shudun-bushi, Akatsichi-bushi*) constitute a set referred to as *nkashi-bushi* in the narrow sense. The second five are interspersed with short songs, known generically as *chirashi*. These five pieces (*Chaya-bushi, Nkashi habira-bushi, Naga Janna-bushi, Naka-bushi, Jūshichihachi-bushi*) are the *ufu nkashi-bushi*. Although the conventional assumption that they predate other items in the repertory is clearly erroneous, they are the longest and the most complex and diverse pieces, both technically and structurally.

Whereas all the pieces in the first two volumes employ the *honchōshī* tuning of the *sanshin* (see §(iv)(a) below), the third volume begins with 34 pieces in the *niagi* tuning. The high tessitura of the vocal parts, the lyrical content and the relatively free metrical structure of these pieces suit them to solo singing. The first five pieces in this volume (*Fishi-bushi, Kwamuchā-bushi, Sanyama-bushi, Nakafū-bushi, Shukkwē-bushi*) again constitute a set, in this case of solo songs. These are the principal solo items in the classical repertory and are often performed together at concerts (see fig.38 for notation and transcription of one version of *Nakafū-bushi*). The remaining items in the third volume are pieces in rare tunings and regional folk songs in the *honchōshī* tuning.

The fourth volume was compiled later than the first three volumes and contains approximately 60 pieces. It is an appendix to the three main volumes and consists of regional folk songs, especially from Yaeyama, arranged in the classical style, and other pieces not included in the earlier three volumes (e.g. instrumental interludes to *kumiodori* music dramas and arrangements of *danmono* pieces originally for the *koto*).

(iii) History. Owing to the paucity of documentary records relating to the early history of Ryūkyū in general, little is known of the early development of music there. Until the *sanshin* tradition became established during the 16th and 17th centuries, musical activity is likely to have focussed entirely on religious ceremonies. Asked about music in their country, two envoys sent to Korea in 1462 replied: 'One performer claps his hands and sings, whereupon others join in . . . There is no instrumental court music'. The performance described here is likely to have been of *omoro*; the remarks indicate that sacred

38. (a) Opening passage of 'Nakafū-bushi' ('sagi-njashi'), niagi tuning, Nomura kunkunshī, iii; (b) transcr. R. Thompson

songs (*kamiuta*) retained a central place in music at this time. The earliest strata of Ryukyuan culture are present in the Miyako islands, where many *kamiuta* are still sung today. Most Miyako *kamiuta* employ a scale (*ritsu*; see §(v)(b) below) that is a feature of the earliest strata of Japanese music as a whole, suggesting their origins in a musical culture shared with Japan proper prior to the linguistic and cultural separation of Ryūkyū and Japan around the 4th and 5th centuries.

The first flowering of Ryukyuan culture occurred during the reign of King Shō Shin (1478–1526), who among his many achievements is reputed to have introduced instrumental music ('flutes and strings') into the court. This was the age when Ryūkyū engaged in a lively entrepôt trade with China, Japan and South-east Asia and imported cultural manifestations that laid the foundations for the future development of Okinawa's diverse and cosmopolitan artistic culture.

The Chinese investiture envoy Chen Kan provided the earliest reference (1534) to what would appear to be Ryukyuan art music as we know it: 'The music employs singing accompanied by stringed instruments. The sound is very melancholy'. One can infer therefore that this music became established among the Shuri nobility early in the 16th century. This dating is further supported by its coincidence with the period of transition in Okinawan literary history between the *omoro* and the *ryūka*, a transition in which the legendary figure of Aka Inko may have played a key role. The *ryūka* was the first indigenous Okinawan literary form to provide an outlet for personalized emotional expression, and music became its chosen medium.

The Japanese invasion of Ryūkyū in 1609 inevitably brought about an increase in Japanese influence to supplement the already strong degree of Chinese influence in the kingdom. Accomplishment in Chinese and Japanese

arts became an essential attribute of any aspirant to government office. However, by the end of the century a cultural crisis of confidence had set in. The consequence was a self-conscious and productive attempt to uncover cultural roots and the great florescence of Ryukyuan culture during the 18th century.

The earliest historically verifiable figure of importance in music was Tansui *wēkata* Kenchū (1623–83), to whom composition of several extant pieces (including the five *nkashi-bushi*) is attributed. The Tansui school maintains a precarious existence today, although the complete repertory of the school consists of only the five *nkashi-bushi* together with two versions each of the *ha-bushi* pieces *Hai Chikuten-bushi* and *Agi Chikuten-bushi*.

Tamagusuku Chōkun (1684–1734), the functionary responsible for presenting performances to the party of Chinese envoys who visited Ryūkyū for the investiture of King Shō Kei in 1719, consolidated the traditional performing arts and devised the new form of music theatre, *kumiodori*. Influenced by Japanese *nō* and Chinese music drama but rooted in Okinawan legend, it employed an artificial, neo-classical form of language and was an early step towards the revival (if not invention) of a distinctive Ryukyuan cultural identity. The music of *kumiodori* dramas employs arrangements of pieces from the classical repertory.

The Nomura-ryū and the Afuso-ryū, the two leading modern schools of classical music, can be traced back in an unbroken line to Yakabi Chōki (1716–75). Yakabi was a practitioner of *nō* who transferred allegiance to Ryukyuan music after losing his eyesight. His foremost pupil was Chinen Sekkō (1761–1828), who in turn taught Nomura Anchō (1805–71) and Afuso Seigen (1785–1865), the founders of the modern schools. Controversy surrounds the precise route of transmission of the Tō-ryū school of which Yakabi was the founder, but it seems likely that Nomura simplified aspects of the tradition to make it more accessible to amateur practitioners.

Despite the popularity of Ryukyuan classical music in Okinawa today, the tradition is essentially a static one, with no new pieces created since the 18th century. In contrast, the folk music tradition has demonstrated considerable vitality. It is unclear precisely when the *sanshin*, which was originally the exclusive property of the nobility, made inroads among commoners. It seems likely that it was introduced during the early 19th century into village festivities and the revels known as *mō-ashibi*, in which young unmarried men and women would engage after working in the fields. The 20th century was a tragic one for Okinawa, and it was newly created songs accompanied by the *sanshin* that provided ordinary people with solace in the internment camps after World War II, and that played a major role in re-establishing Okinawan identity and self-confidence during the 27 years of post-war US military occupation.

(iv) Instruments, performance and aesthetics.

(a) Instruments. Those used in Ryukyuan music are the *sanshin*, the *koto*, the *kokyū* (Ryu. *kūchō*), the flute and various drums. Many Chinese instruments were also commonly played in Ryūkyū, but most of these disappeared together with the tradition of Chinese music performance.

The principal instrument, the *sanshin*, acquired a status as the instrument of the leisured man of culture, similar in this respect to the long zither *qin* in China. Its use was originally restricted to the nobility, and it was made by a government department within the Kaizuri Bugyōsho ('Shell-polishing' Office) ministry. Various models were created under a rigorous system of quality control. Differing mainly with regard to the shape of the neck, the models include *Fēbaru* (the earliest type), *Chinen-dēku*, *Kuba-shunden*, *Kuba-nu-funi*, *Makabi* and *Yuna*, the last two types being most common today.

The *sanshin* is an adaptation of the Chinese SANXIAN three-string plucked lute, which was introduced into Ryūkyū from China after the establishment of a Chinese community in the Kume-mura district of Naha some time after 1392. The *sanshin* was later introduced into Japan, where it served as the basis for development of the *shamisen* (see §II, 6 above). The *sanxian*, *sanshin* and *shamisen* have the same basic structure, consisting of a long neck inserted into a wooden body. The neck of the *sanshin* is made of ebony, red sandalwood or a similar hard wood. The best quality wood was formerly obtained from Yaeyama, but depletion of forest resources there has resulted in the wood being imported mainly from the Philippines. The fingerboard measures approximately 48 cm from the upper bridge to the body, which is covered on both sides with snakeskin obtained from a Thai python; it is slightly rounded and measures approximately 19 cm in length and width. The instrument has three strings, the first (lowest) known as the 'male string' (*ūjiru*), the second as the 'middle string' (*nakajiru*) and the third as the 'female string' (*mījiru*). In classical music it is sounded with a large finger-shaped plectrum made of water buffalo horn placed on the index finger of the right hand. In Amami, the instrument is sounded with a long bamboo sliver.

The basic right-hand playing technique involves a succession of downstrokes; upstrokes are used on weak beats. Stylized movements of the right hand are used on beats when the *sanshin* is silent. Changes of position are relatively rare in the left hand since, in contrast to the *shamisen*, all the required pitches can generally be obtained without such changes. When a change is required, no more than two positions are ever used. Left-hand finger technique employs only the index, middle and little fingers and includes striking a pitch on the fingerboard and holding it (*uchi-utu*), striking a pitch and immediately releasing it (*uchinuchi-utu*), and plucking the string one degree of the scale above the required pitch (*kachi-utu*).

The standard tuning for ensemble performance is *c–f–c′* (*honchōshī*), with the basic pitch varying depending on the range of the singer; solo performers may vary the tunings between *A–d–a′* and *d–g–d′*. *Niagi* is employed especially in solo songs; *ichiagi* (also known as *Tō-nu-tsindami*, 'Chinese tuning') is used in several pieces from Yaeyama and in the music for the Chinese-style drama *tāfākū*; and *sansagi* or *ichiniagi* is the most common tuning in modern folk song (ex.19).

Ex.19

The KOTO used in Okinawan music is the long type of instrument (see also §II, 4 above), with the extra length required because of the relatively low pitch range of the instrument in Okinawa. It is played with rounded plectra set on the thumb, index finger and middle finger of the right hand, with the player kneeling square to the

instrument. The *koto* is generally used in an accompanying role, with the two bottom strings employed only in the solo *danmono* pieces.

The *kokyū* bowed lute is a miniature version of the *sanshin* and was modelled in this respect on its Japanese counterpart. Like the flute, its function is to add colour to the main melodic line. Picture scrolls suggest that Chinese bowed lutes and flute were formerly used.

Percussion instruments include the ancient *chijin* drum used by priestesses, the *pārankū* single-headed drum used in *eisā* performances and the *sanba* wooden clappers used to enhance rhythmic excitement in fast music.

(b) Performance and aesthetics. After the spread of the *sanshin* among ordinary people, the instrument came to be used in many situations in which unaccompanied singing would formerly have been customary. In all genres incorporating the *sanshin*, the songs are sung by the *sanshin*-players only.

Performance of the *sanshin* was originally restricted to male members of the nobility and the tradition continues to be a largely male preserve, except in modern folk music. Although the *koto* was also played only by men, the instrument is now performed in Okinawa almost entirely by women. The standard ensemble used in accompaniment to classical dance consists of two or three *sanshin*, one *koto*, one *kokyū*, one transverse flute and one pair of drums. Drums are not used in *nkashi-bushi* pieces. Concert performances are given by ensembles of various sizes, ranging from one *sanshin* and one *koto* to an unlimited number of performers of each instrument. Performances by around 50 players are common at amateur concerts in Okinawa.

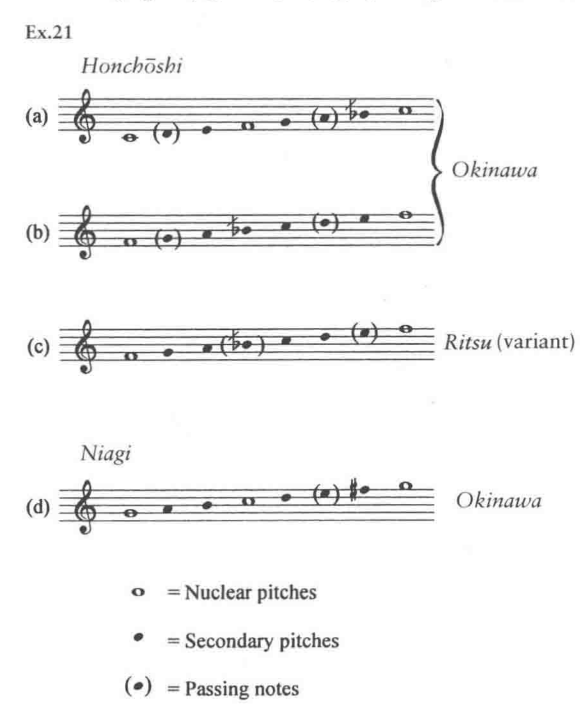
The various vocal techniques employed in classical music are all named, and their realization is rigorously prescribed. Several are similar in name or realization to techniques used in *shōmyō* and *nō*, suggesting a possible direct influence from Japanese music. A wide tessitura is required of more than two octaves, from a 4th below the pitch of the bottom string of the *sanshin* to a 6th above the top string (i.e. *G* to *a′* when the first string is tuned to *c* and the top string to *c′*). The *sanshin* plays regularly on the main beats and anticipates similar melodic motion in the vocal part. As in Japanese *shamisen* music, simultaneous motion of voice and instrument is regarded as naive and unsophisticated. Distinctive features of the vocal line in classical music include the use of extensive melisma and long-held notes above a slowly moving accompaniment and, especially in solo songs, complex interaction between voice and instrument.

As befits a tradition originating in an aristocratic milieu dominated by Confucian ideology, the aesthetic principles underlying the music were codified. They are documented in two brief treatises on musical aesthetics, *Gensei no maki* ('Treatise on strings and the voice', 1789) and *Kadō yōhō* ('Essential principles of the art of song', 1845). The performance ideal is epitomized by the term *gensei itchi*, 'unity of instrument and voice'. The unity extends further to posture, hand movements and all aspects of performance. Facile virtuosity is discouraged, and the importance of humility, effort and concentration is stressed. Such attributes have given music the status of an accomplishment whose main purpose is not so much to entertain listeners as to provide a vehicle for moral self-improvement. They have also discouraged the emergence of a class of professional musicians: music was and continues to be an essentially amateur pursuit.

(v) Notation and structure.

(a) Notation system. The Ryukyuan notation system known as the *kunkunshī* is an adaptation of the Chinese *gongche* system (*see* CHINA, §II, 4, and Table 2). However, whereas the *gongche* system is an absolute pitch notation, the *kunkunshī* is a tablature notation specifically for the *sanshin*. The starting point for the adaptation was the *Tō-nu-tsindami* tuning, and the names assigned to the pitches of the open strings correspond in the two systems. The symbols, together with their readings and relative pitches in the two major tunings, are shown in ex.20. The name

Ex.20 *Kunkunshī* symbols and their relative pitches



kunkunshī is based on the Sino-Ryukyuan readings of the first three characters of the piece that prefaces the earliest extant edition of the *kunkunshī*, the mid-18th century *Yakabi kunkunshī* of Yakabi Chōki. Notated in the *gongche* system, this is the well-known Chinese piece *Lao Baban* (also *Baban*, *Liuban*).

The *kunkunshī* system became increasingly precise over the two centuries following the *Yakabi kunkunshī*. Whereas Yakabi Chōki specified *sanshin* pitches alone with no indication of metre, the *kunkunshī* of his pupil Chinen Sekkō included circles to indicate single-beat rests and small characters and proportional notation to indicate motion with up to four subdivisions of a beat. The *Chinen kunkunshī* was also the first to employ a basic layout of 12 characters to the vertical column. The *Nomura kunkunshī* built on Chinen's innovation by placing each beat in a box, with 12 boxes and beats to a column and seven columns to a page. (In Chinen's system, the non-proportional placement of rests meant that the columns had varying numbers of beats.) The first edition of the *Nomura kunkunshī* to include vocal notation was produced by the Okinawan poet and musicologist Serei Kunio (1897–1950) and published between 1935 and 1941. It was based on the performance of the foremost Nomura school musician of the day, Isagawa Seizui (1872–1937).

Other *kunkunshī* anthologies include those of the Tansui school (1872) and the Afuso school (1912). *Kunkunshī* anthologies for the *koto* also exist, but these are notated in an adaptation of standard *koto* notation.

(b) Structural elements. The scale with the widest distribution throughout Ryūkyū is a variant of the *ritsu* scale (ex.21*c*). This appears especially in *kamiuta* and folk songs in the Yaeyama, Miyako and northern Okinawan regions. The scale more generally associated with the music of Ryūkyū, however, is the *Okinawa* scale and its variants (ex.21*a*, *b*, *d*). This scale is associated in particular with *sanshin* music, although it is not present in the Amami region, except in the southernmost islands where Okinawan music has entered.

There are four main features of the use of the *Okinawa* scale in classical music. First, a core pentatonic or hexatonic scale is present within the framework of an approximate diatonic series. Second, there may be either

one or two tonal centres; when there are two, they fall on the first and fourth degrees (ex.21*a*, *d*). Third, the seventh degree in ex.21*a* and the fourth degree in ex.21*b* are approximately a quarter-tone flat and are inherently unstable. Finally, ex.21*d* is the only scale in which all pitches fall within a strict diatonic series. A variant of this scale in which only the first degree constitutes a nuclear pitch is the scale most commonly employed in modern folk music.

The formal structure of the music is determined largely by that of the song texts; there is no direct expressive linkage between texts and music. *Ryūka* texts generally appear in anthologies classified according to the piece (*fushi*) to which they are sung. In many cases, any of several dozen texts may be sung to a particular piece, and the music in no way represents a 'setting' of a specific verse. In the case of extended texts, the form in both classical and folk music is generally strophic, as in the *kuduchi* genre. Various forms are used in the case of the *ryūka* texts to which the majority of songs are sung. *Ha-bushi* pieces in their simplest form have an *AA* form corresponding to the 8–8 and 8–6 lines of the text (e.g. *Guin-bushi*). In this case it is customary for two syllables in the last line to be repeated. *AA′* form involves compression of the musical material to accommodate the six-syllable length of the last line (e.g. *Chūjun-bushi*). Other *ha-bushi* pieces have a more complex structure, in which the music of the last two lines is repeated after an episode (e.g. *Kajadifū-bushi*, *Hanafū-bushi*). Others have no repetition of formal units (e.g. *Chin-bushi*) or may incorporate *hayashi-kotoba*, meaningless phrases or syllables unconnected with the meaning of the main text (e.g. *Chirurin-bushi*). The formal structure of *nkashi-bushi* is most commonly *AABC* (with B constituting an instrumental interlude), in which the music corresponding to the first line of the *ryūka* verse is repeated for the second line (e.g. *Akatsichi-bushi*). Many pieces, however, have formal structures of considerably greater complexity.

Every piece in the *sanshin* repertory incorporates a short instrumental passage (*utamuchi*) performed several times at the beginning and at the end of a song. In dance pieces this is repeated continuously as the dancers enter and leave the stage.

2. Ainu. The Ainu are an aboriginal people who once inhabited Hokkaidō, Sakhalin and the Kuril islands. Their music and culture link them to other Siberian peoples rather than to the ethnic Japanese. After World War II the Ainu on the Kuril islands and southern Sakhalin migrated to Hokkaidō, which is the only area they now inhabit. The present Ainu population is estimated at over 20,000, the great majority of whom are thought to be of mixed blood. With the dissolution of the tribal system, only a few elderly Ainu carried on the traditions described in the present tense below, but recent years have seen a revival of interest among Ainu as well as other Japanese.

(i) Music and incantation. Shamanism and animism are predominant in the religious life of the Ainu. Their everyday life is strictly governed by taboos and incantations, culminating in a bear sacrifice ritual commonly observed among the northern tribes. Singing, a major feature of Ainu music, is a part of their daily tribal life. Significant elements in Ainu music are the characteristic sounds 'produced' by animal deities (both favourable and unfavourable) who govern the distribution of daily provisions. These onomatopoeic sounds include songs and dances of independent genres such as *chikappo-reki* ('birdsong') and are also heard in dance-songs and ballads, for instance as the imitation of a snorting bear or a slithering snake. Most Ainu instrumental music is a stylization of animal cries and calls. The nonsense-syllable refrains such as 'hessa!' and 'husse!' used in various songs and dances stem from puffing to exorcize evil spirits. Such examples demonstrate the close relationship between Ainu music and the primitive Ainu religion.

(ii) Communal songs and dances. Of the various types of Ainu music the most important and numerous are the *upopo* ('sitting song') and *rimse* ('dancing song'), both sung in relation to incantatory rituals such as those of the bear cult. The most outstanding feature of *upopo* is its polyphonic performance. The people, sitting in a circle, tap the beat on the lids of chests (*hokai*) and sing the *upopo* imitatively, like a canon with a lag of one beat. In this imitation the melodies are altered, or in the practice of the Ainu from Sakhalin, two different melodies are used as in double counterpoint. This results in a cacophony of sounds reflecting the etymology of the *upopo* (the chirping of birds). In such polyphony, unlike Western polyphony, distinction of each voice line is not intended. The cluster of sounds helps to exorcize evil spirits from the ritual sites, cultivate spiritual strength and produce a certain hypnotic transfixion. The Sakhalin Ainu also use a singing technique called *rekúx-kara*. Two women sit face to face with their hands cupped loosely between their mouths, thus forming a resonating passage. The timbre of their voices is then altered by opening and closing the hands to varying degrees. A similar technique is found among the North American Inuit.

The word *rimse* originated in the sound of stamping feet and clashing swords of the *niwen-horippa*, or 'goose-step march'. This was performed on the occasion of tribal calamities in order to exorcize evil spirits. Ainu dancing

is divided roughly into two categories. The first is non-descriptive dance with stylized movement patterns: *rimse* is sung to accompany this type of dance in responsorial fashion, with a leader (*iekey*) and a following group. On rare occasions it is sung antiphonally by two groups or sung in unison throughout. The second type of *rimse* is descriptive or dramatic with mimetic gestures. Included in this category are *chikap rimse* ('bird dance'), which portrays flying birds, and *humpenere* ('whale dance'), in which pantomimic action tells the story of an old blind woman who finds a whale's carcass washed ashore and the subsequent division of the meat among the members of the tribe.

The Ainu depend on hunting and fishing for their subsistence. Since this type of labour demands quiet movements, there are no specific work songs connected with it. Work songs are limited chiefly to harvest songs of a religious nature, in which prayers are offered up for a plentiful harvest and the exorcism of evil spirits from the harvest. Thus, with a few exceptions such as the *iyuta-upopo* ('pounding song') and *chipo-haw* ('rowing song'), there are hardly any work songs involving characteristic actions or rhythmic patterns connected with specific types of work.

(iii) Individual music. Typical of this genre are *yayshama*, in which an improvisatory effusion of emotions is inserted between repeated refrains of *yayshama-nena*; *yaykate-kara*, a love song; and *iyohay-ochis*, a plaintive song on the subject of a broken heart. In any song of this kind the melodies are characterized by personal traits, and each melody can be identified with a specific member of the tribe. The Ainu lullaby (*ihumke*) is similar in this respect. One of its distinctive features is its peculiar manner of voice production: refrains are sung in high falsetto with a rolled tongue, to soothe a crying baby. Improvised words are repeated between refrains.

Ballads are divided into two major types, prosaic and prosodic. The former are epics the subject-matter of which is the myths on which the Ainu religion is founded; they are referred to as *kamui-yukara* ('divine ballad'). Ballads of this type are relatively short and are told in the first person by the gods of nature – animal and plant gods. The other type of ballad is called *yukara* ('human ballad'). The heroes of these ballads are mortals, and their lives, wars and romances are dramatically told in the style of extended epics. *Kamui-yukara*, the older type, is derived from the form of oracles of mediums possessed by animal gods. Onomatopoeic motifs linked with the heroic animals are repeated, and the melody carrying the story is inserted between these refrains. The melodies may be a repetition of the refrain motifs or new recitative-like figures. *Kamui-yukara* gradually developed into *yukara*, in which human heroes play leading roles; it then lost its religious connotations. The refrains diminished and melodies became longer.

(iv) Structure and instruments. Ainu melodies are basically anhemitonic, although melismatic variation often occurs, and a heavy, breathy vibrato often obscures precise pitch. Most Ainu melodies use two or three notes, rather than using evenly all five notes of a pentatonic scale. In two-note melodies the intervals of the major 2nd, minor 3rd and perfect 4th are most common. In three-note melodies the third note is obtained by adding a tone to the nuclear interval of a perfect 4th; for example *a-c′-d′* or *g′-c′-d*. Arpeggiated melodies without dominant frame intervals also occur. Melodies are constructed by repeating motifs. With a few exceptions of hybrid metre, the basic metre in Ainu music is duple, and only rarely does the metre change during a piece.

Pentatonic melodies are common among the peoples surrounding the Ainu, but a detailed examination of the cadences, rhythm and dynamics of Ainu music shows that it is more closely related to the music of Siberian peoples and North American Indians than to that of the Japanese. A comparative analysis of Ainu melodies may shed some light on the history of the migration of peoples from Siberia to the North American continent via the Kuril and Aleutian islands.

Typical Ainu instruments are the *tonkori*, a five-string zither (fig.39), and the *mukkuri*, a jew's harp. Both terms are onomatopoeic derivations from the instruments' sounds. The *mukkuri*, an ancient and widespread type of mouth harp, has a bamboo frame about 15 cm long, 1·5 cm wide and 0·5 cm thick. The *tonkori*, used mostly by Ainu from Sakhalin, has a hollow soundboard about 120 cm long, 10 cm wide and 5 cm thick. The player sits with the instrument resting against his shoulder or held in his arms while he plucks the strings with the fingers of both hands. The basic string tuning is in 4ths and 5ths (*a-d′-g′-c′-f′*), but there are some variants. A characteristic feature of the instrument is the star-like soundhole in its centre. When a ball is inserted into this hole, the instrument is thought to be given spiritual life. The *tonkori* was also formerly used as a ritualistic tool. The shaman's *kačo*,

39. Sakhalin Ainu playing the tonkori (zither), Tokoro, Hokkaidō, 1962

a single-headed frame drum, is used by shamanistic mediums.

(v) Late 20th-century developments. By the 1970s the traditions discussed above were being practised in a living sense by a very few elderly Ainu. Since then, however, interest has grown among the Ainu themselves and more widely within Japan. This, and a heightented political awareness, has led to the establishment of various Ainu-related research or culture centres in Hokkaidō, including the Ainu Museum in Shiraoi. This trend has engendered an increase in folkloric performances, both at tourist-orientated facilities in Hokkaidō and on stages elsewhere in Japan and abroad. Young Ainu are also taking an interest in their roots, as reflected in the albums of neo-traditional music by Oki, an Ainu who is an arts graduate of Tokyo National University of Fine Arts and Music.

Published research on Ainu music itself has remained sparse. Chiba Nobuhiko has begun to provide a flood of detailed analyses of *tonkori* music in particular, and other researchers will soon follow. Foreign researchers have perhaps been dissuaded by the challenge of learning both Japanese and Ainu languages.

IX. Music in the period of Westernization

1. INTRODUCTION. The Meiji period (1868–1912) saw Japan open its doors to the outside world after more than two centuries of isolation. The government adopted a policy of thorough and rapid modernization and Westernization. Although the primary aim was to catch up militarily and economically with its rivals, the Confucian world view suggested that all spheres of culture were interlinked; thus the education system and even the performing arts also had to be modernized.

The sections that follow describe developments since the onset of Westernization in three distinct music spheres in Japan: the Western classical music world; the world of popular musics, both Western-style and Japanese; and the world of *hōgaku*, Japanese traditional classical and theatre musics (for the world of folk song, see §VII above). These three spheres, while developing in relative isolation from each other, also interacted in significant ways. Japanese composers in the Western idiom have, perhaps ironically, come ever more to draw on their Japanese roots, TAKEMITSU TŌRU and MIKI MINORU being prime examples. Traditional musicians seeking new directions have primarily turned to the West, although to varying degrees. Popular composers of the early 20th century often worked in three idioms: Western-style compositions (albeit with Japanese lyrics); 'new folk songs' in near-traditional style; and a hybrid that draws on the pentatonic major and minor scales. The more adventurous among recent pop musicians reflect globalization by mixing Western, Japanese and other elements in the best post-modern tradition. Recent years, for example, have seen arrangements by commercial musicians of *shōmyō* with other instruments and musical styles (e.g. synthesizer, *shamisen*) or for the concert stage (see under RECORDINGS below).

Given that the national education curriculum has since the 1870s virtually excluded traditional music, it might be surprising that the latter survives at all. Western elements are indeed in the ascendant, but indigenous elements remain strong (see §4 below).

2. WESTERN ART MUSIC.

(i) To 1945. European music was introduced to Japan by Portuguese and Spanish missionaries in the mid-16th century, but the ban on Christianity (1588) and the isolationist policy (after 1639) stopped the development of imported music (see §IV, 4 above). When the restrictions were lifted at the Meiji Restoration (1868), European music was again imported, with fresh vigour and unusual rapidity, in the form first of military band music and then of Protestant hymns. The Meiji government actively encouraged the broad diffusion of Western music, and the new school system (1872) adopted a European style of singing in its curriculum. The Music Study Committee, founded by the government in 1879 and headed by Izawa Shūji, welcomed the cooperation of foreign teachers such

as Luther W. Mason, Franz Eckert and Rudolf Dittrich; in 1887 it became the country's first music academy, the Tokyo Music School. *Ongaku zasshi*, the first music journal, began publication in 1890; the first opera performance, a scene from Gounod's *Faust*, took place in 1894. By 1900 concerts were popular, particularly piano, violin and song recitals.

Japanese composers of Westernized music, who began to be active around 1900, at first specialized in songwriting; Taki Rentarō's *Kōjō no tsuki* ('Moon at a desolate castle', 1901) is probably the most famous song of the period. Yamada Kōsaku, who studied in Germany and became the leading composer of the time, made the first attempt to compose orchestral works and operas (about 1912). After 1915 an increasing number of European visitors (some of them, like Prokofiev, refugees from the Russian Revolution) further encouraged musical activities. By 1930 the list of visitors included the violinists Zimbalist, Kreisler, Heifetz and Thibaud, the pianists Godowsky and Levitsky, the singers McCormack, Fleta and Galli-Curci, the guitarist Segovia, and opera companies from France and Russia.

Yamada and his contemporaries were strongly influenced by German Romanticism. After World War I other European schools, such as French impressionism, were influential, and some composers began to use elements of traditional Japanese music in their works. For example, Shin Nihon Ongaku (New Japanese Music), led by Yoshida Seifū and the *koto* performer and composer Miyagi Michio, aimed to perform compositions in European styles with Japanese instruments. Vocal compositions in folksong style or for children were particularly popular.

By 1930 contemporary European movements were quickly transmitted to Japan, and as a result Japanese composers began to write in a variety of styles, including nationalist and futurist. The Shinkō Sakkyokuka Renmei (organized in 1930 by 16 younger composers) rapidly grew into a large organization and in 1935 was renamed the Nihon Gendai Sakkyokuka Renmei and became the Japanese branch of the ISCM. Several smaller composers' associations that had been organized at this time were dissolved at the beginning of World War II, when all musical activities were strictly controlled by the military government.

(ii) Since 1945. After the war musicians made a prompt start to recover and catch up with the international standards of modern music, and development was rapid. Orchestras and opera groups were organized, and new music colleges and schools were established according to the new educational system. In 1946 the Ministry of Education decided to sponsor an arts festival to be held every autumn, including many musical events. In the same year the pre-war organization of the Nihon Gendai Sakkyokuka Renmei was reconstituted as the Nihon Gendai Ongaku Kyōkai (Japanese Society for Contemporary Music). Many smaller groups of composers were organized to further individual activities, the more important being the Shinsei Kai (members including Shibata Minao, Irino Yoshirō and Toda Kunio, 1946), the Shin Sakkyokuka Kyōkai (including Kiyose Yasuji and Matsudaira Yoritsune, 1947), the Jikken Kōbō (including Takemitsu Tōru and Yuasa Jōji, 1951), the Group of Three (Akutagawa Yasushi, Dan Ikuma and Mayuzumi Toshirō, 1953), the Yagi no Kai (including Hayashi Hikaru and Mamiya Yoshio, 1953) and the Shinshin Kai (with Ikenouchi Tomojirō, Bekku Sadao, Miyoshi Akira and others, 1955). The most controversial movement of the time was dodecaphony, which most composers tried at least once. Some composers still used 19th-century styles, some pursued nationalistic trends, and some participated in avant-garde movements. In 1953 *musique concrète* was introduced into Japan, and in 1955 the NHK Electronic Music Studio was opened in Tokyo.

After 1960 Japanese composers started to be more individualistic. The remarkable progress in the quality of their work has produced several internationally known composers. The variety of their activities has been such that practically all Western movements have been quickly transmitted and have counterparts in Japan. In addition there have been movements unique to Japan, notably the composition and performance of works in modern idioms on Japanese instruments. The Hōgaku Yonin no Kai, a group of four players of Japanese instruments formed in 1957, commissioned a series of new compositions for their concerts, encouraging composers to familiarize themselves with Japanese instruments. The Ensemble Nipponia (Nihon Ongaku Shūdan), a group of European-style composers and performers using Japanese instruments, was established in 1964; it made many international tours and was active until the 1990s.

The Society of 20th-Century Music, founded in 1957, sponsored a summer festival like that at Darmstadt until 1965. The Japan Philharmonic SO has commissioned new orchestral works annually since 1958 (except for the years 1972 and 1973), among them important compositions by Yashiro, Takemitsu, Shibata, Mamiya and Miyoshi. The Japanisches-Deutsches Festival für Neue Musik (1967–70), sponsored by the Tokyo German Culture Centre, was significant in the promotion of modern music, as was the festival Music Today, directed by Takemitsu (1973–92). The Kusatsu Summer International Music Festival, founded in 1980, has commissioned new Japanese works every year, while the Suntory Music Foundation, founded in 1969, has commissioned and published new works and promoted concerts of Japanese music; since 1991 it has also awarded the annual Akutagawa Prize for the best orchestral work by a young Japanese composer.

While composers continued to pursue novel styles and techniques, radical avant-garde movements gradually waned after 1970. Many composers, including Ichiyanagi, Shibata and Takemitsu, cultivated an eclectic range of styles, from tonal lyricism to aleatory techniques. Shibata's *Oiwake-bushi kō* (1973) was the first example of a new genre that the composer called a 'theatre piece', somewhat similar to the *musikalisches Theater* of Kagel and Ligeti but drawing on traditional and folk melodies. Its success had a decisive influence on Japanese composers of the 1980s and 90s, who created an increasing number of works calling for stage action. From the mid-1980s opera, both European and Japanese, enjoyed growing popularity, culminating in the opening in 1997 of the New National Theatre, the first Western-style opera house in Japan. Leading Japanese composers of opera include Hara, Miki, Dan and Hayashi, who collaborates with the Konnyaku-za opera group.

The adaptation of traditional Japanese music to European-style composition had become commonplace by the

1980s, when some composers began to look to non-Western (especially Asian) music for their inspiration. The Japanese Society for Contemporary Music (numbering 214 members in 1999) has sponsored an annual festival of contemporary music since 1962 and has awarded the Sakkyoku Shinjin Shō to a young composer since 1984. The Nihon Sakkyokuka Kyōgikai (Japanese Federation of Composers), founded in 1962 to protect composers' rights, has sponsored concerts, published music and, in collaboration with the Suntory Music Foundation, has since 1981 published a biennial catalogue of works by Japanese composers. By 1999 its membership had reached 560.

Japanese influence on music in Europe and North America has been felt in several respects. The educational philosophy of Suzuki Shin'ichi, manifested since 1933 in his method of violin teaching, has been applied extensively to the teaching of the violin and other string instruments, the flute and the piano. Japan has also become an important manufacturer not only of reproducing equipment but also of pianos, string and wind instruments; leading firms are Yamaha, Nippon Gakki and Kawai.

3. POPULAR MUSIC. The musical forms treated here as 'popular' comprise those most often associated with the rise of the mass media, specifically printed media, recordings, radio, cinema and television. While most musical genres performed in Japan have been disseminated through print and recordings or broadcast at one time or another, particular genres have developed in close conjunction with the mass media and the socio-musical expectations of their audiences.

(i) To 1945. Many genres of Japanese music associated today with the Western concept of 'popular music' originated during the Meiji era (1868–1912). The terms *hayariuta* and, later, *ryūkōka* (both literally meaning popular songs) have been used as broader concepts that subsume specific popular song forms. Many such popular songs have texts that are related to current events or social trends and are relatively short-lived in popularity. In contrast to traditional folksongs, composers and lyricists of popular songs are individually identifiable and some gain considerable fame. With some exceptions, especially among jazz-influenced forms, purely instrumental music has played a secondary role in Japanese popular musical life.

During the Meiji period, the introduction of Western culture and concepts of democracy and liberalism deeply affected the Japanese political as well as musical scene. Particularly in urban centres such as Tokyo and Osaka, emerging popularistic political movements enlisted support through a new kind of speech-song called *enka*. With texts related to the goals of the Jiyū Minken Undō (People's Democratic Rights Movement), *enka* songs were heard in music halls and tea houses as well as outdoors on street corners, where broadsheets containing the lyrics were sold. Owing to the songs' directly political nature, the lyrics were considered of greater importance than the melody, so early *enka* were usually half-shouted and half-chanted to emphasize the texts clearly. In using this technique they were influenced by the style of *rakugo*, comic storytelling that was performed in variety halls. Early examples of this kind of *enka* include *Dainamaito-bushi* ('Dynamite Song') and *Oppekepē*. Later, other traditional song genres that had developed in Japan's urban tea houses and theatres influenced the melodic and performing style of *enka*, including *shinnai-bushi*, *gidayū-bushi*, *kouta* and *zokkyoku*.

In the late Meiji and the Taishō periods, political and social events continued to shape *enka* lyrics. The Sino-Japanese War of 1894–5 made popular composed songs on patriotic and military themes (*gunka*), often accompanied by the *genkan* lute. Again during the Russo-Japanese War of 1904–05, *gunka* from the Sino-Japanese War were revived, and new patriotic songs were composed. In between these two conflicts, however, economic depression and the growth of socialism once more produced socially critical song texts. In addition, everyday events and humorous topics also found a place in *enka* lyrics. From 1907 the violin sometimes replaced the *shamisen* as accompanying instrument, as heard in recordings of *Nonki-bushi* (1918).

In 1896 the first gramophones were imported into Japan for sale, and traders soon discovered that Japanese consumers preferred indigenous music to that from the West. Early recordings were made in Japan by *kouta* and *gidayū-bushi* singers, manufactured in England or America and then re-shipped to Japan. In 1907 an American-Japanese record company (Nichibei Chikuonki Manufacturing Company, the predecessor of Nippon Columbia) was established, soon followed by other companies building factories and founding sales outlets for a quickly growing market. By 1926, the monthly sales of Nichibei Chikuonki alone had reached 150,000 records and 5000 phonographs.

The rise of hit songs spurred on this economic development. One of the earliest was *Kachūsha no uta* ('Song of Katherine', composed by Nakayama Shinpei), a ballad of 1914 that sold 200,000 copies. While this song dealt with a foreign theme (it was composed for the Tolstoy play *Resurrection*) and displayed a mixture of European harmonies and Japanese scales, most hit songs of this period remained 'Japanese' in sound. Accompanied by *shamisen*, using *yō* or *in* scales and containing lyrics in traditional poetic forms, popular songs of the early days of phonograph recordings sound similar to the *kouta* of the tea houses, *gidayū-bushi* or folksongs. In addition to the few examples of 'exotic' European-type songs, other important genres showing Western influence include *shōka*, children's school songs, and the previously mentioned *gunka* military songs. The former were composed from the mid-1880s specifically for use in school instruction and were disseminated through school textbooks. *Shōka* school songs often used the so-called *yonanuki* ('fourth and seventh [degrees of the major or minor scale] omitted') scale (see §I, 4 above). They were short, easy to learn songs, written in verse form and having metres of 4/4, 2/4 or (less frequently) 3/4 or 6/8. In the classrooms, these tunes were accompanied by piano or *orugōru* music box. *Gunka* such as *Taishō gunka*, which was composed by Yamada Gen'ichirō in 1894 during the Sino-Japanese War, appeared at the same time as *shōka* and also used the *yonanuki* scale. Many of these, which were used to bolster fighting spirit among soldiers both at home and abroad, feature a steady march beat and an instrumental accompaniment emphasizing Western military and drum instruments.

The rise of popular song genres such as *enka* and *gunka* stimulated the development of a new occupation: the professional songwriter. Nakayama Shinpei (1887–

1952), originally a grammar school teacher, gained instant fame with *Kachūsha no uta* and in his lifetime wrote over 2000 songs. The best known of these include *Gondora no uta* ('Gondola Song', 1915), *Sendō kouta* ('Boatman's *kouta*', 1921) and *Tōkyō ondo* (1933; see §VII, 3 above). In the course of his career, Nakayama often took advantage of the relationship between popular song and theatre (later films), linking some songs with a particular play or film and vice versa. Later in his career he felt more drawn to Japanese folk music and composed songs in folk style, using a *yonanuki* scale mostly in minor mode. Koga Masao (1904–78) gained fame with *Sake wa namida ka tameiki ka* ('Is Sake Tears or Sighs?', 1931) and from an early age wrote under contract for different record companies. He developed his own musical style (the so-called 'Koga melody') that used the *yonanuki* scale and Japanese-style vibrato and ornaments in the voice (*yuri* and *kobushi*). Many of his numerous hits were sung by Fujiyama Ichirō (*b* 1911), so that the two names became inextricably associated with one another in the popular song world.

The years between the Taishō era (1912–26) and the beginning of World War II saw significant turbulence in Japan's society and economy. Due to improvements in medical care and general quality of life, Japan's population almost doubled between 1910 and 1940. This meant that Japan, previously self-sufficient in raw goods and agriculture, now required imports from abroad and ever larger amounts of exports to pay for them. In addition, economic depressions and a dramatic population shift to the cities created social unrest that could not be easily pacified by the weak central political powers. The impoverished tenant farmers resented the relatively comfortable life of urban dwellers, and the growing Western-influenced popular culture (including songs that referred to jazz, alcohol and couple-dancing) was criticized by rightists as 'anti-Japanese'.

Interestingly, it was particularly in periods of economic hardship and social unrest that the record industry grew at astounding rates. Record sales rose over 60% between 1929 and 1931. The rise of star singers such as Fujiyama and Awaya Noriko (*b* 1907), who both consistently produced hit songs throughout the 1930s, spurred on record consumption and the newly-developing radio industry. Awaya became known as the 'Blues Queen' for hit songs such as *Wakare no Burūzu* ('Separation Blues', 1937) and *Ame no Burūzu* ('Rain Blues', 1938), both of which were composed by Hattori Ryōichi (1907–93). The Japanese version of a blues sound was created through the use of the minor *yonanuki* scale (see §I, 4 above) and evenly-accented, moderate 4/4 rhythms to the accompaniment of a brass-dominated jazz orchestra. As the military rose in influence in the years preceding World War II, *gunka* from previous wars and new military songs became popular. *Roei no uta* ('Bivouac song', 1937), with lyrics pledging victory and courageous deeds and set to trumpet fanfares and drums, was a particularly popular *gunka*, selling 600,000 copies. Popular songs of the World War II period reveal many titles dealing with current events, particularly with the war in the Pacific and Asia, and appealing to patriotic feelings. Some of the non-militaristic songs that were popular at this time were originally composed for films; close ties between films and popular songs had already developed in the 1930s.

(ii) Since 1945. The end of the war was followed by a flood of occupying forces, primarily American troops that established their own radio stations and spread American tastes in popular music. Some post-war hit songs reflect this trend, such as *Tōkyō Bugiugi* ('Tokyo Boogie Woogie', 1948), which is written in a major scale and sung without any trace of traditional Japanese vocal technique. There also appeared in the post-war years many translations of American and European hits, such as *Tennessee Waltz* (1952) and *Que sera, sera* (1956). On the other hand, elements of Japanese folksong, such as mode and rhythm, play an important role in the songs made popular by Misora Hibari (1937–89), one of the most beloved singers and actresses of the post-war era. Making her debut as a child singer in 1949, she gained fame with such *enka* as *Ringo oiwake* ('Apple *oiwake*', 1952). Misora, Shimakura Chiyoko (*b* 1938) and male singers including Mihashi Michiya (1930–96), Minami Haruo (*b* 1923) and Frank Nagai (*b* 1932) all contributed toward the evolving postwar *enka*, which contained sentimental, sad lyrics and were sung with *yuri* and *kobushi* ornamentations in a *yonanuki* minor scale.

The rise of postwar *kayōkyoku*, in which predominantly Western scales and singing styles were used, coincided with the increased popularity of Japanese forms of Western popular styles. The term 'group sounds' was used to designate the Japanese reaction in the 1960s towards British and American pop groups, represented by groups such as The Tigers and The Spiders. At about the same time, the *fōku* ('folk') movement emerged, also influenced by Western music, specifically new folk and protest music. This phenomenon coincided with the ascent of the singer-songwriter (exemplified by Yoshida Takurō (*b* 1946) and Minami Kōsetsu (*b* 1949)), a figure who made a break from the former system of composers and lyricists working for record companies and writing for particular singers under contract to those companies. The audiences for their songs were made up of young, urban and well-educated members of the postwar generation.

The 1970s saw the rise of *nyū myūjikku* ('new music'), or music written by singer-songwriters in a contemporary, Western-influenced 'folk' style with personal, introverted lyrics. The melody (often in the natural minor scale and containing short phrases) and the text it conveys are considered more important than the rhythmic basics or instrumental accompaniment. Another form of Western-style Japanese music is simply called *poppusu* ('pops'), which is sung by, and appeals to, young teenagers.

Even before the advent of MTV, television developed in Japan in close coordination with popular music and music makers. Soon after going on the air in 1953, NHK (Nippon Hōsō Kyōkai, Japan Broadcasting Corporation) began to produce television programmes that starred current popular singers. In addition to several weekly programmes, one perennial favourite is the *Kōhaku uta-gassen* ('Red-White Song Competition'), which is broadcast every New Year's Eve and features the year's most popular singers, divided into teams of females and males and performing their latest hits in front of millions of viewers, with a jury deciding the winning team.

There is currently a wealth of popular genres in Japan, including some, such as *enka* and certain forms of *kayōkyoku*, that are unique to the country. At the same time, Japanese versions of Western popular forms such as rock, rap, punk, heavy metal, and country and western

are performed in clubs and broadcast throughout the country. Electronic and broadcasting technology (including phonographs, radio, television, video, CD players, synthesizers and computers) has played an important role not only in the Japanese economy but also in the multifaceted way in which Japanese popular music has evolved.

4. TRADITIONAL MUSIC. Traditional music in Japan (*hōgaku*) was greatly affected by the Meiji Restoration of 1868. Compositional constructions, playing techniques and performing practices of the various guilds have all changed in varying degrees, due in part to the strong influence of Westernization. Despite the ongoing productivity and creativity found within the various genres of traditional music, it remains secondary to Western music in the society at large. From the construction in 1883 of the Rokumeikan Hall, where European waltzes were played in an attempt to impress Westerners with how civilized the Japanese people were, to the three days of Western classical music played on the national radio station in honour of Emperor Hirohito at the time of his death in 1989, Western music has been used to represent a cultured society in Japan.

In education, a cursory nod is given to one or two traditional pieces in elementary and high schools, and only a few institutions of higher education, the most notable of which is Tokyo National University of Fine Arts and Music, offer *hōgaku* studies. Since the modern Japanese school system offers as part of its curriculum only Western music, anyone who wants to learn a traditional instrument does so through private lessons, usually by becoming a member of a school that is part of the *iemoto* guild system (see §I, 3 above), which regulates private studies through a pyramid-type structure of performance certification. This system receives some criticism today from the general public as an outdated form of arts education, but it continues to stand as the main path for exposure to traditional music. Thus, the style of learning through the development of loyalties to a master musician associated with a certain style of performance remains largely unchanged. In 1999, however, the Ministry of Education decreed that all schoolchildren must from 2002 undergo performance tuition in at least one instrument. How this will be executed and received remains to be seen (and heard).

Several important figures incorporated Western musical concepts into Japanese music and brought their own genius to work towards both revolutionizing and preserving traditional music. The 'Father of Modern Japanese Music', Miyagi Michio (1894–1956), not only first incorporated Western musical concepts such as chamber-style structures and theme and variations, but further expanded the techniques and tunings for the *koto*. Miyagi also designed the 17-string bass *koto* in 1921, an instrument that remains popular today. His *Haru no umi* ('Spring Sea') for *koto* and *shakuhachi* is one of the few *hōgaku* works recognized by nearly everyone in Japan. Miyagi was further able to reach a wide audience by travelling abroad, performing with prominent Western musicians such as Isaac Stern and effectively utilizing the newly developed radio and early recording equipment. *Koto* master Nakanoshima Kin'ichi (1904–84) was also a creative innovator who incorporated new concepts without compromising the essence of the ancient instruments, writing with an increasingly international perspective that was influenced by China and India as well as the West. Other performer-composers include Miyashita Shūretsu and Yamakawa Enshō. This phenomenon of looking for inspiration for their instruments from an internationally influenced perspective, as well as combining Japanese instruments with Western and Eastern instruments, continued in the latter half of the 20th century in works by Yuize Shin'ichi, Yamamoto Hōzan, Kineya Seihō and Sawai Tadao.

Composers from outside the performance tradition have also taken an increasing interest in traditional music. They include Shimizu Osamu, Mamiya Michio, Takemitsu Tōru, Miki Minoru, Nagasawa Katsutoshi and Moroi Makoto. There has been a general trend away from imitation of the Western tradition to a more individualized expression that is attentive to the aesthetics of traditional Japanese music. Some of the more recent works that reflect these values are Takemitsu's *November Steps* and Miki's *Jōruri*, both of which have received critical acclaim abroad as well as in Japan. More recently, non-Japanese composers such as Cage, Stockhausen and Gubaydulina have had their compositions for Japanese instruments performed in Japan and have become intrigued with incorporating Japanese musical concepts into music for Western ensembles. An increase in the number of proficient non-Japanese musicians, most noticeably *shakuhachi* players, has also brought an international flavour to the performance tradition. 'World Music' has both influenced and been influenced by contemporary composers and musicians.

Since the mid-1980s, appreciation of Japanese music has been undergoing a minor renaissance in Japan, most likely linked to Japan's rising economic power in the world economy, which has resulted in a more general rediscovery of national pride, coupled with a growing foreign interest in things of a traditional nature. There are *hōgaku* concerts each month in Japan's larger cities. The July 1996 edition of the monthly *Hōgaku Journal* lists no fewer than 98 live performances in the Kantō area (mainly Tokyo), 25 performances in the Hokkaidō/Tōhoku region, 23 in the Chūbu region, 24 in the Kansai region, 4 in Chūgoku/Shikoku/Kyūshu regions, and several abroad, including tours in the Middle East, Europe and South-east Asia. The *hōgaku* listings include classical, contemporary, improvisational and folk styles, with a variety of traditional instrumentation. The performances include student recitals, solo recitals, and large and small ensembles. Most schools have an annual performance in which all of the students take part, and many of the *hōgaku* ensembles perform once each season, so there is rarely a lack of activity. While performance groups such as the Nihon Ongaku Shūdan (Ensemble Nipponia, also known as Pro Musica Nipponia), established in 1964, continue to be active today, the past ten years have been witness to a surge of new ensembles made up of highly proficient players, and the trend towards public performance in addition to performances with one's guild has steadily increased. There are concerts where only *kimono* are worn and the performers kneel on the floor, or where evening gowns are worn and the performers sit on chairs and the conductor is present, or where casual clothing is worn and the performers move freely about the stage with their instruments. The English word 'recital', first used for traditional music in 1902, has now been joined by phrases such as 'live', 'super session' and 'joint concert'. The new generation of *hōgaku* musicians is also making

use of technological advances for CD recordings, videos, electronic instruments and the Internet.

The government has provided limited but steady support towards the preservation of traditional music. Prominent traditional musicians have been nominated as Ningen Kokuhō ('Living National Treasures'), and the annual Geijutsushō award for an outstanding performance includes a traditional category. Since 1955 NHK (the Japan Broadcasting Corporation) has sponsored a one-year course for young students of traditional music, which culminates with a nationally broadcast performance. NHK also invites performers to audition for radio performances on a regular basis; it commissions works and regularly airs a programme that features contemporary music for traditional instruments. Since 1966 the National Theatre has sponsored a yearly concert that features top *hōgaku* musicians giving premières of new works. The National Theatre also sponsors concerts where ancient Eastern instruments are reconstructed and where works are commissioned and performed by *hōgaku* musicians. Any of these performances might feature musicians from various guilds.

Several important changes in the three principal Japanese instruments (see §II, 4, 5 and 6 above) have also had an impact on compositional and performing practices. The 17-string bass *koto* designed by Miyagi in 1921 has primarily been used as a *koto* ensemble instrument, but recently such performers as Sawai Kazue, who studied under Miyagi, have expanded its use as a solo instrument. The 20-string *koto* (which now has 21 strings), designed in 1969 and originally created to accommodate Western scales more easily, is used by several ensembles and can be a solo instrument as well (since 1991 it sometimes has 25 strings). There has been some experimentation with *shamisen* size or with increasing the number of holes on the *shakuhachi*, but for the most part these have not taken hold. While silk *koto* strings continue to be used by some schools, most schools replaced them with nylon strings in the 1970s, then changed to a sturdy tetron string in the early 80s. There has been some controversy over the issue of traditional use of ivory for *koto* bridges, picks and *shamisen* plectra, but these parts are gradually being replaced by plastic with virtually no change in sound.

There has been some unrest throughout many of the genres of the *hōgaku* world regarding the continuation of the *iemoto* guild system. While lesson costs are for the most part reasonable, the pyramid structure, which expects students to meet rising expenses such as hall rental and individual performance certification, along with traditional spending practices surrounding gift-giving as a sign of appreciation, is beginning to be questioned. Schools have responded in different ways, but the tendency has been towards some weakening of traditional structures. Issues of this sort have been addressed in various publications such as *Hōgaku Journal*. In many ways, this tension between new versus old, change versus tradition, is as much an issue today as it was in 1868. The important difference is the lively musical dialogue reaching across cultures and an ever-sharpening appreciation and awareness of Japanese aesthetics by the international community and by the people of Japan themselves.

Japart [Japarte, Jappart, Zaparth; ?Gaspart], **Jean** [Janni, Johannes] (*fl* c1476–81). South Netherlandish composer, from Picardy. He served as a singer in the court chapel of G.M. Sforza in Milan, and later at the Ferrarese court of Ercole d'Este. He probably came to Milan in the early part of 1476 – the earliest pay record to include his name is a document from 4 July 1476, which promises a benefice to 'Janni Japart'. Between 1472 and 1474 Galeazzo had employed his *maestro di cappella*, Gaspar van Weerbeke, to recruit new singers from Flanders; from 1474 the court chapel included several well-known composers, notably Alexander Agricola, Loyset Compère and Johannes Martini. Following Galeazzo's assassination, a letter of safe passage from Milan (dated 6 February 1477) includes 'Johanne haeppart' among the dismissed singers. Japart appears to have gone directly to the Ferrarese court chapel (he is first mentioned there on 1 April 1477), and he remained there until the end of 1480. He was evidently held in some esteem, as he became one of the highest-paid singers in the group. Further evidence of Japart's stature at the court comes from documents of 1479 and 1480 in which it is stated that he received a financial subsidy for a house in Ferrara. The court registers of 1480 also indicate that he came from Picardy. His name no longer appears in the list of ducal singers for 1 February 1481, so it would seem that he left the Ferrarese court in January 1481. Japart's subsequent whereabouts and date of death are unknown. He is probably not to be identified with the 'Jaspare' who was *sangmeester* of the Confraternity of Our Lady in Bergen-op-Zoom in 1504–8, as this was almost certainly a first name (the man cannot, however, have been Gaspar van Weerbeke, with whom Japart has sometimes been confused, since Weerbeke was in Rome at the time). Fétis suggested a link between Japart and Josquin, reporting that Josquin had composed a four-part chanson in honour of Japart (the only 15th-century composer to be so honoured); unfortunately the piece, *Revenu d'oultrements, Japart/Je n'ai du sort que mince part*, no longer survives.

Japart's name occurs in connection with 23 chansons, six of which survive with conflicting ascriptions. Two stylistic features are especially prominent: a predilection for the quodlibet chanson that combines two or even three pre-existing melodies and their texts, a trait that no doubt shows the influence of Busnoys (in three instances in which Japart chansons survive with conflicting ascriptions the other composer named is Busnoys); and a tendency to use ingenious puzzle canons when taking over pre-existing material; thus in one of his two settings of *J'ay pris amours* the pre-existing melody carries the inscription 'Fit aries piscis in licanos ypathon', indicating that the melody (in the superius) is to be transposed down a 12th and sung in retrograde motion, resulting in its sounding as the lowest voice.

His music gained wide popularity through its inclusion in Petrucci's three song collections; in addition, some of his works were copied in several Florentine manuscripts from the 1490s. *Amours fait moult/Il est de bonne heure né/Tant que nostre argent dura* was his most widely-copied work. The sacred work *Vray dieu d'amours/Sancte Iohanes baptista/Ora pro nobis* is closely related to Isaac's *Fortuna desperata/Sancte Petre/Ora pro nobis* and the anonymous *Ic zie den claren dach/Sancte Johannes baptista/Ora pro nobis* (*F-Pn* lat.16664). All three works are in five parts, with the Litany of the Saints occupying two of the inner voices.

It is possible that the ascription 'Gaspart', which occurs in connection with two four-voice songs in the Strozzi Chansonnier (*I-Fc* 2442), *Bon temps* and *Que faict le cocu au bois*, refers to Japart, and not, as is often supposed, to Gaspar van Weerbeke.

ALLAN W. ATLAS/JANE ALDEN

Jaque de Cambrai (*fl c*1260–80). French trouvère. The period of his activity has been postulated largely on the basis of his poetic style. He wrote four *chansons courtoises*, a pastourelle, and six chansons and a rotrouenge in honour of the Virgin. No work survives with music, although melodies for two are recoverable since the Berne manuscript (*CH-BEsu* 389) states that these are based on works by two other trouvères. These are *Haute dame, com rose et lis*, R.1563 (modelled on Thibaut IV, *Ausi com l'unicorne sui*, R.2075), and *Mere, douce creature*, R.2091 (modelled on Raoul de Soissons, *Quant voi la glaie meure*, R.2107). (E. Järnström: *Recueil de chansons pieuses du XIIIe siècle*, i, Helsinki, 1910)

For further bibliography *see* TROUBADOURS, TROUVÈRES.

THEODORE KARP

Jaque de Cisoing. *See* JACQUES DE CYSOING.

Jaque de Dampierre (*fl* 13th century). French trouvère. He is credited with two of the *unica* in the manuscript *F-Pn* 1591: *Cors de si gentil faiture*, R.2097, and *D'amours naist fruis vertueus*, R.1016 (both ed. in CMM, cvii, 1997). Possibly he was a native of Dampierre in the département of Seine-et-Oise, and a member of one of the later generations of trouvères. Each of the two melodies employs bar form and is in a plagal mode. (A. Scheler: *Trouvères belges*, nouvelle série, Leuven, 1879/*R*)

For further bibliography *see* TROUBADOURS, TROUVÈRES.

THEODORE KARP

Jaques-Dalcroze, Emile (*b* Vienna, 6 July 1865; *d* Geneva, 1 July 1950). Swiss music educationist and composer. His early musical studies were pursued first at the Geneva Conservatoire, where he received a first prize for music and poetry, and later in Paris under Fauré, Delibes and Lussy and in Vienna under Bruckner and Fuchs. In 1886, for one season, he was assistant director of the Algiers Théâtre Municipal, where his interest in Middle Eastern rhythms was awakened. This had an enormous influence on his later conception of teaching musical experiences using polyrhythms and irregular rhythms. In 1892 he became professor of harmony at the Geneva Conservatoire, where to replace the traditional teaching method, which failed to give students a real experience of music, he gradually developed his system of co-ordinating music with body movements. He adopted some ideas of his teacher Lussy, who in turn drew on Momigny's theory of rhythm. Lussy's influence can be felt mainly in three areas:

the physical manifestation of rhythm, the differentiation between various accent types (in addition to metrical and rhythmical accentuation, Jaques-Dalcroze also worked with the 'pathetic accent'), and the adoption in music of terms derived from the metrical theories of classical poetry.

Working experimentally and unofficially with volunteer classes, Jaques-Dalcroze first gained public recognition for his method at a conference of the Swiss Musicians Association in 1905; in the following year he held the first training course for teachers. In 1910 he was invited by Wolf Dohrn, the patron of the garden suburb Hellerau, near Dresden, to organize an institute for teaching rhythmical training. In a building specially constructed for his work he continued to develop his method and, with the help of the stage designer Appia and the light artist Salzmann, created the 'Hellerauer Schulfeste', a special theatrical performance combining art and pedagogical improvisation, which gained a worldwide reputation. After the war broke out in 1914 he returned to his own country and founded the Institut Jaques-Dalcroze in Geneva. He had visited England with a group of pupils in 1912 giving lecture-demonstrations; in 1913 the London School of Dalcroze Eurhythmics was founded under the direction of Percy B. Ingham. Similar schools were started in Paris, Berlin, Vienna, Stockholm, Moscow, New York and elsewhere, and in 1926 a congress of rhythm was held at the Institute in Geneva.

The method itself, originally intended to develop the sense of rhythm in music students, provides a general training in music theory, improvisation and rhythmic movement and is also used in the education of children, inasmuch as it quickens mental responsiveness and the powers of self-expression. An important element of the method is Jaques-Dalcroze's theory of arrhythmia, in which a conscious and unconscious bodily sense is brought into play, with the feet making automatic patterns while the arms and the voice respond to improvised music. After this training to obtain the pupil's rapid physical reaction to changing rhythms, which are supplied by the teacher improvising at the piano, whole musical compositions are translated into a language of bodily movement. Bach's fugues, Gluck's *Orfeo* and other works have in this way been given plastic expression by the Jaques-Dalcroze schools, and the principles underlying the method have been applied in varying degrees to theatrical and operatic productions. Among many distinguished students who evolved his method further are the composer Frank Martin, the dancer Mary Wigman, and Elfriede Feudel, Juan Llongueras and Mimi Scheiblauer, who adapted it to both general and special education purposes.

Besides having written books, pamphlets and articles in periodicals about his method, Jaques-Dalcroze wrote a large number of musical compositions, some in popular folk style, some for teaching purposes. (A complete catalogue of his works has been published by the Institut Jaques-Dalcroze, Geneva, 1995–9.) Although his compositions are rarely played today, his significance for the field of musical education has remained, with over 30 institutes worldwide offering a professional education in the tradition of his method.

Jaquet of Mantua. *See* JACQUET OF MANTUA.

Jara, Víctor (*b* Chillan, 28 Sept 1932; *d* Santiago, 15 Sept 1973). Chilean singer-songwriter and theatre director. He learnt his first repertory of folksongs from his mother Amanda, who was a folk singer. He moved with his family from the countryside to a Santiago shanty town when he was 11. His brief study in a seminary and later membership of the choir of the University of Chile, where he became a student in the theatre school, introduced him to a wider repertory including Gregorian chant, classical chorale and scored music as well as playing the organ. At 20 Jara became a keen member and later director of the seminal folk group Cuncumén. In 1966 he was invited to join what became the crucible of Chilean *nueva canción* (new song), the Peña de los Parra, the Santiago folk night club organized by Angel and Isabel Parra. Jara acknowledged the influence of their mother, the folklorist VIOLETA PARRA. In 1969 he became joint winner of the First Festival of Chilean New Song with *Plegaria a un labrador*, backed by the group Quilapayún. He had worked for a time as their artistic director, helping mould their characteristic performance style, something he also did with Inti Illimani; both became key *nueva canción* groups.

In 1970 Jara gave up a notable and successful career as a theatre director with a distinct international perspective to devote himself to full-time musical activity, working at Santiago's Technical University and from 1971 travelling all over Chile and Latin America as a cultural ambassador of the government of President Salvador Allende. Jara was a passionate and vibrant cultural activist of the Chilean left, and many of his performances and songs were directed towards students and workers. A charismatic and popular figure, he was murdered following the military coup d'état of 11 September 1973. His music and commitment to the ordinary people of his country and their cause has brought him to worldwide audiences.

Jara's songs mingle the archaic flavour and modality of old rural musical traditions with deceptively simple melodies and modern harmonic colour. An intuitive master of the guitar with a natural knowledge of classical techniques, his vocal and instrumental work established a new model of folkloric elaboration expanding the range of influences in Chilean popular music. His whole repertory is seminal, in many ways a personal map of developments in Chile from the 1960s until his untimely death, notably *El derecho de vivir en paz* (1971); *Manifiesto* (1972); and *Vientos del pueblo* (1974). Of his 104 compositions registered with the Chilean Society for Authors' Rights the following deserve special mention: *Paloma quiero contarte* (1961); *El cigarrito* (1964); *El arado* (1965); *El aparecido* (1967); *Te recuerdo Amanda* (1968); *Angelita Huenumán* (1969); *Plegaria a un labrador* (1969); and *Luchín* (1972). The latter was part of his cycle of songs *La población* (1972), composed with the involvement of a number of Santiago shanty towns.

JUAN PABLO GONZALEZ

Jarana (Sp.). A song and dance genre which is the regional *son* of the Yucatán peninsula of Mexico. Its name derives from the word in the Jacarandina dialect of Andalusia, Spain, meaning 'a boisterous diversion of common folk'. The term also refers to a medium-size instrument of the guitar family, most frequently with five double courses of strings. Presumably the instrument's name arose from its association with the Yucatecan dance.

See also MEXICO, §II, 2(i), and 3(iv).

E. THOMAS STANFORD

Jarcha. The refrain of a ZAJAL.

Jarda, Tudor (*b* Cluj, 11 Feb 1922). Romanian composer. He studied at the Cluj Conservatory (1941–8) with Bena and Surlaşiu for choral conducting, Ronay for orchestral conducting and Simonis for history. From 1945 to 1948 he was a trumpeter with the Romanian Opera in Cluj; in 1949 he was appointed professor of harmony at the conservatory; from 1954 to 1957 he served as secretary to the Cluj branch of the Composers' Union; and, later, was director of the Romanian Opera (1975–81). His creative work is that of one deeply attached to the village musical life of Năsăud (he has conducted village choirs in Transylvania). In songs, choral pieces and operas he has begun from folk archetypes, using his contrapuntal skill and his gift for surprising harmonic progressions blending folk formulae; in particular, he has made effective use of the *hăulituri*, or instrumental-style vocalises. Two of his operas, *Pădurea vulturilor* ('The Forest with Vultures') and *Dreptul la viaţă* ('The Power of Life'), use traditional patriotic songs.

VIOREL COSMA

Járdányi, Pál (*b* Budapest, 30 Jan 1920; *d* Budapest, 29 July 1966). Hungarian composer, ethnomusicologist and critic. He began his musical studies as a violinist in Rome at the age of eight and continued his lessons in Budapest with Ilona Votisky. In 1936 he entered the Liszt Academy of Music, where he studied the violin with Zathureczky until 1940. He studied composition privately with Bárdos (1934–8) and then with Kodály at the Academy of Music (until 1942). Concurrently he attended Budapest University, where he took the doctorate in 1943 with a dissertation on the secular music of the Kide Magyars.

A member of Kodály's youngest generation of pupils, Járdányi was the last prominent figure to continue his teacher's programme for the development of music education in Hungary. He taught composition, theory, solfège and folk music at the Liszt Academy (1944–59), and in 1948 joined the folk music commission (headed by Kodály) of the Hungarian Academy of Sciences. Taking as his starting-point the work of Bartók and Kodály, Járdányi developed a new system for classifying Hungarian folksongs, the method of which was first published in *Magyar népdaltípusok*. As a critic Járdányi was mainly active during the 1940s, contributing to publications such as *Forrás*, *Szabad Szó* and *Válasz* and to Hungarian Radio. His writings are regarded highly as sources on Hungarian musical life at that time.

His compositional style shows the influence of Bartók and, more particularly, of Kodály. There are signs of these composers in the *Szimfonietta* and the *Missa brevis*, but the Sonata for two pianos has an individuality despite indebtedness to Bartók. Járdányi's main work is the Symphony 'Vörösmarty', for which he received the Kossuth Prize in 1954. One of the few Hungarian national works in the genre, the Symphony has elements of an idealized folk music similar to that of Kodály's later Symphony. *Vivente et moriente* (1963) expresses metaphysical ideas through music which is clarified and even austere by comparison with his earlier work.

JOHN S. WEISSMANN/MELINDA BERLÁSZ

Jardine, Frederick Wincott (*b* London, 1822; *d* London, 1907). English organ builder, nephew of GEORGE JARDINE. He was apprenticed to J.C. Bishop in 1836 and in 1837 went with his uncle to New York; he returned to London in 1842, completing his apprenticeship with Bishop. After the death of SAMUEL RENN (1845) Jardine joined his widow as co-manager of the firm in Manchester in 1848. Sarah Renn died in 1850 and was replaced by James Kirtland (Renn's nephew and ex-apprentice) until his retirement in 1866; the business continued as Kirtland & Jardine until 1867, when it became known as Jardine & Co. Jardine retired in 1874, when he sold the business and returned to London. The firm remained active until 1976; its records are in the British Organ Archive, British Institute of Organ Studies, Birmingham Central Library.

Jardine introduced innovations learnt in the USA and was the first in England to use Vogler's SIMPLIFICATION SYSTEM; there were no pipes standing off the soundboard and a simplified mechanism without rollerboards was evolved. Pedal choruses were developed using a simple mechanism to derive two stops (16′ and 8′, 8′ and 4′ etc.) from each rank of pipes. The Kirtland & Jardine coupler is illustrated in Hopkins and Rimbault. Serious case design was abandoned for Gothic frets, cut by machine to simple geometrical patterns. The firm made only simple mechanical actions but, influenced by the organist Benjamin Joule, developed a Romantic style. Jardine's largest organ was that in St Peter's, Manchester (1856–72), built for Joule; it had four manuals and 61 speaking stops, foreshadowing the Cavaillé-Coll organ of 1877 in the neighbouring Town Hall.

MICHAEL SAYER

Jardine, George (*b* Dartford, 1 Nov 1801; *d* New York, 12 Feb 1882). American organ builder of English origin. Jardine was an apprentice with Flight & Robson. He emigrated to New York in 1837 with his nephew FREDERICK WINCOTT JARDINE who later returned to England. He immediately began building small church organs and church barrel organs, the latter having been common in England during the period but never popular in America. One of these instruments, which plays from both a keyboard and barrels, dates from 1842, and is still in existence in Zion Church, Pierrepont Manor, New York. Only a year after Jardine's arrival in New York, he received a gold medal from the American Institute for a church organ and a self-playing organ. In 1855 his son Edward G. Jardine (1830–96) joined the firm, which then became known as Jardine & Son. The son travelled widely, making several visits to Europe to study the work of Cavaillé-Coll and others. The result of these trips is evident in the transition of the firm's work during the latter part of the 19th century from a style of design and voicing reminiscent of late 18th-century English work to one representing the fully fledged European Romantic idiom. Like other New York builders, Jardine's work was widely distributed in New York and the Southern states, a notable instrument having been built in 1858 for the Catholic Cathedral in Mobile, Alabama. They built organs for the Fifth Avenue Presbyterian Church (1856), St George's Church (1870), St Patrick's Cathedral and St Michael's Church (1893), all in New York. On Edward's death, Charles Scott Jardine (1870–99), son of Frederick William Jardine (1835–82), became head of the firm, which was dissolved in 1900.

BARBARA OWEN

Jarecki, Henryk (*b* Warsaw, 6 Dec 1846; *d* Lwów, 18 Dec 1918). Polish composer, conductor and teacher. He took lessons in composition with Moniuszko at the Warsaw Music Institute from 1864, and also studied conducting, the double bass, organ (with Freyer) and piano. He played the double bass at the Wielki Theatre. In 1872 he was appointed deputy conductor and from 1877 to 1900 was principal conductor and director of the Opera Theatre in Lwów: it was through his artistic judgment and organizing ability that the Lwów Opera became the leading opera theatre in Poland. He produced Polish operas (including his own) as well as the first series in Poland of operas in the European repertory, among them *Lohengrin*. Between 1878 and 1900, for several months in the year, he visited Kraków with his company, also making occasional tours to Tarnów, Stanisławów and Warsaw. From 1902 he was for many years conductor of the Lutnia-Macierz orchestra and chorus at the Lwów Philharmonic. The majority of Jarecki's works are vocal, in particular operas on subjects taken from Polish history and literature. These have certain dramatic qualities, though fundamentally his idiom is unoriginal and strongly influenced by Moniuszko (*Mindowe* is, however, the only contemporary Polish opera to approach Wagner in style). Most of Jarecki's works remained in manuscript and were lost in World War II.

WORKS

Stage: 9 ops, incl. Mazepa (after Słowacki), 1876; Mindowe (after Słowacki), 1879; Jadwiga królowa polska [Jadwiga, Queen of Poland], 1885; Powrót taty [The Father's Return] (after Mickiewicz), 1895; List żelazny [The Iron Letter], 1901, *PL-Wtm*; incidental music
Other works: Sym.; Ov., 1871–3; 2 str qts; Pf Trio, 1868; Vc Sonata, 1871; pf pieces; masses, cants, songs

BARBARA CHMARA-ŻACZKIEWICZ

Jarecki, Tadeusz (*b* Lwów, 1 Jan 1889; *d* New York, 2 May 1955). Polish-American composer and conductor. A

son of Henryk Jarecki, who was a pupil of Moniuszko, he took his first music lessons with his father and then studied composition with Niewiadomski in Lwów. He was a pupil of Taneyev in Moscow and of Jaques-Dalcroze in Hellerau (1912–13) where he remained for some time as a teacher. Besides composition he also studied the piano and conducting. In 1917 he went to the USA and in 1918 won first prize at the Berkshire Festival for his String Quartet op.16. After returning to Poland for two years (1918–20) he settled in New York, conducting the orchestra of the NBC before joining the Chamber Ensemble as their director. In 1929 he became general secretary of the Committee to Foster Friendly Relations between the Arts in Poland and America. From 1932 to 1936, his last years in Poland, he directed the Stanisławów Musical Society and conducted the Lwów SO. During World War II he was in Paris and London, where he formed the association Polish Musicians of London, which he directed until 1943. He went back to New York in 1946 to continue his conducting and composing and to lecture at Columbia University. Jarecki's creative work, which has its roots in the music of Wagner and Richard Strauss, gradually evolved in the direction of a more sublimated sound. His early works are characterized by wide melodic sweeps, but in later works this type of melody gives way to more colouristic effects. In some of his pieces Jarecki makes use of Polish elements stemming from folklore (Symphony no.4), or motifs from the medieval Polish song *Bogurodzica* (Symphony no.5). Jarecki's works were performed mostly in Poland and the USA, but also in Paris. His most frequently performed works include: *Chimere*, his only symphonic work to be published; the String Quartet op.16; and *Trzy pieśni* (op.5), a cycle for solo voice with orchestra on texts by Polish poets. Most of his works were not published. The manuscripts are in the USA. (*EMuz*, W. Berny-Negrey)

WORKS
(*selective list*)

Orch: 5 syms., incl. Symfonia breve; Chimere, sym. poem, op.26, 1925; La foule, sym. suite, 1927; Idylla morska [Sea idyll], sym. poem; 2 sets of sym. sketches, opp.14, 26; Conc. for Orch; Pf Conc.

Inst: 3 str trios, op.11 (1911), op.22, op.23; 3 str qts, op.12, op.16 (1921), op.21 (1922); Pf Sonata, op.19, before 1927

Choral/solo songs; 3 pieśni [3 Songs] (J. Pietrzycki, J. Słowacki, K. Zawistowska), op.5, 1v, orch/pf, 1908

TERESA CHYLIŃSKA/R

Jarman, Thomas (*b* Clipston, Northants., 21 Dec 1776; *d* Clipston, 19 Feb 1861). English composer. A tailor by trade, he was choir leader at the Baptist chapel in Clipston for the major part of his life, and is known to have played various instruments in the choir-band there and in the bands at churches around the area. His first collection, *Sacred Music Volume One* (London, 1803), includes the tune 'Nativity', which is now published in several nonconformist hymnbooks as 'Lyngham'. Then followed three more collections of hymn tunes, together with a large number of anthems, often for church festivals. Later works include *The Northamptonshire Harmony* and a funeral anthem for his friend, Thomas Clark of Canterbury. Jarman organized village choral festivals in north Northamptonshire, and is supposed to have conducted the festival at Naseby in 1837 that included the first performance outside London of part of Perry's *The Fall of Jerusalem*, with metropolitan soloists and orchestral principals, the leader being George Perry himself. From around 1840 Jarman was in charge of the music at the Methodist chapel in Leamington, Warwickshire; he returned to Clipston several years later. His last known published work was *A New Ode on Peace with Russia* of 1856. Some anthems were published posthumously, the latest in 1904.

STEPHEN J. WESTON

Jarmusiewicz, Jan (*b* Zarzecka Wola, nr Leżajsk, 1781; *d* Zaczernie, 5 Aug 1844). Polish musician, theorist and painter. He studied singing and the violin in Rzeszów, Lwów and Kamieniec, and was a boy soprano in the parish church of Leżajsk, where he later became a clerk; he was also a teacher for the Rzeszów *starost* at Żyznów near Jasło. He then studied philosophy and theology at Lwów University. After being ordained as a priest in 1807 he served under Bishop Gołuchowski of Przemyśl at Rzeszów, where he also founded and directed a school for organists. In 1811 he moved to Wojutycze, in 1814 to Przybyszówka and in 1823 he took over the parish of Zaczernie.

Jarmusiewicz is known particularly for his book *Nowy system muzyki* ('A new system of music', 1843), in which he expounded his theories of harmony, based on the functional significance of chords: the tonic, subdominant and dominant chords are termed 'primary' functions ('funkcja'), and from these are derived a series of 'secondary' functions. In this respect, and in the theory of *Wechselleittöne*, which Jarmusiewicz called 'tangenty', there is a close analogy between his system and that later advanced by Riemann. As a painter, Jarmusiewicz is known for a picture of the birth of the Virgin Mary in the church at Zaczernie. He also constructed agricultural machines, and invented a musical instrument called the 'klawiolin', combining the attributes of a piano and of string instruments. This was a hump-backed piano with gut rather than metal strings, and small bows, which, with the help of an internal mechanism, produced the effect of a string quartet.

IRENA PONIATOWSKA

Jarnach, Philipp (*b* Noisy, France, 26 July 1892; *d* Börnsen, nr Bergedorf, 17 Dec 1982). German composer of Spanish and French origin. He was the son of Esteban Jarnach, a noted Spanish sculptor. At the age of 15 Jarnach moved to Paris, where he studied the piano with Risler and composition with Lavignac. When World War I broke out, he emigrated to Zürich, where he came in close contact with Busoni, who advised him privately on his compositions, and convinced the Zürich Conservatory to hire Jarnach to teach counterpoint in 1918. In 1921 Jarnach left his position in Zürich and moved to Berlin, motivated by the desire to remain close to Busoni. There he became actively involved in the avant garde, joining the Novembergruppe and the German Section of the ISCM, and co-directing the Melos Gesellschaft with Tiessen after 1923. From 1925 to 1927 he worked as a music critic for the *Berliner Böser-Courier* and taught several students privately, including Weill. In 1927 he was appointed professor of composition at the Musikhochschule in Cologne, where he taught until 1949. Among his students were Wand and B.A. Zimmermann. Jarnach became a German citizen in 1931, and continued to teach in Cologne throughout the period of Nazi dictatorship, but was not a supporter of the regime. At this time he composed little, sporadically recommending compositions to the Reichs-Rundfunk and having his works performed only rarely, isolating himself from the surrounding political events. In 1949 he became director of the newly established Staatliche Hochschule für Musik, Hamburg, a position he held until 1959. He continued to teach there until 1970. Jarnach received much official recognition as an artist, becoming a member of the Akademie der Künste in Berlin, and being awarded the Berliner Kunstpreis (1955), the Hamburg Bach Prize (1957, with Blacher), the Hamburg Brahms Medal (1958) and the Grosses Verdienstkreuz der Bundesrepublik Deutschland (1959).

Jarnach's early compositions were influenced by late 19th-century French musical and literary culture. His extensive unpublished early songs show the marked influence of Debussy, and as early as 1910 he began composing lieder, influenced by Strauss, Wolf and Schubert. In the 1920s Jarnach became better known for his transparent, contrapuntal chamber works, especially the Sonatine op.12, the String Quintet op.10 (which caused a sensation at Donaueschingen in 1921) and the String Quartet op.16, which was performed and recorded by Hindemith's Amar Quartet. These works are characterized by atonal harmony, linear counterpoint, strict forms and a melancholy tone. They reflect not only Jarnach's allegiance to Busoni's teachings of *Junge Klassizität* but also his study of Beethoven's late quartets and Schoenberg's atonal chamber works. Jarnach thereafter began to depart from Busoni's teachings, however, as can be seen in his highly charged, Romantic *Fünf Gesänge* op.15, his rhapsodic Piano Sonatina op.18 (*Romancero I*) and the French-influenced *Drei Klavierstücke* op.17. After 1937 Jarnach's output diminished considerably, and his most noted achievements after this date are his classicist *Musik mit Mozart* (variations on themes from Mozart's Piano Trio K542 and String Quintet K593), *Das Amrumer Tagebuch* op.30 and *Musik zum Gedächtnis der Einsamen*, a movement for string quartet composed on the occasion of Schoenberg's death.

TAMARA LEVITZ

Järnefelt, (Edvard) Armas (*b* Viipuri [now Vyborg, Russia], 14 Aug 1869; *d* Stockholm, 23 June 1958). Swedish conductor and composer of Finnish birth. He studied under Wegelius and Busoni in Helsinki (1887–90), Becker in Berlin (1890) and Massenet in Paris (1893–4), and after minor conducting posts in Germany was conductor of the Viipuri Municipal Orchestra from 1898 to 1903. Following guest engagements at the opera houses in both

Helsinki and Stockholm, and a year as director of the Helsinki Music Institute (1906–7), he settled in Stockholm in 1907 as conductor of the Royal Opera. In 1910, on his additional appointment as court conductor, he took Swedish nationality, and in 1923 he became the Royal Opera's principal conductor. He returned to Finland as director of the Finnish National Opera (1932–6), and later became conductor of the Helsinki PO (1942–3). In Sweden he introduced Mahler's Symphony no.8 and *Das Lied von der Erde* and Schoenberg's *Gurrelieder* to the concert repertory, and he was an authoritative interpreter of Sibelius (whose wife, Aino, was Järnefelt's sister). At the Finnish National Opera he played an important part in broadening the repertory, especially with operas by Mozart and Wagner. His own works are Romantic in style, often with a national or patriotic basis, and include the slight but charming *Berceuse* and *Praeludium*, both for small orchestra, which became exceedingly popular for a time.

Jarnowick, Pierre-Louis Hus-Desforges. A name incorrectly assigned to PIERRE-LOUIS HUS-DESFORGES.

Jaroński, Feliks (*b* Kraków, 5 Oct 1823; *d* Kielce, 11 May 1895). Polish pianist and composer. He received his musical training from Elsner and Kurpiński in Warsaw; he then moved to Paris, where he studied the piano with Edward Wolff and harmony and counterpoint with Halévy. Jaroński made successful appearances as a pianist, particularly in Paris (1850). In 1856 he settled in Warsaw as a music teacher, giving up public performances, and in 1870 he moved to Kielce. Jaroński's relatively small creative output is confined almost exclusively to piano works. These are marked by exaggerated sound effects and the use of all registers of the instrument. Their texture changes often, using differentiated pianistic means. During his lifetime his Dumky for piano, partly using motifs of Ukrainian origin, were very popular.

ZOFIA CHECHLIŃSKA

Jarre, Jean-Michel (*b* Lyons, 24 Aug 1948). French composer and synthesizer player. The son of the composer Maurice Jarre, he studied harmony and structure at the Paris Conservatoire and developed an interest in electronic instrumentation. Although he wrote for advertising and worked on film and ballet scores, his first major international success came with his instrumental tour de force, *Oxygène* (Pol., 1976). This and the following *Equinox* (Pol., 1978) established a highly commercial musical formula of sweeping, French melodies and intricate symphonic synthesized arrangements married to contemporary dance rhythms. In the 1980s and 90s, Jarre became better-known for his grandiose outdoor spectacles, which used state-of-the-art lasers, projections and interactive technology at venues such as Houston (1986) and London's Docklands (1988), than he did for his actual music, which became more eclectic, particularly on the more experimental *Zoolook* (Pol., 1984). In 1995, Jarre's 'Concert pour la Tolérance', which took place in Paris in front of the Eiffel Tower, played to over one-and-a-half million people and included a traditional Arab orchestra and African percussionists. He returned to the pop charts in 1998 with *Rendez-vous '98* featured on the official album of the football World Cup. Although never really critically lauded, he has become one of the biggest international recording stars.

DAVID BUCKLEY

Jarre, Maurice (Alexis) (*b* Lyons, 13 Sept 1924). French composer. He studied engineering at the University of Lyons and at the Sorbonne, then attended the Paris Conservatoire, studying percussion with Passerone and composition with Honegger. He served in the army during World War II, and in the late 1940s played percussion in the navy band, with the Orchestre Radio-Symphonique, and with the Compagnie Renaud-Barrault, where he became friends with Boulez and Delerue. When Jean Vilar became director of the Théâtre National Populaire, he made Jarre his musical director, resident composer and conductor. In 1952 Georges Franju asked him to write the score for *Hôtel des invalides*. The film went on to become a minor classic, and Jarre turned henceforth almost exclusively to film music, writing scores for many French directors, including Jacques Demy, Alain Resnais and Jean-Paul Rappeneau. In 1962 David Lean commissioned the score for *Lawrence of Arabia*, inaugurating a collaboration that would produce four films and three Academy Awards for the composer (for *Lawrence of Arabia*, *Doctor Zhivago*, 1965, and *A Passage to India*, 1984). After the immense success of this film, Jarre moved permanently to the USA, where he worked with some of the greatest directors in Hollywood, notably John Frankenheimer, Joseph Hardy, John Huston, Paul Mazursky and Peter Weir. Jarre became, along with Delerue, France's most prominent and sought-after film composer of the second half of the 20th century. In addition to his three Academy Awards, he received Oscar nominations for his contributions to *Cybèle* (1961), *The Life and Times of Judge Roy Bean* (1972), *Witness* (1985), *Gorillas in the Mist* (1988) and *Ghost* (1989). He received British Academy Awards for *Witness* and *Dead Poets Society* (1989), and a special César Award in 1985. He is the father of the composer Jean-Michel Jarre.

Jarre has written over 170 scores for film and television, as well as ballets, orchestral works, incidental music and operas. His early concert music reflected his interest in 12-note composition, in contrast to the more popular style of his theatre works, of which the ballet *Notre Dame de Paris*, written in 1964 for the Paris Opéra, was the

most successful. Jarre's earlier film scores use sparse, chamber music scoring: that for *Cybèle* is written for double bass, zither and flute. Once in Hollywood, however, he preferred a richer, more symphonic style, using full orchestral forces. A ceaseless experimenter, he took advantage of the exotic locations and subjects of Lean's films: the score for *Lawrence of Arabia* made extensive use of chromatic modes and motifs and included in its scoring the ondes martenot, an instrument not used before in an American film. *Doctor Zhivago*'s score suggests the influence of such as Borodin, and makes use of the balalaika, as well as Russian folksongs and modes. His scores for Luchino Visconti's *The Damned* (1969) and Volker Schlöndorff's *Die Blechtrommel* (1979) both use an orchestra made up entirely of cellos and double basses, augmented only by human whistling and the fujara, a Polish folk instrument. In the 1980s Jarre became interested in blending electronic sounds with those of traditional orchestral and occasionally non-Western instruments, often by means of digital sampling techniques. His most successful film scores involving electronics are *Witness* (1985), which required only five performers, and *The Year of Living Dangerously* (1982), the subdued, evocative soundtrack of which makes use of traditional Javanese gamelan. In *Jacob's Ladder* (1990), he again attempted a score that was 'atmospheric rather than thematic', making use, alongside electronics, of Indian instruments and a Bulgarian women's chorus.

MARK BRILL

Jarrell, Michael (*b* Geneva, 8 Oct 1958). Swiss composer. Jarrell began to study composition as part of his training as a pianist. He was equally interested in the visual arts and music before entering the Geneva Conservatoire, where he found Eric Gaudibert's courses in composition techniques particularly valuable. He went on to study composition at the Staatliche Hochschule für Musik, Freiburg with Klaus Huber, whom he later acknowledged as having taught him a completely professional approach to composition. He took the course in musical computer science at IRCAM (1986–8), then spent a year in Rome (at the Villa Medici and the Istituto Svizzero, 1988–9) in order to continue the series of *Assonances*that he had started in 1983. He became a professor of composition at the Hochschule für Musik, Vienna, in 1993.

Though he has tackled a wide range of genres (opera, monodrama, ballet, large orchestral works, vocal music, chamber music) it seems that composition, for Jarrell, often comes back to recomposition, as in the case of the series of eight *Assonances*, which he describes as a sketchbook. He is fascinated by artists like Giacometti or Varèse, who incessantly rework the same idea. Clockwork mechanisms form one of the threads running through his work, from the 'Rituel' of *Trei II* to the section of *Rhizomes* entitled 'Clockwork'. Another recurrent motif is the urgency generated by note-repetition. It is doubtless no accident that *Pour les notes répétées* is among the three Debussy's Etudes that Jarrell has orchestrated.

PETER SZENDY

Jarrett, Keith (*b* Allentown, PA, 8 May 1945). American jazz pianist and composer. He began learning the piano at the age of three, and by the time he was seven had presented a full recital and was composing and improvising. He played professionally throughout his elementary school years, and during his teens toured for one season as piano soloist with Fred Waring's Pennsylvanians. In 1962 he moved to Boston, where he spent a year, on a scholarship, studying at Berklee College of Music. He then began working in the Boston area with his own trio and also with such visiting artists as Tony Scott and Roland Kirk. He moved to New York in 1965 but, having decided to avoid commercial work, was scarcely noticed until Art Blakey heard him during a jam session at the Village Vanguard. He joined Blakey's Jazz Messengers in December of that year and stayed with them for four months, gaining critical notice and making his first recording with an established group, *Buttercorn Lady* (1966, Lml).

Jarrett rose to international acclaim as a member of the quartet led by saxophonist Charles Lloyd (1966–9). One

of the first groups to explore a broad range of improvisational styles, Lloyd's quartet attracted a large youthful following extending as far as the USSR, where it toured in 1967; Jarrett's flawless technique, intense lyricism and total physical involvement with the piano were among its strongest assets, as may be heard on the album *Forest Flower* (1966, Atl.). Jarrett also played the soprano saxophone and percussion for Lloyd, a practice he has continued throughout his career. From 1970 to 1971 he worked with Miles Davis, first on electric organ while Chick Corea was playing the electric piano (as on *Miles at Filmore*, 1970, Col.), then playing both instruments after Corea left the group (*Live Evil*, 1970, Col.). Jarrett made good use of Davis's frequent periods of inactivity to work and record with his own band, which included Charlie Haden, Paul Motian and later Dewey Redman and had a fruitful performing and recording career until 1976. Although encompassing a much broader stylistic range, their music revealed a strong kinship with the earlier work of Bill Evans, Paul Bley and Ornette Coleman.

In 1972 Jarrett began performing solo concerts which consisted simply of two extended improvisations, each usually 30 to 45 minutes in length (for example, *Solo Concerts, Bremen/Lausanne*, 1973, ECM). The music spanned a rich variety of traditions, but was developed in a manner that seemed holistic rather than merely eclectic, illuminating Jarrett's reference to his work as universal folk music. Through the international success of these concerts he became the only jazz artist of the 1970s to capture a mass audience without conforming to commercial trends. Furthermore he spearheaded a revival of interest in acoustic music, having refused to play electronic instruments since he left Davis's band. Avoiding easy categorization, his projects remain extremely varied. He has played in a highly acclaimed quartet with Jan Garbarek and in a trio with Gary Peacock and Jack DeJohnette, recorded solo improvisations on the pipe organ and two volumes of standards (*Standards*, 1983, ECM) and performed works from the classical piano repertory, such as Barber's Piano Concerto. His own compositions include pieces for classical chamber groups, symphony orchestra and orchestra with improvising soloists.

BILL DOBBINS

Järvelän Pikkupelimannit [JPP] (Finnish: 'Young folk musicians of Järvelä'). Finnish folk ensemble. Founded in the early 1980s and commonly known as JPP, its members are Mauno Järvelä, Matti Mäkelä and Tommi Pyykönen (violin), Arto Järvelä (many instruments), Timo Alakotila (harmonium) and Timo Myllykangas (double bass). As the name suggests, the players come from Järvelä, one of a cluster of villages around Kaustinen, home to the national Folk Music Institute and the Folk Arts Centre, and are descendants of families of folk musicians active in the area since the late 1800s. JPP work as *pelimanni* (folk musicians), a term applied particularly to performers of folk dance music, and are noted for their distinctive, richly textured and harmonized arrangements of traditional melodies played in a swinging style; their own original compositions in traditional style are for four (occasionally more) violins, harmonium and double bass – a particular Finnish combination. The group's repertory has been influenced by European dance forms, from early polska and minuet to the waltz, polka, mazurka, schottische and tango, although each of these, particularly the tango, has developed a notably Finnish character – smooth, subtle and restrained. JPP's first album, *Laitisen mankeliska*, won the 'Band of the Year' award at the 1986 Kaustinen Festival, and each subsequent album has received numerous prizes. The ensemble tours extensively, has established an international reputation and following, and is one of the foremost representatives of world folk fiddle traditions. In common with other such musicians of their generation in Finland and largely as a result of Heikki Laitinen's courses at the Sibelius Academy Folk Music Department, with its focus on multi-instrumentalism and active participation in different performing traditions, some members of JPP play in various other Finnish groups.

JAN FAIRLEY

Järvi, Neeme (*b* Tallinn, 7 June 1937). American conductor of Estonian birth. He studied percussion and choral direction at the Tallinn Music School before taking his degree in conducting with Nicolai Rabinovich and Mravinsky at the Leningrad Conservatory (1955–60). He made his dêbut in Tallinn in 1954, and began working there as the percussionist in the Estonian State SO. He soon became the music director of this orchestra (1960–80) and of the Tallinn Opera (1966–79). He also formed the Chamber Orchestra of Tallinn, conducted opera and ballet in Moscow and Leningrad, and after winning the first prize in the Accademia di S Cecilia conducting competition in 1971 he began to appear elsewhere in Europe and in Canada, Mexico and Japan. In 1979 he toured the USA, making his Metropolitan dêbut with *Yevgeny Onegin* and appearing with major American orchestras; he emigrated to the USA the following year. He continued to appear as guest conductor with the New York PO, the Philadelphia Orchestra, the Boston SO and many others before becoming principal guest conductor of the CBSO (1981–4). After conducting *Salome* at the Swedish Royal Opera he became principal conductor of the Göteborg SO in 1982 and then the principal conductor of the Scottish National Orchestra in

Glasgow (1984–8). He was appointed music director of the Detroit SO in 1990.

Järvi has conducted all the major orchestras in Europe and America and has kept up a very active career in the studio, making over 300 CDs and threatening to surpass Karajan as the world's most recorded conductor. His repertory is centred on Slavonic and Scandinavian composers, including Sibelius, Prokofiev, Dvořák and Martinů, and he has been a champion for Berwald, Gade, Svendsen, Stenhammar and Tubin; he has also conducted the premières of many works by Tubin and Pärt. He gave the Soviet premières of *Porgy and Bess*, *Der Rosenkavalier* and *Il turco in Italia*. His interests, however, range wide and he is able to give a solid account of anything that comes his way. Järvi's enterprising recordings of rare American music have had a beneficial effect on concert programming throughout the USA. His conducting is particularly admired for its warmth and lyrical line. He became an American citizen in 1987 and is a Knight of the North Star Order of Sweden.

JOSÉ BOWEN

Jarvinen, Arthur (*b* Ilwaco, WA, 27 Jan 1956). American composer and performer. Originally trained as a percussionist, he studied at Ohio University in Athens, Ohio (BM 1978) and at the California Institute for the Arts (MFA 1981), where his teachers included John Bergamo, Ruth Underwood and Karen Ervin (percussion), and Mosko, Subotnick and Earle Brown (composition). In 1981, he co-founded the California EAR Unit; he has also performed with the Antenna Repairmen percussion trio and with his ensemble Some Over History. His honours include commissions from the Los Angeles PO, the Koussevitzky Music Foundation, the Fromm Music Foundation and the American Composers Forum, and an NEA fellowship.

Jarvinen's work combines contemporary experimental music techniques with rhythmic and timbral textures that grow out of his involvement with rock and blues. Most of his compositions are for small instrumental ensembles in which percussion plays a leading role. In addition to idiosyncratic combinations of instruments, he has a fondness for unusual sonorities: *Egyptian Two-Step* (1986) uses two spray cans of compressed air to provide rhythmic counterpoint; and *The Paces of Yu* (1990) employs window shutters, pencil sharpeners and a group of eight mouse-traps. Such unusual compositional choices lend an air of puckish theatricality to his music, a quality also characteristic of his solo stage works, which he has labelled 'physical poetry'.

JOSHUA KOSMAN

Jarzębski [Harzebsky, Warka, z Warki], **Adam** (*b* Warka, nr Warsaw; *d* Warsaw, probably late Dec 1648 or early Jan 1649). Polish composer, violinist and writer. He is first heard of in September 1612, when he entered the Kapelle of Johann Siegmund Hohenzollern, Elector of Brandenburg, in Berlin as a violinist. On 30 April 1615 the elector granted him a year's leave of absence so that he could visit Italy, probably to perfect himself as a composer and to become better acquainted with Italian music. Apparently he did not return to Berlin. Instead he became a musician in the royal chapel at Warsaw, probably in 1616 or 1617, and remained there for the rest of his life. He is last heard of on 26 December 1648, when, close to death, he dictated his last will, and presumably died a few days later. Apart from his musical activities as a violinist and composer, he taught some of the senators' children and acted as an administrator and organizer in connection with the building of the royal palace at Ujazdów, near Warsaw. He was also a man of letters and wrote a verse description of the Warsaw of his day entitled *Gościniec, abo krótkie opisanie Warszawy z okolicznościami jej* ('A gift, or a short description of Warsaw and its environs'; Warsaw, 1643).

As a composer, Jarzębski is known chiefly by the manuscript *Canzoni e concerti* (1627). It contains twelve compositions for two instruments, ten for three instruments and five for four instruments, all with continuo; some are also found in the Pelplin Tablatures. These works were crucially important in the development of chamber music in central Europe. All the two-part pieces are transcriptions of polyphonic vocal works by other composers, among them Giovanni Gabrieli, Lassus, Merulo and Palestrina, but Jarzębski treated the original pieces in such an individual and creative manner that his transcriptions are in fact new compositions, instrumental in nature. He took over only the broad structural outlines and the thematic material of the originals. He used the material only at the beginning of his transcriptions, later so transforming it by variation technique that it assumes a quite different character; moreover, he introduced new elements into many of the pieces (e.g. dance rhythms in *Susanna videns*). In all the pieces Jarzębski's melodies are richly ornamented and are notable for their harmonic

basis, which is manifested in, for example, the way in which they are built on broken triads (as in *Nova casa*, *Sentinella*, *Spandesa*, *Bentrovata*, *Norimberga*, *Canzon terza* and *Canzon quinta*) and in the subordination of the lower voices to the highest voice. The three- and four-part pieces show distinct tonal leanings, but the two-part ones are still firmly modal. Jarzębski handled chromaticism and dissonance in a lively manner, as can be seen in the three-part *Chromatica*, in one section of which he experimented by introducing the motif of a descending chromatic 4th that was popular at the time. The two-part pieces resemble various types of ricercare and fantasia. The others are varying types of canzona, among which the arch-form canzona is particularly conspicuous, since it was still a rarity in central European chamber music of the 1620s. Jarzębski, moreover, introduced up-to-date italianate trio-sonata textures to Warsaw. In some of his instrumental works he used popular tunes.

JASRAC [Japanese Society of Rights of Authors and Composers]. *See* COPYRIGHT, §VII, 4.

Jaubert, Maurice (*b* Nice, 3 Jan 1900; *d* Azerailles, 19 June 1940). French composer. Jaubert attended the Lycée Masséna, and studied music with Groz at the Nice Conservatoire, winning a piano competition at the age of 16. He studied law at the Sorbonne and after two years of military service (1920–22), practiced law before becoming music director for Pleyela Records in 1925. He began composition that year, writing incidental music for Calderón's *Le magicien prodigieux*. His extensive work for the theatre was marked by a successful collaboration with Giraudoux. In 1929 Alberto Cavalcanti commissioned the score for *Le petit chaperon rouge*, and over the following decade Jaubert concentrated heavily on film music. He was music director for the Pathé-Nathan studios (1931–5), and worked for the GPO film unit in London. Recalled for military duty in 1939, he became a captain and was killed in action shortly before the Armistice. His death was arguably the greatest loss sustained by the French cinema during the war. In the late 1970s the director François Truffaut made four films using Jaubert's music (*L'histoire d'Adèle H*, 1975; *L'argent de poche*, 1976; *L'homme qui aimait les femmes*, 1977; *La chambre verte*, 1978).

Jaubert was a prolific composer of film scores, stage works, songs, choral works and orchestral music. Over a period of ten years he scored more than 50 films, including some of the most important titles of the Golden Age of French cinema. He was instrumental in the development of poetic realism, and worked closely with the most distinguished directors of the period, including Jean Vigo, René Clair, Marcel Carné and Julien Duvivier. With his classical training, Jaubert saw himself as part of the high cultural tradition of French music. He had a keen interest in contemporary musical developments, and counted among his friends Fauré and Satie, as well as Ravel, who was best man at his wedding. In composing for film he remained conscious of the unity of musical and cinematic elements, and the problems and possibilities raised in the combination of sound and image. Music, he considered, should not try to explain or express images as such, but should instead 'render physically sensible the[ir] internal rhythm'. At the same time he sought to develop a straightforward musical idiom, free of pretence and in keeping with the status of film as the new popular art form. Whether with a sparse musical language or with rich melodies and orchestrations, Jaubert managed to maintain an awareness of the score's function within the overall dramatic conception, without sacrificing the quality of the music itself. His most powerful work was undoubtedly the haunting 'Valse Grise', for Duvivier's *Un carnet de bal* (1937), disturbing yet simple and expressive in its melancholy. In Vigo's *Zéro de conduite* (1933), Jaubert created the music for a slow-motion sequence portraying a children's rebellion, by reversing a pre-recorded soundtrack, thus underlining the unsettling strangeness of the events depicted. The score for *Quai des brûmes* (1938) perfectly but undemonstratively heightens the dark, tense atmosphere of Carné's film. In *Le jour se lève* (1939), his last major film score, the recurring drum roll accentuates the character's (and the audience's) claustrophobia, lending to the entire film the sense of a haunting, fateful vision.

MARK BRILL

Jaucourt, Louis, Chevalier de (*b* Paris, 27 Sept 1704; *d* Compiègne, 3 Feb 1779). French philosopher, writer and music theoretician. He began his studies in Geneva about 1712. In 1722 he went to Cambridge to study mathematics, after which he studied theology at Leiden and then medicine with Boerhaave; he defended his doctoral thesis in 1730. A versatile writer, he collaborated on the *Bibliothèque raisonnée des ouvrages des savants de l'Europe* and wrote a *Histoire de la vie et des oeuvres de Leibniz* (Leiden, 1734). On his return to Paris in 1736 he got to know Voltaire, Montesquieu and Diderot, who invited him to collaborate on the *Encyclopédie*, of which he became co-editor. He drafted 17,000 of the 60,000 articles, of which about 150 were on music. His originality as far as the texts on music are concerned is difficult to establish as he readily combined his own ideas with those borrowed from others. His most interesting articles are those on the history of music (particularly ancient, Hebrew and Egyptian music) and on questions relating to scientific subjects, such as anatomy and physiology. He also contributed a large number of the texts on organology.

Jawurek [Javůrek], **Józef** (*b* Konopiště, nr Benešov, Bohemia, 16 March 1756; *d* Warsaw, 22 July 1840). Polish pianist, conductor, composer and teacher of Czech extraction. Educated first in the Benedictine monastic school at Sazava, near Prague, he completed his studies in Prague under Zenner. He made his début as a pianist in Warsaw in 1792, and he soon settled permanently in Poland. In 1793 he became music teacher and band conductor on Duke M. Radziwiłł's estate at Nieborów, but later moved to Warsaw and became director of music at the Augustinian and Evangelical Churches. From 1817 he was also conductor of the concerts given by the Amateur Music Society orchestra, as well as piano teacher at the Alexandrian Institute and (from 1827) at the High School of Music. In 1825 he gave performances on the newly invented choraleon. He was a friend of the Chopin family, and on 27 May 1825 conducted a concert in which Chopin took part. In 1826 he conducted the Requiem of Elsner, who dedicated to him his Mass in C op.22. Jawurek composed a triumphal march *Warna* (1828), a *Romance française variée* for piano (1824), *Graduale* and other choral works, and 23 songs.

IRENA PONIATOWSKA

Jaye, Henry (*fl c*1610–67). English maker of string instruments. He was one of the earliest and best English makers and the first of several generations of makers by that name. He had his workshop in Southwark, London, where he made treble, tenor and bass viols and also lutes and pochettes. Jaye is mentioned in Thomas Mace's *Musick's Monument* (1676) as being one of the best of the older generation of viola da gamba makers, and in the list of instruments left by the small-coal merchant Thomas Britton one of the viols is described as 'the neatest that Jay ever made'. Jaye's instruments are finely cut, light in construction and of small dimensions (*see* VIOL, figs.11a and 11b). Beautifully executed heads and open scrolls are usual, the varnish is often a dark cherry, and an ornamental oval rose hole is sometimes carved in the belly. The tone is soft and velvety. The earliest extant example of Jaye's work known, a bass viol that formerly belonged to Galpin, is in the Gemeentemuseum in The Hague. Its label reads 'Henrie Jaye in Southwarke.1611' (photograph in Galpin). Galpin also reported having seen one that was made in 1610. The latest example known, a tenor viol, dates from 1667 and is in the Victoria and Albert Museum, London. Other Jaye instruments are in the Paris Conservatoire museum (no.106, dated 1624) and privately owned. Examples of his labels are shown in Vannes (no.1004) and Lütgendorff (no.385).

MURRAY LEFKOWITZ

Jaye Consort of Viols. English viol consort. It was founded in 1959 by FRANCIS BAINES and his wife, June, and named after Henry Jaye (*fl c*1610–67). The other members were Nicola Cleminson, David Pinto, Jane Ryan and Peter Vel. Led by Baines's intuitive feel for period instruments, the sound of the Jaye Consort was characteristically sweet and singing, with the players allowing space for the viol's natural resonance. The players commonly performed on viols of Jaye's period. Active until the 1980s, the ensemble specialized in English consort music from Byrd to Purcell; Francis Baines had a particular admiration for the music of Orlando Gibbons whose viol works were regularly performed. In its earlier concerts a proportion of medieval secular music was included on reconstructed instruments. The Jaye Consort made over 70 broadcasts and was much in demand in festivals around Europe.

LUCY ROBINSON

Jazz. The term conveys different though related meanings: 1) a musical tradition rooted in performing conventions that were introduced and developed early in the 20th century by African Americans; 2) a set of attitudes and assumptions brought to music-making, chief among them the notion of performance as a fluid creative process involving improvisation; and 3) a style characterized by syncopation, melodic and harmonic elements derived

from the blues, cyclical formal structures and a supple rhythmic approach to phrasing known as swing.

1. INTRODUCTION. Writers have often portrayed the history of jazz as a narrative of progress. Their accounts show jazz evolving from a boisterous type of dance music into forms of increasing complexity, gradually rising in prestige to become an artistic tradition revered around the world. Certainly attitudes towards the music have changed dramatically. In 1924 an editorial writer for *The New York Times* called jazz 'a return to the humming, hand-clapping, or tomtom beating of savages'; in 1987 the United States Congress passed a resolution designating jazz 'an outstanding model of individual expression' and 'a rare and valuable national American treasure'. In keeping with this general theme of progress, historians have emphasized innovation as a primary force driving jazz forward, identifying new techniques, concepts and structures that presumably helped push the music to ever higher stages of development.

But tracing lines of evolution and innovation in jazz reveals only part of a story much broader in scope and more complex in structure. For if some musicians have sought to make a mark as adventurous innovators, many others have viewed themselves as stalwart bearers of tradition. If some have struggled as uncompromising creative artists whose work reaches only a small, select audience, others have flourished providing entertainment for the masses. And if jazz has undeniably accrued status and respect over the years, it has also consistently provoked controversy. The term itself has often carried negative associations, which is partly why Duke Ellington and other musicians spurned the label, and why Max Roach once told an interviewer, 'I resent the word unequivocally' (Taylor, H1977, p.110).

Several factors account for the volatility of jazz as an object of study. First, its musical identity cannot be isolated or delimited. Although often used to designate a single musical idiom, 'jazz' (like the signifier 'classical') refers to an extended family of genres, with all members sharing at least some traits in common yet none capable of representing the whole. Second, the varying functions of jazz have made it difficult to perceive as a unified entity. Jazz can be background sounds for social recreation, lively accompaniment for dancing or music that invites close listening and deep concentration – and the same performance might operate on these different levels simultaneously. Third, the subject of race has generated heated debate over jazz and shaped its reception. While jazz is a product of black American expressive culture, it has always been open to musical influences from other traditions and since the 1920s has been performed by musicians of varying backgrounds throughout the world. In different eras, for example, commercially successful white musicians such as the bandleader Paul Whiteman and the saxophonist Kenny G have been identified by large segments of the public as major exponents of jazz. Many others, however, view these two as standing outside the tradition altogether and consider jazz to be a form of 'black music' in which black Americans have been the leading innovators and most authoritative practitioners.

Such problems in accounting for the identity, function and racial character of jazz are bound up in one another. They have been present from the very beginning.

2. JAZZ AND THE NEW ORLEANS BACKGROUND (1895–1916). 'Jazz' took on musical connotations in the USA during the years of World War I; before then it was a colloquialism possibly southern and black American in origin, perhaps derived from African roots. Writers have offered several definitions of the term in this pre-war period, claiming it to be a verb that meant to make something livelier or faster, to demonstrate pep and energy or to engage in sexual activity. In its earliest printed appearances, 'jazz' turns up as a noun. A San Francisco sportswriter in 1913 used the word to describe a kind of spirited liveliness shown by baseball players, for example: 'Everybody [on the team] has come back full of the old "jazz"', and 'Henley the pitcher put a little more of the old "jazz" on the pill [i.e. ball]' (Porter, E1997, p.5).

A few years later, small ensembles from New Orleans playing spirited, syncopated dance music began featuring the term – also spelled as 'jass' – in their names. One was Stein's Dixie Jass Band, a white group from New Orleans that in 1917 (with slightly different personnel) performed and recorded in New York as the Original Dixieland Jazz Band. Another was the Creole Band, a group of black American musicians that toured on vaudeville circuits in various parts of the USA (1913–18) and was occasionally advertised as a 'New Orleans Jazz Band' or as the 'Creole Band/Sometimes called the Jazz Band'. These ensembles gave northern urban audiences their first exposure to an energetic, blues-tinged musical idiom derived from southern black performing traditions. A New York newspaper article commented on the phenomenon in 1917 (Osgood, G1926, p.11):

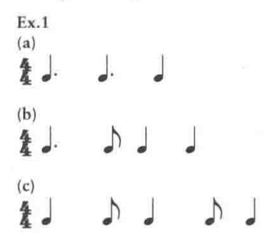
> A strange word has gained wide-spread use in the ranks of our producers of popular music. It is 'jazz', used mainly as an adjective descriptive of a band. The group[s] that play for dancing, when colored, seem infected with the virus that they try to instil as a stimulus in others. They shake and jump and writhe in ways to suggest a return to the medieval jumping mania.

Novel and entertaining, this music usually accompanied dancing and was performed in places serving alcoholic beverages: restaurants, night clubs, cabarets and dance halls.

Yet while jazz first drew widespread notice in the years just prior to 1920, some musicians and historians have claimed that it originated much earlier. Bunk Johnson stated that he and Buddy Bolden were playing jazz in New Orleans in about 1895–6; Jelly Roll Morton said he invented jazz in 1902 (he was 12 at the time). Various brass bands from New Orleans (the Olympia, the Golden Rule and the Eagle) have also been cited as playing in a jazz style before 1910. Since these assertions have been made retrospectively, often by individuals with a strong personal investment in the histories they have related, and since there is little contemporary evidence to put such claims in perspective, questions of when and how a jazz performance practice emerged remain open for speculation. Despite this uncertainty, most historians of jazz agree that New Orleans was the principal incubator of this musical tradition.

New Orleans in the early 1900s displayed a syncretic blend of African, Caribbean and European cultures unique among American cities. Jelly Roll Morton's Catholicism and belief in *vodoun* exemplified the cultural fusion that also characterized the city's musical traditions. A major port and commercial centre, New Orleans attracted black Americans from rural communities in Louisiana and neighbouring states, offering economic incentives, educational opportunities and more relaxed racial codes. At the same time, many residents had to endure poverty and sharp tensions that divided neighbourhoods and districts according to ethnicity, class and skin colour: blacks, whites and the lighter-complected subgroup 'Creoles of color' (*gens de couleur*, henceforth designated by 'Creoles') of mixed African and European ancestry.

The foundations of jazz were established by black Americans in this urban environment before the music had a name, or when it was still referred to as ragtime or 'ratty' music. The process unfolded as musicians gradually developed new ways of interpreting a varied repertory that included marches, dance music (two-steps, quadrilles, waltzes, polkas, schottisches and mazurkas), popular songs, traditional hymns and spirituals. What might be called a nascent jazz sensibility arose from the loosening of performance strictures and the adoption of an individualistic, defiantly liberating attitude that has remained at the core of this musical tradition. Although we lack documentation that shows this process unfolding, it is possible to hypothesize some of the stages involved. Rhythms, for example, gradually may have come to be interpreted more freely than in earlier 19th-century marches, ragtime and cakewalks. Phrases were stretched out and either played in a more relaxed manner or syncopated more vigorously, not just in one instrumental part but in two or more simultaneously. Drummers 'jazzed up' – that is, enlivened – simple duple and triple metre by introducing syncopated patterns and phrasing over bar lines. Players began embellishing and ornamenting melodies, inventing countermelodies, weaving arpeggiated lines into the texture and enriching diatonic harmonies with blue notes (*see* BLUE NOTE (i)).



Though such techniques may have been applied to music by solo pianists active in New Orleans, among them Jelly Roll Morton and Tony Jackson, they generally came to characterize a style of ensemble playing. Precursors to the jazz bands during the period 1915–20 included small dance groups led by such players as Buddy Bolden, Lorenzo Tio and Oscar 'Papa' Celestin, together with brass bands (often featuring some of the same players) that provided music for such community functions as parades, picnics, parties and funerals. Morton, in a 1938 Library of Congress interview with Alan Lomax, recalled the typical brass band instrumentation as including 'a bass horn [e.g. tuba or euphonium], one trombone, one trumpet, an alto [horn] and maybe a baritone [horn] or clarinet, and a bass drum and snare drum'. These bands gave employment and ensemble experience to such early New Orleans jazz musicians as Bunk Johnson, King Oliver, Louis Armstrong and many others. They fostered a sense of group identity, pride and competitiveness. They formed a professional sphere comprised almost exclusively of males, a trait that characterized jazz in the following years (except in the area of singing, where women have predominated); they also helped create a performance environment in which individual expression was encouraged yet closely coordinated with the activities of other ensemble members. As the writer Ralph Ellison later observed, 'true jazz is an art of individual assertion within and against the group . . . each solo flight, or improvisation, represents . . . a definition of [the jazz artist's] identity: as individual, as member of the collectivity and as a link in the chain of tradition' (Ellison, H1986, p.234).

Given the scanty documentation for New Orleans jazz during these formative stages (*c*1895–1915), it is unclear to what extent improvisation was practised in the early dance and brass bands but, judging from later exponents of the style, a phrase like 'collective improvisation' (used by writers to suggest a basic approach to performing) exaggerates the degree to which the music was spontaneous, invented in the moment. Players were guided by familiar formal plans, ordered sequences of themes and keys, specific functions of individual instruments within ensembles and common techniques of embellishment. When musicians invented new rhythmic devices and melodic patterns, these were imitated by others and repeated in different pieces, then passed on through oral tradition. The way in which Louis Armstrong once described his approach to soloing – 'First I play the melody, then I play the melody 'round the melody, then I routines' – hints at the conventional practice that shaped his approach to improvising, belying the primitivist myth of 'instinct' or 'natural feeling' that produced the music and challenging the concept of 'collective improvisation'. Moreover, musicians working in certain New Orleans contexts (high society balls and parties, and on the excursion boats that went up the Mississippi River) were required to play from written parts, their opportunities to improvise limited accordingly. Many Creole musicians in particular, who lived in and around the city's French Quarter, were proficient readers who combined an ability to play from notation with techniques of embellishment and variation.

Who created jazz? This has been a controversial issue in the jazz literature, especially since much of the evidence concerning origins comes from vague and often conflicting oral testimony. Yet it can be said with certainty that New Orleans musicians of African descent – both the blacks living 'uptown' and the Creoles 'downtown' – played a leading role both as inventors and expert practitioners of the techniques that came to characterize jazz. Concurrently, members of other racial and ethnic groups became involved early on in the development and dissemination of these same techniques. The white musician George 'Papa Jack' Laine, for example, led brass and dance bands that trained other white musicians later active in jazz, among them Tom Brown, George Brunis and Nick LaRocca. These bands furnished music for similar social functions as their black American counterparts, such as parades and riverboat entertainment. As with the early black bands, the lack of recorded documentation makes it difficult to know the styles in which these white groups played. It is conceivable, though, that white New Orleans musicians in the early 1900s were also beginning to adopt a looser and more syncopated approach to the repertory of brass and dance bands.

Musicians of Caribbean ancestry and of mixed racial and ethnic heritage also contributed to the formation of a jazz performance practice. One was the Cuban-American cornettist and cellist Manuel Perez, who played with the

Onward Brass Band and led a well-known dance band called the Imperial Orchestra. The Creole population of New Orleans included many descendants of Haitians and Cubans who had immigrated to the city in the 19th century, and the New Orleans-Caribbean connection proved especially important for jazz rhythm. When Jelly Roll Morton spoke of the 'Spanish tinge' present in jazz, he had in mind rhythmic patterns like the *tresillo* (ex.1*a*),

habanera (ex.1*b*) and *cinquillo* (ex.1*c*) of Cuban and other Caribbean and Latin American dance genres. Such rhythms turn up in some of his own compositions, such as *New Orleans Blues* (*c*1902–5; 1923, Gen.) and *The Crave* (*c*1910–11; 1939, General). They also appear in late 19th-century pieces published in New Orleans such as W.T. Francis's *The Cactus Dance, Danza Mexicana* (1885) and his arrangements of pieces played by the Mexican Military Band at the 1885 World's Exposition in New Orleans.

The racial and ethnic profile of early New Orleans jazz, then, was multicultural, reflecting the mixed heritage of the city's residents. At the same time, most of the leading musicians identified with jazz were black Americans. These two generalizations would remain constant as the music spread beyond New Orleans in the years that followed.

It is likely that characteristic syncopating and embellishing techniques employed by black, Creole and white musicians in New Orleans might have been heard in small ensembles elsewhere in the country. Groups that played instrumental ragtime, dance genres such as the habanera, rumba and tango, and blues pieces like W.C. Handy's *Memphis Blues* (1912) and *St Louis Blues* (1914) probably displayed features that resembled what might be called 'proto-jazz'. The Ohio-born reed player Garvin Bushell recalled playing with a circus band in 1916 that performed marches, ragtime and blues throughout the South and Midwest; he also identified the accomplished black clarinettists – Percy Glascoe, J. Paul Wyer (the 'Pensacola Kid') and Fred Kewley – who travelled with circus and minstrel bands and later could be heard in jazz and blues settings.

Nevertheless, there was something distinctive about the musical fusion that occurred in New Orleans, a flavour and piquancy that resulted from a subtle blending of many different ingredients. Together with this intermingling of musical traits, other extra-musical qualities helped shape an emerging jazz aesthetic. In his memoirs, Sidney Bechet described how black American jazz expression embodied memory, pride and the happiness that followed Emancipation. 'All that waiting', he wrote (F1960, p.48), 'all that time when that song was far-off music, waiting music, suffering music . . . It was joy music now. . . . It wasn't spirituals or blues or ragtime, but everything all at once, each one putting something over on the other'.

In the decade before 1920, players from New Orleans took this 'joy music' to California, Chicago and other parts of the country offering employment opportunities. They also began recording jazz, which quickly catapulted a regional American vernacular idiom into the international arena.

3. Early recorded jazz (1917–23). Recordings have played a crucial role in disseminating jazz. From 1917 to 1920, the years when 'jazz' began appearing with increasing frequency as a stylistic label, record companies were mainly issuing 8-, 10-, or 12-inch discs that were played at 78 r.p.m. The performances, most lasting between three and four minutes, were recorded by acoustical methods; microphones did not come into widespread use until after 1925. Thus the glimpses of early jazz afforded by recordings are compromised by the technology of the day. The balances of sound and timbral qualities heard on these recordings, for example, may have been quite different in live settings, while the relatively short duration of recorded performances may have been extended when bands played live. The acoustical recording process also affected instrumentation: drummers often had to limit their activity to wood blocks and cymbals since drums could cause distortion in the sound. In addition, the pieces recorded by bands may not have reflected what they performed regularly outside the studio: record producers and publishers often selected the repertory as part of a larger marketing effort to help sell sheet music copies of newly published compositions. Finally, race was a factor that helped determine who could record and what they could perform. Black jazz musicians only began to record in significant numbers during the period 1923–5 and even then found themselves expected to play a repertory emphasizing blues and hot jazz (fast, rhythmically energetic dance music) that ostensibly would appeal to the black American consumers record companies were seeking to reach in their segregated race series (*see* Race record). As Duke Ellington's saxophonist, Otto Hardwick, observed, 'The field for recording was quite limited . . . if you didn't play the blues, there was no room for you'.

For all these reasons, recordings may offer unreliable sonic representations of early jazz performing practice. But at the very least they preserve evocative echoes of the varied jazz styles that were beginning to circulate in the USA and overseas by the early 1920s.

The historical distinction for being the first group to record jazz goes to the Original Dixieland Jazz Band. A quintet of white musicians from New Orleans, it made its first recordings early in 1917 in New York, where the band had been attracting attention through appearances at Reisenweber's Restaurant on 58th Street. Though the Original Dixieland Jazz Band lacked both banjo and a bass instrument (string bass or tuba), its other instruments became standard for small New Orleans jazz units, consisting of three lead or melody-carrying instruments (cornet, clarinet, trombone) with piano and drums providing accompaniment in the rhythm section. Pieces they recorded show a mixture typical for early jazz bands: blues, ragtime, popular songs and novelty numbers. Improvisation, however, is minimal. Often the band seems to be following set routines: *Livery Stable Blues* (1917, Vic.), for example, uses a common multi-part strain form derived from 19th-century marches and ragtime (e.g. *AABBCCABC*); when individual strains are repeated, they vary little from previous statements. The band must have impressed listeners with both its ebullience and its

extroverted humour: the group was a seasoned vaudeville act, and its crowd-pleasing tactics, for example the imitation of animal noises in *Livery Stable Blues*, may have reflected more its stage experience than its New Orleans jazz background. The New Orleans Rhythm Kings, another white band, showed more restraint, demonstrated in their smoother and more rhythmically supple rendition of *Livery Stable Blues* (1922, Para.) when compared with recordings of the same piece made by the Original Dixieland Jazz Band in 1917 and again in 1923 under the title *Barnyard Blues* (OK).

Another example of early jazz recorded by New Orleans musicians, this time a black American group, was provided by Kid Ory and a five-piece band (cornet, clarinet, trombone, piano and drums) that recorded in Los Angeles in 1922. Though its instrumentation is identical to that of the Original Dixieland Jazz Band, Ory's band displays a gentler, more lilting rhythmic style on *Ory's Creole Trombone/Society Blues* (Nordskog). A greater sense of relaxation pervades these performances, in contrast to the more febrile qualities of the Original Dixieland Jazz Band. In other respects, though, the multi-strain formal patterns, the 'set' quality of many of the instrumental lines (though the cornettist Mutt Carey does take liberties in embellishing parts), the functions of instruments within the ensemble and the use of breaks (short passages played by soloists while the rest of the band stops) all resemble aspects heard in the Original Dixieland Jazz Band's performances. As with the Original Dixieland Jazz Band, virtually nothing played by Ory's band would qualify as 'collective improvisation'. Instead it was repetitive, highly ordered and predictable music, probably intended for dancers though, as Gushee has noted (G1977, p.5), it is likely that the band's lack of a full rhythm section (one that included bass, banjo and a complete drum kit) made it sound different on record from what listeners heard live.

In addition to these early recorded examples by small groups from New Orleans, larger ensembles playing syncopated dance music showed another side of the emerging jazz phenomenon. Black bandleaders in New York such as James Reese Europe, Ford Dabney, Tim Brymn and Leroy Smith performed with groups consisting of up to 15 or more players, including strings together with brass, reeds and percussion. The relatively few recordings made by these ensembles during the period 1914–23 have often been cited as examples of late instrumental ragtime or 'pre-jazz'. Indeed, in some ways they seem closer in sound and spirit to the bands of John Philip Sousa and Arthur Pryor, or to theatre pit orchestras and polite society dance orchestras, than to the insouciant, convention-flaunting strain of jazz that characterized the Roaring Twenties. Nevertheless, the energy and rhythmic verve of Europe's orchestra, especially when the drummer Buddy Gilmore was driving the ensemble as on *Castle Walk* (1914, Vic.), as well as the loosely embellished performance practice and repertory of rags, pop songs and blues, relate this group to the Original Dixieland Jazz Band, New Orleans Rhythm Kings and Ory's band, even if the overall sonic identity seems quite different in character. (The frequent unison melody lines account in large part for the difference, not just the larger size or stiffer rhythmic practice, of Europe's orchestra.) Europe, who directed the celebrated 369th US Infantry Regiment Band in France during World War I, linked his approach to jazz in 1919, explaining that 'jazz' was associated with certain instrumental effects (mutes, flutter-tonguing), strong rhythmic accents and 'embroidery' and 'discordance' in the instrumental parts. He also made clear his belief that jazz originated in black American culture: 'The negro loves anything that is peculiar in music, and the "jazzing" appeals to him strongly . . . We have our own racial feeling and if we try to copy whites we will make bad copies' (Porter, E1997, pp.126–7). A contemporary of Europe who led a large ensemble that included early jazz or pre-jazz in its repertory was Will Marion Cook. Though his Southern Syncopated Orchestra made no recordings, it travelled to Europe in 1919 and made a deep impression on listeners, among them the Swiss conductor Ernest Ansermet who found Bechet's blues solos 'admirable equally for their richness of invention, their force of accent, and their daring novelty and unexpected turns' (Walser, H1999, p.11).

Other bandleaders provided models for organizing and standardizing the instrumental components of dance orchestras playing jazz. On the West Coast during the mid- to late 1910s, Art Hickman led a ten-piece ensemble consisting of two brass (cornet and trombone), two saxophones, violin, piano, two banjos, string bass and drums. He took the orchestra east in 1919. Evidence of the impact of New Orleans jazz style upon Hickman can be heard in the final chorus of *Whispering* (1920, Col.), both in the arpeggiated embellishing techniques of the soprano saxophone (emulating a New Orleans clarinettist) and the loose connecting phrases of the trombone, playing in 'tailgate' fashion. Hickman's configuration of brass, reeds, violin and rhythm section was emulated by Paul Whiteman, another California-based bandleader who came to New York in 1920. The instrumental line-up of Hickman's and Whiteman's bands required arrangers skilled in composing embellished melodic variations and exploring different timbral combinations. One was Ferde Grofé, who worked first with Hickman in California and after 1919 as arranger and pianist with Whiteman. Grofé helped Whiteman develop a concept of SYMPHONIC JAZZ by adding strings and double-reed instruments (oboe and bassoon) to the brass, single-reed (saxophone and clarinet) and rhythm sections, and by borrowing themes from the classical repertory – such as Rimsky-Korsakov's 'Song on the Indian Guest' (1921, Vic.) from his opera *Sadko* – to produce dance music that sought to evoke the 'high art' aesthetic of the concert hall. In Chicago Isham Jones was another prominent white bandleader who by the late 1910s was fronting an ensemble made up of three distinct sections (brass, reeds and rhythm instruments) with the addition of violin, which later would disappear from the standard dance-band ensemble. Jones's arrangements often featured 'hot' sections that emphasized syncopation and improvising soloists, as in the cornettist Louis Panico's muted, growling statement on *Never Again* (1924, Bruns.).

By the early 1920s, then, jazz could be heard on recordings made by small ensembles like the Original Dixieland Jazz Band, the New Orleans Rhythm Kings and Kid Ory's group, by medium-sized dance bands like those of Hickman and Jones and by larger ensembles like Europe's society orchestra and Whiteman's concert orchestra. Yet another recording outlet for jazz musicians came in the form of small pick-up groups accompanying female blues singers. Beginning with the recordings Mamie

Smith made in 1920 with her promoter Perry Bradford, and continuing with the flood of singers that followed as the blues craze took hold, it was customary to hire two to five musicians to back up vocalists for record dates, especially those made for race labels in Chicago and New York. Often these musicians had experience playing jazz in dance bands and displayed their skills as improvisers in studios. In 1920–21 the New York trumpeter Johnny Dunn and a small band with rotating personnel took part in a number of sessions with the singer Edith Wilson. The loosely organized ensemble work on recordings like *Nervous Blues* and *Vampin' Liza Jane* (1921, Col.) – with clarinet, trombone and trumpet sometimes doubling, embellishing or playing around the melody – hints at the kind of informal accompanying conventions players were using in clubs and theatres. At times the interweaving polyphonic strands suggest the New Orleans small-group model, but Dunn's style is both busier and more clipped rhythmically than that of such Crescent City lead cornettists as King Oliver and Tommy Ladnier. Other musicians with jazz credentials turn up on these blues records from the early 1920s, including the trumpeter Bubber Miley and the clarinettist Buster Bailey with Mamie Smith (1921), the trumpeter Joe Smith and the pianist Fletcher Henderson with Ethel Waters (1922), and the pianist Fats Waller with Sara Martin (1922).

In 1923, six years after the Original Dixieland Jazz Band recorded its first sides, black American jazz musicians started getting more opportunities to distribute their work via recordings. That year, companies in Chicago and Richmond, Indiana, issued the first discs of such noted New Orleans figures as King Oliver and Jelly Roll Morton. In New York Fletcher Henderson and his orchestra began recording regularly for various labels, and Bessie Smith cut her first sides accompanied by jazz instrumentalists. In St Louis Bennie Moten's Kansas City Orchestra made its first recordings. From this time on, recordings offered a more accurate and representative sampling of jazz activity in the USA.

The 1923 recordings of King Oliver's Creole Jazz Band revealed the cohesive, relaxed yet hard-driving rhythmic style of this band of mostly New Orleanians working regularly on Chicago's South Side. Though slightly larger than the Original Dixieland Jazz Band and Ory's band, Oliver's group featured a similar two-part configuration: a front line of melody-playing instruments made up of clarinet, trombone and two cornets (played by Oliver and the young Louis Armstrong) and a rhythm section of piano, banjo, drums and occasionally bass. Oliver's repertory combined older, ragtime-based strain forms (*Froggie Moore*, 1923, Gen.) with current pop songs (*I Ain't Gonna Tell Nobody*, 1923, OK.) and earthy blues (*Jazzin' Babies Blues*, 1923, OK.). Blues lyricism was central to their brand of jazz, epitomized by Oliver's keening muted solos, like the celebrated one on *Dipper Mouth Blues* (1923, Gen.) which later trumpeters emulated and embellished. The fuller, more dynamic rhythm section heard in Oliver's band (compared to Ory and the Original Dixieland Jazz Band earlier) reflected the group's function playing for dancers, a point that would have been illustrated more vividly if the drummer Baby Dodds had been able to use his entire drum kit instead of being restricted largely to wood blocks and cymbals. Also, the democratic performing mode, which gave each individual a voice while working harmoniously together as a unit, showed a model of ensemble playing positioned midway between the loosely improvised accompaniments of Johnny Dunn and his Jazz Hounds and the precisely controlled arrangements of Paul Whiteman. For these reasons, and by virtue of their sheer exuberance and irresistible rhythmic momentum, Oliver's 1923 recordings made a powerful statement about the expressive potential of New Orleans jazz that resonated loudly for decades to follow.

A contrasting strain of black American jazz in about 1923 is found on recordings made in New York by Fletcher Henderson's orchestra. For Henderson, 'hot jazz' did not define his group's identity, as it did for Oliver in Chicago, but instead constituted one of the idioms it provided for dancers, together with 'sweet' popular songs, novelty numbers and waltzes (though the breadth of Henderson's repertory was never fully documented on record). It was in part Henderson's versatility, as Jeffrey Magee (G1992, pp.58–64) noted, that helped him succeed as a black bandleader competing for jobs with other white and black ensembles in New York, as when he secured a long-term engagement at the Roseland ballroom in Manhattan (1924). On recordings, Henderson and his musicians at times appear to be following commercially published stock arrangements (*Oh! Sister, ain't that hot?*, 1924, Emerson); at other times they play arrangements contributed by Don Redman, a member of the band's reed section. In general, the reliance on notation and three-section configuration of Henderson's groups (brass, reeds and rhythm) placed it more in the dance-band tradition of Hickman and Whiteman than in the New Orleans mould of Oliver, Ory and the Original Dixieland Jazz Band, although traces of the New Orleans polyphonic weave show up occasionally, as in the final chorus of *When you walked out someone else walked right in* (1923, Puritan), an arrangement by Redman of an Irving Berlin song. Together with the active sectional interplay and set melodic variations dictated by arrangements, Henderson's band also featured 'hot' improvised (or improvised-sounding) solos by such players as Coleman Hawkins (*Dicty Blues*, 1923, Voc.), the trombonist Charlie Green (*Shanghai Shuffle*, 1924, Pathe) and Louis Armstrong (*Copenhagen*, 1924, Voc.).

4. The Jazz Age (1920–30). 'Jazzin', everybody's jazzin' now', sang Trixie Smith in *The world's jazz crazy and so am I* (1925, Paramount). The song attested to the fever generated by jazz during the 1920s as it spread throughout North America to Europe, Latin America and distant parts of the globe. This expansion occurred in two concurrent phases. First, American jazz was exported overseas in the form of recordings, published sheet music and arrangements and by travelling ensembles. As early as 1918–19 Louis Mitchell and his Jazz Kings performed in Paris and the Original Dixieland Jazz Band undertook a long residency in England. They were followed in the 1920s by Benny Peyton, Arthur Briggs, Sidney Bechet (who returned after his first trip in 1919) and other American musicians scattered throughout Europe. Europeans could also hear jazz interpreted by orchestras touring with such black musical revues as *From Dover to Dixie* (1923), *Plantation Days* (1923) and *Chocolate Kiddies* (1925–6). The market for jazz extended beyond western Europe: Sam Wooding's orchestra appeared in Hungary, Russia and Argentina, while the pianist Teddy

Weatherford travelled with Jack Carter's orchestra to East Asia in the late 1920s.

At the same time as American jazz reached new listeners abroad, those living in different parts of the world began to perform, record and write about the new syncopated music. Local jazz bands sprang up everywhere, from those led by Bernard Etté in Germany and Fred Elizalde in England to Dajos Bela in Hungary and Eduardo Andreozzi in Brazil. A number of these ensembles recorded for major labels like Columbia, Decca, Odeon and Victor. Jazz also made an impact on European composers of concert music, just as ragtime had done earlier. Attempts to incorporate (or parody) the rhythmic patterns, harmonic vocabulary and sonorities of jazz were undertaken in France by Milhaud (*La création du monde*, 1923) and in Germany by Hindemith (*Suite '1922'*, 1922) and Krenek (*Jonny spielt auf*, 1925). During the same period, writings on jazz began to proliferate in newspapers, periodicals and literary magazines. The German periodical *Der Querschnitt* published articles on jazz in 1922–3, and in Leipzig Alfred Baresel turned out pedagogical materials and *Das Jazz-Buch* (1925), which Bradford Robinson called the first comprehensive textbook on jazz in any language.

Public reaction to jazz varied widely in the USA during the 1920s. Early on some condemned the music as improper, even immoral. Jazz 'excite[s] the baser instincts', according to John Philip Sousa (Ogren, E1989, p.56). It 'offends people with musical taste already formed', charged an editorial in the *New York Times* (8 Oct 1924), 'and it prevents the formation of musical taste by others'. Jazz had supporters, too. Carl Engel, head of the Music Division of the Library of Congress, noted that 'jazz finds its last and supreme glory in the skill for improvisation exhibited by its performers . . . [good jazz is] music that is recklessly fantastic and joyously grotesque' (G1922, p.187). For some, jazz symbolized the spirit and temper of contemporary American life, whether it was F. Scott Fitzgerald in *Tales of the Jazz Age* (1923) describing the rebellious hedonism of the younger generation or the music critic W.J. Henderson claiming in 1925 that jazz expressed 'ebulliency, our carefree optimism, our nervous energy and our extravagant humour' (*New York Times Book Review*, 8 Feb 1925). Not everyone linked jazz exclusively with the USA. For the American cultural critic Waldo Frank (*In the American Jungle (1925–1936)*, New York, 1937, p.119), jazz was emblematic of the 'Machine' and symbolized the diseased condition of industrialized society, 'the music of a revolt that fails'. In 1921 the British critic Clive Bell ('Plus De Jazz', *The New Republic*, 21 Sept 1921, pp.92–6, esp. 93) equated jazz with artistic modernism, identifying such figures as Picasso, Stravinsky, T.S. Eliot and Woolf with the 'jazz movement', noting in their work an underlying quality of 'impudence in quite natural and legitimate revolt against Nobility and Beauty'.

Notwithstanding the varied associations that jazz took on in the 1920s, the music itself served two primary functions. First and foremost it accompanied dancing, as jazz bands supplied lively, syncopated rhythms that set people in motion; recordings issued by jazz groups often identified on their labels the particular dance step for which the music was suitable: Oliver's *Chattanooga Stomp* (1923, Col.) was a 'Shimmy One Step', Ellington's *East St Louis Toodle-00* (1926, Voc.) a 'Fox Trot'. James P. Johnson's 'Charleston', written in 1923 for the show *Runnin' Wild*, inspired a popular craze for this dance, and its characteristic rhythmic motive (related to the *tresillo*; ex.2) turned up in individual solos and arrangements played by jazz orchestras. Many jazz instrumentals

Ex.2

referred to specific dances or implied dance movement in their titles, among them *Doin' the New Low Down*, *St. Louis Shuffle*, *Birmingham Breakdown*, *Hop Off*, *18th Street Strut* and *Moten Stomp*. Jazz musicians accompanied not just social dancers but professional dance acts in vaudeville and musical theatre. When Coleman Hawkins performed in 1921–2 as one of Mamie Smith's Jazz Hounds, he and other band members accompanied both the singer and various dancers appearing on the same bill. Similarly, Count Basie joined the vaudeville act of Gonzelle White (1926) in which fellow band members danced and performed stunts onstage. The drummer Freddy Crump, Basie recalled, 'used to come dancing back in from the wings and hit the drum as he slid into a split. He used to grab the curtain and ride up with it, bowing and waving at the audience applauding' (Basie and Murray, F1985, p.86).

Basie's recollection of Crump points up the second main function of jazz in the 1920s: to provide entertainment that often had a comedic flair or novelty component. Jazz bands were often visually stimulating, with players throwing objects such as hats and drumsticks in the air, striking dramatic positions while performing and taking part in stage business. Theatres provided a common venue for presenting jazz musicians on bills with other performers. As a result, jazz bands were often judged by the quality of their visual presentation or act. Duke Ellington's band once performed a routine at a Harlem theatre in which the set resembled a backwoods church and Bubber Miley dressed as a preacher to deliver a musical sermon on his trumpet. Louis Armstrong had a similar preacher's act, calling himself Reverend Satchelmouth, when he played in New York with Fletcher Henderson's orchestra and in Chicago with Erskine Tate and the Vendome orchestra. These theatrical aspects of jazz were carried on by Cab Calloway and Jimmie Lunceford in the 1930s, avoided by most after World War II, and revived years later in a different guise by the avant garde, as in the work of Sun Ra and his Arkestra, the Art Ensemble of Chicago and Cecil Taylor.

A concert staged by Paul Whiteman at New York's Aeolian Hall on 12 February 1924 crystallized conflicting views of jazz in the 1920s. Titled 'An Experiment in Modern Music', Whiteman's event sought, among other things, to suggest that the old 'discordant Jazz' (the New Orleans small-group style identified with the Original Dixieland Jazz Band) was being replaced by 'the really melodious music of today', namely 'Modern Jazz'. Gershwin's *Rhapsody in Blue*, arranged by Grofé and first performed on this occasion, was referred to in the press as a 'Jazz Rhapsody'. For Whiteman and others, then, jazz was a form of American popular music, not necessarily racially marked, suitable for polite dancing by urban sophisticates or adaptable by composers for use in the concert hall. This perspective on jazz also dominated Henry O. Osgood's *So This Is Jazz* (Boston, 1926), the first book-length study of the subject in English. The main figures profiled by Osgood were all successful white

bandleaders or composers, among them Whiteman, Gershwin, Berlin and Ted Lewis.

Jazz in the 1920s was a fluid, unstable construct. Depending on who used the term, it could refer to Jelly Roll Morton, Vincent Lopez and his Hotel Pennsylvania orchestra, T.S. Eliot's *The Waste Land* or Gershwin's *Rhapsody in Blue*. The breadth of its semantic range is demonstrated by the 1927 film *The Jazz Singer*, in which the lead character, played by Al Jolson, is a white Jewish singer who performs in blackface, employs jerky body movement and does trick whistling. Jolson's taut delivery and histrionic mode of 'jazz' singing contrasted sharply with the work of other contemporary musicians, such as the proud, joyful strains of Louis Armstrong and his Hot Five in *Struttin' with some Barbecue* (1927, OK.) and the stark tonal portrait sketched by Duke Ellington and his orchestra in *Black and Tan Fantasy* (1927, Bruns.).

5. Swing and big bands (1930–45). If, in his 1924 Aeolian Hall concert, Paul Whiteman attempted to predict what type of jazz would prevail in the years to come, his crystal ball was cracked. It was not his polite and decorous symphonic jazz that captured the public imagination but rather the rhythmically charged hot jazz of black bands like Fletcher Henderson, Duke Ellington, McKinney's Cotton Pickers and Bennie Moten, and of white bands like the Casa Loma orchestra, that set the tempo for developments in the 1930s and 40s. Instead of displaying the hefty girth of Whiteman's 20-piece orchestra, these ensembles were sleeker, each numbering roughly a dozen players around 1930, usually comprising three trumpets, two trombones, three reeds (saxophone doubling on clarinet) and four in the rhythm section. By the early 1930s the tuba had been replaced by a string bass and the banjo by a guitar, yielding a leaner sound overall. Arrangers for these bands included Benny Carter, John Nesbitt, Eddie Durham, Don Redman, Horace and Fletcher Henderson and Gene Gifford, who discovered ways to translate the freedom and flexibility of improvising soloists into the parts they wrote. Sometimes they played the reeds off against the brass as in the final 'shout' chorus of Fletcher Henderson's *New King Porter Stomp* (1932, OK.), based on an antiphonal call-and-response figure reaching back to older black American musical forms like the work song and spiritual. They devised short repeated phrases (riffs) that could accompany solos or serve a primary melodic function, as in *Casa Loma Stomp* (1930, OK.) by the Casa Loma orchestra and the last chorus of *Moten Swing* (1932, Vic.) by the Bennie Moten orchestra. They lightened textures by cutting down on doubled parts and streamlining harmonies. Such features gave large-ensemble jazz speed and grace and made the rhythm buoyant, propulsive and infectious. The term for this rhythmic quality – borrowed from the vocabulary of black musicians – was swing (*see* Swing (ii)), and it soon became a noun synonymous with jazz and a rallying cry for a new generation of listeners, dancers and critics.

A figure who played a major role in popularizing swing in the mid-1930s was Benny Goodman. Like Whiteman earlier and Elvis Presley a few decades later, Goodman was a white musician who could successfully mediate between a black American musical tradition and the large base of white listeners making up the majority population in the USA. Wearing glasses and conservative suits – 'looking like a high school science teacher', according to one observer (Stowe, E1994, p.45) – Goodman appeared to be an ordinary, respectable white American. Musically he was anything but ordinary: a virtuoso clarinettist, a skilled improviser who could solo 'hot' on up tempo numbers and 'sweet' on ballads, and a disciplined bandleader who demanded excellence from his players. With these combined personal and musical attributes, he built a following through radio network programs ('Let's Dance', 1934–5 and 'The Camel Caravan', 1936–9), recordings made for the Victor label beginning in 1935 and live performances nationwide. Jazz historians have often used the date of one of these appearances (21 August 1935, when his orchestra broadcast live from the Palomar Ballroom in Los Angeles) to mark the beginning of the swing era, a period stretching into the mid-to-late 1940s when the large-ensemble jazz purveyed by Goodman and many other bandleaders reigned as the popular music of choice. Significantly, the pieces that galvanized listeners most during the Palomar performance were hot jazz numbers from Goodman's repertory that had been arranged by a black American musician, Fletcher Henderson.

In some ways Goodman practised a racial politics more inclusive than that of his predecessors, though he was not the first prominent white bandleader to perform music written by black Americans. (Paul Whiteman, for example, had commissioned arrangements from William Grant Still in the late 1920s.) Besides featuring the work of such black arrangers as Fletcher and Horace Henderson, Jimmy Mundy, Edgar Sampson and Mary Lou Williams, Goodman formed small groups that brought white musicians together on the bandstand and in the recording studio with such notable black players as Lionel Hampton, Teddy Wilson, Charlie Christian and Cootie Williams. During Goodman's Carnegie Hall concert (16 January 1938), members of his band jammed onstage with musicians from Count Basie's orchestra. Colour lines were also crossed when black musicians were hired as featured soloists with white bands, such as Billie Holiday with Artie Shaw (1938) and Roy Eldridge with Gene Krupa (1941–3). Despite these examples of integration, black musicians confronted widespread segregation and discrimination throughout the swing era. While they profited economically from the vogue for swing, an idiom they had largely invented in the late 1920s and early 30s, black musicians were unable to realize the level of commercial success and media visibility enjoyed by the bands of Goodman, Tommy and Jimmy Dorsey, Glenn Miller, Harry James and Artie Shaw.

In the guise of swing, jazz became domesticated in the 1930s. Earlier, jazz had been associated with gin mills and smoky cabarets, illegal substances (alcohol and drugs) and illicit sex. Swing generally enjoyed a more wholesome reputation, although some preached of the dangers it posed to the morals of young people. This exuberant, extroverted music, performed by well-dressed ensembles and their clean-cut leaders, entered middle-class households through everyday appliances like the living-room Victrola and the kitchen radio. It reached a wider populace as musicians transported it from large urban centres into small towns and rural areas. Criss-crossing North America by bus, car and train, big bands played single night engagements in dance halls, ballrooms, theatres, hotels, night clubs, country clubs, military bases and outdoor pavilions. They attracted hordes of teenagers who came to hear the popular songs of the day and dance the jitterbug, lindy hop and Susie Q. The strenuous touring

schedule of big bands was far from glamorous. Nevertheless, musicians who played in these ensembles could symbolize achievement and prove inspirational, as the writer Ralph Ellison recalled from his early years growing up in Oklahoma City (H1986, p.220):

> And then Ellington and the great orchestra came to town; came with their uniforms, their sophistication, their skills; their golden horns, their flights of controlled and disciplined fantasy; came with their art, their special sound; came with Ivie Anderson and Ethel Waters singing and dazzling the eye with their high-brown beauty and with the richness and bright feminine flair of their costumes, their promising manners. They were news from the great wide world, an example and a goal.

In less densely populated areas of the USA, bands might be based in one location but travel regularly within a circumscribed area covering two or more states. These so-called territory bands were especially active in the midwestern and south-central USA. Among the better-known leaders of black territory bands were Don Albert and Alphonso Trent (based in Dallas), Troy Floyd (San Antonio), Jesse Stone (Dallas and Kansas City), Walter Page (Oklahoma City) and Bennie Moten and Andy Kirk (Kansas City, Missouri). Though territory bands enjoyed modest financial success and made relatively few recordings (with the exception of Moten and Kirk), they provided black musicians with important professional opportunities and fused together the vocal expressivity of the blues with the rhythmic verve of dance music and the electric spontaneity of improvised solos and ensemble riffs.

These latter stylistic traits became hallmarks of the Kansas City-based orchestra led by Count Basie beginning in 1935. Basie had earlier worked the southwest territory circuit with Walter Page's Blue Devils (1928–9) and Bennie Moten (1929–35). Forming his own band after Moten died, he drew upon the local blues-drenched and riff-oriented ensemble style to create a dynamic version of swing that gained national exposure by the late 1930s. His orchestra featured a rhythm section renowned for their smoothly interlocking parts and relaxed teamwork, reed and brass sections capable of explosive accents and muscular phrasing, gifted improvising soloists such as the saxophonist Lester Young, the trumpeter Buck Clayton and the trombonist Dicky Wells, and the warmly expressive vocals of Helen Humes and Jimmy Rushing. The heat and excitement generated by the Basie band comes across especially on recordings of live radio broadcasts from this period, but can also be heard on such studio issues as *Doggin' Around* (1938, Decca), *Jumpin' at the Woodside* (1938, Decca) and *Lady, be good* (1936, Voc.).

The big bands of the swing era were entertaining for both listeners and dancers and instructive for the musicians who played with them. Formal education in jazz was scarce before the 1950s; in particular, racial discrimination often blocked access to music conservatories for black musicians. Working and travelling with big bands, however, young musicians learned about blending and balancing within an ensemble, constructing terse, shapely solos, setting background riffs and coordinating with the rhythm section; older musicians offered technical tips and help in interpreting written arrangements. Players also learned the non-musical values of presentation and appearance, managing finances and maintaining disciplined habits. These groups, then, represented both self-contained social units as well as systems of apprenticeship. Most of the leading jazz instrumentalists who emerged in the 1940s and 50s had spent time in big bands.

Big bands also provided a training and proving ground for vocalists. Ensembles usually carried with them at least one solo singer; some had both male and female singers as well as small vocal groups, and these expanded the timbral palette of big bands as arrangers used harmonized voices to deliver melody lines as well as supply background harmonies. (The Boswell sisters had begun exploring this vocal jazz territory in the early 1930s.) Solo singers added glamorous presence as well as musical variety. In 1929 Paul Whiteman became one of the first major bandleaders to feature singers regularly with his ensemble, such as the soloist Mildred Bailey and a vocal trio, the Rhythm Boys (Bing Crosby, Harry Barris and Al Rinker). The practice became standard in the 1930s and 40s, with the roster of distinguished big band vocalists including Ivie Anderson with Duke Ellington, Ella Fitzgerald with Chick Webb, Billie Holiday with Count Basie and Artie Shaw, Peggy Lee with Benny Goodman, Anita O'Day with Gene Krupa, Frank Sinatra with Harry James and Tommy Dorsey, and Sarah Vaughan and Billy Eckstine with Earl Hines. The exposure and experience these singers received from big bands helped them launch successful solo careers: performing each night with 15-piece orchestras, they absorbed important lessons about rhythm and phrasing and learned how to use limited space (a 32-bar vocal chorus inserted in the middle of a three-minute instrumental arrangement) to maximum advantage. Singers were also presented as featured soloists who received accompanying support from big bands; a number of Fitzgerald's recordings with Webb's band, such as *A-tisket, A-tasket* (1938, Decca), *Bei mir bist du schön* (1938, Decca) and *Undecided* (1939, Decca), placed her at the centre of attention, dominating the arrangements.

For those aspiring to compose and arrange in the jazz idiom, big bands offered a ready-made performing outlet. New pieces were constantly needed, whether original works or fresh arrangements of older ones; many bands hired staff arrangers to fill the demand. Commercially published arrangements were also widely used, but it was the specials (distinctive arrangements owned by individual ensembles and often not circulated) that helped give bands a unique sound, setting them apart from the competition. Duke Ellington's orchestra was identified by its signature muted brass sonorities, its thick polyphonic textures and its high level of dissonance, all of which characterized such compositions as *East St Louis Toodle-oo* (1926, Voc.), *Ko-Ko* (1940, Vic.), and *Blue Serge* (1941, Vic.). Showmanship, novelty vocals and razor-sharp precision contributed to the musical persona of Jimmie Lunceford's orchestra, as did the polished, economical arrangements of his staff arranger, Sy Oliver. Artie Shaw's big band was distinguished by the leader's clarinet as well as the employment of a string section, effectively used by William Grant Still in his arrangement for Shaw of *Frenesi* (1940, Vic.).

Some composers approached writing for big bands not just as a practical assignment but as an opportunity for musical experimentation. Eddie Sauter stretched conventional harmonic practice in arrangements for Red Norvo and Benny Goodman, raising dissonance to a level higher than was customary in popular dance music. In this he was joined by Don Redman in *Chant of the Weed* (1931, Bruns.), Coleman Hawkins in *Queer Notions* (1933,

Voc.), Jimmie Lunceford in *Stratosphere* (1935, Decca) and Claude Thornhill in *Portrait of a Guinea Farm* (1941, OK.). Efforts to stretch the length of big-band compositions beyond the usual three-minute limit of 78 r.p.m. recordings were made by Duke Ellington in *Reminiscing in Tempo* (1935, Bruns.) and *Diminuendo in Blue-/Crescendo in Blue* (1937, Bruns.). Some composers (Ellington, Sauter, Artie Shaw and Mel Powell) invoked the classical concerto tradition when they wrote vehicles for soloists with big bands, though they did so without directly borrowing formal procedures and compositional techniques. Another example of swing-classical hybridity surfaced in arrangements for big bands of pieces from the concert-music repertory, as in Still's version of Edward MacDowell's *A Deserted Plantation* (1940, Vic.) for Artie Shaw's band.

By the late 1930s there were signs that jazz was gaining respect as a musical tradition in the USA. It began to be heard more often in Carnegie Hall (where James Reese Europe's Clef Club Orchestra had performed several times before 1920), from Goodman's first concert there in 1938 to John Hammond's 'Spirituals to Swing' evenings in 1938–9 and Ellington's annual series of programmes there starting in 1943. Winthrop Sargeant's *Jazz, Hot and Hybrid* (1938) treated the music as a subject fit for musicological inquiry, analysing rhythmic, melodic and harmonic features in close detail. Interest in reconstructing jazz history was evident in Frederic Ramsey jr and Charles Edward Smith's *Jazzmen* (New York, 1939/*R*), which explored the origins of jazz in late 19th-century New Orleans and traced the later evolution of hot jazz and blues in Chicago and New York.

Serious interest in jazz also developed in Europe during the 1930s. Such visiting American musicians as Armstrong, Ellington and Hawkins gave jazz lovers in England and on the Continent first-hand opportunities to hear major artists whose careers they had been following on recordings. Some European writers sought to define what they called 'authentic' or 'real' jazz and to distinguish it from the more commercialized forms offered up by Tin Pan Alley songwriters and white 'sweet' orchestras. This was the critical agenda set by the Belgian writer Robert Goffin in *Aux frontières du jazz* (Paris, 1932) and the Frenchman Hugues Panassié in *Le Jazz Hot* (Paris, 1934) and *The Real Jazz* (New York, 1942/*R*). Panassié's passion for traditional and hot jazz led him to help found the Hot Club de France in 1932 and edit its magazine *Jazz Hot* for a number of years. Another member of this group of French enthusiasts was Charles Delaunay, who published one of the first comprehensive reference guides to jazz recordings, *Hot Discography* (Paris, 1936), and started the French jazz record label Swing. Also affiliated with this group was the Quintette du Hot Club de France, featuring the guitarist Django Reinhardt and the violinist Stephane Grappelli. The recordings of this ensemble provided a showcase for the nimble technique and inventive soloing of Reinhardt and Grappelli and established the quintet as one of the first major jazz groups to emerge from Europe.

The vogue for swing and jazz was widespread in the late 1930s. In Holland the Ramblers (a big band formed in 1926) made recordings on its own and accompanied Coleman Hawkins and Benny Carter. In England the BBC initiated the programme 'Radio Rhythm Club' (1940) that featured jazz on a regular basis. Political authorities in some nations (Germany and the Soviet Union) perceived jazz as a threat, branding it as unwholesome and decadent – 'entartete Musik', as the Nazis termed it – and attempted to put forward their own sanitized forms of popular dance music allegedly purged of unwanted 'black' and 'Jewish' characteristics. Despite this crackdown, in some cases resulting in the persecution of musicians, jazz continued to circulate in Nazi Germany and in the USSR under Stalin. As the historian S. Frederick Starr noted (E1983, p.175), 'Jazz everywhere proved far easier to denounce than eradicate'.

6. Small groups and soloists of the swing era. While big bands offered many musicians steady employment and professional training during the 1930s and 40s, smaller groups were also prevalent. They approached the problem of balancing composition and improvisation in different ways, ranging along a continuum from the highly controlled to the loosely coordinated. The Raymond Scott Quintette and John Kirby Sextet were like miniature big bands, specializing in precisely executed and, at times, intricate arrangements that displayed the talents of arrangers as much as players. Other small groups were less rigorously scripted, relying more on head arrangements (memorized riffs and harmonized parts scattered throughout a given piece) or using composed sections to start pieces followed by improvised solos and ad lib final choruses for the full ensemble. This looser approach, shifting the balance away from writers toward improvising instrumentalists, can be heard on recordings by the Kansas City Six (made up of members of Count Basie's big band) and the various Ellington and Goodman small-band units of the late 1930s. Looser still, on the opposite end of the spectrum from Scott and Kirby, were groups that adopted an informal, jam session approach. Musicians in these settings depended little or not at all on pre-planned parts, relying instead on familiar performing conventions and a common musical vocabulary to play a repertory drawn largely from the 12-bar blues and familiar popular songs such as *I got the rhythm*, *Sweet Georgia Brown* and *Lady, be good*. Such ensembles could be heard in many situations: in night clubs when the regular evening's entertainment was over; on recordings, like those made for Milt Gabler's Commodore label, that assembled skilled improvisers in the studio and let them generate performances with minimal rehearsal; on the soundtrack to Gjon Mili's film *Jammin' the Blues* (1944), which re-created a late-night session using such players as the saxophonists Lester Young and Illinois Jacquet, the trumpeter Harry 'Sweets' Edison and the drummers Sid Catlett and Jo Jones; in the series of 'Jazz at the Philharmonic' concerts launched by the impresario and record producer Norman Granz (1944), which, like the Commodore recordings and Mili's film, set up controlled performing contexts within which jazz musicians were expected to play with freedom and spontaneity.

Small groups were particularly valuable in honing the skills of soloists. They gave individual players more time to develop their ideas than was customary (or practical) in big-band arrangements. The pianist Sammy Price, for example, recalled stopping in a Kansas City club one night when a jam session was underway, going home, then returning over three hours later to find the same piece still being played. In competitive contests or 'cutting sessions', musicians took turns building long, virtuosic solos designed to vanquish the opposition. Small-group

recordings did not permit such extended excursions, but they could still let soloists shine in the spotlight. The several sides made for Commodore in 1940 by the Chocolate Dandies (featuring the trumpeter Roy Eldridge, tenor saxophonist Coleman Hawkins and alto saxophonist Benny Carter) placed emphasis on individual statements rather than on ensemble playing. On the ballad *I surrender dear*, Hawkins states the theme in the first chorus, Eldridge solos in the second chorus, then Hawkins returns for the third; all the while the rhythm section sustains behind them a steady, secondary accompaniment. This practice of placing a higher value on creative soloing than on sectional interplay and group collaboration differed markedly from that of the big bands of the swing era (as well as the New Orleans and Chicago groups of the 1920s), which strove for more parity between soloing and ensemble playing.

The emphasis on solos in small-group jazz of the 1930s and 40s set new standards of virtuosity and instrumental proficiency. Hawkins inspired other saxophonists who wished to learn some of the advanced ideas he applied to the changes (chord progressions) of popular songs; trumpeters admired Eldridge's control of the upper register and daring construction of phrases. The pianist Art Tatum, who performed both as soloist and with his trio at the Onyx on 52nd Street, brought to jazz a new combination of harmonic savvy, playful wit and transcendental technique: what he did seemed so impossible that it helped raise the ceiling for what other musicians might accomplish. The guitarist Charlie Christian, with his fluent, horn-like phrasing and clean articulation, demonstrated how his instrument could assume a leading soloistic role in jazz, and Jimmy Blanton performed a similar function for the bass through his work with Ellington's orchestra (1939–41).

The rise of virtuosity in jazz was due not just to exceptionally talented individuals, however. In the USA opportunities for instrumental instruction in high schools and colleges helped improve the general level of musicianship. Black American teacher-bandleaders like N. Clark Smith and Walter Dyett in Chicago fostered the development of many young black musicians – among them Lionel Hampton, Nat King Cole, Milt Hinton and Ray Nance – who later moved into the world of big bands and instrumental jazz. Jimmie Lunceford's popular orchestra grew out of the student group, the Chickasaw Syncopators, formed at a high school in Memphis. Another band that emerged from an institutional programme was the all-female International Sweethearts of Rhythm, formed in 1939 at the Piney Woods Country Life School in Mississippi. By the early 1940s, the general technical ability of jazz players was significantly higher than it had been a decade or two earlier: recordings of both small groups and big bands demonstrate this convincingly.

7. Traditional and modern jazz in the 1940s. The swing era reached its apogee in the early 1940s, with the bands of Ellington, Basie, Goodman, Shaw, Dorsey, Miller and many others enjoying unprecedented popularity and commercial success. There were problems: wartime conscription thinned the ranks of big bands; record manufacturing was slowed by a shortage of shellac used in the war effort; the musicians' union called for a ban on commercial recording which limited distribution of the music between 1942 and 1944. Generally, however, swing remained the popular music of choice throughout the years of World War II, in tandem with a craze for the blues-based, ostinato-driven genre of Boogie-woogie.

Meanwhile other forms of jazz during the 1940s presented alternatives to the prevailing swing style offered by big bands. A resurgence of interest in older, pre-swing jazz styles led to what some critics later called a New Orleans or Dixieland revival. The musicians identified with this movement came from different places and backgrounds. Some were older black players from Louisiana such as the clarinettist George Lewis and the cornettist Bunk Johnson, both of whom had performed mainly in and around New Orleans until they began receiving national recognition through recordings and live performances in the 1940s. Johnson in particular was hailed as a living link to an older, 'authentic' jazz tradition, since he had figured prominently among New Orleans musicians in the early 1900s. Louis Armstrong praised Johnson's playing from this period, comparing it favourably to that of Buddy Bolden and King Oliver. Yet Johnson's recordings, made between 1942 and 1947, when he was in his 60s and past his prime, do not convincingly present him as the accomplished musician the young Armstrong may have remembered. Other exponents of earlier jazz during this period were white northerners who drew upon their experience playing New Orleans and Chicago small-group styles in the 1920s, among them the cornettists Wild Bill Davison and Muggsy Spanier, the clarinettist Mezz Mezzrow and the guitarist Eddie Condon. Davison's version of *Eccentric* (1947, Cir.), a piece the New Orleans Rhythm Kings had recorded 25 years earlier, combined the instrumentation and interweaving polyphonic textures of older New Orleans ensembles with the smoother rhythmic flow of swing. Still another group of musicians participating in this revival of interest in early jazz were white players on the West Coast, such as the cornettist Lu Watters and the trombonist Turk Murphy, who attempted more self-consciously to recreate the styles of such celebrated early jazz bands as King Oliver. Altogether the New Orleans revival made its impact through recordings, performances at such venues as Condon's and the Stuyvesant Casino in New York City and Earthquake McGoon's in San Francisco, and articles in the jazz press, often polemical in tone, in which critics championed early jazz as more expressive and 'authentic' than what they considered to be the vitiated commercial product presented by big bands during the swing era. In effect, these writers, labelled as 'moldy figs' because of their conservative tastes, carried on the work begun by Robert Goffin and Hugues Panassié during the previous decade, waging a similar battle with the opposing factions only slightly changed.

While some musicians and fans assumed a retrospective stance in the 1940s, seeking to reclaim the roots of jazz tradition, others began to construct a fresh musical vocabulary that would set themselves apart from both the traditional and swing camps. If the New Orleans revival was a nationwide phenomenon, the impetus to forge a modern jazz idiom was centred in New York, initially in Harlem, and came from a younger generation of black American musicians born between 1913 and 1925. Major figures involved in the effort included Kenny Clarke (*b* 1914), Dizzy Gillespie (*b* 1917), Thelonious Monk (*b* 1917), Charlie Parker (*b* 1920), Bud Powell (*b* 1924) and Max Roach (*b* 1924). These players did not deliberately set out to create a new jazz idiom, but gradually it

happened. Through informal and after-hours jam sessions held in small night clubs and musicians' apartments, a process of collaborative discovery unfolded in which new ideas about harmonic substitutions, rhythmic vocabulary and melodic construction were worked out, shared and tested on the bandstand. One primary site for this activity was the Harlem club, Minton's Playhouse. Gillespie recalled some of the advance preparation he did for informal evening performances there: 'On afternoons before a session, Thelonious Monk and I began to work out some complex variations on chords and the like, and we used them at night to scare away the no-talent guys' (Shapiro and Hentoff, E1955, p.337). Parker, who first visited New York in 1939, recalled spontaneously making harmonic discoveries while jamming in a Harlem 'chili house'. Having grown weary of improvising solos on conventional harmonies, he described a moment of revelation: 'I was working over [the popular song] *Cherokee*, and, as I did, I found that by using the higher intervals of a chord as a melody line and backing them with appropriately related changes, I could play the thing I'd been hearing. I came alive.' (ibid., 354). Evidence of Parker's *Cherokee* experimentation can be heard in a private recording made in early 1942 at Monroe's Uptown House. This document points toward Parker's magisterial treatment of the *Cherokee* chord progression a few years later on his commercial recording *Koko* (Savoy, 1945).

Recordings from the early 1940s prove limited as sources documenting the emergence of modern jazz, or Bop and bebop as it was onomatopoeically dubbed by critics. The recording ban of 1942–4 was partly to blame, but as Scott DeVeaux noted, even without the recording ban it is doubtful that companies would have found bop to be an appealing, marketable commodity, characterized as it was by 'a loose, improvisatory format and an eclectic repertory of standards studded with harmonic obstacles' (DeVeaux, E1997, p.298). There are glimmers, though, of modern techniques being introduced within a conventional swing context. Live recordings of sessions at Minton's in 1941, when Monk and Kenny Clarke were members of the house band, contain the pianist's dissonant, chromatically inflected harmonies and the drummer's explosive accents that later would dominate the rhythmic topography of bop. Similarly, a few of Charlie Parker's solos with the Jay McShann band hint at imminent departures from swing conventions, as in the saxophonist's asymmetrical phrasing on *Moten Swing* and double-time lines on *Body and Soul* (both from the 1940 Wichita transcriptions).

More dramatic evidence of a fully formed modern jazz practice, however, turns up in recordings from 1944–5, by which time the experimentation described by musicians had presumably been going on for several years or more. The use of chromatically altered pitches within a diatonic harmonic context (e.g. flattened 5th and 9th, sharp 9th, flat 13th) can be heard in some of Gillespie's solos recorded with Hawkins and his orchestra in February 1944, and the trumpeter's trademark double-time phrasing can be heard toward the end of the ballad *I stay in the mood for you* (1944, Deluxe), recorded with the Billy Eckstine orchestra. The dissonant syntax, whole-tone runs and off-kilter rhythmic patterns of Monk contrast with the longer, spun-out phrases of Hawkins on the latter's recordings of *On the Bean* (1944, Joe Davis) and *Flyin' Hawk* (1944, Joe Davis). Differences between the older swing style and the newer bop idiom are vividly illustrated by instrumentalists on Sarah Vaughan's recording of *Mean to Me* (1945, Contl), in which the relaxed, flowing solo of tenor saxophonist Flip Phillips is followed by the darting, agitated lines of Parker and Gillespie.

A stylistically cohesive example of bop can be heard in *Shaw 'Nuff*, recorded by Gillespie and his All Star Quintette (1945, Guild). The ominous tone of the introduction comes from the flattened 5ths played in the bass register of the piano by Al Haig, shadowed by Sid Catlett on tom-toms. The dissonant tritone also figures in the rapidly moving melody or 'head' played in unison by Gillespie and Parker, returning at the end with the repeat of the introduction and the final D♭ to G fillip in the piano. The rapid tempo, irregular phrase groups (in both head and solos), sudden, sharp drum accents, chromatically altered notes, spare accompanying of Haig and the enigmatic introduction and coda are all aspects that point to the development of a modernist 'art for art's sake' aesthetic in marked contrast to the popular trajectory of swing and the folkloric echoes of traditional jazz.

Though bop was primarily a small-group style of jazz, performed usually with two or three lead instruments (most often trumpet and saxophone) and three or four in the rhythm section, some big bands played a role in promoting this music. Earl Hines and Billy Eckstine both directed ensembles that featured young modernists in their ranks, among them Gillespie, Parker, Vaughan and Fats Navarro. Gillespie himself led a big band in the second half of the 1940s; his recording of Gil Fuller's *Things to Come* (1946, Musi.), with its breakneck tempo, wildly aggressive phrasing and ubiquitous flattened 5ths, shows the attempt to make bop effective in a large-ensemble format. The big band of Boyd Raeburn in the mid-1940s was known for its provocatively dissonant harmonies and unusual timbral combinations. Even such an avid exponent of entertaining swing as Hampton recalled wanting 'some of that bebop sound in my performances', hiring Betty Carter (Lorraine Carter at that time) for that purpose in 1948. Other bands, such as those led by Woody Herman, Artie Shaw, Claude Thornhill and Duke Ellington, featured bop-flavoured arrangements in their repertory without necessarily championing the cause of modern jazz.

In addition to drawing upon the newly minted expressive resources of the bop idiom, some modern jazz groups in the 1940s began incorporating rhythmic features from the Afro-Cuban heritage. To be sure, rhythmic patterns from the Caribbean and Latin America had been part of jazz from early on, as in Jelly Roll Morton's 'Spanish tinge' pieces and in the presence of such dance forms as the Argentine tango and Cuban rhumba in the repertories of jazz orchestras in the 1920s and 30s. Latin stylistic features had also been introduced to American dance orchestras by musicians who had come to the USA from Caribbean nations, such as Ellington's trombonist Juan Tizol (Puerto Rico), the flute and reed player Alberto Soccarras (Cuba) and the trumpeter Mario Bauza (Cuba). But in the 1940s jazz forged stronger bonds with the Caribbean in the work of Machito (Frank Raul Grillo) and his Afro-Cubans and in the contributions made by the Cuban percussionist Chano Pozo to Dizzy Gillespie's orchestra in 1947–8. Gillespie showcased Pozo's talents in such compositions as *Manteca* (1947, Vic.) and the two-part *Cubana Be/Cubana Bop* (1947, Vic.), composed

by Gillespie with George Russell, which fused together forward-looking, dissonant harmonies with traditional Afro-Cuban conga patterns and vocal chanting led by Pozo. Similar features are heard in Pete Rugolo's *Cuban Carnival*, recorded by Stan Kenton's orchestra (1947, Cap.). The impact of Afro-Cuban rhythmic practice on small-group jazz performance can be heard in Max Roach's playing with the Bud Powell trio on Powell's composition *Un poco loco* (1951, BN) and Gillespie's *Night in Tunisia* (1951, BN).

In seeking to understand the rise of 'modern jazz' in the 1940s, historians have tended to stress either its affinities with swing and earlier jazz (bop as a further evolution of harmonic practice and virtuosity cultivated in the 1930s) or its radical, self-conscious break with tradition (bop as a revolt against the watered-down, commodified form of jazz presented by big bands). Other writers, though, among them DeVeaux and David Stowe, described bop as reflecting the contingencies of professional music-making and the economic structures of the music industry. Their studies depict the emergence and reception of modern jazz as a complex, socially mediated process, not merely as an artistic decision to replace an older prevailing style with an innovative new one. Another way of viewing bop is as a response to social and political conditions black Americans faced in the 1940s. Claiming that swing was not 'expressive of the emotional life of most young Negroes after the war', Amiri Baraka (LeRoi Jones) argued that the 'willfully harsh, *anti-assimilationist* sound of bebop' reflected the anger and alienation of those who felt themselves to be 'outside the mainstream of American culture' (Baraka, H1967, pp.81–2). Eric Lott, similarly, called bop 'intimately if indirectly related to the militancy of its moment' (Gabbard, H1995, p.246). None of these interpretations takes precedence over any other; all prove useful in understanding a dynamic musical movement that fundamentally changed the way jazz was played and perceived.

8. Post-bop developments in the 1950s. Enthusiasm for big-band swing gradually waned after World War II: the postwar generation preferred other music for dancing and listening. The popularity of rhythm and blues in the late 1940s signalled a shift in taste towards earthy songs with a strong, shuffling backbeat. The rich, brassy textures of big bands gave way to a leaner, more streamlined sound featuring vocals, one or two horns, electric guitar, bass and drums. Figures formerly associated with instrumental jazz, such as the pianist Nat King Cole and the saxophonist Louis Jordan, highlighted their vocal talents as they moved into the more commercially lucrative field of rhythm and blues and contemporary pop. Singers who had launched careers with big bands, such as Frank Sinatra, Ella Fitzgerald and Sarah Vaughan, found success as soloists in the later 1940s and 50s, often recording pop songs with orchestral accompaniment in settings removed from the jazz sphere. The appeal of solo singers and close-harmony vocal groups, and the rise of rhythm and blues and early rock and roll, brought the swing era to a definitive close and created problems for many jazz musicians who had formerly worked with big bands. While a few of the most successful big bands survived this period and carried on, others were forced to reduce their numbers or broke up altogether. Count Basie began leading smaller units in 1950–51, then reconstituted a big band that gained popularity with slow, melodious, gently swinging pieces such as Frank Foster's *Shiny Stockings* (1956, Verve) and Neal Hefti's *Lil' Darlin'* (1957, Roul.) and riff-driven blues numbers with a heavier backbeat (*Every day I have the blues*, 1955, Clef, and *Blues in Hoss' Flat*, 1959, Roul.). To survive economically, big bands had to keep current with popular tastes or, in the case of Ellington and Kenton, assemble a repertory so distinctive and players so accomplished that they could still command a public following.

With big bands becoming increasingly risky ventures, small-group activity picked up during the 1950s. But if jazz lost popularity and economic clout, its musicians gained the creative freedom to try out new approaches. For some this meant finding fresh ways to integrate composition and improvisation, while for others it meant tapping into the rich vein of black American vernacular idioms, blending jazz with rhythm and blues, blues and gospel. This was a time of synthesis and consolidation, in which techniques from both swing and bop were freely mixed together. Bop initially may have been, as Baraka noted, 'harsh' and 'anti-assimilationist', but during the 1950s its profile changed: the musical language became more moderate as it came to be absorbed into everyday speech.

The career of Miles Davis during this period shows these synthesizing and moderating processes taking place. Although Davis had been a member of Charlie Parker's band (1945–8), his own playing avoided the virtuosic brilliance of the bop idiom. It was slower, sparer and softer. What Davis lacked in conventional trumpet technique he made up for in plangent lyricism. In 1949–50, collaborating with such arrangers as Gil Evans, Gerry Mulligan and John Lewis, Davis assembled a nine-piece band to record a group of pieces that were later reissued as a long-playing album entitled *Birth of the Cool* (Cap., 1957). These recordings combined the harmonic language and gestural vocabulary of bop with the ensemble precision derived from big-band swing; all the musicians had had experience playing with big bands, and Evans's arranging for the orchestra of Claude Thornhill made a direct impact on the sound and style of the Davis nonet, particularly in his use of tuba and french horn in the ensemble and in a slow, atmospheric number like 'Moon Dreams'. Throughout *Birth of the Cool* a sense of relaxation prevails quite different from the frenetic motion and whirling turbulence of bop. At the same time, the basic idiom on such pieces as 'Move' and 'Boplicity' displays features recognizable from the work of Parker, Gillespie, Powell and others. Beyond transforming – and to an extent subduing – the language of bop, the Davis nonet sought in these performances to find a more flexible model for integrating solo improvisation with group ensemble passages. Improvised and written lines often intertwine in a symbiotic relationship, departing from the conventional big-band practice of having soloists play only with rhythm section or with accompanying riffs.

Some of the same qualities manifest on the 1949 Davis nonet sides (relaxed pacing, understated expression, softer-edged tone) turned up in the work of other jazz musicians of the 1950s, causing critics to tag them with the descriptive label of Cool jazz. The Modern Jazz Quartet drew upon players formerly in Gillespie's big band: the pianist John Lewis, vibraphone player Milt Jackson, bass player Ray Brown (later Percy Heath) and the drummer Kenny Clarke (later Connie Kay). They

specialized in stately, classical-tinged, small-group swing, presented in pellucid textures and with an air of formality reminiscent of the concert hall. Like the Davis nonet, the Modern Jazz Quartet sought creative solutions to the problem of combining written parts with improvisation, with Lewis composing many of the vehicles used for such exploration. The group also introduced new formal models for jazz, not just with extended works or suites made up of shorter movements (as Ellington had been doing since the 1940s) but with different structures used for soloing, as in the 32-bar chorus form for *Django* (1954, Prst.), organized in the following scheme: *A* (6 bars) *A* (6) *B* (8) *A'* (4) *C* (8). Another composer-driven small group of the same period that became identified with cool jazz was the Dave Brubeck quartet. They enjoyed great success with such albums as *Jazz Goes to College* (Col., B1943, 1954) and *Time Out* (Col., 1959), the latter featuring pieces using time signatures unusual for jazz (5/4 for 'Take Five', 9/8 for 'Blue Rondo a la Turk'), together with the liquid alto saxophone solos of Paul Desmond. More experimental and less popular than Brubeck and the Modern Jazz Quartet were New York-based groups led by the pianist and teacher Lennie Tristano, which featured in the late 1940s and 50s two of his students, the saxophonists Lee Konitz and Warne Marsh, whose playing was more austere and restrained than that of bop's leading exponent, Charlie Parker. Historians have tended to view the tenor saxophonist Lester Young as the progenitor of the cool school of playing that in the 1950s and 60s might be said to include Konitz, Marsh, Desmond, Stan Getz, Zoot Sims and, in California, Chet Baker, Bud Shank and Jimmy Giuffre. Then again, Young played an important role in Parker's musical evolution, and Parker himself (according to Gerry Mulligan, recalling the *Birth of the Cool* period) was the 'no.1 influence on us all'. So the critically convenient opposition of 1940s bop and 50s cool jazz belies important underlying lines of musical kinship.

Davis did not confine himself to the cool aesthetic mapped out by his nonet in 1949–50. The quintet he led in 1955–7 with the tenor saxophonist John Coltrane, the pianist Red Garland, the bass player Paul Chambers and drummer Philly Joe Jones, delivered a mixed repertory of high-voltage bop (*Oleo*, 1955, Prst.), relaxed blues (*Blues By Five*, 1956, Prst.) and haunting ballads (*My Funny Valentine*, 1964, Col.). Beginning in 1957 he made a series of LPs in collaboration with arranger Gil Evans, in which he held forth as lead soloist against a lush and luminous orchestral backdrop in album-length suites that resembled extended jazz concertos. (One piece, in fact, was Evans's arrangement of a movement from Rodrigo's *Concierto de Aranjuez*, included on *Sketches of Spain*, Col., 1960.) Concurrent with these Evans collaborations, Davis could be heard in a sextet format that contrasted his aphoristic style with the effusive outpourings of the saxophonists Coltrane and Cannonball Adderley. Whatever cool aspects might have formed part of Davis's musical persona were effectively complemented (or countered) by fellow group members, especially the hard-driving swing of drummer Jimmy Cobb. Nevertheless, on the LP *Kind of Blue* (Col., 1959), the Davis sextet offered a veritable 'rebirth' of the nonet's cool affect from a decade earlier, featuring pensive tone poems like 'Flamenco Sketches' and 'Blue in Green' that relied mostly on individual solos rather than pre-arranged parts and offering players the chance to construct solos using specific modes (other than major or minor) over radically simplified harmonic underpinnings. Davis explained his approach at the time as part of a general movement in jazz 'away from the conventional string of chords, and a return to emphasis on melodic rather than harmonic variation' (Williams, G1962, p.167). His modal experiments on *Kind of Blue* opened up liberating possibilities for players of the 1960s.

Davis was one of many jazz musicians in the 1950s who discovered ways of assimilating and transforming the bop idiom that had seemed so experimental and self-contained in the previous decade. Many younger players absorbed the lessons of their 'modern jazz' elders, becoming fluent speakers of a bop lingua franca. Clifford Brown, for example, teamed up with Max Roach to form a quintet in the mid-1950s that extended the reach of bop while making it more accessible. Using a musical vocabulary derived from the work of the Parker-Gillespie axis, the Brown-Roach quintet offered energized renditions of popular songs and bop standards. For this group, employing the idiom of 'modern jazz' was not so much a statement of difference or being outside the mainstream, as it had been for the first generation of boppers, but an effective and by now familiar set of guidelines for group organization and individual expression. The intense rhythmic propulsion of their performances may have led to their labelling by critics as a HARD BOP group. This designation, implying a stylistic variant of 1940s bop, was also applied to the work of the drummer Art Blakey and his Jazz Messengers, Horace Silver (Blakey's pianist for several years), Sonny Rollins (who worked with the Brown-Roach quintet and Miles Davis, then began leading his own groups) and Miles Davis's mid-1950s quintet and others.

Though such journalist-coined labels as hard bop and bop tend to push jazz uncomfortably into narrow categories, there were some significant departures in the small-group modern jazz of Blakey, Silver and others from the work of those who preceded them. Tempos on the whole tended to be slower, allowing drummers to articulate a stronger underlying beat that created a regular rhythmic groove. Melodies were simpler; the dizzying intricacies of Parker's *Donna Lee* and Gillespie's *Be-Bop* gave way to repetitive, riff-based tunes such as Silver's *Doodlin'* and Bobby Timmons's *Moanin'* (1958, BN). The blues presence became stronger in hard bop, and rhythms and harmonies evoking the church helped anchor the music solidly in the black American vernacular, as in the instrumental 'amen' responsorial figures in Timmons's *Moanin'* and the folksy melody of Silver's *The Preacher* (1955, BN). Even the titles of pieces became friendlier, more familiar: instead of Parker's *Klactoveedsedstene* and Monk's *Epistrophy*, it was Davis's *Walkin'*, Brown's *Swingin'* and Silver's *Cookin' at the Continental*.

9. MAINSTREAM, THIRD STREAM AND THE EMERGING AVANT GARDE. The greater accessibility and populist tinge in the music of Blakey, Silver and other small-group jazz figures of the 1950s pointed to larger shifts taking place within the music itself. As the fundamentals of 1940s bop became part of daily practice, forming a common foundation for many younger musicians to follow, what was once 'outside the mainstream' in LeRoi Jones's phrase moved to the centre. At the same time, the discrete, often oppositional jazz factions of the war years

– especially the advocates of traditional jazz ('moldy figs'), swing fans and boppers – became more moderate in tone. A broader, more inclusive conception of jazz began to take hold that folded bop or 'modern jazz' in with other styles that made up the 'jazz tradition'. This consolidating process can be seen in the jazz literature of the time, such as M.W. Stearns's *The Story of Jazz* (New York, 1956), Shapiro and Hentoff's oral-history anthology, *Hear Me Talkin' to Ya* (New York and London, 1955) and in *The Jazz Review* (1958–61), a journal that gave serious consideration to jazz from all eras. The traditional–modern rift was similarly bridged in the television special, 'The Sound of Jazz' (1957), which featured different generations of musicians together, at times deliberately mixing them to emphasize their shared heritage, as when Count Basie was placed sitting at the far end of a grand piano where he could be seen enjoying the dissonant blues chords of Thelonious Monk.

The perception of a common practice within the multi-layered jazz tradition led to the use of the adjective 'mainstream' (*see* MAINSTREAM JAZZ) as a descriptive label during the 1950s. The British-born critic Stanley Dance, often credited with introducing the term, issued a series of albums under the rubric 'mainstream jazz', featuring artists who had emerged on the scene in the 1930s and 40s, among them Coleman Hawkins, Earl Hines, the trombonist Dicky Wells and the cornettist Rex Stewart. Dance used mainstream as a delimiter, referring to musicians whose work fell both chronologically and stylistically between the 'traditional' and 'modern' categories. By the early 1960s, though, bop had become old and familiar enough to join the jazz mainstream that now was bounded on one side by New Orleans or traditional jazz and on the other by the searching experimentation associated with the avant garde. From this time on, mainstream has remained a popular signifier to imply such characteristic traits as improvised solos over cyclical, repeating chorus form, use of popular songs, blues and short original compositions as basic units of structure, pervasive rhythmic feeling of 'swing', reliance on functional harmony within a tonal system and greater weight placed on individual improvisation than on pre-set or composed material.

Consensus about a jazz mainstream was also reflected in the term THIRD STREAM, coined by Gunther Schuller (1957), which described music that drew upon jazz techniques as well as aspects of the European art-music tradition. Schuller was particularly interested in finding ways to juxtapose composed and improvised parts and to integrate post-Schoenberg harmonic practice into the active vocabulary of jazz musicians. These goals are apparent in his composition *Transformation* (1957, Col.), recorded by an 11-piece ensemble including the trombonist Jimmy Knepper and the pianist Bill Evans and consisting of an improvised middle section flanked by a pre-composed introduction and coda evoking Webern's spare textures and *Klangfarbenmelodie*. Similar blendings and juxtapositions of jazz with European art music (from the Baroque to atonality) can be heard in compositions from this time by John Lewis of the Modern Jazz Quartet (*Vendome*, *La Ronde Suite*, *Concorde* and *Piazza Navona*), George Russell (*Concerto for Billy the Kid*, written for Bill Evans, and *All about Rosie*) and Charles Mingus (*Gregarian Chant*, *Revelations*). Much of this repertory was presented not in the night club venues customary for jazz but in concert halls, school settings (for example at the Brandeis Jazz Festival and the Lenox School for Jazz) and art museums. If one result of modern jazz in the 1940s had been the introduction of a musical vocabulary that later formed the basis of mainstream practice, third stream represented another part of its legacy, embodying the notion that jazz was a serious form of artistic expression and not solely meant to be relaxing, diverting or danceable.

There were other paths musicians followed in search of new modes of jazz expression in the 1950s. In New York Mingus adopted a workshop format in which players collaborated in rehearsals and public performances to produce music that grew out of a process of group composition and improvisation. Such works as *Pithecanthropus erectus*, *Haitian Fight Song* and *Ecclusiastics* contained thematic material supplied by Mingus, but their fluidity and sense of collective creation reflected the workshop ideals he fostered. At the same time, while some of Mingus's work showed the forceful impact made upon him by early 20th-century European musical modernism, his pieces often drew deeply upon the black American vernacular, particularly blues and gospel, as in the 12/8 metre and plagal harmonies of *Better Get Hit in your Soul* (both 1959, Col.), displaying a soulfulness and joyous abandon associated more with the Blakey-Silver hard bop axis than with the diplomatic negotiations of third stream.

Another major innovator to emerge during this period was John Coltrane. Building upon the expanded harmonic vocabulary of bop, the saxophonist employed techniques of chord substitution and superimposition to loosen the music from its tonal moorings. Original pieces such as *Giant Steps* and *Countdown* (both 1959, Atl.) used unconventional chord movement, such as root motion by 3rds replacing cycles of 5ths, and chromaticism to create rich harmonic environments. Like Miles Davis, his former bandleader, Coltrane gravitated toward the combination of modal melodies with stable harmonic fields. He based *Impressions* (1961–3, Imp.) on the two-mode framework (D and E♭ Dorian) of Davis's *So What* and used pedal points in *My Favorite Things* (1960, Atl.) and *A Love Supreme* (1964, Imp.) to provide tonal reference points while permitting melodic excursions to go even further afield. Coltrane's virtuosity and brilliance as an improviser enhanced the appeal of his musical experimentation, and his personal conception of the tenor saxophone proved greatly influential for several generations of players in the following decades.

Beyond the modal techniques taken up by Coltrane and Davis, other means were adopted by musicians seeking to expand the harmonic vocabulary of jazz. Monk brought a high level of dissonance (for jazz, at least) to his piano solos and compositions, and his interest in chromatic-based chord progressions can be traced back to compositions written in the early 1940s, such as *Epistrophy* and *Well, you needn't*. As an accompanist, he often stopped playing while a horn player improvised, thus allowing soloists greater harmonic freedom as they continued with just drums and bass. (Gerry Mulligan also explored the idea of a pianoless quartet in the 1950s.) Examples of that freedom can be heard in recordings made by Monk with Coltrane (1957) and in live recordings featuring both artists when they played together at the Five Spot Café (1957). Monk's interest in raising the dissonance

threshold and rewriting the rules of functional harmony were later taken up by fellow pianist-composers Herbie Nichols, Cecil Taylor and Andrew Hill. Lennie Tristano displayed a similar penchant for dissonance, although in his case it was often linear and contrapuntally derived rather than introduced through vertical harmonic structures. In contrast to these figures, Bill Evans treated dissonance almost as a colouristic device, using minor 2nds in voicings, for example, to lend an edge of tension to rich chords built upon extended triads, occasionally 4ths. Evans also pursued a piano sound ideal radically different from that of Monk, Taylor and Tristano, distinguished by a singing, rounded tone, legato touch and, especially on ballads, liberal use of the damper pedal, all features that pointed in the direction of 19th- and early 20th-century European composers (Chopin, Brahms and Ravel) whose works Evans knew and admired.

In addition to developing new technical resources for jazz in the late 1950s and early 60s, some artists showed a concern with addressing social and political issues through their music. Jazz had always contained implicit messages about exercising personal freedom and striving together to realize a practical model for participatory democracy. But it had rarely been overtly political: Billie Holiday's performance of the anti-lynching song *Strange Fruit* (1939, Com.) and Duke Ellington's satirical treatment of racial inequities in the musical *Jump for Joy* (1941) were unusual statements for jazz musicians to make. But, as already noted, bop could be said to embody the protest of young black Americans who felt marginalized and oppressed by the 'Jim Crow' racial inequities in the urban north. And it was partly the defiant stance assumed by Parker, Gillespie and their peers that enabled a young musician like Mingus to comment directly on current political events and social conditions, as when he indicted a segregationist Arkansas governor in *Original Faubus Fables* (1960, Can.) or protested inequality for black Americans in *Freedom* (1962, UA). During this period, as the civil rights movement was gathering momentum and black nationalism was emerging as a powerful political force, other jazz musicians joined Mingus in speaking out. Sonny Rollins issued *The Freedom Suite* (Riv., 1958), the liner notes containing a statement by the saxophonist decrying the persecution and repression faced by black Americans. Max Roach collaborated with the singer and songwriter Oscar Brown jr on *We Insist! Freedom Now Suite* (Can., 1960), featuring sections titled 'Driva' Man' and 'Tears for Johannesburg'. The pianist Randy Weston, in collaboration with the poet Langston Hughes and the arranger Melba Liston, celebrated the cultural and spiritual homeland of black Americans in *Uhuru Afrika!* (Roul., 1960). Abbey Lincoln, similarly, affirmed pride in the black American heritage through the songs 'When Malindy Sings' and Weston's 'African Lady' on her album *Straight Ahead* (Can., 1961). A negative review of *Straight Ahead* in *Down Beat* caused the magazine to arrange a panel discussion made up of critics and musicians, published by the magazine under the title 'Racial Prejudice in Jazz'.

If a single musician personified the searching spirit of progressive jazz in the late 1950s and early 60s, it was the saxophonist Ornette Coleman. Although steeped in the bop of Parker and the hard-edged blues of his home state of Texas, Coleman ventured far beyond this musical territory in the company of several musicians he met in Los Angeles in the mid-1950s: the cornettist Don Cherry, the bass player Charlie Haden and the drummer Billy Higgins. Coleman's pianoless quartet came to New York in 1959 and drew considerable critical attention performing at the Five Spot Café. Although Coleman's solo lines frequently implied an underlying tonality and used intervals and gestures familiar from the blues, the group's collective effect suggested abandonment of set chord changes, known forms and conventional instrumental functions. Haden and Higgins proved to be not just supportive accompanists but assertive participants in a four-way conversation. Harmonic activity was unpredictable, regular phrase structures abandoned and functional tonality at times erased. *Blues Connotation* (1960, Atl.) begins with saxophone and trumpet stating an aggressive theme – not quite in 12-bar blues form – that sounds typical of the Silver-Blakey school of hard bop. As Coleman delves into his solo, however, the structure opens up and dissolves, and the established tonality flickers in and out of focus. The blues is no longer a governing principle but a point of reference, as Coleman explained (N. Hertoff: *The Best of Ornette Coleman*, Atl., 1970 [disc notes]): '[The piece] is played in the blues tradition, which makes it sound like a blues, but as you listen throughout you hear that the minor 3rds do not dominate but act as a basis for the melody'. Coleman, like Davis around the same time, thus demonstrated an interest in 'melodic rather than harmonic variation', jettisoning the bopper's chord-driven engine in order to increase options for improvised lines.

The titles of Coleman's albums sought to reflect the spirit of innovation driving his activity: *Tomorrow is the Question! The New Music of Ornette Coleman* (Cont., 1959), *The Shape of Jazz to Come* (Atl., 1959), and especially *Free Jazz* (Atl., 1960), in which a double quartet collectively improvises to produce dense textures, jarring dissonance and agitated rhythmic activity. While some hailed *Free Jazz* as a liberating manifesto, opening a new world of possibilities for adventurous musicians working in jazz, others saw it as a violent, even destructive act: the *Down Beat* reviewer John A. Tynan wrote

> This witches' brew is the logical end product of a bankrupt philosophy of ultraindividualism in music . . . these eight nihilists were collected together in one studio at one time and with one common cause: to destroy the music that gave them birth.

10. Free jazz, fusion and beyond (1960–80). In the 1960s the bold challenges to the jazz tradition posed by figures like Ornette Coleman and John Coltrane appealed to other young musicians seeking to find their voice. A breakaway movement formed within the jazz community, analogous in some ways to the ideological formation of the bop school 20 years earlier, in which proponents of what some called Free jazz (or 'the new thing') distanced themselves from the mainstream that had gradually taken shape during the 1950s. These musicians, most in their early to mid-20s, sought to liberate themselves from the constraints of chord progressions, pre-composed melodies, swing, the Tin Pan Alley songbook and predictable roles for ensemble players. They gave priority to unbridled energy, raw emotional expression and collective improvisation; their music was fierce, angry, passionate, chaotic, discordant and uncompromising.

Prominent figures in this group were the saxophonists Archie Shepp, Pharoah Sanders, Albert Ayler, Marion

Brown and John Tchicai, the trombonists Grachan Moncur III and Roswell Rudd, the cornettist Don Cherry, the trumpeter Bill Dixon, the pianist Cecil Taylor, the bass players Gary Peacock and Buell Neidlinger and the drummers Ed Blackwell, Andrew Cyrille and Sunny Murray. They found outlets for their music in artists' lofts, galleries and small concert halls. Record studios also formed part of the free jazz scene. Coltrane's historic recording session of *Ascension* (Imp., 1965) brought together members of his own quartet with seven young players, based in New York. The issued disc contained a 40-minute performance that had some elements of pre-planning (melodic motifs and mode choices) but relied primarily on spontaneous collaboration. 'The emphasis was on textures rather than the making of an organizational entity', said Shepp, one of the participants. 'There is no casual approach to be taken to this record', warned A.B. Spellman in the liner notes, observing that the group formed 'a plexus of voices, all of different kinds, but most belonging to that generation which grew up on Charles Mingus, Thelonious Monk, [Cecil] Taylor, [Jackie] McLean, Coleman, Coltrane, the human rights struggle, and nuclear weapons'.

Impulse, the label that released *Ascension*, put out this recording and others by experimental younger musicians under the rubric 'the new wave in jazz'. Typical is Shepp's piece *The Chased* (1965, Imp.), showing his fusion of Coleman's blues phrases and short, riff-like motives with Coltrane's muscular tone and headlong momentum, all unveiled in a charged, unstable environment free of set forms and chord changes. In the liner notes to his album *Mama Too Tight* (Imp., 1966), Shepp praised Coleman for 'revitaliz[ing] and refurbish[ing] the blues idiom' and stated his own aim 'not to "overthrow" the many valid musical references that are extant, but to include them whenever possible'.

The dissonant, strident, often atonal style cultivated by the free jazz players made the music appealing only to a small group of listeners. Conservative jazz fans found it unpalatable and denounced it. The music's low commercial value, together with problems in getting it performed, led to the formation of organizations aiming to provide a sympathetic community of listeners, together with a base for economic support, teaching and playing opportunities. In Chicago such a group was the Association for the Advancement of Creative Musicians (AACM), founded (1965) by the composer and pianist Muhal Richard Abrams, and which spawned such ensembles as the quintet Art Ensemble of Chicago (formed 1969) and the trio Air (formed 1975). A similar musicians' collective, the Black Artists Group (BAG), took shape in St Louis (1968), serving as a meeting-ground for Julius Hemphill, Hamiet Bluiett and Oliver Lake, who later joined with David Murray to form the World Saxophone Quartet (1976). Other important musical organizations supporting experimental jazz improvisation and composition included New York's Jazz Composers Guild and Jazz Composers' Orchestra Association, Detroit's Creative Arts Collective (CAC), and in Europe, Amsterdam's Instant Composers Pool (ICP) and Germany's New Artists Guild (later Free Music Production). The mystical pianist, composer and bandleader Sun Ra also exemplified the trend in constructing communal structures for avant-garde jazz. Sun Ra lived together with members of his Arkestra first in Chicago, later in New York and Philadelphia, rehearsing and touring with the group while issuing recordings on small independent labels such as ESP and Saturn. Sun Ra and his Arkestra, like the Art Ensemble of Chicago after them, used theatrical elements and costumes to present music as ritualized spectacle.

Because of their novelty and innovative edge, free jazz players of the 1960s have received considerable attention from historians writing about that period. But they represented only one of many currents in jazz flourishing by this time. Mainstream or 'straightahead' jazz continued to be the dominant style of jazz heard around the world. This category now subsumed both the work of bop and post-bop musicians like Gillespie, Monk, Sarah Vaughan, Bill Evans, Sonny Rollins and Art Blakey, as well as older musicians still active, among them Earl Hines, Coleman Hawkins and Roy Eldridge. Some jazz musicians in the 1960s sought to reach wider audiences by performing popular material: Louis Armstrong with *Hello, Dolly!*, Ella Fitzgerald with the country and western album *Misty Blue* and Duke Ellington and the guitarist Wes Montgomery with songs by the Beatles. Others drew upon black American vernacular idioms like blues, rhythm and blues and soul to bring their music closer to prevailing popular styles of the day. Horace Silver incorporated rock and 'boogaloo' beats in *The Jody Grind* (1966, BN) and *Psychedelic Sally* (1968, BN), as did Les McCann and Eddie Harris on their 1969 hit, *Compared to What* (Atl.). Cannonball Adderley also achieved commercial success with his relaxed and soulful rendition of Joe Zawinul's *Mercy, Mercy, Mercy* (1966, Cap.). Some of the most inventive small-group jazz by younger players who did not exclusively embrace the free jazz aesthetic can be sampled in the series of albums Blue Note issued featuring such artists as Lee Morgan, Donald Byrd, Freddie Hubbard, Woody Shaw, Joe Henderson, Hank Mobley, Wayne Shorter and Herbie Hancock.

Vital life signs in the field of big-band jazz were also present during the 1960s. Ellington produced some of the most memorable music of his career during this period on such albums as *Afro Bossa* (Rep., 1963), and *The Far East Suite* (RCA, 1966). He also turned to composing concerts of sacred music requiring the combined forces of orchestra, solo singers, choir and dancers; these works, didactic in tone and devout in character, were performed in cathedrals and churches in the USA and Europe. Meanwhile, he and his orchestra kept touring steadily and performing for both listeners and dancers, as did other swing era survivors such as Count Basie, Benny Goodman and Woody Herman. Joining these veterans on the scene were newly formed ensembles, including the Kenny Clarke-Francy Boland Big Band in Germany, the Thad Jones-Mel Lewis orchestra in New York and the Don Ellis Orchestra in Los Angeles. These groups attested to the continued appeal of the big-band sound while seeking to attract younger listeners by incorporating features drawn from other idioms, as in the funky rhythm and blues groove in the Jones-Lewis orchestra's version of *Central Park North* (SolS, 1969).

An important stream of jazz activity during the 1960s flowed from Brazil. The popularity of Brazilian samba and bossa nova first reached American jazz musicians through recordings by Antônio Carlos Jobim, João Gilberto and Laurindo Almeida. In the early 1960s guitarist Charlie Byrd introduced Stan Getz to bossa nova this way and both went on to perform pieces from this

repertory together and with Brazilian musicians, as on the albums *Jazz Samba* (Verve, 1962) and *Getz/Gilberto* (Verve, 1963), the latter featuring Jobim's 'Girl from Ipanema' performed by João and Astrud Gilberto. The nearly whispered vocals, gently strumming rhythms and cool affect of these jazz bossa nova performances occupied vastly different aesthetic terrain from the angry and aggressive free jazz emerging at the same time. The Brazilian contribution to jazz grew stronger in the decades to follow, from artistic collaborations between musicians (Wayne Shorter and Milton Nascimento on *Native Dancer*, Col., 1974) to the series of important Brazilian performers who contributed to the jazz scene, among them the percussionists Airto Moreira and Alphonse Mouzon, the singer Flora Purim and the pianist Eliane Elias.

Japan was another country that began to figure more prominently on the world jazz scene in the 1960s and 70s. Beyond developing a significant base of jazz fans that would draw American musicians to cities like Tokyo and Osaka, Japan produced musicians who launched successful international careers as performers and recording artists, among them the pianist and bandleader Toshiko Akiyoshi, the saxophonist and flute player Sadao Watanabe, the trumpeter Terumasa Hino and the pianist Yosuke Yamashita. Record companies in Japan also issued music by American artists that featured both a higher quality of sound and at times previously unreleased material not available in the USA and Europe.

Just as Miles Davis in the 1950s had inspired jazz musicians to embrace a 'cool' aesthetic and to explore modal options, so in the 1960s and 70s he paved a way others found attractive. The quintet he led from 1965 to 1968 (featuring the saxophonist Wayne Shorter, the pianist Herbie Hancock, the bass player Ron Carter and the drummer Tony Williams) specialized in richly textured original compositions written by its members. It perfected a free and fluid performance style that nevertheless remained tonally anchored, though often modally inflected, and used cyclical harmonic structures derived from earlier jazz practice. Davis was also increasingly drawn to create lengthy improvised statements over static harmonic fields, and this tendency, together with the adoption of a solid backbeat, even quaver-note rhythmic motion and electronic instruments (such as bass and keyboards), brought his music closely in line with rock and funk on such albums as *In a Silent Way* (Col., 1969) and *Bitches Brew* (Col., 1969). This jazz-rock admixture came to be called fusion by the critics, some of whom considered the music no longer part of the jazz tradition. Davis was undeterred, later writing of this time: 'I wanted to change course, *had* to change course for me to continue to believe in and love what I was playing' (Davis and Troupe, F1989, p.298). He also observed that fewer black musicians were playing jazz in the 1960s because it was 'becoming the music of the museum'.

A number of young musicians who played with Davis in the late 1960s followed their leader's example in playing loudly amplified music that fused together elements of jazz, rock, funk and soul, as well as non-western musical traits. Shorter and the keyboard player Joe Zawinul co-founded Weather Report in 1970, a group that combined the improvisatory freedom of jazz with a rhythmic vocabulary derived from rock, Latin American and Afro-Caribbean traditions. Weather Report could produce liquid, floating textures that resembled those of Davis's mid-1960s quintet but was also adept at hard-driving rock, as on 'Teen Town' and 'Birdland' from the album *Heavy Weather* (Col., 1976). Another Davis alumnus, Chick Corea, formed a jazz-rock unit, Return to Forever, that reached its peak of popularity in the mid-1970s, while Herbie Hancock similarly achieved commercial success with multi-layered, polyrhythmic, jazz-funk fusion on the albums *Headhunters* (Col., 1973) and *Man-Child* (Col., 1975). In 1971 the British guitarist John McLaughlin, who had performed with Davis on the recordings *In a Silent Way* and *Bitches Brew*, formed his own high-energy, high-decibel electric band, the Mahavishnu Orchestra, which took jazz-rock fusion further into the acid rock mode of the period, also incorporating hypnotic ostinatos and modal melodies derived from Indian music. In the 1970s McLaughlin pursued another kind of fusion with the acoustic trio Shakti, in which he collaborated with the Indian musicians Lakshminarayana Shankar and Zakir Hussein. Virtually alone among these gifted Davis alumni in the 1970s, Keith Jarrett rejected the electrified rock, funk and fusion options, preferring instead to appear before the public as solo acoustic pianist, spinning out lengthy, discursive improvisations that at times took on the aura of religious ritual. Nevertheless, Jarrett's investment in process over product, together with his adamant insistence on artistic self-determination, marked him as yet another musician who had been significantly moulded through his experience with Davis.

While many musicians in the 1970s were intrigued by the possibilities of mingling jazz with rock, funk and non-Western influences – some of them enjoying commercial success in the process – others continued to pursue the adventurous artistic agenda set forth by free jazz exponents in the 1960s. Interest in free jazz was especially high in Europe. Among the important musicians there contributing to a robust alternative jazz scene, against the backdrop of mainstream and traditional jazz, were the guitarist Derek Bailey and the saxophonists John Surman and Evan Parker in Britain; the trombonist Albert Mangelsdorff, the vibraphone player Gunter Hampel and the pianist Alexander von Schlippenbach in Germany; the drummer Han Bennink, the pianist Misha Mengelberg and the reed-player Willem Breuker in the Netherlands; and the Ganelin Trio and Sergey Kuryokhin in the USSR. Large ensembles also emerged from this activity, notably Schlippenbach's Globe Unity Orchestra (founded in 1966), the Breuker Collective (1974), Mathias Rüegg's Vienna Art Orchestra (1977) and Pierre Dørge and the New Jungle Orchestra (1980). These aggregations tended to be highly eclectic in style and drawn to open-ended forms and spontaneous compositional procedures. Jazz constituted only part of their musical identity, which also included folksongs, rock, 20th-century art-music techniques and liberal doses of satire and Dadaesque humour. The European avant garde also proved nurturing for American musicians touring or living abroad, such as Don Cherry, Steve Lacy and Anthony Braxton.

Stylistic pluralism also characterized approaches to avant-garde jazz in the USA during the 1970s. Two important centres of activity were New York and Chicago. In lower Manhattan a vibrant scene developed in artists' lofts and other non-commercial performing spaces. At Sam Rivers's Studio Rivbea in New York's SoHo, a series of recordings was made in 1976; released under the title

Wildflowers, they featured such musicians as the saxophonists Kalaparusha (Maurice McIntyre), Byard Lancaster, Marion Brown, Anthony Braxton and David Murray, the drummers Sunny Murray and Andrew Cyrille and the trumpeters Olu Dara and Leo Smith. For these figures, as for their European contemporaries, playing 'free' was more a performing option than a mandate. Although Byard Lancaster and Sunny Murray took considerable harmonic and rhythmic liberties with the Harold Arlen song *Over the Rainbow* (1977, Douglas), the original melody was still there for listeners; in Kalaparusha's *Jays* (1977, Douglas), similarly, the saxophonist's free and probing solo unfolds over a bass ostinato that serves a binding rhythmic function throughout. Such fusions of free techniques with principles of compositional ordering characterized the work of figures associated with Chicago's Association for the Advancement of Creative Musicians, notably Muhal Richard Abrams, Roscoe Mitchell and Braxton, later Leo Smith and George Lewis.

11. Jazz at the end of the 20th century (1980–99). Mary Lou Williams, Duke Ellington and others likened jazz to a tree: with roots extending deep into black American, African and European musical traditions, it has grown upward and outward, its branches and limbs representing varied styles all joined to a sturdy trunk that keeps alive connections to a rich musical past. In the late 20th century, the diverse and multifaceted character of this tree of jazz was striking. Nearly all the major jazz styles from the past – New Orleans, big-band swing, bop, mainstream, free jazz and fusion – are still being performed by contemporary musicians. The longevity and international appeal of these styles refute the familiar unilinear, evolutionary model of jazz history. When new forms of jazz emerge, the old branches do not drop off and vanish but keep growing on their own. Far from being radical revolutionaries, most jazz musicians are committed conservationists who cultivate pre-existing styles or develop hybrid strains through creative recycling.

One example of this hybridity surfaced in the 1990s when musicians fused 1960s 'soul jazz' (the funky, populist-tinged work of Donald Byrd, Les McCann and Lou Donaldson) with the rhythms, rapping and technology of hip hop. Dubbed acid jazz (*see* Acid jazz (ii)) by critics, the music is characterized by short, riff-like quotations (sampling), layered polyphonic textures, heavy beats, digitally synthesized sound effects and collage-like construction. Typically the style's jazz flavour comes from individual solo lines and harmonic inflections, while the hip hop component dominates the rhythmic accompaniment. In *Music Evolution* (Col., 1997), by the group Buckshot LeFonque led by the saxophonist Branford Marsalis, a vocalist raps about connections between jazz and hip hop while in the background Marsalis and the trumpeter Russell Gunn provide harmonized riffs that evoke hard bop of the 1950s and 60s. In *Cantaloop Island (Flip Fantasia)* (BN, 1993), the British group Us3 rework Hancock's *Cantaloupe Island* by placing a vocal rap atop the original melody and modernizing the rhythmic background. This process of rearranging and updating is traditional for jazz musicians: Hancock himself had done it with *Cantaloupe Island* (cf the 1964 version on the album *Empyrean Isles*, BN, with that of 1976 on *Secrets*, Col.), and earlier, bop musicians supplied new melodies for familiar harmonic structures (e.g. Miles Davis's *Donna Lee*, based on the harmonies of (*Back Home Again in Indiana*) and arrangers retooled older pieces from the repertory (e.g. Don Redman's transformation of King Oliver's *Dipper Mouth Blues* into *Sugar Foot Stomp* for the Fletcher Henderson orchestra). While the rhythmic character of acid jazz has led some to question whether it properly qualifies as jazz, the music clearly is located somewhere on the tree's outer branches, no further out on a limb, in some ways, than third-stream experiments of the 1950s or free jazz of the 1960s.

For other recent younger players, hybridity results not so much from the fusion of disparate idioms, as with acid jazz, but from the adoption of a wide-ranging repertory and an open-ended attitude towards musical techniques. Every sound source is available for use, including jazz recordings from every era which remain readily available as reissues on compact disc. Players also freely incorporate aspects of popular, classical and world music traditions. On Joshua Redman's début recording (WB, 1992), he performed original compositions, standards from the swing and bop eras, together with a song by the 'Godfather of Soul', James Brown's *I got you (I feel good)*. The World Saxophone Quartet's *Rhythm and Blues* (Elek. Mus., 1988), similarly, presented fresh investigations of a repertory previously thought outside the realm of jazz: songs associated with the Motown artists Marvin Gaye and Otis Redding and the songwriters Kenny Gamble and Leon Huff. The saxophonists David Murray and James Carter can, in a single performance, recapitulate the entire history of their instrument in jazz, from low-down gutbucket blues to the harmonic virtuosity of Hawkins and Rollins to the cries and shrieks of Ayler. With his group Masada, the composer and saxophonist John Zorn filters traditional Jewish musical materials through the lens of contemporary jazz practice and chamber music performance; in other settings he constructs postmodern pastiches that rapidly juxtapose such styles as hard bop and free jazz with punk rock and music from films and cartoons. The saxophonist Jane Ira Bloom integrates movement and live electronics into her performances; the composers Fred Ho and Jon Jang draw upon East Asian musical resources in works conceived for their ensembles; the clarinettist Don Byron's specialities include free jazz, klezmer music and small-group swing.

While some jazz musicians of the 1980s and 90s embraced a philosophy of stylistic pluralism, others aligned themselves more directly with figures and trends from the past. Recordings often supplied occasions for homage, as in the saxophonist Antonio Hart's *For Cannonball and Woody* (Novus, 1993), honouring Cannonball Adderley and Woody Shaw; the pianists Danilo Perez's *Panamonk* (Imp., 1996) and Jessica Williams's *In the Key of Monk* (Jazz Focus, 1999); the trumpeter and composer Dave Douglas's tribute to Wayne Shorter, *Stargazer* (Arabesque, 1997); and the saxophonist Joe Henderson's series of discs devoted to single figures, among them Billy Strayhorn, Miles Davis and Antônio Carlos Jobim. Musicians undertaking such concept albums usually sought to capture distinctive traits of the artists being honoured, at the same time retaining their individual voices and improvising freely within stylistic parameters of their choice. Retrospective gestures are also common fare at jazz concerts and festivals, as at George Wein's annual JVC festivals in New York, which always include celebrations of past jazz masters, or at the Montreux Jazz Festival in 1991, when Miles Davis, in

collaboration with Quincy Jones, revisited arrangements Gil Evans had written for him more than 30 years earlier.

A more conservative form of engagement with the past has been taken by jazz repertory ensembles. These groups, typically big bands affiliated with universities, conservatories or large cultural institutions (such as the Lincoln Center Jazz Orchestra and Smithsonian Jazz Masterworks Orchestra), attempted to revive the sounds of earlier well-known ensembles, such as those of Ellington, Basie and Goodman, often playing from transcriptions of recordings and reproducing solos as well as ensemble and rhythm section parts. If the transformative recycling of acid jazz reflects black American traditions extending back for centuries, the re-creative impulse behind jazz repertory groups derives from the model of European art music, interpreting finished 'works' (scores generated from recordings) and striving for 'authenticity' through historically informed performing practice.

The jazz repertory movement was but one symptom of the larger process of institutionalization jazz underwent in the 1980s and 90s. In the USA particularly, jazz came to receive a level of economic support and recognition previously reserved for classical music. Private foundations, government arts agencies, museums and major corporations became important sources of funding, underwriting special events and media projects and sponsoring fellowships, awards and competitions for jazz musicians. Institutions of higher learning established jazz degree programmes and hired seasoned professionals to serve as teachers. The literature on jazz expanded greatly in the form of textbooks, scholarly monographs, popular biographies and histories and pedagogical materials. And when in the 1990s some writers began to debate the virtues or perils of a 'jazz canon' (recorded performances that had assumed the status of 'masterpieces', as on the critic Martin Williams's widely-used anthology *The Smithsonian Collection of Classic Jazz*, 1972, 2/1987), it was evident that jazz had covered vast cultural distance over the relatively short course of its history.

One figure who played a crucial role in popularizing and promoting jazz during this period was Wynton Marsalis, a trumpeter, composer, bandleader and educator from New Orleans. After emerging in the 1980s as a talented soloist with Art Blakey and the Jazz Messengers, then with his own groups featuring his brother Branford, Marsalis began exploring past eras in jazz while refining his own musical language both as player and composer. The recording *Black Codes (From the Underground)* (Col., 1985) displays his virtuosity as a trumpeter together with his interest as a bandleader in exploring the rhythmic freedom, expressive vocabulary and formal play of Miles Davis's mid-1960s quintet. As founding artistic director of the jazz programme at Lincoln Center, New York's prestigious and powerful sponsor of European-derived performing arts (opera, ballet, symphony and chamber music), Marsalis helped bring jazz solidly within the embrace of America's cultural establishment. He increased visibility for jazz through his concerts and recordings, television and radio programmes, and book and video projects; he commissioned new works and sponsored high-school band competitions; he toured widely with the Lincoln Center Jazz Orchestra and appeared regularly as clinician and lecturer in schools throughout the country. At the same time, he sparked controversy by articulating views some considered to be unduly rigid and conservative, particularly his insistence that certain musical features (swing, the blues, call and response) must be present in order for music to qualify as jazz. Others criticized his programming at the Lincoln Center, claiming that it excluded members of the jazz avant garde or did not adequately highlight contributions of white and female musicians. Despite his singular success in raising the cultural capital of jazz, then, Marsalis was unable to resolve questions that had surrounded the music from early on in its history, fundamental questions of definition, ownership, racial identity and function.

Marsalis and other contemporary jazz musicians around the globe make up an extended musical family with widely varying ideas about what jazz is and how to play it. Some seek the thrill of the cutting edge, others the security of tradition. Some devote themselves to free-form improvisation on street corners, others unveil new works in clubs and concert halls, still others play Ellington and Gershwin in crowded hotel lobbies and noisy restaurants. Yet despite their striking differences, these musicians share a common ancestry that can be traced back to New Orleans, to the 'joy music' of Sidney Bechet and the blues of Buddy Bolden, and before that, to the bands of Europe and the drums of Africa. They have been drawn one and all to a resilient musical tradition that beckons with the promise of self-discovery and preserves the hope of freedom.

Jazz-funk. A 20th-century pop music style. It fuses jazz and jazz-influenced melody and improvisation with the more simple, driving rhythms and bass lines of funk as characterized by James Brown and Parliament. Early jazz-funk albums included Miles Davis's *Bitches Brew* (1969), which also incorporated many rock elements. In the 1970s many American jazz artists such as Donald Byrd, Herbie Hancock and Lonnie Liston Smith added funk elements to their sound; in the late 70s and early 80s, British groups began to explore jazz-funk, with bands such as Light of the World and Hi Tension softening the hard-edged rhythms of funk and incorporating more jazz elements. By the late 1980s and 90s the definition had narrowed: jazz-funk lost many of the jazz inflections that had characterized its beginnings. It became a more spartan, simpler music, more heavily reliant on a standard 4/4 rhythm track, repetitive bass guitar groove and, frequently, a rhythm guitar line more heavily influenced by disco than in the 1970s. Protagonists of this development included the Brand New Heavies, Jamiroquai and the Hammond organ-based James Taylor Quartet. Additionally, from jazz funk came Acid Jazz, at first a record label but soon an umbrella term used to describe the more adventurous jazz-funk artists, such as Galliano.

WILL FULFORD-JONES

Jazz Messengers. A hard-bop group led by ART BLAKEY, formed initially as a cooperative with HORACE SILVER in 1953.

JBs [Fred Wesley and the JBs; Maceo and the Macks]. American instrumental funk group and backing band to JAMES BROWN. Formed in 1970, they made a number of recordings over the next five years. Their varied personnel included Fred Wesley (trombone and director), Maceo Parker (alto saxophone), Brown (keyboards) and Bootsy Collins (bass guitar). The line-up featured up to six horns, two guitars, organ, bass guitar, one or two drummers and percussion. Their sound was essentially an extension of Brown's (most of the material was written by Brown and arranged by Wesley) and featured Wesley and Parker's unique improvisations. *Gimme some more*, *Pass the peas* and *Cross the track (We better go back)* are typical: a repetitive groove on a 9th or minor 7th chord, created from a number of short riffs and vamps, underpins the horns' riff-based melodies which are interspersed with collective vocals made up of singing, raps, random chatter and background noise. Like much of Brown's music, the bridge, on the sub-dominant or dominant, varies the groove and typically lasts eight bars. In their solos, Wesley and Parker employ simple blues riffs and create an exciting rhythmic impetus by varied attack and lengths of notes.

While Brown is rightly credited with an enormous influence over a range of musical styles since the early 1970s, his rhythm section created the most subtle, distinctive and danceable grooves, on which his reputation rests. In Britain the JBs had a significant impact on the acid jazz scene of the late 1980s and early 90s, when groups such as the James Taylor Quartet resurrected the jazz-funk instrumental. As instrumentalists Wesley and Parker have created significant alternatives to jazz and rhythm and blues styles.

Jean-Aubry, Georges [Aubry, Georges Jean] (*b* Le Havre, 13 Aug 1882; *d* Paris, 14 Nov 1949). French writer on music. Educated in his home town, he soon developed an interest in contemporary music and arranged early performances of Debussy's music there (1908). In 1915 he moved to London, where he edited *The Chesterian*

from 1919 and organized concerts of contemporary French music. In 1930 he returned to Paris, where he belonged to a circle of avant-garde musicians and littérateurs and was a frequent contributor to periodicals. Encouraged by his 20-year friendship with Debussy, he wrote enthusiastically in support of contemporary French composers, noting similarities between their music and that of the 18th century (Couperin, Rameau). He wrote perceptively in praise of Spanish composers (Falla, Granados, Albéniz), but rejected German Romanticism as expressed in the works of Wagner and Strauss.

Jeannin, Jules Cécilien (*b* Marseilles, 6 Feb 1866; *d* Hautecombe, Savoy, 15 Feb 1933). French musicologist. After studying at the Marseilles Conservatoire, he entered the Benedictine abbey of Hautecombe in Savoy and became organist there. He spent the years 1896–8 in the Middle East, where he studied the liturgical chant of the Catholic Syrians and Maronites. The study of Syrian music was a first step in his investigation into the rhythm of Christian chant. In his *Etudes sur le rythme grégorien* Jeannin adopted a mensuralist approach to the problem of rhythm in chant performance and attacked the equalist interpretation of the monks of Solesmes (*see* PLAINCHANT). His transcriptions, using bar-lines which mark off bars of varying length, illustrate his basic principle: that Gregorian chant consists of short and long notes which are combined in groups of variable length, and in which the tonic accent of the word normally takes the place of the metrical accent and is often treated as long.

CHRISTIAN HANNICK

Jean Paul [Richter, Johann Paul Friedrich] (*b* Wunsiedel, 21 March 1763; *d* Bayreuth, 14 Nov 1825). German novelist, satirist and aesthetician. His father was a schoolmaster, organist and composer of church music who eventually obtained a post as Lutheran pastor. Jean Paul entered the Gymnasium at Hof in 1779, having already shown a fondness for improvisation that continued well into his adult years. From 1781 to 1784 he was a theology student at the University of Leipzig, but he was forced to discontinue his studies due to straitened circumstances. For the next eight years he made his living as a private tutor and provincial schoolmaster. At the same time he developed a liking for Haydn's symphonies and oratorios, the church music of Graun and Hasse and the operas of Mozart, Gluck and Méhul.

Jean Paul cultivated one of the most unusual styles in German writing, its chief characteristics including extravagant metaphors, puns and wordplay, syntactic convolutions, the juxtaposition of high-flown poetry and homely prose, and humorous or sentimental digressions which could range from discussions of Fichtean philosophy to hot-air ballooning. With the publication in 1793 of *Die unsichtbare Loge*, his first major novel, and the first of his writings to appear under the pseudonym Jean Paul, he rose almost instantly to fame; his celebrity was clinched by the appearance of *Hesperus* in 1795. Over the course of the following decade he produced four more novels that became among the most widely read books in the early nineteenth century: *Des Quintus Fixlein Leben* (1796), *Siebenkäs* (1796–7), *Titan* (1800–03) and its unfinished sequel *Flegeljahre* (1804–5). In the meantime, his move to Berlin (1800) put him touch with Fichte and such early romantic thinkers as Friedrich Schlegel, Tieck and Schleiermacher. Three years later he settled in Bayreuth, where he spent the remainder of his life; with a pension from Prince Karl Theodor von Dalberg (and subsequently from the Bavarian government), Jean Paul was given free reign to pursue a variety of literary projects. In addition to writing further works of fiction, his lively interests in theoretical matters bore fruit in the *Vorschule der Ästhetik* (1804), written in the discursive mode characteristic of his novels, and *Levana* (1807), a treatise on education.

Music is a significant presence in Jean Paul's fictional and theoretical works. The garden-concert scene in *Hesperus*, for instance, re-creates a performance in which the writer had heard Carl Stamitz play the viola d'amore. More importantly, it prefigures the whole panoply of ideas associated with the early romantic aesthetic whereby music was viewed as an entry into a metaphysical dreamworld, an expression of infinite longing, and a language capable of uttering the inutterable. *Flegeljahre* ends as Walt, one of the novel's twin-brother protagonists, listens 'enraptured' to the fleeting tones of his brother Vult's flute. Musical metaphors are also often used to

make a point in the *Vorschule der Ästhetik*. Two composers in particular were captivated by Jean Paul's idiosyncratic style: Robert Schumann and Gustav Mahler. In Schumann's youthful attempts at prose fiction (the autobiographical idyll *Juniusabende und Julitage* and the fragmentary novel *Selene*, both of 1828), he drew on the quirky manner of his literary idol. Florestan and Eusebius, the principal crusaders against musical philistinism in Schumann's *Davidsbund*, were modelled on such antithetically paired characters in Jean Paul's novels as Walt and Vult. The composer's contradictory testimony notwithstanding, his *Papillons* op.2 (1831) drew at least partial inspiration from the concluding chapters of *Flegeljahre*. Both titles for the revised version of Mahler's First Symphony (1893) include references to Jean Paul's *Titan*, while the designation of the symphony's first part (Aus den Tagen der Jugend; Blumenstück, Fruchtstück und Dornstück) makes an allusion to the full title of *Sibenkäs*.

JOHN DAVERIO

Jean Renverset. *See* ARRAS, JEAN D'.

Jeans [née Hock], **Susi** (*b* Vienna, 25 Jan 1911; *d* Dorking, Surrey, 7 Jan 1993). Austrian organist, keyboard player and musicologist, active in Britain. She studied first under Franz Schmidt at the Vienna Music Academy (1925–31), where she gained the diploma, and later with Straube (1932, 1934) at the Kirchenmusikalisches Institut, Leipzig, and with Widor in Paris (1933). In 1935 she married Sir James Jeans (1877–1946); one of the foremost British scientists of his day, he was also an accomplished amateur organist, and his book *Science and Music* (1937) was dedicated to her. She became a naturalized British citizen and assumed a prominent position in the British organ world. Her home at Cleveland Lodge, Dorking, contained an extensive collection of instruments including a working model of a water organ, a neo-Classical organ (built by Eule in 1936, the first to be introduced into England), and several chamber organs.

Lady Jeans did much to help initiate an interest in the historically informed performance of pre-Romantic organ music. An energetic crusader for the preservation and faithful restoration of old organs, she recorded and gave recitals on the organ, pedal harpsichord, clavichord and virginals in Britain, on the Continent and in Western Australia, and made many concert tours throughout North America. She adjudicated in organ competitions in Haarlem and Aosta, and conducted seminars in the USA and Australia; in 1967 she joined the music faculty of the University of Colorado for a period as organist-in-residence. She also directed the Boxhill Festival, which was founded in 1966. Her performances reflected informed and assiduous scholarship: her writings deal chiefly with aspects of early organ and keyboard music, its performing practice and its performers. The Lady Susi Jeans Centre for Organ Historiography at University of Reading, founded in 1993, inherited her archives after her death.

GILLIAN WEIR/CHRISTOPHER KENT

Jeanty, Occide [Occilius] (*b* Port-au-Prince, 18 March 1860; *d* Port-au-Prince, 28 Jan 1936). Haitian composer and military band director. He studied music with his father, Occilius Jeanty, who was director of both the Ecole Centrale de Musique and the Musique du Palais, the Haitian presidential band. In 1881 Jeanty won a government scholarship to study at the Paris Conservatoire with the cornettist Arban. He wrote a textbook with his father entitled *Petite grammaire musicale* (Paris, 1882). After the death of his father in 1892, Jeanty was appointed director of the Musique du Palais. Most of his output was written specifically for the presidential band, including many marches, quadrilles, waltzes, polkas and *méringues*. He also wrote funeral marches for the Haitian presidents Florvil Hyppolite (*Chery Hyppolite*), T. Augustin Simon Sam (*Ti Sam*) and Nord Alexis (*Sur la tombe*). During the American occupation of Haiti (1915–34) Jeanty was an outspoken critic of the US military forces and was dismissed from his post by President Sudre Dartiguenave in 1916. He was reinstated by President Louis Borno in 1922 and remained director of the presidential band until 1934. One of Jeanty's best-known works is the military march '1804', a work written for the centenary of Haitian independence. During the US occupation the march became associated with Haitian political resistance, prompting the Haitian government to ban performances of the work when Jeanty was conducting the Musique du Palais.

MICHAEL LARGEY

Jebb, John (*b* Dublin, 1805; *d* Peterstow, Herefordshire, 8 Jan 1886). Anglo-Irish writer on music. The eldest son of Justice Richard Jebb and nephew of Bishop Jebb of Limerick, he was educated at Winchester and Trinity College, Dublin. After graduating MA in 1829, Jebb briefly held the rectory of Dunerlin in Ireland before becoming prebendary in Limerick Cathedral (1832), rector of Peterstow, Herefordshire (1843), prebendary in Hereford Cathedral (1858), and canon residentiary there (1870).

Jebb was a leading authority on the choral service of the Anglican Church. When Dr W.F. Hook proposed to reinstate choral services and a surpliced choir at Leeds Parish Church in 1841, it was to Jebb that he looked for advice and a definition of musical policy. With his background as a cathedral dignitary Jebb argued that in churches where a recognized choir was introduced the desired musical effect should not be marred by what he called 'the roar of the congregation'. He consequently persuaded Hook to adopt the cathedral form of service at Leeds rather than the alternative model first demonstrated in 1839 by the Rev. Frederick Oakeley at Margaret Chapel, London, where the choir's role was to lead the congregation in response, hymn and psalm. Thus arose two opposing 'schools' at a time when the movement to introduce choral services in parochial worship first began to exert strong influence throughout the Anglican communion.

The substance of Jebb's policy was first made public at Leeds in *Three Lectures on the Cathedral Service* (1841). A more scholarly and definitive treatment of the topic was published in his *The Choral Service of the United Church of England and Ireland* (1843). He also made an edition of Thomas Caustun's *Venite exultemus* and *Communion Service* (1862).

WRITINGS

Three Lectures on the Cathedral Service of the Church of England (Leeds, 1841, 3/1860)

The Choral Service of the United Church of England and Ireland, being an Inquiry into the Liturgical System of the Cathedral and Collegiate Foundations of the Anglican Communion (London, 1843)

BERNARR RAINBOW

Jebe, Halfdan Frederik (*b* Trondheim, 3 Nov 1868; *d* Mexico City, 17 Dec 1937). Norwegian violinist and composer. He received his training in Christiania, Leipzig (violin with Sitt), Berlin (with Joachim) and Paris (composition with Massenet), where he played in the Colonne Orchestra (1894–7). In Paris he was a member of the group of Scandinavian musicians, artists and writers (Munch, Krag, Strindberg, Sinding and others) to which Delius was attached, and he and Delius became firm friends. In summer 1896 the two men, and according to tradition the writer Knut Hamsun, made a concert tour in Norway, and in January 1897 Jebe accompanied Delius on his second trip to Florida. In November that year he became conductor at the Central Theatre in Christiania, where he met his future wife, the actress Sofie Bernhoft. He left the theatre after only one season, and, joining forces with Delius again, spent Christmas 1898 with Delius's sister Clare in Yorkshire. He led the orchestra which gave the first concert of Delius's music in England in St James's Hall on 30 May 1899. Twelve letters from Jebe to Delius survive in the Delius Trust Archives; three of them have been published (*Delius: a Life in Letters*, London, 1983).

In 1901 he toured through Germany, Austria, Hungary, Serbia, Romania, Italy and Egypt, giving concerts and selling compositions as necessary, and in 1902–3 he visited China, Japan, India and Ceylon. He returned to Norway at the beginning of 1904, and a period of concentrated work followed, resulting in his opera *Vesle Kari Rud*. However, he was not sympathetic to the intense cultural nationalism which asserted itself in Norway on the achievement of independence from Sweden in 1905, and the next year he took himself to America. He played in orchestras in New York and travelled widely in North and South America, giving concerts, before settling down in Mexico. There he made the acquaintance of the revolutionary leader Felipe Carrillo, Governor of Yucatán, and became teacher of the violin, the piano and composition at the Mérida Conservatory. After Carrillo's execution in 1923 Jebe composed his A minor Symphony, subtitled 'The Path of Destiny towards the Ideal', in his memory.

In Mérida, where he lived until his death, Jebe was encouraged in the composition of a good deal of chamber music by the Alonzo Patrón Quartet, but his chief source of inspiration lay in the history and culture of the Maya. Although he had scorned the fervent patriotic nationalism of his own country, he found material for his Romantic imagination in the exotic art and legends of the ancient civilization of his adopted home. He composed an opera, *Dignidad Maya*, and several ballets on Mayan subjects, and his children's fable *La muerte de la ardilla* (given at the Palacio de Bellas Artes, Mexico City, 1938) is based on folk melodies. With A. Rendon Muños he founded the Orquesta Sinfonica de Mérida, and in 1933 he attempted to establish a festival on the basis of his own works which would make Mérida a 'new Bayreuth'. He also campaigned on behalf of artistic causes and standards and exerted an important influence on the musical life of Yucatán.

It was to Jebe that Delius dedicated his *Arabesk* in 1911. Whereas Fenby has recognized Delius himself in the Pan of Jacobsen's poem, there can be little doubt that it was Jebe whom Delius saw in this fantastic creature of nature. Jebe was an extreme example of the fin-de-siècle Romantic artist driven by a desire to experience everything, and having done so, like Gauguin, brought to reject the complicated society of Europe in favour of a simpler and freer life in a remote corner of the world. Yet he could not cut himself off from his heritage; works such as

Lad vaaren komme ('Let spring come') and *Norvegia* reveal continuing ties with Norway. In 1932 he had a concert of his own compositions performed by the Philharmonic Society under Olav Kielland in Oslo.

WORKS
(*selective list*)

Ops: Vesle Kari Rud (P. Egge, C. Krohg), 1904–5; Dignidad Maya (Jebe, S. Molina), 1932–3; La muerte de la ardilla (S. Molina); Snehvit og Rosenrød

Ballets: Lol-tun [Flower Stone], La mano roja, La leyenda del cenote sagrado, Rhapsodia yucateca

Orch: Aphrodite Suite (1922); Capriccio, 1922; Sym., a, 1923; Carnaval de Mérida; Marche nuptiale; Suite 'La muerte de la ardilla'; Norvegia; Sobre las olas [after waltz by J. Rosas]; Suite 'Remembranza', D; Uxmal Ov.

Chbr: 2 sonatas, vn, pf; Hymne, vn, pf (1905); Sérénade, vn, pf (1897); Ballade, vn, pf; Fanitullen, vn; Improvisation on Swedish Melodies, vn, pf; Intermezzo, vn, pf; Lad vaaren komme, str qt; Romanza (Siluetas), pf qnt; Serenade, pf qnt; Prelude, str qnt; Str Qt, 'Billeder fra Yucatán'; Pf Sextet

Choral: Lad vaaren komme [Let Spring Come] (J.P. Jacobsen), S, chorus, orch, perf. *c*1913, Sp. trans. as Primavera

Songs: [4] Sangkompositioner (1898); Drikkevise (1898); 6 Romances (V. Krag), 2 Sets of 3 (1899, ?1899); The Afterglow (A. Brunel) (1902)

Pf: Henrik Harpestrengs stormester marsch (1898); Premier album; Romance (1905)

Principal publishers: Academy (London), Olaf By (Christiania), Fantuzzi (Milan), Nordisk Forlag (Copenhagen), Warmuth (Christiania)

MSS in *N-Ou*

Jedlitzka, Marie. *See* JERITZA, MARIA.

Jeep. *See* HODGES, JOHNNY.

Jeep [Jepp], Johannes [Johann] (*b* Dransfeld, nr Göttingen, 1581 or 1582; *d* Hanau, 19 Nov 1644). German composer and organist. He spent his childhood at his birthplace and at Münden and attended the Lateinschulen at Göttingen and Celle. For over four years as a boy he sang (with a 'graceful treble voice') in the Hofkapelle at Celle, where he probably came under the influence of Jacob Syring and Johannes Nesenus. After his father's death about 1600, he went to study at Nuremberg and Altdorf, where he was strongly influenced by Hans Leo Hassler and Valentin Haussmann (who made fun of him in a song, *Jep, Dillentent*, of 1607 but for whom in 1614 he published an elegy, *Musica, liebe Schwester mein*); he also got to know J.A. Herbst. About 1610 he journeyed through France and Italy, Venice being one place that he visited. In the autumn of 1613 he succeeded Erasmus Widmann as Kapellmeister and organist at the court of the Count of Hohenlohe at Weikersheim. According to his own testimony he performed in the count's service 'before kings, electors and lords'. He was also entrusted 'with matters of great secrecy, diplomatic missions and other affairs'. In 1625, when musical institutions at the court were dissolved because of the Thirty Years War, Count Friedrich made him his steward at Hollenbach.

He spent more than ten years on the compilation and composition of the Hohenlohe hymnbook, which, after being delayed for a variety of reasons, was finally published in 1629. About 1635 he spent just over a year as organist of Frankfurt Cathedral as a deputy for Herbst (to whom he may have been related through his first wife). Then, for doctrinal reasons, he turned down an offer from the German Masters of the Teutonic Order (to whom Hohenlohe had been made over for the duration of the war in 1636). In January 1637, backed by Herbst's recommendation and after successful auditions, he went back to Frankfurt as civic Kapellmeister. Wartime conditions and a run of illnesses, however, prevented his making a success of this post, and three years later he was dismissed. Starting back for Weikersheim in the summer of 1640, he got as far as Hanau, where he earned a modest living working for the schools until, in January 1642, he took up what was to be his last appointment, as director of the almost defunct chapel of Count Ernst of Hanau-Münzenberg and organist of the principal church, the Marienkirche. Two funeral addresses were preached when he died: the one by Böhm was given before the palace's Lutheran congregation; the other was given by the court preacher, Henning, a minister of the Reformed Church.

Jeep composed over 100 hymns and psalm settings, most of them in four parts. Michael Praetorius referred, in the preface to his *Urania* (1613), to his psalms 'in simple counterpoint', ranking them with those of Hassler and a few other musicians 'in Franconia and Swabia'. Jeep intended his Weikersheim hymnbook of 1629 as an expanded new edition of Erasmus Widmann's *Geistliche Psalmen und Lieder* (1603) but with most of the texts completely reset by himself. He incorporated his settings of 1607–9, some of them in revised form, into the new collection and retained none of Widmann's settings except those of Lobwasser's version of the psalms, to which he added five more. Jeep was, however, best known not for hymns and psalms but for the 34 secular songs of his *Studentengärtlein*. The numerous reprints of them show how popular they were. They are entirely homophonic strophic songs on the threshold of monody whose particular strength lies in their simple, folklike character and the perfect matching of words and music; Gerber placed them among the finest songs composed in the wake of H.L. Hassler. A late piece such as the *Hymnus-hymenaeus* of 1640, 'in the style of Italian madrigals, with continuo', shows that Jeep was acquainted with the modern music of his day.

WORKS
published in Nuremberg unless otherwise stated

SACRED

[62] Geistliche Psalmen und Kirchengesäng . . . D. Martini Lutheri und anderer frommen Christen, wie sie in christlichen Kirchen . . . zu singen gebräuchlich, 4vv (1607, lost; 2/1609)

[114] Geistliche Psalmen und Kirchengesänge wie sie . . . auff alle Fest-, Sonn- und Feyertäge bevorab zu Weikersheimb . . . zu singen gebräuchlich, 4vv (1629), incl. 1 lied each by H.L. Hassler, J. à Burck; 2 ed. in *WinterfeldEK*, ii; 26 ed. in L. Schöberlein: *Schatz des liturgischen Chor-und Gemeindegesang* (Göttingen, 1865–72); 2 melodies in *ZahnM*; 5 ed. K. Ameln and others: *Handbuch der deutschen evangelischen Kirchenmusik* (Göttingen, 1932–), i/2, ii/1, iii/2

Hymnus-hymenaeus, das ist Lieblich- und zierliches Hochzeit-Gesang . . . auss dem 2. Capitel dess Hohenlieds Salomonis . . . auff italiänische Madrigalen arth, 5vv, bc (Hanau, 1640)

6 lieder, 4vv, in L. Erhard, Harmonisches chor- und Figural Gesangbuch (Frankfurt, 1659)

1 work, 3vv, 1605[3]

An Gott niemand verzage, 4vv, *D-DS**

SECULAR

Studentengärtleins erster Theil [17] neuer . . . weltlicher Liedlein, 3–5vv (1605, 3/1610, lost; 4/1614, 7/1626); Ander Theil [17] . . .

Liedlein, 4, 5vv (1614, 3/1622), 1 lied in 1611[23]; both vols. ed. in EDM, 1st ser., xxix (1958)

WILFRIED BRENNECKE/DOROTHEA SCHRÖDER

Jeffers, Ronald (Harrison) (*b* Springfield, IL, 25 March 1943). American composer and conductor. He studied composition with Leslie Bassett, Ross Lee Finney and George Wilson at the University of Michigan (BM 1966, MA 1968) and with Roger Reynolds, Oliveros, Gaburo and Robert Erickson at the University of California, San Diego (MM 1970). He also studied choral conducting at Occidental College, Los Angeles (1968–70), with Howard Swan. After serving as director of choral activities at SUNY, Stony Brook, during the academic year 1973–4, he accepted a similar position at Oregon State University. As a conductor there he participated in two major American premières: those of Lajos Bárdos's *A nyúl éneke* and Paul Patterson's *Kyrie*. With the Oregon State University Choir he made extensive European tours in 1978 and 1982. Jeffers's principal works are vocal (either for chorus or solo voice). His music exhibits ingenious interplays of timbre and texture and an intuitive mastery of rhythm and pitch.

WORKS

Prayer of St Francis, 1v, 1965; Missa concrete, 3 choruses, 1969, rev. 1973; In memoriam, chbr ens, 1973; Time Passes (D. Thomas, T.S. Eliot), Mez, 4-track tape, chimes, gongs, 2 dancers, 1974–81; Sanctus, SATB, 1975; Transitory (trad.), SATB, 4-track tape, 1980; Transitory III (R. Jeffers), female vv, 1981; Arise, my love! (Jeffers), 12 vv, chimes, gongs, 1981; Crabs (R. Weaver), tape, 1981; This We Know (Chief Seattle), SATB, 1987; Songs of the Sea (W. Whitman), SSTTBB, 1991; Salut au Monde! (Whitman), chbr ens, 1993; several other works, mainly vocal

DAVID COPE

Jefferson, Blind Lemon [Lemmon] (*b* Couchman, TX, Sept 1897; *d* Chicago, 18/19 Dec 1929). American blues singer and guitarist. His sight deteriorated in early childhood, and as a teenager he made a living by singing in the streets of various Texas towns. In 1917 he moved to Dallas, where he sang with Leadbelly. After travelling in various southern states in the early 1920s, he went to Chicago (1925), where he began a series of recordings of exceptional importance. Jefferson was the most influential of all black American folk-blues singers and one of the greatest performers in his idiom. His voice was not strident, but high enough to carry above street noises and attract attention from some distance. At times he sang in a low, moaning fashion, which he complemented by the use of bent notes on the guitar; *Long Lonesome Blues* and *Shuckin' Sugar Blues* (both 1926, Para.) are representative of his haunting, melancholy style. Although he rarely used a slide, an exception being on the blues-ballad *Jack O'Diamond Blues* (1926, Para.), he produced cries or imitative passages on the strings, most characteristically on his two best recorded songs, *Black Snake Moan* and *Match Box Blues* (both 1927, OK). His compositions, which often imply that he had at least partial sight, were frequently autobiographical, as in *Pneumonia Blues* (1929, Para.); others showed a concern for the fate of prison inmates, such as *Hangman's Blues* and *Blind Lemon's Penitentiary Blues* (both 1928, Para.). Jefferson's songs were recorded in many versions by other blues singers, but his unique guitar playing was rarely successfully imitated.

PAUL OLIVER

Jefferson, Marshall (*b* Chicago, September 1959). American acid house producer and musician. He was first attracted to dance music in 1983 at Chicago's Music Box on hearing early influential DJs such as Ron Hardy and the ground-breaking early house music of Jesse Saunders. Using the most basic of instrumentation, he recorded classic examples of early Chicago house music; his début, *Go Wild Rhythm Trax* (1985), paved the way for *Move Your Body*, acknowledged as one of house music's most important works. He then produced *Acid Trax* (1988) for Phuture which, in using the sound of the Roland TB-303 synthesizer, created the acid house genre; both the track and genre spawned more imitators than developers of the sound, something which drove Jefferson back underground to record the sweeping, less TB-303-oriented *Open your eyes*. This attempt to recreate his early feelings for Chicago house led to 'deep house'. He also put together and produced the vocal dance group Ten City throughout the late 1980s and early 90s. Despite the solo album *Day of the Onion* (KTM? 1997), his defining work remains restricted to an intensely creative and inspiring period in the late 1980s.

IAN PEEL

Jefferson Airplane. American rock group. It was formed in San Francisco in 1965 by Marty Balin (Martyn Jerel Buchwald; *b* Cincinnati, 30 Jan 1943; vocals) and Paul Kantner (*b* San Francisco, 12 March 1941; guitar and vocals) and was among the most important rock groups to emerge from the Haight-Ashbury psychedelic scene of 1966–9. The band's second album, *Surrealistic Pillow* (RCA, 1967), contained two hit singles, 'Somebody to Love' and 'White Rabbit', and featured Balin, Kantner,

Jorma Kaukonen (*b* Washington DC, 23 Dec 1940; guitar), Jack Casady (*b* Washington DC, 13 April 1944; bass), Spencer Dryden (*b* New York, 7 April 1943; drums) and the charismatic Grace Slick (Grace Barnett Wing *b* Chicago, 30 Oct 1939; vocals). This line-up subsequently recorded a series of successful and often innovative albums, including *After Bathing at Baxter's* (RCA, 1967), *Crown of Creation* (RCA, 1968) and the politically inspired *Volunteers* (RCA, 1969), all of which became staples of late 1960s progressive FM radio. The group's early influences were primarily American folk and blues, but elements of modal jazz and Indian music can be found throughout their music, especially in the sometimes extended instrumental solos. After the band's last studio album, *Long John Silver* (RCA, 1972), Slick and Kantner reformed the group into Jefferson Starship which, while much less adventurous musically, enjoyed tremendous commercial success in the 1970s and 80s with nine hit singles, including *Miracles* (1975, featuring Balin) and *Jane* (1979), and nine hit albums. The late-1960s line-up (without Dryden) reunited briefly in 1989, releasing *Jefferson Airplane*.

JOHN COVACH

Jeffery, Peter (Grant) (*b* New York, 19 Oct 1953). American musicologist. From Brooklyn College, CUNY, he took the BA (1975), and from Princeton University, the MFA (1977) and the doctorate (1980), with a dissertation on the autograph manuscripts of Cavalli. He was cataloguer of Western manuscripts and editor of publications at the Hill Monastic Manuscript Library at Saint John's University, Collegeville, Minnesota (1980–82), and taught Gregorian chant and music history at the New York School of Liturgical Music (1983–4). He taught at the University of Delaware (1984–93), and was made professor of music at Princeton in 1993. He was editor of the *Liturgical Chant Newsletter* from 1985 to 1990. Jeffery's principal area of interest is Christian liturgical chant from the earliest times to the present day, in many of its manifestations: Gregorian, Ethiopian, Byzantine. Rather than follow narrow lines of investigation, however, he has considered the techniques of the ethnomusicologist and attempted in his monograph (1992) to combine ethnomusicology with the study of Gregorian chant. He has also studied world music and musical cognition.

PAULA MORGAN

Jefferys & Nelson. English firm of music publishers, formed through the partnership of Charles Jefferys and SYDNEY NELSON.

Jeffreys, George (*b* *c*1610; *d* Weldon, Northants., 4/5 July 1685). English composer, music copyist and organist. He played an important role in the dissemination of Italian music in England during the Caroline and Commonwealth periods. His own compositions reflect his interest in the Italian *stile nuovo*, but he never relinquished entirely the techniques of his native tradition. As a result his mature music (all for the church) provides a highly individual solution to the problem of combining the English polyphonic style with Italian declamatory techniques. Though his willingness to experiment led occasionally to harmonic crudities and overcluttered textures, he deserves to be regarded, along with Matthew Locke (to whom he is stylistically closest), as one of the most accomplished and imaginative of Purcell's immediate predecessors.

1. Life. 2. Copying activities. 3. Works.

1. LIFE. According to Anthony Wood, Jeffreys was descended from Matthew Jeffries of Wells and was a member of the Chapel Royal before 1643. His name does not, however, appear in the surviving court records, except as the composer of an anthem transcribed into the books of the Chapel Royal during the 1670s; nor can any

evidence be found to link him with the Wells Cathedral musician. It seems more likely that Jeffreys came from Worcestershire. By his marriage he was related to the Salwey family of Stanford, and a pedigree of the Salweys, published in 1781, shows connections with the 'Jefferies' family of Holme Castle going back to the mid-16th century.

He was in the service of the Hatton family from at least 1631, when he set some verses by Sir Richard Hatton; the following year he collaborated with Peter Hausted, a Hatton protégé, in the stage work *The Rivall Friends*. Another poet in the Hatton circle, Thomas Randolph, provided the texts for three masque-songs and for the pastoral dialogue *Why sigh you, swaine?* Jeffreys was certainly in the employment of Sir Christopher Hatton (later 1st Baron Hatton) by 1633; in April of that year he made a 'Cattalogue of Manuscripts of my Masters ... at Moulton Park'. All this must cast further doubt on Wood's assertion that he had served at the Chapel Royal before 1643. By 1638 Jeffreys had moved to the village of Weldon, a few miles from Hatton's principal residence, Kirby Hall. In December 1637 he married Mary Peirs, the widowed daughter of Thomas Mainwaring, rector of Weldon and Dene. In his will, Mainwaring left £120 to his 'affectionate son, George Jeffreys'; there were also bequests to Jeffreys's two children, Christopher, who in 1659 was a junior student at Christ Church, Oxford, and was said by Wood to be 'excellent at the organ', and Mary. Another son, Thomas, died in infancy.

In 1643 Jeffreys was summoned to Oxford to assist Hatton, now the king's Comptroller of Household, in what seems to have been a purely administrative capacity; however, his musical talents were soon put to use. Wood, Henry Aldrich (*GB-Och* 879, facing f.1) and, in the following century, Sir John Hawkins refer to his activities as organist at Christ Church, Hawkins adding the information that 'choral service was performed there after a very homely fashion'. This comment implies that chapel services during the king's residence at Christ Church were performed in the manner of chamber music, a description which certainly applies to the few-voiced concertato motets by Italian composers of which Jeffreys made copies for performance, and also to many of the devotional songs he himself composed before 1646.

After the surrender of Oxford to the parliamentarian forces, Hatton fled to Paris, where he remained until 1656. Jeffreys returned to Weldon to resume his duties for the Hatton family; by 1649 he had become a senior Hatton servant, attending to their affairs in Northamptonshire as well as representing them in London. From this point onwards it is possible to follow his activities quite closely. About 250 letters he wrote to Hatton's son, Sir Christopher (later 1st Viscount Hatton), Lady Hatton and others (Hatton-Finch correspondence, *GB-Lbl*) are almost wholly concerned with administration of the Hatton estate, but, together with Jeffreys's will and the many comments he wrote into his autograph score book (*Lbl* Add.10338), they reveal a great deal about his character and personal circumstances. It is clear that, as a royalist and high churchman, it would have been difficult for him to find congenial employment as a musician under the Commonwealth. By the time of the Restoration he had acquired further property in Northamptonshire, including a manor house in Isham and several smaller dwellings that provided him with an income from rents. It is therefore not surprising that Jeffreys, no longer a young man in 1660, did not seek a post that would have given him recognition as a composer. The only work to be published in his lifetime was the two-part sacred song *Erit gloria Domini*. Nevertheless, to judge from the quantity of his music appearing in contemporary manuscripts other than the autographs, he seems to have been highly regarded by those who knew his work.

2. Copying activities. Jeffreys's own compositions are greatly outnumbered by his copies of music by other composers, some English (Walter Porter, John Wilson), the majority Italian, which he made as part of his duties for Hatton. The Italian music survives in two manuscripts in the British Library and four in the Bodleian Library, Oxford. The British Library manuscripts are the most extensive, one (Add.31479) containing 110 motets with basso continuo for one, two and three voices, and the other (Mad.Soc.G.55–9) containing a companion set of 49 motets for four and five voices. The composer is rarely named, but virtually all the pieces can be identified (Wainwright, 1997). Most of the music appears to have been copied from printed books purchased by Hatton in 1638 from the London bookseller Robert Martin. None of the books was published earlier than 1610, and most date from the 1630s. Other Italian music that Jeffreys copied was not published until after 1660. That he continued copying in his later years is evident from the copies he made of three of Purcell's sonatas of 1683.

The Italian composer whose work Jeffreys seems to have studied most closely was Alessandro Grandi (i); 36 motets by him are in the British Library manuscripts. Other composers represented in these two sets of partbooks by more than ten works are Egidio Trabattone (22), Merula (21), Aloisi (15), Sances (12) and Facchi (11). It was undoubtedly through copying, studying and performing this music that Jeffreys acquired his understanding of *seconda pratica* techniques, which he subsequently applied to his own compositions (nine of which are settings of the texts of pieces in Add.31479 and Mad.Soc.G.55–9).

3. Works. The principal source for Jeffreys's own compositions is an autograph score book (*GB-Lbl* Add.10338). It is the only source for the secular music, and the only autograph score for the instrumental works. It is made up of several different kinds and sizes of paper bound together in about 1650, after much of the music had already been written out. Clearly Jeffreys had decided to collect his music in a single volume, making fresh copies of some of his earlier pieces (among them the Hatton and Hausted settings) and allowing space for new compositions. Dates appended to some of the pieces indicate the date of composition, not of copying. The earliest date given for a sacred work is 1648, but 58 of the devotional settings were certainly composed before that time; the latest date given is 1665. Most of the sacred pieces occur in at least one other autograph source, of which the main ones are four sets of partbooks (*Lbl* (1 inc.), *Lcm*). Three works also occur in autograph scores (*Ob*).

Jeffreys's fantasias are workmanlike but unadventurous, being for the most part little more than essays in old-style polyphony. They do, however, reveal his interest in the Italian baroque, as do the early stage works, though of these only the songs for *The Masque of Vices* hint at

the melodic inventiveness and rich harmonic resource characteristic of many of the sacred pieces. The four Hatton settings suffer from lack of clarity in the part-writing and poor harmonic rhythm; so do all but two of the songs for *The Rivall Friends*, acted before the king and queen at Cambridge on 19 March 1632 but 'cryed down by Boyes, Faction, Envie, and confident Ignorance'. As yet, Jeffreys had not come to terms with the problem of combining the new declamatory style with traditional polyphonic techniques.

An eventual solution to this problem first suggests itself in the dialogue 'Drowsy Phoebus' from *The Rivall Friends* and in the two separate secular dialogues, which were probably composed at about the same time. Stylistically not unlike the dialogues of William and Henry Lawes, these works nevertheless display a real understanding of the principles of declamatory song tempered by a natural feeling for melodic lyricism. This ability to adapt Italian models to an English manner is carried a stage further in Jeffreys's Italian songs, in which the influence of Gesualdo and Monteverdi is never far beneath the surface, but in the cantata *Felice pastorella* English and Italian styles are held in more even balance, both in the symphonies (for violin and four-part viols) and in the expressive vocal lines, especially in the passages for one, two or three solo voices.

The Latin sacred music, which constitutes more than half Jeffreys's output, falls into three main categories: the few-voiced concertato motets or devotional songs, the liturgical works, and the motets for four, five and six voices, some of which have sections marked 'sola' and 'omnes'. *Heu, me miseram* does not fall into any of these categories. His only biblical dialogue, it is surely one of the finest essays in the genre by a 17th-century composer, showing Jeffreys's ability not only to depict the events of the drama but also to convey the changing emotions of the characters within it. It shows a remarkable understanding of operatic principles, and is by no means eclipsed by Purcell's celebrated biblical dialogue *In guilty night*.

By far the largest group of Latin sacred settings is the series of motets (devotional songs) with basso continuo for one, two and three voices. In general style and structure these sacred songs superficially resemble the few-voiced motets of Dering: both composers model their settings on the work of Grandi, but Jeffreys's greater harmonic sophistication and occasional use of arioso reflect more modern influences, particularly that of Carissimi. Most of the songs for two and three voices consist of a series of fugal points interspersed with homophonic passages. A frequent characteristic is the simultaneous development of two contrasted but complementary motifs: in the final part of *Hei mihi Domine*, for example, a simple lyrical figure for the words 'misericors es' is contrasted with another, racked with melodic and harmonic dissonance, setting the words 'miser sum'. Several of the few-voiced motets are carefully planned to reach their musical and emotional climax in the closing bars. The final section of *Lapidabant Stephanum* introduces a falling chromatic figure for the words 'obdormivit in Domine', while *Timor et tremor* and O *quam suave* (one of two Latin motets for solo bass) both have exquisitely expressive codas. Jeffreys seems to have had a particular fondness for the bass voice, using it more frequently than any other as a soloist in his ensemble pieces. Often he makes considerable technical demands, with wide leaps and elaborate decorative runs, suggesting that he had at his disposal, perhaps at Oxford, a bass of exceptional range and agility.

In common with other English composers of the period Jeffreys showed a distinct lack of adventure in most of his liturgical music. However, the C major *Jubilate*, which omits parts of the psalm text, was obviously intended as a non-liturgical motet. The vigorous homophonic opening is entirely in the Italian manner and could easily be mistaken for the work of Monteverdi, as could parts of the *Gloria in excelsis Deo*, which, since the 'Gloria Patri' is not set, appears to be another non-liturgical motet. The paired motets O *Domine Deus* and O *Deus meus* reveal a more personal voice. The texts are concerned with adoration expressed in language bordering on the erotic. The extravagance of language and implicit sexual metaphor is matched in Jeffreys's settings by melodic lyricism which, often ravishing in itself, is made more voluptuous by the closely-spaced textures and rich harmonic resource. Passing and suspending dissonances abound in these motets, as they do in many other works, particularly those setting texts of lamentation.

While Jeffreys's sacred Latin music is, broadly speaking, consistent in quality, the English is distinctly less even. One or two of the few-voiced devotional songs have an expressive range comparable with the best of the Latin settings, but the *Gloria, Sanctus and Responses for the Communion Service* and *Glory to God on high*, composed in 1652 at the request of the prominent royalist divine, Peter Gunning, fail to rise above the conventional. The funeral anthem *In the midst of life*, however, is far from conventional. Composed 'in the time of my sickness, Octob. 1657', it is intensely subjective and contains some of Jeffreys's most extreme harmonic experimentation, notably in the series of remote modulations at the words 'who for our sins most justly art displeased'. Even more remarkable are the chromatic dissonances for 'the bitter pains of eternal death', which, by an extraordinary alchemy, are soothing rather than disturbing, suggesting release from physical consciousness. The text of this last section of the anthem is concerned with divine mercy, evoking from Jeffreys a lyrical response. This is extended into the Alleluia coda which, as in several of his other English anthems, is the musical and emotional consummation of the entire work.

The English sacred music includes several settings of freely-composed personal texts. In the section of the autograph score book headed 'Songs Mottects of 5 parts' are settings of seven texts reflecting on events in the church year from the Nativity to Pentecost: *Harke, sheapard swaynes*; *Bussie tyme this day*; *Brightest of dayes*; *Whisper it easily*; *Ryse, hart, thy lord is rysen*; *Looke upp, all eyes* and *A musick strange* (an eighth piece, for the Feast of the Circumcision, survives only in the incomplete set of partbooks, *GB-Lbl*). In the case of only one of these anthems (*Ryse, hart*) is the identity of the poet, George Herbert, known. The texts of the other anthems lack the discipline and intellectual appeal of Herbert's verse, but Jeffreys obviously found in them an expression of religious experience to which he could readily respond. Some of the poems have passages in dialogue form; in all of them the pervading atmosphere of mystical rapture and vivid imagery provided Jeffreys with a strong impulse for musical setting. Not all the anthems achieve the same heights, but the best of them

Page from the autograph score of Jeffreys's anthem 'A musick strange' for Whitsunday 1662 (GB-Lbl Add.10338, f.572r)

surpass any of the Latin settings. The last piece in the set, composed in 1662, is *A musick strange* (see illustration). Here, with the assured technique he had developed by the time of the Restoration, Jeffreys managed to draw together all of the most characteristic features of his earlier work: declamation absorbed into song, the simultaneous development of contrasted motifs, affective melodic writing in which the florid runs are emotionally expressive rather than merely decorative, a real interpenetration of melodic declamation and harmonic tension, and, above all, a sense of musical growth.

Because of the circumstances in which he worked, Jeffreys attracted little attention as a composer in his lifetime. The earlier devotional settings, which almost certainly formed part of the chapel repertory of the royal court at Oxford, were not revived after the Restoration, and the music he wrote after his return to Weldon was never widely performed. Consequently, he had little influence on the next generation of composers, few of whom could have been aware of the way in which he tackled and ultimately resolved the problem of absorbing Italian influences into English song. From a historical perspective, Jeffreys commands attention as a pioneer of italianate sacred music in England.

WORKS

with basso continuo unless otherwise stated; principal MS sources only; for a complete list and editions see Aston (1970)

SACRED LATIN VOCAL

PETER ASTON

Jeffries, Matthew (*b* c1558; *d* c1615). English composer. He was appointed a vicar-choral at Wells Cathedral in December 1579 and by 1587 he was Master of the Choristers. According to Wood he took the BMus at Oxford in 1593. Wood described him as an 'eminent musician', a judgment that is borne out by his extant compositions. Jeffries remained at Wells until at least December 1613 when he apologized for speaking rudely to the Archdeacon of Wells. By March 1617 a younger colleague had become Master of the Choristers.

All but three of Jeffries's anthems set verses from the psalms although the consort anthems and two of the full anthems appear to have been conceived as domestic devotional music. The fragmentary Service 'for meanes' is a large-scale work in the Great Service tradition. His works generally are highly contrapuntal in style, technically assured and imaginative.

WORKS

Edition: *Matthew Jeffries: Consort, Full and Verse Anthems*, ed. J. Cannell (Madison, WI, 1998) [C]

PETER LE HURAY/JOHN CANNELL

Jehan. *See* MAISTRE JHAN.

Jehan I, dit le Roux, Comte de Bretagne (*b* 1217; *d* 1286). French trouvère. Five of the six chansons attributable to him are unique to one manuscript (*F-Pn* fr.847). Neither this source nor any other specifies his identity. Some scholars believed him to have been Pierre de Dreux, dit Mauclerc, who acquired the title through his marriage to Alix, sister of the murdered Prince Arthur, Duke of Brittany. Most, however, are convinced that the trouvère was Pierre's son, Jehan, who married Blanche, a daughter of Thibaut IV de Champagne, King of Navarre, in 1236, and who assumed the title of Comte de Bretagne in 1237. Three of the six chansons survive without music, but the manuscript indicates that *Haute chancon*, a religious work, is to be sung to the melody of *Bernart, a vous*. Two of the three melodies are cast in bar form, whereas the third is non-repetitive. The melody for *Chanter me fait* is remarkable not only for its large range of a 12th, but also

for numerous leaps, several of which are juxtaposed to form unusual melodic progressions.

WORKS

THEODORE KARP

Jehan, Claude Petit. *See* PETIT JEHAN, CLAUDE.

Jehan Bretel. *See* BRETEL, JEHAN.

Jehan de Braine (*b c*1200; *d* 1240). French trouvère. A younger son of Robert II de Dreux and his second wife, Yolanta de Couci, he became Count of Mâcon and Vienne through his marriage to Alix, granddaughter of Guillaume V. He died during the crusade of 1239 led by Thibaut IV of Champagne, King of Navarre. Moniot d'Arras addressed one of his chansons (R.739) to Jehan, whose nephew, Jehan I, dit le Roux, was undoubtedly the trouvère cited as the Comte de Bretagne. One pastourelle and two *chansons d'amour* are attributable to Jehan de Braine: *Par desous l'ombre d'un bois*, R.1830, *Pensis d'amours, joians et corociés*, R.1345, and *Je n'os chanter trop tart ne trop souvent*, R.733 (all ed. in CMM, cvii, 1997). The reading of the second of these in the Manuscrit du Roi (*F-Pn* fr.844) ends on the seldom-used final *b*, while that in the Chansonnier de Noailles (*F-Pn* fr.12615) ends on *e*. This chanson is notated in the 3rd mode in the Chansonnier Cangé (*F-Pn* fr.846), but neither of the remaining works survives in mensural notation.

For bibliography *see* TROUBADOURS, TROUVÈRES.

THEODORE KARP

Jehan de Grieviler (*b* Grévillers, nr Arras; *fl* mid- to late 13th century). French trouvère. Probably from Grévillers, he was among a group of 16 married, evidently unordained, clerics in Arras, some of whom were engaged in commercial activities, who on 28 January 1254 petitioned the Bishop of Arras to exempt them from civic taxation. A 'Grieviler' is listed in the necrology of the *Registre de la Confrérie des jongleurs et des bourgeois d'Arras* of 1254–5, but it is not certain that this refers to Jehan, since some of his jeux-partis identify him as a member of the Arras *puy* that was active mainly during the second half of the 13th century. Jehan was a participant in at least 34 jeux-partis, six of which (three with surviving music) begin in his voice. He exchanged strophes with Jehan Bretel and Adam de la Halle, among others, the latter of whom would have been very young by the 1250s. He also left behind six or seven chansons and a rotrouenge. All but one of the songs follow the conventional *ABABx* musical structure; *Uns pensers jolis* is through-composed. Many of Jehan's melodies begin on middle or low C, ending on C or G, but often extending outside the octave to high G or F. One melody, *Jolie amours*, begins on B♭, an unusual occurrence, and stretches to high and low F, where it ends.

ELIZABETH AUBREY

Jehan de Lescurel. *See* JEHANNOT DE L'ESCUREL.

Jehan de Nuevile (*b c*1200; *d c*1250). French trouvère. He was the second son of the nobleman Eustache de Nuevile, who held land in Neuville-Vitasse, slightly south-east of Arras. Jehan entered into the succession on the death of his elder brother, Eustache, and was himself succeeded by his younger brother, Gilles, before 1254. Colart le Boutellier dedicated one of his chansons to Jehan, who in turn dedicated *L'autrier par un matinet* to Colart (although the authorship of this work is contested). The Manuscrit du Roi (*F-Pn* fr.844) attributes ten chansons to Jehan. Six more are credited to him in the table of contents, although they are ascribed to Gautier d'Espinal and Guiot de Dijon in the main body of the manuscript. Of the total, only three survive with music, these being the only ones that also survive in other manuscripts. They are *Desoremais est raison*, R.1885, *Quant li boscages retentist*, R.1649, and *L'autrier par un matinet*, R.962 (all ed. in CMM, cvii, 1997). Among the poems surviving without music is a complainte, a rare northern French example of the Provençal planh. Jehan's chansons show a preference for isometric structures and for heptasyllabic verses. All of the melodies are cast in bar form: that for *L'autrier* being notable for the extensive use made of the material from the opening phrase. *Desoremais*, while in

an authentic G mode, uses the seldom-marked accidental C♯ twice during the course of the cauda.

THEODORE KARP

Jehan des Murs. *See* MURIS, JOHANNES DE.

Jehan de Trie (*b* c1225; *d* ?1302). French trouvère. He succeeded his father, Mathieu, as Comte de Dammartin and Seigneur de Trie in 1272. In documents of the same year he also bears the title of Seigneur de Mouchy. Two chansons are attributable to him. One, *Bone dame me prie de chanter*, R.790*a*, is ascribed also to Thibaut IV of Champagne and Gace Brule; the other is *Li lons consirs et la grans volentés*, R.955 (both ed. in CMM, cvii, 1997). Both are composed of isometric, decasyllabic strophes, set by Dorian melodies in bar form, beginning on the 7th degree. An unusual downward leap of an octave occurs in the sixth phrase of *Bone dame*. (H. Petersen Dyggve: *Trouvères et protecteurs de trouvères dans les cours seigneuriales de France*, Helsinki, 1942)

For further bibliography *see* TROUBADOURS, TROUVÈRES.

THEODORE KARP

Jehan Lebeuf d'Abbeville en Pontieu (*fl* 1362). French composer. He is known only from a two-voice CHACE added in a blank space on the verso of *F-CHRm* 130, with the instruction 'C'est une chace qui ce chante a .ii. Et le fit Frere Jehan Lebeuf d'Abbeville en Pontieu l'an 1362'. This lost manuscript is known primarily as an important source of 11th-century polyphony; the chace uses the circle and semicircle mensuration signs of the Ars Nova, although the notation is almost entirely in ligatures. For facs. and transcr. see M. Schneider: *Geschichte der Mehrstimmigkeit*, ii (Berlin, 1935, 2/1969), 53, suppl. 149.

GILBERT REANEY

Jehannot de l'Escurel [Jehan de Lescurel] (*fl* early 14th century). French poet and composer. He is known only from a collection of his works appended to the interpolated version of the ROMAN DE FAUVEL (*F-Pn* fr.146, ff.57*r*–62*v*). The transmission and notation of his compositions point to the early 14th century, while references in the text indicate that he worked in Paris. The older identification with a cleric who was hanged in 1304 is not certain; the name is frequently encountered in Paris at that time (Rouse, in Bent and Wathey). The collection contains, after the three-voice rondeau *A vous douce debonnaire*, 32 monophonic songs and two 'diz entez': longer poems whose strophes end with a notated refrain, linked by textual content and rhyme to the preceding strophe. The works are ordered alphabetically and the collection extends to the letter 'G'; it must therefore constitute only a part of his complete works.

Jehannot's songs form the largest mensurally notated monophonic collection of the period and thus the most important witness to an upheaval in the transition to the new polyphonic ballade and the division into separate genres of the so-called 'formes fixes', as they are seen in the mid-14th century in the works of Guillaume de Machaut. The extensive text collection *GB-Ob* Douce 308 constitutes a counterpart to Jehannot's works; the monophonic French songs in the *Roman de Fauvel* itself supplement them. In these sources the concept of genre involves a division between the refrain forms 'rondeau' and 'balade' (or 'balette'/'balaite'). The second group encompasses the developing forms of the three-strophe ballade as well as the virelai, but there are overlaps between the two incipient song forms and above all the group encompasses a variety of different structures with individual formal plans and single-strophe formulations.

The content of the texts covers a broad spectrum, from the light tone of the dance-song to the most sophisticated register of *grand chant courtois*. In the musical formulation, the notational procedures of polyphony, in duple and triple time as well as with semibreve groups divided off by dots, form the basis of a genuinely mensural conception and of a new individualization, the principal characteristic of which is extreme semantic differentiation. Typical of such procedures is the contrast between the light character of the playful *Gracieusette*, notated in semibreves throughout (see ex.1, with clarification of the different possibilities for rhythmic interpretation), and the long, declamatory note values in the complaint of an 'amie non amee' in the emphatic *Amours, que vous ai meffait* (ex.2*a*), and also, in the same song, the radical change from long to very short note values at the point where the text speaks of the unfortunate hour that must have led to her unhappiness (ex.2*b*).

A fundamental feature of melodic formulation lies in the integration of short ornamental groups, such as are seen in variant readings in the upper voices of motets. In the older monophonic song they must have belonged to the realm of performing practice, but they are found in the new song-forms of Machaut and others, where they expand the contrapuntal progressions within the harmonic framework. Reductions of Jehannot's melodies to the level of declamatory rhythmic values of long and breve reveal sequences very similar to those found in older, non-mensural songs (see ex.3, with the beginning of *Abundance de felonie* in original notation, 3*a*, and in reduction, 3*c*, in comparison with the opening of a chanson by Adam de la Halle, 3*d*).

Refrains in the dits, as in the 'balades', make use of pre-existing material, with an intertextual link between music and text, even where the material used is obviously new.

Each of these characteristics of Jehannot's monophonic songs recurs in the new polyphonic song style of the later 14th century. By contrast, the three-voice 'score'-notated rondeau *A vous douce debonnaire* (of which the middle voice exists, in a different version, as a monophonic work)

Ex.1 (Opening)

(a)

Gra - ci - eu - set - te La tres dou - ce Gil - le - te

(b) different possibilities of interpretation

Gra - ci - eu - set - te la tres dou - ce Gil - le - te

belongs to the tradition of such works that began with Adam de la Halle; nevertheless, Jehannot's setting contains a strikingly high percentage of imperfect consonances used in a deliberate way.

WORKS

monophonic unless otherwise stated

Edition: *The Works of Jehan de l'Escurel*, ed. N. Wilkins, CMM, xxx (1966) [W]

BALADES

Abundance de felonnie, W 7; Amours aus vrais cuers commune, W 2; Amours cent mille merciz, W 4; Amours que vous ai meffait, W 6; Amours trop vous doi cherir, W 8; Amour, voules vous acorder, W 5; Belle com loiaus amans, W 16; Bien se lace, W 10; Bien se peust apercevoir, W 15; Bonne amour me rent, W 12; Bontes, sen, valours et pris, W 11; Comment que pour l'eloignance, W 17; Dame gracieuse et bele, W 23; Dame vo regars m'ont mis en la voie, W 21; D'amour qui n'est bien celee, W 22; De la grant joie d'amours, W 19; Dis tans plus qu'il ne faudroit flours, W 29; Douce Amour confortez moi, W 20; Fi, mesdisans esragie, W 30; Gracieusette, W 32

RONDEAUX

WULF ARLT

Jehin-Prume, Frantz [François] (*b* Spa, 18 April 1839; *d* Montreal, 29 May 1899). Canadian violinist and com-

poser of Belgian birth. He was a pupil of his maternal uncle, François Prume, of Hubert Léonard, de Bériot and Fétis at the Brussels Conservatory, and later may have received guidance from Vieuxtemps and Henryk Wieniawski. At the age of 16 he began to give concerts and soon became widely known in Europe. An appointment to the Mexican court took him to North America in 1863. He appeared in the USA and Canada in 1865 and married the Canadian singer Rosita del Vecchio (1848–81) the next year. Jehin-Prume continued to tour in North America and extensively in Europe, but Montreal became his permanent residence. The first internationally known virtuoso to settle in Canada, he promoted orchestral and chamber music as conductor and performer. He composed two violin concertos (1860, 1874) and an oratorio dedicated to Pope Leo XIII, and wrote transcriptions and cadenzas for the violin; only a few works, published in Belgium, Canada and France or preserved in manuscript at the National Library of Canada, survive.

HELMUT KALLMANN

Jelić [Jelicich, Jelich], **Vincenz** [Vincenzo, Vinko] (*b* Fiume [now Rijeka], 1596; *d* Zabern [now Saverne], Alsace, ?1636). Croatian composer. His birthplace is sometimes indicated as Flumen Sancti Viti, or St Veit am Pflaum, which are descriptive names for Fiume. The original form of his surname was Jeličić (Jelicich). In 1606 he became a choirboy in Archduke Ferdinand's chapel at Graz, where he was taught by Matthia Ferrabosco. After a brief return to Fiume (1609–10) he was back in Graz, in the Ferdinandeum, studying first at the Gymnasium and then at the Jesuit University. From 1615 he was an instrumentalist in the court chapel, where he furthered his musical studies, possibly at first under Reimundo Ballestra. In 1618 he went to the court of Ferdinand's brother Leopold at Zabern, Alsace, where Ballestra had been appointed Kapellmeister in 1616. He entered Leopold's service first as an instrumentalist, but after taking holy orders he combined his musical duties with those of vicar and later canon of the church of Ste Marie. There are no references to him in documents at Zabern or elsewhere after 1636, when he probably died during an epidemic in Zabern following a battle in the Thirty Years War.

Jelić may have written some of his op.1 before he left Graz. The court in Graz attracted several Italian and italianate composers (Ballestra, Bonometti, Pfendner, Priuli) from whom he would have been able to learn the elements of the north Italian (and particularly the Venetian) expressive style. He was careful to treat individual words expressively, and he contrasts syllabic and melismatic passages effectively. An interesting feature is his frequent use of tempo indications: 'tardi', 'tardissimo', 'allegro', 'allegrissimo'. His op.2 follows the style of op.1, but includes somewhat more conventional four-part psalm settings. Six of his pieces were reprinted in two of Johann Donfrid's anthologies (RISM 1627[1], 1627[2]).

BOJAN BUJIĆ/STANISLAV TUKSAR

Jelinek [Elin], **Hanns** (**Johann**) (*b* Vienna, 5 Dec 1901; *d* Vienna, 27 Jan 1969). Austrian composer and teacher. He had little formal musical training, but participated in Schoenberg's class at the Schwarzwald School for three months in 1918–19 and was for four months a private student of Alban Berg's. From 1920 to 1922 he studied the piano, harmony and counterpoint with Franz Schmidt at the Akademie für Music und Darstellende Kunst in Vienna. For nearly three decades afterwards, he earned his living principally as a pianist in bars and cinemas, and with leading small bands.

His first concert works, *Symphony in D* and *Praeludium, Passacaglia und Fuge*, are rooted in the Austrian symphonic tradition of the early twentieth century. He drew on his knowledge of popular music in his subsequent works: the *Sinfonia ritmica (Musik in Jazz)* for jazz band and orchestra, *Rather Fast* for jazz band and the *Sonata ritmica* for jazz band. His *Heitere Synfonie* for brass instruments and percussion and his *Drei chansons* on texts by Erich Kästner are conspicuous for their satirical and parodistic elements. He also composed freely atonal works, especially after returning to Vienna from Berlin in 1931. From 1932 to 1943 Jelinek made intensive study of Schoenberg's recent music, and turned definitively to 12-note composition in 1934, completing the dodecaphonic String Quartet no.2 in 1935 and *Prometheus* for baritone and orchestra in 1936. From 1936 to 1947, however, Jelinek abandoned composing music for the concert hall. Under the pseudonym Hanns Elin he composed, arranged and published a number of popular songs and 'Wienerlieder' as well as music for operettas and films. As Hanns Jelinek he celebrated Austria's Anschluss with Germany in 1938 with a *Befreiungshymne*.

Together with Hans Erich Apostel, Jelinek maintained the legacy of the Schoenberg school in post-war Vienna. In the 1950s he established himself as an important teacher of 12-note composition. He was invited to teach 12-note composition at the Darmstadt summer courses in 1952, and from 1958 to 1969 he taught 12-note composition, and the composition of film music, at the Akademie für Musik und Darstellende Kunst. His *Zwölftonwerk*, a nine-volume collection of piano and chamber pieces based upon a single note row, gradually reveals the compositional resources of 12-note composition. His *Anleitung zur Zwölftonkomposition*, the examples in which were drawn primarily from the *Zwölftonwerk*, was one of the first textbooks to provide systematic instruction in 12-note techniques. His *Zwölftonfibel* for piano contained 144 graded exercises and pieces designed to familiarize young pianists with the sounds and styles of 12-note works. Jelinek also edited a series of *Libelli*

dodecaphonici (1961–4), which contained short works by his students for student performers. His investigations into all-interval 12-note rows led him to plan a 'Systematization of 12-Note Rows', which remained unfinished at his death.

His dodecaphonic compositions tend to avoid the rhythmic and contrapuntal complexities found in the music of Schoenberg, Webern and Berg. Particularly characteristic are his jazz-inspired 12-note works, *Three Blue Sketches* for small ensemble (1956), *Two Blue O's* for seven jazz instruments (1959) and the ballet *Dances around the Steel Blue Rose* (1956–9). He received the Preis der Stadt Wien for music in 1947 and the Oesterreichischen Staatspreis for music in 1966.

WORKS
(*selective list*)

Stage: Bubi Caligula, operetta, 1947–53; The Dances around the Steel Blue Rose, ballet, op.33, 1956–9

GREGORY S. DUBINSKY

Jelínek, Josef. *See* GELINEK, JOSEF.

Jelski, Michał (*b* Dudzicze, nr Minsk, 8 Oct 1831; *d* Rusinowicze, nr. Vilnius, Jan 1904). Polish violinist, composer and writer on music. He studied with Wincenty Bańkiewicz in Vilnius and from 1860 studied the violin with Lipiński in Dresden, composition with Lachner in Munich and violin with Vieuxtemps in Paris. In the 1850s he played in Kiev and Minsk, and from 1861 to 1879 he appeared in Poland and Germany, where he met with universal critical approval. His repertory included works by Bach, Spohr, Paganini, Vieuxtemps, de Bériot, Lipiński and others. Jelski's compositions include works for violin, edited by Henkl in Frankfurt and by A. Kocipiński in Kiev. His compositions relied on an early Romantic style, with conventional elements typical of Polish music of that period. He expoited greater contrasts of sound, with pervasive virtuoso elements, together with a rich harmony which supported his conception. He also wrote regular articles on music in Polish magazines, taking in a wide range of historical considerations, the discussion of problems concerning musical life and musical biographies. Together with his niece, Alexandra Glogerowa, he also collected folksongs from the region around the River Narew. Jelski wrote about 100 works for the violin, notably two violin concertos, a Fantasia for violin and orchestra, Sonata in E minor, fantasias, dances, and other miniatures.

ZOFIA CHECHLIŃSKA

Jélyotte, Pierre de (*b* Lasseube, 13 April 1713; *d* 12 Oct 1797). French singer and composer. He received his early musical training at Toulouse, where he studied singing, the harpsichord, the guitar, the cello and composition. In 1733 he went to Paris and made his début at the opera in a revival of Collin de Blamont's *Les fêtes grecques et romaines*. In the next years at the opera he continued to sing minor roles and his popularity quickly grew. In 1738, when the *haute-contre* Tribou retired, Jélyotte took the main part in a revival of Lully's *Atys*. Subsequently he created many of Rameau's leading roles, usually with the soprano Marie Fel (they are listed by Piton). With her he also performed in Mondonville's *Daphnis et Alcimadure* in 1754, a tragedy written in their native Languedoc dialect.

Jélyotte often took part in performances at court. *Zeliska*, his *comédie-ballet* (*F-Pn*; one vaudeville in *Mercure de France*, March 1746), had its première at

Versailles in 1746. In 1745 he had been appointed *maître de guitare* to the king and later he became first cellist for the Théâtre des Petits Appartements of Madame de Pompadour. In the *concerts spirituels* that she organized he performed his own motets (now lost) or those of Mondonville. *Ecoutez l'histoire*, a *romance* by him, survives (*F-Pn*). At the Paris Concert Spirituel, however, he made only infrequent, unannounced appearances (see, for example, *Mercure de France*, May 1752, p.185). He retired from the opera in 1765 but continued to perform occasionally in soirées at the Prince of Conti's home. An oil painting by Ollivier records one of these performances, in which Jélyotte is playing the guitar beside the young Mozart (aged seven) seated at a harpsichord during his first visit to Paris. Several other portraits of Jélyotte are known (they are listed by Prod'homme); to those should be added an anonymous miniature (Musée des Beaux-Arts, Dijon) on ivory formerly presumed, on unknown authority, to be a portrait of Claude Balbastre (see illustration) – he is accompanying himself on the guitar, and a score of *Atys* stands open before him on the harpsichord.

One of the extraordinary features of Jélyotte's voice was the ease with which he traversed the upper register of the *haute-contre* range (*f♯'* to *d''*). Some of Rameau's roles originally written for Tribou (such as Castor in *Castor et Pollux*, 1737) and later revised for Jélyotte (1754) demand a high tessitura and agility in rapid runs. One of the most difficult ariettes in all of Rameau's works, 'Règne, Amour' from *Zaïs* (1748), was also written for him. Rameau's librettist, Cahusac, pointed to the talents of Fel and Jélyotte as an important factor in the success of Rameau's works:

> We enjoy nowadays two singers who have carried taste, precision, expression and lightness of singing to a point of perfection that one would never before have thought possible. The art owes its greatest progress to them, for without doubt it is to the possibilities that Mr Rameau saw in their brilliant, flexible voices that opera owes its remarkable pieces with which this illustrious composer has enriched French singing.

Pierre de Jélyotte: miniature on ivory by an anonymous artist, after 1737 (Musée des Beaux-Arts, Dijon)

MARY CYR

Jembe [djembe, djimbe, jimbe, yimbe]. A type of drum played with both bare hands. It is in widespread use primarily in Mali and Guinea among the Maninka and Susu peoples, and also in neighbouring Senegal, Côte d'Ivoire and Burkina Faso; it is also perhaps the most popular African drum outside the African continent (several dozen CDs have been released since the late 1980s; for discography see Charry). The *jembe* is 58–64 cm tall and has a goatskin (formerly antelope) head 30–38 cm in diameter. The upper third is bowl-shaped and the bottom two thirds is cylindrical with a slight outward flare in certain varieties. The head is mounted with a high degree of tension, requiring metal rings on either end of the bowl through which rope (formerly hide) is threaded. For performances, three metal plaques, called *sekeseke* in Mali, with rings along the edges are inserted into the sides, creating a jingling sound. Although there are no hereditary restrictions on who may play the *jembe*, the instrument is associated with Maninka and Susu blacksmiths, called *numu*, perhaps because they were creators of the metal tools needed to carve the wooden body. The *numu* family names Camara, Doumbia and Kante are frequently found among *jembe* players, along with Mande noble family names such as Keita and Konate.

The *jembe* is the cornerstone of the national ballets of Mali and Guinea and plays an important role in the ballets of neighbouring countries. A typical ensemble includes one lead *jembe*, one or two accompanying *jembe*, and from one to three *dundun*. Three main strokes are used ('slap', 'tone' and 'bass'), which combine to form a limited number of accompanying patterns. Unique *dundun* patterns and lead *jembe* phrases define dozens of dance rhythms played on occasions of circumcisions, excisions, marriages, agricultural labour, secret mask society ceremonies and recreation.

ERIC CHARRY

Jemnitz, Sándor [Alexander] (*b* Budapest, 9 Aug 1890; *d* Balaton Földvár, 8 Aug 1963). Hungarian composer, critic and conductor. He studied composition with Koessler at the Budapest Academy of Music (1906–8) and then went to the Leipzig Conservatory, where he was a pupil of Reger (composition), Nikisch (conducting), Straube (organ) and Sitt (violin). Between 1911 and 1913 he was active in several smaller opera companies: as répétiteur at Bremen and as conductor at Czernowitz (now Černovice), Jihlava and Scheveningen. He lived in Berlin from 1913 and there took further composition lessons from Schoenberg and began to write studies on music, publishing several articles in *Die Musik* in 1914–15. In 1916 he returned to Hungary. He wrote for various newspapers and periodicals before becoming regular music critic of the daily paper *Népszava* (1924–50), in which post he established himself as one of the most respected Hungarian critics of the period. He was a propagandist for modern music but also helped to make the Classics more widely known; at the same time he reported on Hungarian musical life for the foreign press. From 1945 to 1947 he was president of the Workers' Cultural Union, and he was editor-in-chief of the periodical *Éneklő munkás* from its foundation in 1947, as well as editor of *Éneklő nép*. In addition, he taught at the Budapest Conservatory from 1951. During his last years, when he was no longer writing criticism on a regular basis, he published several popular monographs on composers.

As a composer Jemnitz remained to the end of his life faithful to the spirit of his two great teachers: his tightly woven, elaborate textures are rooted in Regerian counterpoint, but he was also quite strongly influenced by the expressionist Schoenberg of the 1910s. There was little response to his work within Hungary, but he gained a considerable reputation in western Europe. His first published work, the Piano Sonata no.1, was favourably received by *Die Musik* in 1915, and thereafter more than a dozen of his youthful pieces were published by Wunderhorn. An important point in his career was the performance of the String Trio no.1 by Hindemith's ensemble at the Donaueschingen Festival of 1924. This was followed by performances of his music at ISCM Festivals (1927, 1929, 1933, 1935) and several awards, including prizes from Schott (1927) and Universal Edition (1933). At the same time, his articles, which display a wide-ranging knowledge, his organizing activities and his pressing for Hungary to take a more active part in the ISCM all made him a well-known and widely respected figure abroad. He was in personal contact with Adorno, Berg, Pisk, Reich, Schoenberg and Stein.

WORKS

ORCHESTRAL AND VOCAL

Orch: 7 miniatűr, 1947 [version of 17 Bagatelles, op.5]; Conc., op.12, chbr orch, 1931, unpubd, arr. as Divertimento (ballet, 3 scenes), Budapest, 1947, unpubd; Prelude and Fugue, op.13, 1953, unpubd; Nyitány békeünnepélyre [Ov. for a Peace Festival], op.58, 1951; Conc., op.61, str, 1954, unpubd

Songs: opp.3, 6, 11 (L. Uhland), 15, 32b, 35 (J. Erdélyi), 40 (E. Ady), 41b, 50 (L. Kassák), 59, 62 (D. Kosztolányi), 63, 66 (L. Benjámin), 71 (Des Knaben Wunderhorn), 73 (G. Illyés), 1916–59 [opp.32b, 40, 41b, 63, 66, 71, 73 unpubd]; Schicksal (Uhland), 1919; 2 Songs (T. Raith), 1922

Choruses: opp.9, 16, 32a, 45, 47–9, 51–4, 67 etc., 1925–55 [opp.45, 67 unpubd]

CHAMBER AND INSTRUMENTAL

2–4 insts: Str Qt, op.2b, 1911, unpubd; Qt, op.7, org, str trio, 1921, unpubd; Trio, op.19, fl, vn, va, 1923; Trio, op.20a, 2 ob, eng hn, 1926, unpubd; Trio, op.20b, fl, ob, cl, 1926; 2 str trios op.21, 1924, op.24 (Serenade), 1927; Partita, op.29, 2 vn, 1924; Trio, op.33, gui, vn, va, 1932, unpubd; Qt, op.41a, 3 tpt, b tpt, 1925, unpubd; Str Qt [no.2], op.55, 1950, unpubd; 2 suites, vn, pf, op.57, 1952, unpubd, op.60a, 1953; Capriccio, op.60b, vn, pf, 1953, unpubd; A levél [The Letter], op.69, db, pf, 1956; Fantasia, Intermezzo, Burla, op.74a–c, cl, pf, Fantasia and Burla (1965)

Sonatas, 2 insts: op.10, vn, pf, 1920; op.14, vn, pf, 1920; op.22, vn, pf, 1923; op.17, vc, pf, 1922; op.25, va, vc, 1927; op.27, fl, pf, 1930–31; op.28, sax, banjo, 1934, unpubd

Sonatas, 1 inst: op.18, vn, 1922; op.31, vc, 1933; op.34, hp, 1933; op.36, db, 1935, unpubd; op.37, vn, 1935; op.39, tpt, 1938; op.43, fl, 1938; op.44, vn, 1938; op.46, va, 1941

KEYBOARD

Pf: Aus der Regerstunde, op.2a, 1917; 2 Sonatinas, op.4, 1919; 17 Bagatelles, op.5, 1919; 5 sonatas, op.8, 1914, op.23 (Tanzsonate), 1927, op.26, 1929, op.30, 1933, op.64, 1954; Fegyvertánc [War Dance], 1921; Ornament, 1925; Recueil, op.38, 1938–45; Táncra [For Dance], I, op.56, 1950, II, op.65, 1953–4, both unpubd; Ugrós tánc [Jumping Dance], 4 hands, 1958

Org: Introductio, passacaglia e fuga, op.1, 1918; Sonata per pedale, op.42, 1938, unpubd; 2 sonatas, op.68, 1955, op.72, 1957, op.72 unpubd

Principal publishers: Editio Musica, Kistner & Siegel, Rózsavölgyi, Schott, Universal, Wunderhorn, Zimmermann

VERA LAMPERT

Jena. University city in Thuringia, Germany. It was granted city rights in 1332 and developed into an outstanding

Torchlight concert by the Jena collegium musicum: watercolour by an unknown artist, 1744 (Museum für Kunst und Gewerbe, Hamburg); the collegium musicum (arranged around a three-manual harpsichord) is presenting a professor with a festive musical greeting, while a congratulatory poem is borne in on a cushion (centre)

musical centre from the foundation of the university in 1558. There is early evidence of folk music and the use of music in the monastery and churches; the Michaeliskirche beside the market had a Kalandsbrüderschaft, an itinerant choir, an organ and Kantor from 1442. The court of the Wettin dukes stipulated the presence of court trumpeters and *Stadtpfeifer*. The university, through which Jena gained its first importance, was established in the Kollegiumhaus and had its own church and library. The large collection of valuable music manuscripts was given to Jena by Elector Johann Friedrich of Saxony; of some 140 items, it includes choirbooks, fragments and prints of partbooks, and the famous 14th-century Jenaer Liederhandschrift. According to Schmeizel the 'Kantorgesellschaft or collegium musicum was famous and flourished at this time [1565]', a statement supported by the number of musicians who studied or worked there, and by the considerable activity of music publishers and printers. The musicians connected with Jena during this period included Nicolaus Rosthius, Georg Quitschreiber, Johannes Herold, Sethus Calvisius, Melchior Franck and Melchior Vulpius. In his *Praefatio* (1632) Burckhardt Grossmann, a Jena official and music lover, gave a critical account of the varied musical life around him.

After the Thirty Years War (1618–48) there was a revival of art music, encouraged by the dynastic bond between Jena and the duchy of Saxe-Weimar; the dukes lived intermittently in either place, and there was a lively exchange of musicians. Student music developed particularly under Adam Drese (1620–1701), who as court Kapellmeister composed dance music, ballets and songs. Clandestine music circles and research into music physiology formed the background to numerous individual studies such as those of J.G. Neidhardt, Johann Treiber and David Funck, in which new acoustic and theoretical problems were set out. Bach would certainly have known the young Treiber's *Sonderbare Invention: eine Arie in einer einzigen Melodey aus allen Tönen und Accorden auch jederley Tacten zu Componiren* (Jena, 1702), as a preliminary study to 'well-tempered' tuning. Bach's cousin Johann Nicolaus Bach (1669–1753), a university organist, was among the leading musicians who gave new impetus to the collegium musicum through its serenades, cassations and comedies; his burlesque cantata *Der Jenaer Wein- und Bierrufer* has remained a delightful milieu piece with reference to traditional customs. The Akademisches Konzert, founded in 1769 and held in the historic Rosensäle, became a flourishing institution of the bourgeoisie. The symphony orchestra connected with the concerts acquired a particular distinction under the leadership of Carl Stamitz.

From the late 18th century Jena, along with Weimar, became the academic centre for the development of Classical and Romantic ideas, the former fostered in Jena by Goethe and Schiller and the latter by Thibaut, Schlegel, Brentano, Tieck and Novalis. The lively musical response to this was especially strong within the Jena Students' Association, whose patriotic and liberal aims stimulated

lied and choral singing in which Theodor Körner and Lützow-Freischar were major influences. Free-thinking middle-class salons, such as Sophie Mereau's, provided a wide variety of music and formed the basis of the continuous musical development into the 19th century when music congresses were held in Jena; important musicians closely connected with the city, such as Hummel, Liszt, Ernst Naumann, Reger, Fritz Stein and Robert Volkmann, continued the city's musical development into the 20th century. In 1828, when the student song association was suppressed by the authorities, the Bürgerlicher Gesangsverein was established and became the most important musical institution in Jena. Between 1905 and 1908 a new university was established, including a Singakademie, the Akademisches Orchester and the Musicology Institute, whose professors, lecturers and tutors have included Fritz Stein, Werner Danckert, Heinrich Möller, Heinrich Besseler, Lothar Hoffmann-Erbrecht and Günther Kraft. The university inherited the city's ancient traditions which now acquired a new focus, also provided by the large concert hall of the Volkshaus (built by the Carl Zeiss Foundation). The conservatory, founded in 1913 by Willy Eickemeyer, is now the Staatliche Musikschule. The Madrigalchor, the Max Reimann University Ensemble, the choirs of the Michaeliskirche and Friedenskirche, and the Jenaer Philharmonie (formerly the Jena SO) are the most important performing groups in the city.

G. KRAFT/R

Jenaer Liederhandschrift (*D-Ju* El.f.101). *See* SOURCES, MS, §III, 5.

Jeney, Zoltán (*b* Szólnok, 4 March 1943). Hungarian composer. He studied the piano and attended Pongrácz's composition classes at the Debrecen Secondary Music School. From 1961 to 1966 he was a composition pupil of Farkas at the Academy of Music, Budapest; he continued his studies in Rome with Petrassi in 1969. After returning to Hungary he worked as a freelance composer, becoming a leading figure in the New Music Studio, an experimental group which was the focus of Hungarian avant-garde musical activity in the 1970s. Jeney's developing interests in new techniques were fostered by Pongrácz and by the freer atmosphere at the Budapest Academy in the 1960s; early pieces were influenced by Bartók, Dallapiccola, Webern, Berg, the new Polish school, Kurtág and Durkó. In Rome, and later, Jeney came under the influences of Boulez's theory, Stockhausen's music and oriental philosophy, and he began to experiment with loose musical structures in such pieces as *Wei wu wei*, a title which may be translated as 'Influence your neighbour but do not try to'. This direction in Jeney's work was intensified as a result of his contact with Cage's thought.

Later works have been influenced by text in a variety of ways. Some are transcriptions of texts, made with the aid of an original code: for example, writings by Cage are encoded in *A szem mozgásai* ('Movements of the Eye'). The Twelve Songs, while setting poems by Blake, Hölderlin, Tandori and Weöres, develop a relationship between syllable length and sonority that owes more to e.e. cummings's use of language. Jeney draws on a broad range of philosophies and musical traditions. *Apollónhoz* ('To Apollo'), a Callimachus setting, is built up from monodies based on an ancient scale-system he discovered during a visit to Greece. Meanwhile the influence of the New Music Studio continues to be apparent in his involvement in collaborative projects with (among others) Vidovszky, and his pieces for unspecified instrumentation, as well as in the overriding ethos of his works as a whole, which views composition in terms of process rather than final product.

One of the most highly-respected composers in Budapest, Jeney was appointed in 1986 to a professorship at the Liszt Academy of Music, where he became head of the composition department in 1995. He has also worked abroad as a visiting scholar at Columbia University in 1985 and in West Berlin (1988–9) on a residency supported by the Deutscher Akademischer Austauschdienst. In 1993 he was made a member of the Széchenyi Academy of Arts of Letters and President of the Hungarian Composers' Union.

GYÖRGY KROÓ/RACHEL BECKLES WILLSON

Jenkins, David (*b* Trecastell, Breconshire, 30 Dec 1848; *d* Aberystwyth, 10 Dec 1915). Welsh composer, conductor and editor. He was apprenticed to a tailor but showed early determination to become a musician, and taught himself Tonic Sol-fa. In 1874 he was one of Joseph Parry's first music students at the newly founded University College of Wales, Aberystwyth, and four years later, as the college could not yet award degrees, took the Cambridge MusB externally. He was appointed instructor in music at Aberystwyth in 1882, lecturer in 1899 and professor in 1910. A prolific composer, he published most of his music himself, including some fine hymn tunes ('Penlan', 'Builth', 'Gnoll Avenue', 'Bod Alwyn'). Of his larger works *Job*, *The Storm*, *Arch y Cyfamod* (composed for the National Eisteddfod, Caernarvon, 1876), *The Psalm of Life* (Cardiff Triennial Festival, 1895), *The Galley Slave* and *Scenes in the Life of Moses* (his last big work, dated 1 March 1915) were popular during the heyday of the great Welsh choral movement. His rather traditional Romantic style combines a German harmonic richness with dramatic Italian characteristics. He was admired as a conductor in Wales and the Welsh communities in the USA, where he was in demand for chapel singing festivals and as an adjudicator at competitive eisteddfods. He wrote regularly on music in the Welsh press and edited *Y Cerddor*, jointly with D. Emlyn Evans from 1889 to 1913 and then singly until his death.

OWAIN EDWARDS

Jenkins, Edmund Thornton (*b* Charleston, SC, 9 April 1894; *d* Paris, 12 Sept 1926). American composer. He studied the clarinet, the piano and the violin at Atlanta Baptist College (now Morehouse College) where his teachers included Kemper Harreld. In 1914 he performed with his father's ensemble, the Jenkins Orphanage Band, at the Anglo-American Exposition in London. He later enrolled at the RAM, where he studied the clarinet, piano and singing, and had composition lessons with Corder. His awards included an orchestral scholarship (1915–17), medals for singing, and clarinet and piano playing, and the Ross Scholarship (1919–21). He became an Associate of the RAM in 1921.

After working in British theatre orchestras and dance bands, employment that resulted in a number of recordings (1921), he moved to Paris. He continued performing and composing, and established the Anglo-Continental-American Music Press. Among his published works are songs, compositions for solo piano and orchestral works. Black musical culture is particularly evident in his jazz phrasing, for instance in the *Folk Rhapsody* for orchestra. His involvement with the Pan-African congresses of 1921 and 1923 was also influential. In 1923 he embarked on what was to be a disillusioning tour of America, an experience that introduced black theatrical elements into his compositional style. His manuscripts are held at the Center for Black Music, Columbia College, Chicago.

JEFFREY GREEN

Jenkins, Gordon (*b* Webster Groves, MO, 12 May 1910; *d* Malibu, CA, 24 April 1984). American arranger, composer and conductor. He played the cinema organ and piano before joining a radio station in St Louis. In 1936 he began arranging for the Isham Jones dance orchestra and then composed and arranged for Benny Goodman, Woody Herman, Lennie Hayton and André Kostelanetz. After a brief spell conducting on Broadway he moved to California (1936) to work for Paramount, and later became a musical director and performer for NBC's Hollywood network (1938–44). He returned to New York in 1949. He is best known for his light orchestral music such as the mood suites *Seven Dreams* and *Manhattan Tower*, and conducted his own light orchestra from the mid-1940s to early 50s. He arranged for many popular singers, most notably for Frank Sinatra with the song *It was a very good year*, for which he won a Grammy award in 1965, and on Sinatra's albums *Where Are You?* (1957) and *No One Cares* (1959). He also recorded with Nat 'King' Cole, Louis Armstrong and Peggy Lee.

Jenkins, John (*b* Maidstone, 1592; *d* Kimberley, Norfolk, 27 Oct 1678). English composer, supreme in consort music, especially for viols.

1. LIFE. According to Anthony Wood, Jenkins was born at Maidstone, and the year of his birth has been deduced from lines on his tomb. He was probably the son of Henry Jenkins, a carpenter who married Anne Jordaine on 28 June 1591. The inventory taken at Henry's death in 1617/18 noted 'Seven Vialls & Violyns, One Bandora & a Cytherne'. John was bequeathed the bandora – a significant choice in the light of his later fame as a lutenist

and lyra viol player. It is likely that he became apprenticed as a musician in the household of Anne Russell, Lady Warwick, at Northaw, Hertfordshire, and Broadstreet, London: her niece, Lady Anne Clifford, noted in her diary in 1603 that she 'learned to sing and play on the bass viol of Jack Jenkins, my aunt's boy', and a 'John' Jenkins received a £10 annuity in Anne Russell's will on 11 October 1603. Among Jenkins's patrons were the Derham family of West Derham [Dereham], Norfolk, and the L'Estrange family at Hunstanton. The two families were friends and Jenkins probably moved freely between them as the occasion required; he was apparently never officially attached to any household, for his pupil Roger North wrote: 'I never heard that he articled with any gentleman where he resided, but accepted what they gave him'. Jenkins was in London in February 1633/4, participating in the extravagant masque *The Triumph of Peace*, and once was brought to play the lyra viol before King Charles I 'as one that performed somewhat extraordinary' (North).

During the Commonwealth North noted that Jenkins 'past his time at gentlemen's houses in the country'. References link his name with the poets Edward Benlowes and Thomas Shadwell, with Elizabeth Burwell of Rougham, Suffolk, and with the youthful Joseph Procter mentioned by Wood. From about 1654 he was visiting the North family at Kirtling, Cambridgeshire, residing there between 1660 and 1668 as teacher to Roger and Montagu. Roger North's writings provide an endearing character study of the composer and many reminiscences concerning his stay at Kirtling. In 1660, at the Restoration, Jenkins was appointed as a theorbo player in the Private Musick, but although he spent some time at court between 1660 and 1663, it is unlikely that he attended often. North wrote:

> He kept his places at Court, as I understood to the time of his death; and tho' he for many years was uncapable to attend, the court musitians had so much value for him, that advantage was not taken, but he received his salary as they were payd.

His last years were spent at the home of Sir Philip Wodehouse at Kimberley, Norfolk, where he died. He was buried in the church there on 29 October 1678.

2. WORKS. Jenkins's consort music built on the foundations laid by Byrd and his contemporaries. Over 800 of his instrumental works survive. The chronology of his music is impossible to ascertain with accuracy, but during the first half of his life the viol fantasias provided the focal point of his creative work. He inherited a form already in its prime, through the examples by Coprario, Ferrabosco (ii), Lupo, Ward and others which served as his models. However, his genius as a composer in this field was highly individual, showing itself in unsurpassed lyrical inventiveness and outstanding gifts for tonal organization. The decisive modulations are seldom abrupt; the sense of anticipation is long drawn out and the climaxes are reached gradually by the subtlest means: the largeness of scale and the emotional intensity of his fantasies depend chiefly upon this feature, not hitherto employed to such a degree by other consort composers. Jenkins also exploited to the full the characteristically English habit of crossing the parts in pairs, a technical resource particularly favourable to his fluent and roving melodic invention. These factors coupled with his innate feeling for the sonorities and techniques to the viol, gave rise to a series of works whose pre-eminence in their kind is beyond question.

The fantasias in four, five and six parts embrace many forms, though four clear types emerge: monothematic works (which are fugues in all but name), those in which one mood prevails throughout in spite of changes in the thematic material, those comprising two main sections of contrasted character (sometimes with a short episode between), and those made up of several contrasted sections, usually with clearly defined closes. All open with an extended fugato section, polyphony prevails, and full rein is given to the contrapuntal devices of imitation, inversion, canon, augmentation and diminution, the themes being freely modified to suit the counterpoint. Organ parts have no significant independence and merely duplicate material from the string parts.

During his long life, the many-voiced consorts of viols gradually made way for the instrumentation of the Italian trio sonata. Responding to this change, Jenkins produced two collections of three-part fantasias. Those for treble, two basses and organ mark the trend towards shorter, more clearly defined and contrasted sections – a process carried even further in the 21 fantasias for two trebles and a bass completed by 1650. Triple-metre sections, absent from the four-, five- and six-part works, are included and the polyphonic writing takes on a less involved contrapuntal style with more casual treatment of the fugal material. In the set for two trebles, the emergence of the violin has a marked effect on the melodic style of the music. The long irregular phrases, often featuring parallel construction and sequential treatment, so typical of the viol consorts, are replaced by shorter, more balanced phrases with sprightly and vigorous themes. While there is no known keyboard part for this collection, the organ features prominently in the works with two basses, where it is given solo introductions and interludes, an idea transferred from the contemporary fantasia-suites.

Jenkins's earliest fantasia-suites seem to be the 17 for treble, bass and organ and the ten for two trebles, bass and organ, and they closely follow the pattern established by Coprario. This was a three-movement form comprising fantasia, almain and galliard (the last called 'ayre' and ending with a common-time coda), lively thematic material to suit the violin, triple-time sections, solo organ interludes and the treatment of the keyboard throughout as an indispensable obbligato part. Both sets contain interesting harmonic writing with imaginative organization of tonality, occasional progressions of a startling kind and augmented chords perhaps inspired by the works of William Lawes. 'Divisions' dominate much of Jenkins's writing in this genre, rising to the heights of virtuosity in the nine fantasia-suites for treble and two basses and the seven fantasia-air division sets. With emphasis placed on instrumental display, the opening movements contrast sharply with the less extrovert viol fantasias. The divisions, invariably placed after the opening fugato section, are frequently followed by a short homophonic passage in triple time before the customary rich harmonic conclusion. The second movements are usually brisk and sprightly by nature, betraying their origin as dance forms, though sometimes – notably in the fantasia-air sets and the eight four-part suites for two trebles and two basses – they assume an altogether larger

format with further florid writing. In his later fantasia-suites Jenkins generally preferred the corant to the 'ayre' or galliard as the third movement, dispensing with the common-time coda. The four-part suites and the remaining fantasia-air sets, continuing the trends already noted, with their varied textures, less stereotyped 'divisions', clearcut forms and firm tonality, seem to be Jenkins's last contribution to the genre – the ten suites for three trebles, bass and continuo were probably written for use at the Restoration court.

To judge by surviving manuscripts, Jenkins's shorter instrumental pieces were the mainstay of amateur music-making in England in the mid-17th century. 32 of the airs for two trebles, two basses and organ, probably dating from the 1640s, are particularly fine. Serious in mood, with subtle instrumental colouring, they are longer and more consistently contrapuntal than most airs, largely avoiding even the most stylized of dance idioms. Although some early isolated airs are undoubtedly for viols, the violin ousted the viol in much of this music and the popular combination of two violins with a bass seems intended for most of his three-part airs, some of which are dated 1645. Grouping of the airs into suites was often a somewhat arbitrary procedure. Some were re-scored to suit changed circumstances. The English predilection for virtuoso 'divisions', initiated by such men as Daniel Norcombe (ii) and Hume, is maintained and developed in Jenkins's splendid pieces for bass viols. Much of his output for lyra viols is lost or incomplete. Apart from solos, the instrument fulfils a dual role in several consorts, supplying both a melodic part and chords amplifying the harmony. The dominant influence on many of Jenkins's short dances would appear to have been the instrumental forms of decidedly French style which permeated English music via the masque.

Jenkins's vocal music is relatively unimportant. There are several secular airs and dialogues with continuo, written in the melodious recitative style typical of the post-madrigalian era. Declamatory techniques are tempered in the sacred songs to suit a more polyphonic vein containing touches of colourful harmony and naive word painting.

ANDREW ASHBEE

Jenkins, Newell (Owen) (*b* New Haven, CT, 8 Feb 1915; *d* 21 Dec 1996). American conductor. He studied in Dresden, Freiburg and Munich, at Yale University, and in New York with Leon Barzin. His début was in 1935 with *Dido and Aeneas* at the Städtisches Theater, Freiburg, and in 1940 he founded the Yale Opera Group, New Haven. From 1948 to 1956 he worked in Bologna and Florence, where he formed and directed the Piccola Accademia Musicale (1952), and in the 1970s he was guest conductor at the Stockholm Royal Opera. Meanwhile, in 1958, he started the Clarion Concerts series in New York which broadened into concert and semi-staged performances of rare Baroque operas, among them Vivaldi's *Farnace*, Hasse's *L'olimpiade* and Piccinni's *Didon*. His recordings include operas by Simon Mayr, Rossini and Dittersdorf, and works by Cherubini, G.B. Sammartini, Brunetti and J.M. Kraus. Jenkins taught at New York University, 1964–74, and at the University of California at Irvine, 1971–9. His musicological activities have included research on G.B. Sammartini and Kraus, and he has published an edition of nine symphonies by Brunetti.

DENNIS K. McINTIRE, NOËL GOODWIN

Jenkins, Tom (*b* Leeds, 4 Nov 1910; *d* London, 13 Feb 1957). English violinist. After studying with Flesch and Sascha Lasserson he went on to achieve international popularity as a performer in BBC Radio's light music broadcasts between the 1930s and 50s. As leader of the BBC Palm Court Orchestra in the radio programme 'Grand Hotel' he attracted a weekly audience of ten million listeners, who responded enthusiastically to his expressive yet technically precise handling of the light classical repertory. He also gave performances with the LSO and the Hallé Orchestra, and was voted Most Popular Musical Entertainer in the National Radio Awards for two successive years in the early 1950s. In his most celebrated broadcasts and performances Jenkins played a Stradivarius of 1667.

DUNCAN HEATH

Jenko, Davorin (*b* Dvorje, 9 Nov 1835; *d* Ljubljana, 25 Nov 1914). Slovenian composer. He was educated in Ljubljana and Trieste, and studied law in Vienna, where he conducted the choir of the Slovenian Choral Society (1859–62). In 1862 he went to Pančevo as the conductor of the Serbian Church Choral Society, and in 1865 he accepted the post of conductor of the Belgrade Choral Society, which he held until 1877. In 1869–70 he studied composition in Prague. Between 1871 and 1902 he was a composer and conductor at the National Theatre in Belgrade. His first compositions were inspired by Slovenian nationalism and he returned to Slovenia towards the end of his life; however, most of his works were written during his stay in Belgrade (then in the independent kingdom of Serbia), so his chief contribution is to Serbian music. He was, indeed, constantly motivated by a pan-Slav ideology.

At the time of Jenko's arrival in Pančevo, Serbian culture and art music was beginning to develop after the long period of Turkish occupation. He was largely responsible for developing a special type of Serbian Singspiel. *Vračara* ('The Sorceress') was the first Serbian operetta, and Jenko's incidental music for the Serbian theatres in Belgrade and Novi Sad was often influenced by Serbian folk music. *Pribislav i Božana*, his most ambitious work, comes close to the type of Weberian Romantic opera. His orchestral compositions were among the first in Serbian music.

BOJAN BUJIĆ, ROKSANDA PEJOVIĆ

Jenks, Stephen (*b* Glocester, RI, 17 March 1772; *d* Thompson, OH, 5 June 1856). American composer and tune book compiler. He taught singing schools in New England and New York State, and cultivated a network of pupils and fellow teachers whose compositions he published. He was a prolific exponent of the American idiom developed by Daniel Read and other Connecticut composers in the 1780s and 90s, and contributed 127 pieces to the ten collections of psalmody he issued between 1799 and 1818. He was a major composer of fuging-tunes. While taking most of his texts from Isaac Watts and other English evangelical poets, Jenks showed considerable interest in patriotic, commemorative and elegiac verse.

In 1829 Jenks moved to Ohio, where he farmed and reportedly made percussion instruments, though he continued to compose until 1850. His manuscript copybook includes settings of popular revival hymns in a contemporary 19th-century style incorporating folk elements. Although Jenks's music is neglected in the northern states, his tunes 'Liberty', 'Evening Shade' and 'North Salem' are still frequently performed by southern shape-note singers who preserve the singing-school tradition.

DAVID WARREN STEEL

Jennefelt, Thomas (Lars Ragnar) (*b* Huddinge, 24 April 1954). Swedish composer. He studied composition with Bucht and Mellnäs at the Royal College of Music in Stockholm (1974–80) and sang in Eric Ericson's chamber choir. In 1994 he became chairman of FST, the Society of Swedish Composers.

Vocal works dominate Jennefelt's output. His breakthrough work *Warning to the Rich* (1977), with its solid choral writing, became known internationally. In subsequent works he sought to counteract the expressivity of traditional settings, often treating texts syllabically and giving familiar poems new perspectives: his *Dichterliebe* finds horror and abomination in Heine's words where Schumann found idyll. His orchestral work *Musik vid ett berg* ('Music before a Mountain') was originally conceived as a melodrama, but the highly charged text was ultimately abandoned in favour of a purely instrumental treatment. The work is nonetheless intended to be performed with 'dramatic tension as though it were a spoken drama', and the shadow of a text and a vocal line is almost discernible in the writing for the orchestra.

WORKS

Stage: Maria Stuart (incid music, F. Schiller), vv, insts; Tanter [Aunties] (chbr op, Jennefelt, T. Waltersson), 1982; Albert och Julia (radio op, A. Levelius, Jennefelt), 1987; Gycklarnas Hamlet [The Jokers' Hamlet] (op, 2, B. Nordfors, after P.C. Jersild), 1987–9; Farkosten [The Vessel] (chbr op, Jennefelt), 1993–4
